Kraus, 1967); *Newspapers in Microform, United States,* 1948–1983 (Washington, D.C.: Library of Congress, 1984); *United States Newspaper Project, National Union List,* 3rd edn, June 1989 (Dublin, Ohio: Online Computer Library Center)

Compiled by Erica Judge, Meghan Lalonde, and Liza Weingarten

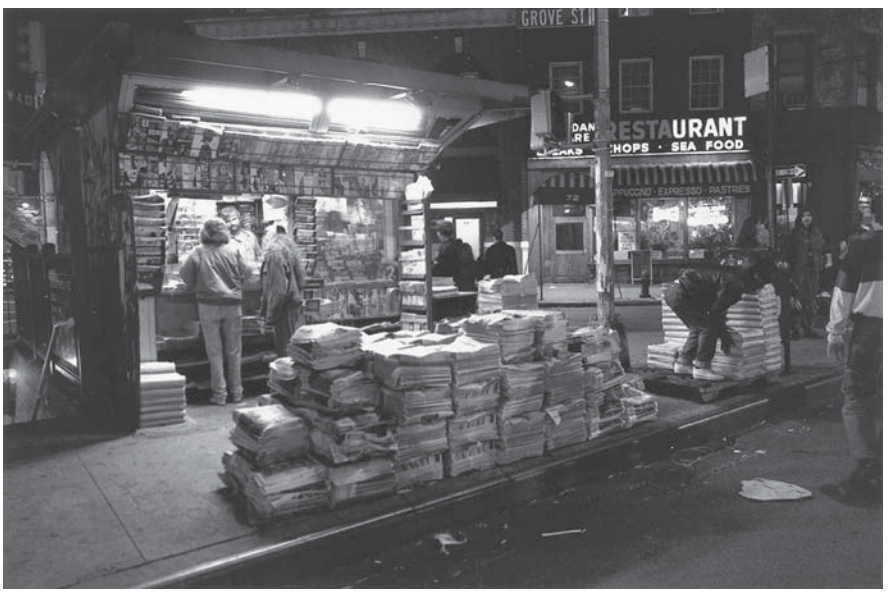
by David Hale and Gerard Hallock. The *New York Times* was launched in 1851 by Henry J. Raymond. Fierce competition led editors to use the Pony Express, pigeons, railroads, and steamboats in gathering news.

Of the penny newspapers introduced during the 1830s only the *Herald* and the *Sun* survived, but the development of the popular press changed journalism profoundly. Regular reports from Washington, D.C., were begun in 1822 by the *New-York Statesman* under the direction of Nathaniel Carter. Elias Kingman became the first permanent Washington correspondent (1830–61) and wrote for such publications as the *Journal of Commerce.* The Harbor News Association, the first cooperative organization for gathering news, was formed in 1849. A number of female journalists gained influence, including Margaret Fuller of the *Tribune.* Advertising became more sophisticated. By 1860 the *Herald* had a circulation of 77,000 and was the world's largest daily newspaper. The *Tribune,* particularly through its weekly edition, was popular outside the city.

Journalism played an important role before and during the Civil War. The weekly edition of the *Tribune* had a national circulation of more than 200,000 as early as 1852 and provided extensive coverage of the intense debates in the West before the war. By 1861 the *Herald* was printing 135,000 copies a day. Greeley inveighed against slavery, seeing its abolition as a moral issue that transcended the preservation of the Union, while Bennett supported President Abraham Lincoln's policies halfheartedly. Censorship was pervasive, and when the *New York World* and the *Journal of Commerce* in 1864 published a forged document concocted by a stock-market speculator, the government forced them to suspend publication for two days. Coverage of the draft riots of 1863 was sensational, and the presidential election year of 1864 saw angry debates over the policies of Lincoln, who was strongly endorsed by only five of the 17 daily newspapers in the city. New formats were introduced by *Frank Leslie's Illustrated Newspaper* (weekly, 1855) and *Harper's Weekly* (1857), which incorporated large illustrations printed from wood engravings. Greeley and Bennett both died in 1872; James Gordon

News bulletin outside the New York Herald *at Park Row and Ann Street, 3 September 1881. A reporter brings information from the telegraph in the office about President James A. Garfield's condition several weeks after he was shot by a disgruntled office seeker.*

Bennett, Jr., took over the *Herald* and remained in charge until his death in 1918. Newspaper staffs became larger, and the telephone was used more widely for gathering news. The city was the national center for writers, who were drawn by the quality of the morning daily newspapers (the *Post* under the direction of E. L. Godkin was the only evening newspaper of high quality at the time). The city's dailies provided extensive reports on local party politics. In 1871 the Tweed Ring was exposed by the *Times* and ridiculed by Thomas Nast in cartoons for *Harper's Weekly.*



Circulations continued to grow toward the end of the nineteenth century. The most important issue in the city was the large influx of immigrants; by 1890 about 80 percent of the population had a foreign-born parent, and the number of foreign-language newspapers increased accordingly. In 1880 the first halftone photograph of good quality appeared in the *New York Daily Graphic.* Joseph Pulitzer bought the *World* in 1883 and by 1887 had morning, evening, and Sunday newspapers that allowed him to dominate the newspaper business (the Sunday edition alone had a circulation of 250,000, the largest of any newspaper in the nation). In 1888 the *Sun* published photographs of life in the slums by Jacob A. Riis. The *Wall Street Journal* was begun in 1889 by the Dow Jones financial service. The *New York Age,* published by T. Thomas Fortune from 1890, became a leading newspaper of the black press.

By 1890 stereotyped plates invented during the Civil War were used in new kinds of presses, allowing 48,000 12-page newspapers to be produced in an hour. Color printing was first used by the *World* in 1893, and color comics became a feature of the Sunday edition. The best-known comic strip was *Hogan's Alley* by R. F. Outcault, which depicted life in a tenement. The central character, a toothless child wearing a nightshirt dotted with blobs of yellow ink, became known to readers as the Yellow Kid. In 1895 William Randolph Hearst moved to the city from San Francisco and purchased the *New York Journal,* which attracted reporters from Pulitzer, and published the Yellow Kid as well. The *Journal* and the *World* became sensational, cramming pages with enormous headlines and photographs. This style, called YELLOW JOURNALISM by critics, was adopted by daily newspapers nationwide during the Spanish–American War. Along with the *Sun* under Charles A. Dana and the *Herald* under Bennett, the *Journal* and the *World* nonetheless attracted some of the best writers of the day, who gathered in the newspaper offices on Park Row and at neighboring steakhouses. Well-known reporters included Nelly Bly, Lincoln Steffens, and Stephen Crane.

Competition among newspapers increased during the following decades. The *New York Times,* which had been strong under Raymond, lost considerable prestige during the 1880s and 1890s until it was taken over in 1896 by Adolph S. Ochs, who in 1904 appointed Carr Van Anda as his managing editor and moved operations to a new building on Broadway known as the Times Tower (1904). Of the $100 million that the *Times* earned between 1896 and 1921, Ochs reinvested $96 million in the newspaper, which was widely regarded as the city's finest and most dependable by the end of World War I. Hearst began newspapers in other cities, and Pulitzer devoted the last years of his life to relentless crusades in the MUCKRAKING spirit. The *Jewish Daily Forward* was launched in 1897, the *Amsterdam News* in 1909. The *Herald* continued to offer comprehensive coverage, but the quality of the *Tribune,* the *Sun,* and the *Post* deteriorated. A number of press associations were formed about this time. The ASSOCIATED PRESS, the successor to the Harbor News Association, was reorganized in 1900. It had cooperative agreements with foreign news agencies and controlled much of the flow of news until E. W. Scripps formed the United Press (1907) and Hearst the International News Service (1909). The socialist daily newspaper the *New York Call* began publication in 1908 and became popular, but it suffered after 1918 when the *Times* led the major daily newspapers in promoting a wave of anti-Bolshevik hysteria nationwide. The *Call* lost its mailing privileges under provisions of the Espionage Act of 1917; its offices were later ransacked by government agents and it was forced out of business in 1923. German-language newspapers were also attacked. Hearst's newspapers and the *World* were among the few publications that condemned these events. The communist newspaper the *Daily Worker* was formed in 1924 and later renamed the *Daily World.*

The 1920s saw the introduction of tabloid newspapers that incorporated large photographs and wild headlines. One of the first TABLOIDS was the *Illustrated Daily News* (26 June 1919), soon renamed the *Daily News;* its circulation reached 750,000 by 1924 and two million before World War II. In 1924 tabloid newspapers were introduced by Hearst (the *Mirror*) and Bernarr Macfadden (the *New York Evening Graphic*). Popular for their columnists and bold format, tabloids put tremendous pressure on other newspapers; the *Herald* and *Tribune* merged in 1924, and the *World* was sold to the Scripps–Howard chain in 1931, which promptly closed it down and merged the evening edition into the *World–Telegram.* The *Sun* was absorbed by the *World–Telegram* in 1950. After Ochs's death in 1935 the *Times* was taken over by his son-in-law Arthur Hays Sulzberger. It soon had more comprehensive coverage of major stories, foreign correspondents, and more Pulitzer Prizes than any competitor. The largest foreign-language newspaper was the *New York Staats-Zeitung,* which at one point had a circulation of 250,000. The *Village Voice* began in 1955 as a weekly alternative to the daily press. Radio and television increased the importance of the press associations, and in 1958 the United Press and the International News Service merged to form United Press International.

A series of strikes during the early 1960s hurt newspapers. The business retained an unusually complicated structure, with press operators, drivers, reporters, and typographers each represented by different unions. The number of daily newspapers decreased from eight to three; among those that closed were the *Herald Tribune* in 1966 and the *Journal–American* (owned by Hearst) and *World–Telegram and*

Stacks of the Sunday New York Times *near a newsstand in Greenwich Village on a Saturday night, 1991*

Sun (owned by Scripps–Howard) in 1967, which together were known briefly in 1966 as the *World Journal Tribune.* The *New York Times* won two important cases in the U.S. Supreme Court: one concerning libel (*New York Times v. Sullivan,* 1964) and the other concerning an attempt by the federal government to prevent the release of the Pentagon Papers (1971). In 1982 United Press International moved its offices to Washington, D.C.

During the 1990s there was intense competition for readers and advertisers, especially among the city's three tabloids: *New York Newsday,* the *New York Post,* and the *Daily News.* After a long strike the *Daily News* was bought first by Robert Maxwell and then by Mortimer B. Zuckerman, and the *Post* underwent several changes of management before being acquired in 1993 by Rupert Murdoch, who had owned the newspaper from 1976 to 1988. By the first decade of the twenty-first century, New York City had four major daily newspapers, more than any other U.S. city. In addition, it was home to more than 175 other newspapers that served various neighborhoods and ethnic communities. Many foreign-language papers, such as the *Jewish Daily Forward* and the *Ming Pao Daily News* (with a circulation of 108,000), thrived in the city. The decade also witnessed several significant changes in the newspaper field. In October 2003 the parent company of *Newsday*, the Tribune Company, began issuing a free morning paper, *AM New York,* which gained a circulation of more than 300,000 by 2005. A competitor, *Metro New York,* was launched in May 2005 and also distributed for free. These papers became a common sight in the morning subway commute. In 2007 Murdoch's News Corporation purchased the *Wall Street Journal.*

New Springville. Neighborhood in central Staten Island, adjoining the Greenbelt and bounded by Bull's Head, Travis, Willowbrook, Lighthouse Hill, and the Fresh Kills at Greenridge. It is part of Community District 2. The area was first settled in 1680 when it was called Carle's Neck, for the extension of land between Main Creek and Richmond Creek. By about 1840 it included a small hamlet, a dock, a Methodist church, and several freshwater springs, surrounded by a patchwork of modest farmsteads, and was known variously as Springville and New Springville. Extant structures from the nineteenth century include the former Asbury Methodist Church (1849, replacing an earlier building) and the Sylvanus Decker Farmhouse (circa 1810), both designated city landmarks, and the Basketmaker's House (circa 1810, now at Historic Richmond Town). New Springville remained an agricultural district and the center of truck farming in Staten Island until the end of the 1950s when subdivision for tract housing accelerated. From 1926 to 1964 two small airports were situated on Richmond Avenue, the main thoroughfare of the neighborhood and the focus of commercial development through the end of the twentieth century. The population grew rapidly after the opening of the Verrazano–Narrows Bridge in 1964 and became increasingly diverse after 1970, as many residents of Brooklyn moved to the area to occupy new townhouses, garden apartments, and condominiums built near the Staten Island Mall, which opened on Richmond Avenue in 1973. During the 1980s Korean and Chinese immigrants settled in New Springville. At the turn of the twenty-first century large numbers of Jewish and Korean families lived there; Indian and Filipino immigrants had also settled in the area.

Newsweek. Weekly international news magazine launched in Manhattan in 1933 by Thomas J. C. Martyn, formerly a foreign editor of *Time.* After the death in 1961 of its owner Vincent Astor it was sold to the Washington Post Company. The magazine made its reputation by incorporating objective reporting, signed commentaries, and (from 1967) advocacy issues. It publishes several editions overseas, including one in Japanese. Since 2000, the magazine has expanded to include Arabic, Polish, Russian, Spanish, and Chinese language editions. The circulation worldwide was more than four million and the readership more than 21 million as of 2010. The offices are at 251 West 57th Street.

Elliot S. Meadows

News World. Original name of the New York City Tribune.

Newtown. Name used in colonial times for Elmhurst and for one of the three towns that made up what is now the borough of Queens. The first European settlement in Queens was made at Maspeth in 1642, attacked by Indians in 1643, and abandoned in 1644. Another settlement was made in 1652 at what is now Queens Boulevard and Broadway, a site well inland and less vulnerable to raiding; it was at first named Middleburgh and in 1664 renamed Hastings. Settlers often referred to it as the "new town" to distinguish it from the first settlement, and when the English set up a system of towns and counties in 1683 the name Newtown was given to the village and the township. In 1895–96 an area north of Newtown was developed by Cord Meyer (II), a real estate promoter who did not want his development to be associated with the pollution of Newtown Creek; in 1896 he prevailed on federal authorities to rename the area Elmhurst, although the name Newtown is retained by a high school and a subway station.

Vincent Seyfried

Newtown Creek. Tributary of the East River. It extends inland for a distance of 3.5 miles (5.6 kilometers), including a number of canals into Brooklyn, and is the boundary between Brooklyn and Queens. The creek was the route by which European colonists first reached Maspeth in 1642. During the American Revolution the British spent the winter near the creek, and the British military road that crossed Queens to what is now the Ma-

Newtown Creek, 2009

rine Air Terminal began at the town dock in Maspeth. Commercial vessels and small boats sailed the creek in the early nineteenth century. About 1860 the first oil and coal oil refineries opened along the banks and began dumping sludge and acids into the water; sewers were built to accommodate the growing neighborhoods of Williamsburg and Greenpoint and discharged their wastes directly into the creek, which by 1900 was known for pollution and foul odors. The water corroded the paint on the undersides of ships, and noxious deposits were left on the banks by the tides. High-level bridges over the creek were built from 1903 (some remain). State and city commissions sought unsuccessfully to improve the creek as it became one of the busiest commercial waterways in the country, second only to the Mississippi River in tonnage: 5,435,016 tons (4,929,560 metric tons) were transported in 1915 by 102,270 ships, which passed so frequently that traffic over the drawbridges was seriously disrupted. The channel was dredged constantly and widened by the federal government to accommodate marine traffic; the creek's natural depth was between 4 and 12 feet (1.2 and 3.7 meters). After World War II the creek's importance as a shipping route decreased, but it continued to be the site of many industrial plants. During the 1940s and 1950s, leaks at oil refineries including ExxonMobil and ChevronTexaco precipitated one of the largest underground oil spills in history. The spill was not discovered until 1978, and no action was taken until 1990 when ExxonMobil entered into consent decrees with the state to clean it up. The cleanup moved at a glacial pace through the early twenty-first century, when the 17-million-gallon oil spill covered more than 50 acres (20.2 hectares) underground. In 2004 residential property owners filed a lawsuit against the oil companies, and in 2008 efforts were under way to have the creek designated a federal Superfund site to speed the cleanup process. The Newtown Creek Alliance, Riverkeeper, and other organizations attempted to restore and protect the creek, and students reintroduced oysters, which act as natural filters, to its waters.

Vincent Seyfried

New Utrecht. Neighborhood in southwestern Brooklyn, lying within Bensonhurst. The land was inhabited by Nyack Indians in 1647 when the governor of New Netherland granted a deed to Anthony Jansen van Salee. It became one of the first six towns in Kings County and included what became Bensonhurst, Bath Beach, Dyker Heights, Mapleton, and Bay Ridge. The first European settlement was a house and a mill built in 1652 by Cornelius van Werckhoven (a schepen, or alderman, in Utrecht in the Netherlands), his two children, and their tutor, Jacques Cortelyou. After van Werckhoven's death in 1655 Cortelyou assumed leadership of the settlement, secured patents for land later occupied by Fort Hamilton, and divided the parcel into 20 plots of 50 acres (20 hectares) each, the last of which he reserved for the town's poor. In 1677 residents formed the Reformed Protestant Dutch Church: its building, erected in 1828, stands at 18th Avenue and 83rd Street.

By 1738 there were 282 inhabitants, of whom 119 were slaves. Farmers raised cattle and grew grains and tobacco. The population grew to 907 in 1810, 1009 in 1820, 2129 in 1850, and 4742 in 1880 as residents gradually sold land to developers who built suburban houses. The remaining truck farmers grew vegetables to sell to the growing population of Brooklyn. The opening of the Sea Beach, Coney Island, and West End steam railroads in the 1870s accelerated development of the area as a suburb. New Utrecht lost its identity when it was annexed by the City of Brooklyn in 1894 and is now considered a small neighborhood of Bensonhurst.

Stephen Weinstein

New Utrecht Reformed Church. Dutch Reformed church in southwestern Brooklyn, at 18th Avenue between 83rd and 84th streets. It opened in 1677 in the village of New Utrecht (1661) and was the fourth Dutch Reformed church in Kings County. The original building, erected in 1700, was repaired in 1774 and used as a hospital by the British during the American Revolution; it was demolished owing to structural weakness in 1827 and replaced in 1828 by a Georgian Gothic church built of granite with Victorian milk-glass windows in brick frames. A parsonage in the Dutch shingle style was added on 83rd Street in 1885 and a parish house in a Romanesque Revival style on 84th Street in 1892. It was declared a New York City landmark in 1966, and the church and the cemetery are both listed on the National Register of Historic Places. In 1998 the parish house was also landmarked.

Kevin Kenny

New Venice. Original name of EDGEMERE.

New Year's Eve. The first celebration of New Year's Eve in Times Square took place in 1906, sponsored by the *New York Times* to mark the completion of its new headquarters. The event was staged by the newspaper's publisher Adolph Ochs, who conceived of an elaborate "time ball" that would descend from atop a building precisely at midnight, intentionally recalling the globes used in most U.S. cities during the 1870s and 1880s to keep time and synchronize watches. The brightly lit ball of Times Square became an annual feature of the celebration, except for two years during World War II. Each New Year's Eve the spectacle drew hundreds of thousands of people to Times Square and millions of television viewers from across the nation. From the early 1990s onward, the Times Square Business Improvement District, now the Times Square Alliance, has hosted the New Year's Eve celebration. For the centennial of the New Year's Eve ball in 2008, the Times Square Alliance introduced a new LCD crystal ball that was twice as bright, had enhanced color capabilities, and was more environmentally friendly.

New York, New Haven and Hartford Railroad. Railroad formed in 1872, the first to connect New York City with Boston. It

superseded the New York and New Haven Railroad, which was chartered in 1844 to operate between Canal Street and New Haven, Connecticut; in New York City it used track owned by the New York and Harlem Railroad. Service to Boston and New England was taken over by Amtrak in 1971; the line between New York City and New Haven continued to serve commuters and became administered by the Connecticut Department of Transportation and the Metropolitan Transportation Authority of New York State.

John L. Weller, *The New Haven Railroad: Its Rise and Fall* (Mamaroneck, N.Y.: Hastings House, 1967)

See also Railroads.

John Fink

New York, Westchester and Boston Railroad. Railroad operating from 24 May 1912 as a modern, four-track subsidiary of the New York, New Haven and Hartford Railroad. It inherited the rights of the New York, Housatonic and Northern Railroad and the New York and Portchester Railroad, both defunct, and was built at a high price. The operators of the railroad believed that the commercial center of the city would continue to move north, but the zoning law of 1916 contained the central business district below 59th Street and the line ran no farther south than 133rd Street at the Harlem River in the Bronx. Hindered by their inability to transport passengers into Manhattan, the directors abandoned the line on 31 December 1937. The portion of the line in the Bronx reopened on 15 May 1941 as the Dyre Avenue shuttle of Interborough Rapid Transit. The New York, Westchester and Boston was the last important railroad built in New York City.

John Fink

New York Academy of Arts. Original name of the American Academy of the Fine Arts.

New York Academy of Medicine. Nonprofit corporation formed in 1847 to raise the standards of medical education and promote the health of the public. It originated at a time when physicians were struggling to establish themselves as members of an ethical and scientific profession. The academy's status rose with that of the profession, and by the time it moved into the building at 119 West 43rd Street in 1890, it was renowned for its expertise on issues of municipal health in New York City. The academy advocated improved public hygiene and sanitation as a means of staving off epidemics. It moved in 1926 into a building designed by the architects York and Sawyer at 2 East 103rd Street. Recommendations by special committees of the academy helped give rise to the Department of Hospitals (1928), to a review of maternal deaths in the 1930s, and to the New York City Health and Hospitals Corporation (1970). During the mid-1990s the academy was particularly well known in the field of medical education. Its health library, the second largest in the United States, contains more than 14 miles (23 kilometers) of shelves and nearly 700,000 catalogued works, including one of the world's finest collections of rare medical Americana and early European medical materials, and one of the world's largest collections of cookbooks (donated by a physician concerned with nutrition). Besides offering a wide range of information services to its fellows and to the general public, the institution serves as a regional library of medicine and coordinates cooperative services among health sciences libraries in 10 northeastern states and Puerto Rico. In 1991 the New York Academy of Medicine installed its first full-time president, Jeremiah A. Barondess, who at the request of Mayor David N. Dinkins launched a new study of the city's municipal hospital system. In the early twenty-first century the academy had more than 2100 fellows who worked in the fields of medicine, social work, nursing, law, education, and research.

Sandra Opdycke

New York Academy of Sciences. Organization formed as the Lyceum of Natural History by scientific polymath, educator, and politician Samuel Latham Mitchill (1754–1831), who convened the first meeting on 29 January 1817; most of the early members were students and faculty at the College of Physicians and Surgeons. Progress came haltingly, and it was not until 1823 that the Lyceum began regular publication of its journal *Annals of the New York Academy of Sciences,* which continues in the twenty-first century as one of the longest-published scientific journals in the United States. In 1836 the academy moved from rented rooms at the New York Dispensary to its own building on Broadway, but financial pressures forced the members to sell it in 1844. The following year, the Lyceum moved into the Medical School Building at New York University and shared quarters with the university for 32 years.

By 1860 the Lyceum maintained a library and a natural history museum, but eventually some functions of the Lyceum ceased: it no longer had any role as a natural history museum after its museum was destroyed by fire in 1866, and no scientific research was carried on within it after a professorate oriented toward research emerged at Columbia University. The Lyceum's role was also changed when its members helped to establish the American Museum of Natural History (1868), as science became increasingly specialized and emerged as a profession, and as societies devoted to individual disciplines grew. In 1876 the Lyceum reorganized as the New York Academy of Sciences. The new organization was controlled not by weekly membership meetings but by an elected council and was divided into four sections: biology; chemistry and technology; geology and mineralogy; and physics, astronomy, and mathematics. As a general scientific society the academy was responsible in 1887 for the organization of the first meeting of the American Association for the Advancement of Science, held in New York City. Under the leadership of Nathaniel Lord Britton the academy in 1891 organized the Scientific Alliance, a federation of scientific societies that published a monthly bulletin and from 1906 occupied quarters at the American Museum of Natural History. The early decades of the twentieth century were a time of prosperity for the academy; such scientists as Edmund Beecher Wilson, Thomas Hunt Morgan, Franz Boas, James McKeen Cattell, and Michael Pupin were active members. In 1912 the academy organized a survey of the geology, anthropology, and natural history of Puerto Rico and the Virgin Islands that continued for three decades. Under the auspices of the academy, scientists from many institutions in New York City conducted expeditions, the results of which the academy published.

From 1938 until the present day the New York Academy of Sciences has sponsored conferences on a wide range of scientific topics as a means of communicating research results to the scientific community. Among its notable "firsts" were conferences on antibiotics in 1946, on acquired immune deficiency syndrome (AIDS) in 1983, and on severe acute respiratory syndrome (SARS) in 2003. Since 2002 the academy has sponsored efforts to build scientific communities through programs such as the Frontiers of Science program and the Scientists Without Borders program, which is mobilizing and coordinating science-based efforts to address health, environmental, and other challenges in the developing world, and the creation of global science alliances with Mexico City, the United Kingdom, and China, among others. The academy's online offerings include eBriefings, its Science and the City Webzine, and access to its extensive library of *Annals* volumes. The organization also publishes a member magazine.

Throughout its history, the academy has counted among its membership leaders in the sciences, business, academia, and government, including U.S. presidents Thomas Jefferson and James Monroe, Thomas Edison, Louis Pasteur, Charles Darwin, Margaret Mead, and Albert Einstein. More recently, members include a number of Nobel laureates, such as Harold Varmus, Eric Kandel, Paul Green-

gard, and James Watson. The academy in the early twenty-first century had more than 25,000 members in 140 countries.

New York African Society for Mutual Relief. Formed in New York City in 1808, it was incorporated in 1810 when Mayor DeWitt Clinton carried a special petition to the state legislature at Albany, making the organization the first to be incorporated by black Americans. Early members included the influential Episcopal minister Peter Williams, Jr.; the businessman William Hamilton, Sr.; John Teasman, an instructor at the New York African School; James McCune Smith, the nation's first black physician; Christopher Rush, one of the first African Methodist Episcopal bishops; Philip A. Bell, the antislavery journalist and editor of the *Colored American;* and Thomas Downing, proprietor of one of the most exclusive restaurants in Manhattan. All the members staunchly opposed slavery and promoted the black national convention movement and the independent black church movement. African Society Hall, a building constructed in the rear of the society's first property in lower Manhattan, was the meeting place of most of the African associations of antebellum New York City and contained a trap door so that it could fulfill its dual role as a stop on the Underground Railroad.

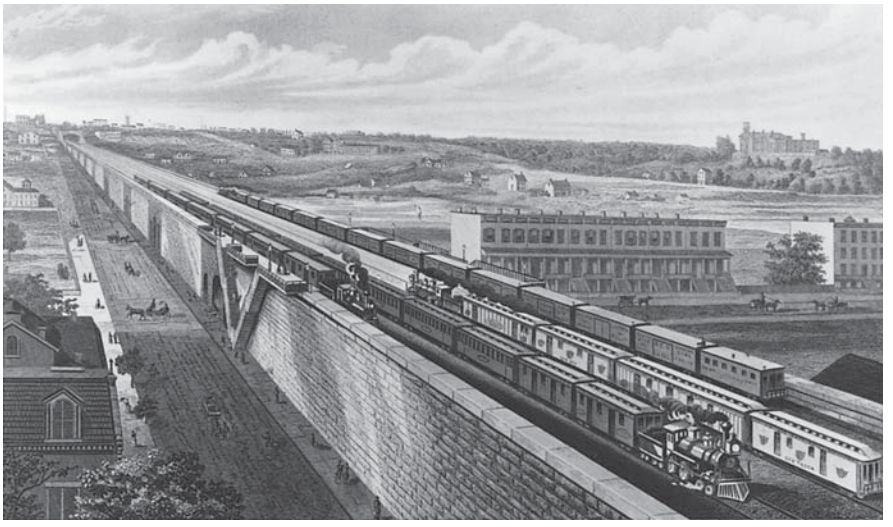
After the Civil War the society was struck by a number of internal scandals that shook its members' faith in mutual relief as a principle and collective action as a strategy. It came close to disbanding on more than one occasion but was saved by the inspired work of its oldest members: the printer John J. Zuille, one of the leading antislavery spokesmen in the city; E. V. C. Eato, grand master of the state's black Masons; William P. Powell, owner of a seaman's home and a nationally known abolitionist; and Peter Vogelsang, a veteran of the Union army. Together they brought a new unity to the society and a new commitment to its struggle for equality. By 1900 Booker T. Washington could refer to the New York African Society for Mutual Relief as the most influential and successful financial association among black Americans. During the decades that followed, the society became active in the politics of New York City and made public declarations on such national issues as the Scottsboro case in Alabama. Its membership included the city's foremost ministers, business leaders, politicians, and intellectuals. Among these were the real estate dealer John Nail and the dentist Walter N. Beekman.

From the 1880s to 1945 the already sizable holdings of the New York African Society increased by $1000 annually, and by 1910 each membership was worth several thousand dollars, although the initiation fee was far smaller. The members of the society therefore faced a dilemma: either the initiation fees and dues would need to rise to a prohibitive level, or each new membership would reduce the worth of all existing ones. The society struggled with declining membership for four decades until many of the society's benefits were duplicated by the New Deal. In 1945 the remaining members began the sad work of dismantling the society and liquidating its impressive holdings.

Craig Steven Wilder

New York Age. Weekly newspaper launched in 1887 as an organ of blacks who advocated equal rights. It was edited from 1889 to 1907 by the distinguished black journalist T. Thomas Fortune, who urged blacks to take part in the political process. In 1907 he sold his interests to Fred R. Moore, secretary and national organizer of the National Negro Business League, who continued to edit and publish the newspaper, with his son-in-law Lester A. Walton as its managing editor. In 1949 black ownership ended when the newspaper was purchased by Richard Bourne-Vanneck and his wife. It ceased publication in 1960.

Sandra Roff



New York and Harlem Railroad. First railroad in New York City, originating in 1832 with horses for motive power and connecting Union Square with 23rd Street and Fourth Avenue. Steam-powered operations began in 1835 when the railroad extended its line to 125th Street and Fourth Avenue in Harlem. It built the city's first major train station, at 27th Street and Fourth Avenue, and eventually built as far north as Chatham, New York, and as far east as Albany. In 1857 it merged with the New York and Hudson River Railroad to form the New York Central and Hudson River Railroad. The tracks of the railroad between New York City and Dover Plains through the Bronx River Valley form the backbone of the Metro-North Commuter Railroad in the twenty-first century.

See also Railroads, §1.

John Fink

New York and Mississippi Valley Printing Telegraph Company. Forerunner of Western Union Company.

New York and Sea Beach Railway. A railway that began operating on 18 July 1877 as a small steam line for transporting passengers from New Utrecht Avenue in Brooklyn to Coney Island over 4.5 miles (7 kilometers) of private track. It was the last line built specifically to profit from the enormous Coney Island summer traffic. The railroad's depot at Coney Island was the Sea Beach Palace, a building constructed for the Centennial International Exposition of 1876. The line was extended from New Utrecht Avenue to the ferry terminal at 65th Street in 1879 and was profitable to the end of the 1880s, but during the 1890s it was undermined by new trolley lines. The line was leased to the Brooklyn Rapid Transit (BRT) system in 1897, electrified, and linked to the elevated lines in Brooklyn. Its track was used by trolleys until 1907 and in 1915 was integrated into the Fourth Avenue subway line. Now known as the Sea Beach or "N" line, the line has four tracks, of which two furnish the normal

New York and Harlem Railroad, four-track viaduct over Harlem flats between 98th and 112th streets

service; there are nine stations and a terminus at Stillwell Avenue, Coney Island.

Vincent Seyfried

New York Aquarium. Aquarium opened by the City of New York at Castle Clinton in Battery Park in 1896. The New York Zoological Society took over the administration of the facility at the city's request in 1902; under the first director elected by the society, Charles H. Townsend, steps were taken to alleviate crowded conditions and maintenance problems. Charles M. Breder, Jr., succeeded Townsend in 1937 and helped to establish the aquarium's international reputation for scientific research. Aided by its location, the aquarium flourished for many years and drew 7000 visitors a day until the parks commissioner, Robert Moses, temporarily closed it in 1941 because of construction of the Brooklyn–Battery Tunnel; ensuing plans to demolish Castle Clinton and close the aquarium permanently aroused such strong protest that the castle was spared and the aquarium moved to the Bronx Zoo. Because of pressures to distribute funds for cultural attractions evenly among the boroughs, the Bronx was rejected as the site for a new aquarium in favor of Coney Island, where a new facility opened in 1957 near the boardwalk. An affiliated marine laboratory opened nearby in 1964 and was dedicated in 1967 as the Osborn Laboratories of Marine Sciences (named for Henry Fairfield Osborn), where research was conducted in fish genetics, fish pathology, aquaculture, and pharmacological applications of marine science. It was the first aquarium to breed and exhibit beluga whales, from 1961 through 2005, when the whales were transferred to a cooperative breeding program at the Georgia Aquarium. On 12 June 2007, Akituusaq, a 115-pound (52-kilogram) male Pacific walrus, was born, the first walrus born at the aquarium. In the early twenty-first century the aquarium's 14-acre (5.7-hectare) site is home to more than 8000 animals representing 350 species in outdoor and indoor habitats. The aquarium draws more than 750,000 visitors a year, mostly from Brooklyn, and is active in education, scientific research, and conservation.

Elliot S. Meadows

New York Association for New Americans [NYANA]. Resettlement agency. Formed in 1949, it became the largest agency of its kind in the United States by assisting more than a quarter of a million people referred by the Hebrew Immigrant Aid Society, including Jewish refugees from Europe (1949–53); Greece (1955–56); Hungary (1956–58); Egypt and Romania (1956–63); Cuba (1961–67); Czechoslovakia (1968–69); Poland (1968–69); the Soviet Union and Russia (from 1969), which eventually accounted for the largest number of refugees; Syria (1977); and Iran (from 1983). In 1975 the association began receiving federal funds to aid in the resettlement of non-Jewish refugees from Southeast Asia; it also received funds from the United Jewish Appeal, the United Way, private foundations, and government grants. From 1975 through 1990 the association assisted refugee "boat people" from Vietnam, Cambodia, and Haiti, as well as Ethiopian and Iranian Jews. In the mid-1990s the association resettled many Tibetans and Syrian Jews; it continues in the early twenty-first century to support services for refugees and immigrants.

Joseph S. Lieber

New York Association for the Blind. Name used from 1906 to 1990 by the Lighthouse.

New York Athletic Club. Private club at Central Park South and Sixth Avenue, formed in 1868 by William B. Curtis, Henry E. Buermeyer, and John C. Babcock in the backroom of the Knickerbocker Cottage on Sixth Avenue between 27th and 28th streets. On 11 November 1868 the club sponsored the New York Athletic Games, the first indoor amateur athletic meet in the United States, in the unfinished Empire Skating Rink on Third Avenue. The meet drew more than 1000 spectators, who saw six track and eight field events; among the innovations introduced at the meet were cleated athletic shoes and an early bicycle with a large front wheel called the velocipede. The club built a boathouse on the Harlem River in 1870, opened a clubhouse in Mott Haven in June 1874, and in 1880 purchased an island of 30 acres (12 hectares) in Long Island Sound as a training retreat for its elite competitors. Called Sheffields Island (later renamed Travers Island for the club's president William R. Travers), the island had two buildings in which as many as 70 athletes could live and train while carrying on business in New York City. By 1898 the club had many prominent businessmen in the city as members. In 1903 the club built the first squash courts in the United States. The club's building on 180 Central Park South opened with great fanfare on 22 January 1929 and now houses extensive athletic facilities, restaurants, and guest rooms. In the twenty-first century the club continues to offer its facilities to members at both its Manhattan and Travers Island locations.

Robert Hillenbrand

New York Bible Society. Organization formed on 4 December 1809 at the home of Theodorus Van Wyck to distribute English-language Bibles without note or comment in New York City. An auxiliary of the American Bible Society from 1829 to 1912, it had offices in the society's Bible House on Astor Place until 1919. After briefly occupying quarters on Madison Avenue, it moved in 1921 into a building at 5 East 48th Street donated by James Talcott and later named for him. Now known as the International Bible Society, it has moved to Colorado Springs.

Alana Erickson Coble

New York Botanical Garden. Public botanical garden in the Bronx. See Botanical gardens.

New York Cancer Hospital. See Memorial Sloan–Kettering Cancer Center.

New York Cares. Nonprofit organization that helps support 850 nonprofit agencies, public schools, and other social services in need of volunteers throughout the five boroughs. It is New York City's leading organization for unaffiliated volunteers and is the umbrella organization for 500 flexibly scheduled volunteer opportunities. It is known for organizing programs such as its annual coat drive, providing emergency response services, and restoring parks and cultural institutions throughout the city. Twice a year New York Cares sponsors New York Cares Day and Hands on New York Day, which deploys 12,000 volunteers into the city's parks and school systems. Because of the success of the program, the Hands On Network, a national volunteer and community service organization that works closely with New York Cares, was founded. In 2009 New York Cares garnered support from 48,000 volunteers, implementing programs at 1000 community organizations and assisting 400,000 New Yorkers.

Stephanie Miller

New York Central Lines LLC. Railroad company formed in 1998, named after the New York Central Railroad, which ran from 1832 to 1968. Owned and operated by CSX Transportation, since 2003 its trains continue to transport freight goods along lines in the Northeast, Midwest, and Canada.

Ben Silk

New York Central and Hudson River Railroad. Principal route for passengers and freight traveling west from New York City during the late nineteenth century. Its origins may be traced to the New York and Harlem Railroad (1832) and the Hudson River Railroad (1846); it was known as the New York Central Railroad until Cornelius Vanderbilt merged it in 1869 with the Hudson River Railroad. The railroad followed the course of the Hudson River and the Erie Canal and because of its easy grades gained a competitive advantage

over other railroads and canals. In 1871 passenger train operations were consolidated at the new Grand Central Terminal on 42nd Street. Like its competitor the Pennsylvania Railroad, the New York Central and Hudson River cut the travel time between New York City and Chicago to 16 hours during the 1930s with its fastest train, the Twentieth Century Limited. In 1893 its Empire State Express set a speed record of 112 miles (180 kilometers) an hour. When the new Grand Central Terminal opened in 1913, the railroad's suburban electric trains, which carried commuters, used the lower level and its intercity trains the main level. In 1968 the railroad merged with the Pennsylvania Railroad to form the Penn Central, which declared bankruptcy in 1970. Its intercity routes were taken over in 1971 by the National Railroad Passenger Corporation (Amtrak), its commuter routes in 1972 by the Metropolitan Transportation Authority (MTA), and its freight operations in 1976 by the Consolidated Rail Corporation (Conrail).

Robert A. Olmsted

New York Chamber of Commerce. See Partnership for New York City (i).

New York City Ballet [NYCB]. Dance company, also known as City Ballet, formed in 1948 by Lincoln Kirstein and George Balanchine. In 1933 Kirstein invited Balanchine to the United States to establish a ballet school and company where American dancers could receive instruction from renowned ballet masters and perform new repertory for U.S. audiences. Balanchine agreed and the two first founded the School of American Ballet (SAB) in 1934, which served as an incubator for what would become New York City Ballet. To guarantee that the students would develop to fulfill the professional demands of the company, Balanchine supervised the training of his dancers, whom he taught to move with great precision, speed, and keen musicality. He served as SAB's artistic director and chairman of faculty and later as City Ballet's ballet master-in-chief. Balanchine created a unique American style that contrasted sharply with the previous classical aesthetic. In 1935 he and Kirstein founded their first professional company, the American Ballet. However, it ended soon after the collapse of both its exchequer and manager. During the following years several ballet companies were established and dissolved, and only the continued existence of SAB provided any indication that a permanent company in the future was possible. In 1946 Balanchine and Kirstein formed Ballet Society, which performed at New York's City Center of Music and Drama over the next two years. During that time Morton Baum, chairman of the City Center finance committee, began negotiations that led to Ballet Society joining City Center as a permanent ballet company called New York City Ballet. On 11 October 1948 NYCB opened its first season. Sixteen years later, City Ballet permanently moved to the David H. Koch Theater, named at the time New York State Theater, in Lincoln Center.

Balanchine worked with the music of Bach, Mozart, Tchaikovsky, Ravel, Ives, Gershwin, Sousa, Alexander Glazounov, and Mikhail Glinka, and music connoisseurs often attended NYCB performances to hear scores that were not played in concert halls. More than by any other composer, Balanchine was influenced by his friend and frequent collaborator Igor Stravinsky. For his eight-day Stravinsky festival (1972), Balanchine choreographed eight of the 20 new ballets presented. Balanchine also found inspiration with certain dancers he called his "muses," such as Suzanne Farrell. The Balanchine aesthetic predominated in the works of other company choreographers, including that of Frederick Ashton, Antony Tudor, John Taras, Todd Bolender, Peter Martins, and Jerome Robbins, an associate director of the company from 1949 to 1956 and again from 1969 to 1990. Robbins's work with the company was characterized by humor, introspection, and an impressive command of dance values. Among his most successful early ballets were *Cage, Concert,* and *Afternoon of a Faun,* an adaptation of the controversial work by Vaslav Nijinsky. His later ballets included *Dances at a Gathering, Goldberg Variations, Glass Pieces,* and *I'm Old Fashioned,* a tribute to Fred Astaire.

On Balanchine's death in 1983 Robbins and Martins, who joined the company in 1970 as a principal dancer, became the new ballet masters-in-chief. After several early pieces reflecting Balanchine's influence, Martins created a number of original ballets, including *Ecstatic Orange* (1987) and *Fearful Symmetries* (1990), both to minimalist scores, as well as his own renditions of *Swan Lake* (1999) and *Romeo+Juliet* (2005). Kirstein retired as the general director in 1989, and Robbins resigned in 1990; Peter Martins became the sole ballet master-in-chief after Robbins's resignation. During the early 1990s NYCB started the Diamond Project, an initiative to foster works by new choreographers and present them every two to four years. To honor its 50th anniversary, City Ballet received coverage and recognition from various outlets, including a major exhibition in the New-York Historical Society. In 2004 *Live from Lincoln Center* broadcast the NYCB celebration of the 100th birthday of George Balanchine in real time to fans on Lincoln Center Plaza and to television viewers at home. The company also received attention during the 2000s for its charitable works. After the terrorist attacks of 11 September 2001 the company performed a special show for the families of victims. Four years later NYCB ended the largest capital campaign ever conducted for a dance company, raising $58 million over five years. City Ballet and New York City Opera announced in 2009 that engineer and businessman David H. Koch had donated $100 million to modernize, enhance, and maintain New York State Theater, which was renamed the David H. Koch Theater. NYCB is considered one of the top ballet companies in the world. It employs about 100 dancers and offers more than 20 weeks of performances annually in the city.

Nancy Reynolds, Frank Nestor

New York City Community College of Applied Arts and Sciences. Former name of New York City Technical College.

New York City Farm Colony–Seaview Hospital Historic District. First designated historic district on Staten Island, occupying an elevated site abutting and partly within the Greenbelt, bounded to the north by Walcott and Brielle avenues, to the east by Manor Road, to the south by Rockland Avenue, and to the west by Colonial Avenue and Forest Hill Road; it is bisected by Brielle Avenue. The Richmond County Poor Farm was founded in 1829 as a municipal poorhouse where residents farmed the land for their keep. After consolidation in 1898 it was renamed the New York City Farm Colony and in the early twentieth century supported more than 800 residents with fruit, vegetables, pigs, and chickens. New buildings were added west of Brielle Avenue by the Department of Public Charities from 1903 to 1914; the large, gambrel-roofed fieldstone dormitories and service buildings were designed by a number of firms including Renwick, Aspinwall and Owen to evoke colonial domestic architecture, contrasting with the severe institutional almshouses formerly used on Blackwell's Island. Four large neo-Georgian dormitories were added in 1934. In 1915 the Farm Colony merged with nearby Seaview Hospital; the farm became a geriatric facility from the 1950s until it closed in 1975. In 1982 the Department of General Services took possession and transferred 25 acres (10 hectares) to the Parks Department.

Seaview Hospital, built on the opposite side of Brielle Avenue, was the country's largest and most expensive municipal facility for treating tuberculosis. The original portion consisted

of patients' pavilions, dining halls, nurses' and doctors' residences, and a surgical pavilion; it was carefully designed by Raymond F. Almiral for maximum efficiency and exposure to air, light, and pleasant vistas. The patient pavilions had capacious sleeping porches and solaria and were enlivened by distinctive tile roofs and mosaic friezes. The hospital was dedicated in 1913; later additions, including a number of open-air pavilions (1917), increased the capacity of the hospital to 2000 patients. In 1951 the first successful clinical trials of a nontoxic cure for tuberculosis were undertaken at Seaview, which was converted to other uses after 1961. In the early twenty-first century the hospital remains in operation, housing 300 beds in portions of the old complex and several modern buildings; it is known for its long-term-care brain injury unit. In 1985 the Landmarks Preservation Commission designated the area encompassing the Farm Colony and Seaview Hospital a historic district, including 120 acres (48.5 hectares) and 11 buildings.

Shirley Zavin, Kate Lauber

New York City Health and Hospitals Corporation [HHC]. Nonprofit corporation created by state law on 27 May 1969 to administer all municipal health facilities in New York City. It began operations on 1 July 1970 with a board of 15, of whom five members were municipal officials, five were appointed by the mayor alone, and five were appointed by the mayor with the approval of the City Council. Like its predecessor, the Department of Hospitals, HHC was required to focus on serving the city's poor. Its formation followed a decade of increasingly strident criticism of the municipal hospital system, and it was believed that a quasi-independent corporation would encounter fewer of the bureaucratic constraints that many investigative commissions had identified as a major difficulty in providing health care. HHC did have somewhat more autonomy than its predecessor, but not to the extent hoped for by its supporters. In addition to political obstacles it was impeded by the city's severe fiscal crisis. Caught between municipal deficits and rising medical costs, it was forced during the late 1970s and 1980s to close some hospitals and consolidate others. A series of untoward deaths in municipal emergency rooms in 1991 drew intense public scrutiny, as a result of which the director of HHC resigned and Mayor David N. Dinkins requested an investigation of the municipal system by the New York Academy of Medicine. At that time the system contained about 9000 beds, barely half the number managed by the Department of Hospitals in 1929, and its facilities cared for 30 percent of the city's newborn and pediatric patients, 40 percent of its substance abuse patients, and 50 percent of its psychiatric patients, as well as 10 percent of the patients hospitalized for AIDS in the entire United States. In the early twenty-first century HHC attempted a transformation in response to its critics, launching a $1.3 billion building and modernization plan; criticism was revived in 2008 when a patient died in the waiting room at Kings County Hospital Center. HHC remained the largest municipal hospital system in the country, with 11 acute-care hospitals, four skilled nursing facilities, six diagnostic and treatment centers, home health care, and more than 80 community clinics.

New York City Housing Authority. See Housing.

New York City Lunatic Asylum. Municipal residential facility located on the northern end of Roosevelt Island dedicated to the treatment and housing of the mentally ill during the mid- to late 1800s. By the early 1800s modern theories of mental illness emphasized the need for humane medical care in a peaceful, orderly environment. With these principles in mind, the Lunatic Asylum was designed by Alexander Jackson Davis and completed in 1839. Originally intended to be an expansive complex, the facility ultimately consisted of a central building, the Octagon, at the center of two long wings. The Octagon and its magnificent rotunda were built from gray stone in what Davis called the "Tuscan style," but the design also included strong Greek Revival influences.

Insufficient funding and a rapidly rising rate of mental illness led to overcrowding and substandard care (often provided by prisoners from the nearby penitentiary). Conditions at the asylum were exposed by the journalist Nelly Bly, who feigned mental illness in order to be committed. She reported on her experiences for the *New York World,* and later in a book, *Ten Days in a Mad-House.* By 1894 the task of managing the mentally ill would prove too great for the city, and the asylum's patients were transferred to state facilities. The Lunatic Asylum was renamed Metropolitan Hospital and became a general care facility.

Eric Hollingsworth

New York City Marathon. An annual footrace first staged in 1970. See Running.

New York City Mission Society. Missionary organization formed on 19 February 1827 to encourage religious conversions by distributing religious tracts. Originally known as the New York City Tract Society, it began operating mission stations in 1852. It was renamed the New York City Mission and Tract Society in 1866 and in 1870 shifted its efforts to opening churches in poor neighborhoods; the first, Mount Olivet, was at 63 East Second Street. With the Association for Improving the Condition of the Poor, the Charity Organization Society, and the Children's Aid Society, the New York City Mission and Tract Society received the United Charities Building at 105 East 22nd Street as a gift from John M. Kennedy in 1891. Given its current name in 1913, it advises churches and social service agencies into the twenty-first century.

New York City Opera. Formed in 1943 as the City Center Opera Company by Mayor Fiorello H. La Guardia and other prominent citizens, it was intended for lower- and middle-class New Yorkers who could not afford the Metropolitan Opera and to provide a forum for emerging American singers, conductors, and composers. In its early years and under the direction of Julius Rudel (1957–79) the company gave the premieres of works by Dominick Argento, Jack Beeson, Lee Hoiby, Leon Kirchner, Robert Kurka, Gian Carlo Menotti, Douglas Moore, Thomas Pasatieri, Ned Rorem, Robert Ward, and Hugo Weisgall and introduced many American singers, including soprano Beverly Sills and basses Norman Treigle and Samuel Ramey, as well as the Spanish tenors Plácido Domingo and José Carreras. The company performed at City Center on West 55th Street until 1966 when it moved to the New York State Theater at Lincoln Center. After retiring from the stage Sills managed the company from 1979 to 1989; she built a large audience by programming works from the operatic mainstream and musical comedies and by introducing supertitles (displaying below the proscenium arch an English translation of the text being sung), as a result of which a large deficit was eliminated and the company's operating budget was nearly tripled (to $28 million). Sills was succeeded in 1990 by the conductor Christopher Keene, who emphasized adventurous repertory of the sort that had characterized the company's early years. Under director Paul Kellogg (1996–2007) the company pursued unsuccessful attempts to build a new theater and sever its affiliation with Lincoln Center. The New York City Opera has proved resilient in the face of financial challenge, protracted union strikes, and the loss of its costumes in a warehouse fire in 1985. George Steel took the reins as general director in 2009 and oversaw the renovation of the David H. Koch Theater during the 2008–9 season.

James M. Keller

New York City Partnership. See Partnership for New York City (ii).

New York City Technical College. College of the City University of New York at 300 Jay Street in Brooklyn, formed in 1946 by the state legislature as the New York State Institute of Applied Arts and Science, one of five experimental technical schools intended for returning veterans of World War II. In 1948 it became part of the State University of New York. The New York City Board of Estimate assumed responsibility for its administration in 1953 and changed the name to the New York City Community College of Applied Arts and Sciences, and the college joined the city university system in 1964. In 1971 it absorbed the Voorhees Technical Institute (originally the New York Trade School) and opened a branch campus at 450 West 41st Street in Manhattan (closed in 1987). Bachelor's degrees were first awarded in 1980 when the school took its current name. New York City Technical College is the only technical college in the city university system. It offers bachelor's degrees in hotel and restaurant management, legal assistant studies, telecommunications, and graphic arts, among other things. In 2002 it changed its name to New York City College of Technology. In 2009 about 15,400 students were enrolled in its degree programs.

Marc Ferris

New York City Transit Authority. Public authority created by the State of New York to operate and maintain the public transit system in New York City. It assumed responsibility for running the city's subways on 15 June 1953. In 1968 the authority became part of the Metropolitan Transportation Authority (MTA). New York City Transit Authority is the agency's legal name; in the mid-1990s MTA changed its common name to MTA New York City Transit. In addition to the city's subways it operates local buses, express bus routes, and the Staten Island Railway. From 1982 to the present the authority has implemented a massive capital renewal program, accompanied by management changes, that have revitalized the city's subway and bus systems. More than $45 billion was allocated to the capital program between 1982 and 2009. In 2007 the agency had an operating budget of $6.5 billion (58 percent of which was covered by fare revenues, the balance from subsidies), and 47,696 employees. On an average weekday in 2007, it had 7.5 million riders, including 5.1 million on the subway and 2.4 million on buses. Annual ridership in 2007 was more than 1.5 billion (the highest since 1952) for the subway, and 738 million for buses.

Peter Derrick

New York City triathlon. Annual endurance sporting event involving swimming, biking, and running. Begun in 2001 it quickly became one of the premier triathlons in the country, drawing Olympians from around the world as well as more than 3000 amateur athletes and fitness enthusiasts in 2008. The event is run on a course of the standard Olympic distance. The 1500-meter swim is held in the Hudson River, beginning at West 98th Street and finishing at the 79th Street boat basin. Competitors then transition to their bicycles for a 40-kilometer round-trip ride north on the Henry Hudson Parkway to the Mosholu Parkway and back again to 79th Street. Finally, they run south along Riverside Park and east across 72nd Street to Central Park where they complete their 10-kilometer run. The race has attracted more entrants each year at both the professional and novice levels.

David White

New York City Tribune. Daily newspaper founded in 1976 as the *News World* by the Korean spiritual leader and businessman Sun Myung Moon. It had its headquarters at 401 Fifth Avenue in Manhattan and was printed in Long Island City. The newspaper was promoted as an alternative to the other daily newspapers in New York City and became known for its conservative news coverage and editorials. The name was changed to the *New York Tribune* in 1983, prompting a copyright lawsuit from the *International Herald Tribune* that was settled in the following year when the name was changed again, to the *New York City Tribune.* Apart from a brief period during a newspaper strike in 1978, the *Tribune* failed to attract serious local interest, and after years of diminishing circulation and advertising revenues it ceased publication in January 1992.

James Bradley

New York Clearing House Association. Organization formed in 1853 by 52 commercial banks in New York City to make possible the daily settling of demand obligations among them, and the first organization of its kind in the United States. The plan for it was first advanced in 1831 by Albert Gallatin, former secretary of the treasury. The association was set up as a nonprofit, cost-recovering institution that derived its operating revenues from the bank owners belonging to it, who paid fees based on the volume of their clearings. Additional members were admitted on receiving approval from three-fourths of the existing membership. When the clearing house was in its heyday about 1908, each member bank had two representatives: a delivery clerk who presented currency or claims against other banks, and a settling clerk who received currency or checks from other banks. Each morning at 10 a.m. the delivery clerks formed a procession that paraded around the desks of the settling clerks, to whom they presented notices of accounts due. A third group of clerks, employed by the clearing house and known as proof clerks, then tallied the sums and calculated the amount due from or to each bank. As many as 2500 transactions were thus reduced to no more than 50 in a procedure that generally took only 35 to 40 minutes. Each member deposited gold or legal tender in its accounts at the clearing house, on which it could draw for debts owed to other member banks. The most common medium used in balancing accounts was the clearing house certificate, or CHC, which was issued to member banks in denominations of $5000, $10,000, $20,000, and $100,000, dollar for dollar, when member banks made their deposits of gold, silver, or other legal tender. CHCs were used exclusively as reserves and in clearing operations among members.

The New York Clearing House Association had virtually all the characteristics of a "bank of issue" or "central bank," except that it was privately owned and operated. It required weekly financial statements from its members and monitored their soundness and liquidity, and its members sometimes helped to set minimum reserve requirements that supplemented state and national banking laws. Eventually the association became a lender of last resort for members facing liquidity crises marked by high short-term interest rates, security liquidations, and bank closings. Its clearing house loan certificates (CHLCs), which were very similar to CHCs and had the same denominations, were issued to member banks as payment for secured loans that the clearing house made to them and were then used by the banks to settle their daily balances at the clearing house. These certificates prevented the hemorrhaging of specie and legal tender bank reserves and prevented sound but illiquid banks from failing. Over 50 years the New York Clearing House Association issued hundreds of millions of dollars in CHLCs with virtually no losses to banks or bank depositors. The role of the clearing house as a lender of last resort ended with the advent in 1914 of the Federal Reserve System, which duplicated most of its functions, but the association nevertheless continued to operate.

Restructed as the Clearing House Payments Company in 2004, the company's wire payment system (known as CHIPS) is responsible for 350,000 payments each day totaling $1.6 trillion. The association is the oldest bank association and forum in the United States. It publishes positions on issues of importance to its owner banks in the form of comment letters, amicus curiae filings, and other published materials.

Richard H. Timberlake

New York Clipper. Weekly newspaper. Founded in 1853 by Harrison Trent and Frank Queen (1823–82), its publisher and editor from 1857 until his death, it covered sport and the theater and catered to the tastes of lower- and middle-class Americans. It published detailed reports of blood sports, rowing, baseball, billiards, boxing, cricket, hunting, fishing, horse racing, winter pastimes, and other amusements, as well as news and circus reports, fiction and verse, and criticism of music and the theater. The newspaper reflected Queen's advocacy of athletics and physical training for both sexes and all classes and ages. It was bought by *Variety* in 1923.

George B. Kirsch

New York Coliseum. Former convention center at 10 Columbus Circle in Manhattan. Designed by Leon Levy and Lionel Levy and constructed in 1956 with federal urban renewal funds secured by Robert Moses on a site owned by the Triborough Bridge and Tunnel Authority, it was an architecturally undistinguished structure of gray brick that included an exhibition hall, a parking garage, and an office tower 25 stories tall. During the first 30 years of its existence, the Coliseum was the principal venue in New York City for large trade shows and for such public events as automobile and boat shows, but its small size and the many columns that obstructed its interior hindered exhibitors, from whom workers at the facility were also acknowledged to have extorted fees. In 1986, the opening of the Jacob K. Javits Convention Center rendered the Coliseum obsolete, and several plans were put forward to redevelop the site, most of them widely criticized because of the shadows the new structures would have cast over Central Park. A more modest plan designed by David Childs of Skidmore, Owings and Merrill was delayed in the early 1990s by the city's worsening economy; the Coliseum was demolished in 2000 and was replaced by the Time Warner Center.

John Voelcker

New York College for the Training of Teachers. Original name of Teachers College.

New York College of Podiatric Medicine. Private podiatric college opened in 1911 at 124th Street between Park and Madison avenues as the New York School of Chiropody. The oldest institution of its kind in the United States, the college also runs the seven Foot Clinics of New York.

Marc Ferris

New York Colored Mission. School and philanthropic association for blacks opened in 1865 on West 30th Street in the Tenderloin. Run by a group of Quaker educators and sponsored by the African Sabbath Association, it provided for the religious education of black children and evolved into one of the most active philanthropies in the city. The mission offered services by black and white ministers, a Sunday school, and Bible classes; maintained a physician and a nurse for medical care; and sent "friendly visitors" to black homes to distribute food, clothing, shoes, and coal to the poor and sick. It also sponsored socials on Friday evenings and athletic activities, served inexpensive meals, and had an employment office, rooms for young women, a night school, a nursery school, a sewing school, and a reading room. The mission remained in operation at least until 1938.

Seth M. Scheiner, *Negro Mecca: A History of the Negro in New York City, 1865–1920* (New York: New York University Press, 1965)

Mike Sappol

New York Commercial Association. Original name of the New York Produce Exchange.

New York Community Trust. One of the oldest and largest community foundations in the United States. Formed in 1924 by the United States Mortgage and Trust Company to manage permanent trusts for charitable purposes, it became more independent in 1926 when its first director, Ralph Hayes, arranged to work with several banks. The trust set itself apart from the community foundations in nearly all other large American cities by making grants not only in its home region but throughout the United States and abroad. Initially emphasizing its expert ability to invest money and execute donors' wishes, it grew slowly for three decades despite the establishment of such important entities as the Moritz and Charlotte Warburg Memorial Fund (to provide scholarships at the Hebrew University in Jerusalem) and a fund of $2.5 million from the Laura Spelman Rockefeller Memorial. By 1945 the trust held 77 funds with total assets of $17.6 million, making it one of the 50 largest U.S. foundations. It grew more quickly in the following decades, and by 1964 its 173 funds held nearly $40 million. Further growth was brought about by changes in the federal tax law in 1969, which tightened the regulation of private foundations and thus made community foundations more attractive. Herbert West, who succeeded Hayes in 1967, worked to form the New York Regional Association of Grantmakers (1975), the Tri-State United Way (1975), the Energy Conservation Fund (in the late 1970s), and the Citizens Committee on Substance Abuse (1989). It also provided technical services to other nonprofit organizations, and it undertook efforts directed at people with AIDS, the urban poor, undocumented immigrants, public schools, and the aged. During the 1970s and 1980s the trust became a national leader in serving suburban donors with regional affiliates. Four of these were set up, each with its own board: in Westchester (established 1975), Long Island (1977), Fairfield County, Connecticut (1982), and the Berkshire–Taconic region (1987). West led the trust until his death in 1989. In that year the trust held assets of more than $830 million, enabling it to make annual grants of $50 million. It continued to grow under his successor, Lorie A. Slutsky; by 2006 the Trust had assets of more than $2 billion.

The board of the New York Community Trust is selected in part by the participating banks and in part by public and private officials, including the chief judge of the U.S. Court of Appeals, the mayor, and the heads of the Association of the Bar of the City of New York, the New York Academy of Medicine, the New York Chamber of Commerce and Industry, and Lincoln Center for the Performing Arts.

David C. Hammack

New York Container Terminal. Commercial shipping port formerly known as Howland Hook Marine Terminal, located on the Arthur Kill north of Goethals Bridge in Staten Island. Built by the American Export Lines, the terminal was sold to New York City for $47.5 million in 1973. The city leased the 187-acre (76-hectare) facility to the Port Authority of New York and New Jersey in 1985; the facility largely shut down from 1986 to 1996. In 1995 the Port Authority leased the facility to Howland Hook Container Terminal Inc. The Port Authority acquired 124 adjacent acres (50 hectares) called Port Ivory in 2001 and as of 2007 was developing a 39-acre (16-hectare) rail terminal on the site. To accommodate larger ships at the Howland Hook and Bayonne docks, the Port Authority dredged the Arthur Kill channel to 41 feet (12 meters); the project was completed in 2006. In 2007 the Ontario Teachers' Pension Plan paid $2.4 billion to acquire the New York Container Terminal and three other shipyards from Hong Kong–based Orient Overseas International Ltd., which began running the facility in the 1990s. Along with the Brooklyn–

Port Authority terminal, the facility is one of the two major New York commercial shipping ports. It includes 412,000 square feet (38,000 square meters) of container cargo storage space; 82,000 feet (25,000 meters) of temperature-controlled storage; a 3,000-foot (900-meter)–long, 42-foot (13-meter)–deep ship berth; and onsite maintenance, trucking, and intermodal rail facilities. The International Longshoremen's Association Local 920 runs the facility, which employed roughly 420 longshoremen and 66 management employees in 2007.

Ben Silk

New York Cotton Exchange. Commodities market formed in 1870 at 142 Pearl Street by local merchants who dominated the cotton export business before the Civil War, as well as such notable merchants from the South as the Lehman brothers. It developed into the leading cotton futures market at a time when the nation imported more than 50 percent of the world's annual crop (compared with 90 percent in 1860). After World War II competition from other nations and growing domestic demand steadily reduced its share of trade. The exchange traded in wool futures in the 1950s but had little success because of trading irregularities and government scrutiny. In 1966 it successfully established futures contracts for frozen orange juice concentrate; its later trade in wool futures and tomato futures failed. Stricter requirements for self-regulation were established by the Commodity Futures Trading Commission in the 1970s and 1980s, with an especially great effect on trade in high-risk perishable items. The New York Cotton Exchange developed extensive trading in financial futures in the 1980s, including futures tied to two- and five-year notes of the U.S. Treasury, the U.S. dollar, and the European Currency Unit. In the early twenty-first century the exchange traded futures and options in cotton, frozen concentrated orange juice, and potatoes, as well as interest rates, currency, and index futures and options.

Jerry W. Markham, *The History of Commodity Futures Trading and Its Regulation* (New York: Praeger, 1987)

Morton Rothstein

New York County. One of the five counties of New York City, coextensive with the borough of Manhattan.

New York Curb Market (Agency) [New York Curb Exchange]. Stock exchange known from 1953 as the American Stock Exchange.

New York Ecclesiological Society. Organization formed in 1848 to reintroduce to the Episcopal Church Catholic customs abandoned during the English Reformation; it was closely allied with the Oxford Movement. The society was influential in reviving Gothic architecture, especially the "middle pointed," or decorated, style popular in England during the fourteenth century, and it included the architect Richard Upjohn among its members. From 1848 to 1853 it issued the quarterly publication the *New-York Ecclesiologist,* which was devoted to ecclesiastical architecture, fixtures, furnishings, and ritual. It also published proceedings from British ecclesiological societies, to which the society deferred in virtually all matters. The ecclesiologists helped to eliminate Puritan influence from the Anglican liturgy and determine church architecture for many years. The society ceased operations in 1855, its objectives fulfilled with the success of the Gothic Revival.

Susanna A. Jones

New York Entomological Society. Organization formed on 29 June 1892 at the home of Charles Palm at 172 East 64th Street by a small group of insect collectors and naturalists that included the furrier Gustav Beyer. The society sponsored meetings, lectures, and from 1893 a yearly auction of beetles, moths, and butterflies. In March 1893 it launched the *Journal of the New York Entomological Society.* The Brooklyn Entomological Society (1872) was absorbed in 1968. In May 1992 the society organized a centenary dinner at the Explorers Club at which many of the dishes included insects as ingredients. The society has long been closely associated with the American Museum of Natural History, to which many members have donated important collections, scientific books, and periodicals.

Louis N. Sorkin

New Yorker. Weekly magazine launched in February 1925 by Harold Ross and Jane Grant with funds from the family that owned the Fleischmann Yeast Company. Aimed at an urbane, literate readership rather than at what Ross called "the old lady in Dubuque," it began as a sophisticated humor magazine and soon took on a more literary emphasis, affecting a breezy aloofness and a sardonic wit and combining characteristics of the *American Mercury, Vanity Fair,* the English magazine *Punch,* and the German magazine *Simplicissimus.* Regular features came to include a weekly miscellany of reportage and banter called "Talk of the Town," extended profiles of prominent figures, listings of cultural events, and "newsbreaks," which reprinted unintentionally amusing errors from other publications. Politically the magazine embraced a genteel liberalism. Members of the Algonquin Round Table figured prominently in the magazine during its early years, especially Alexander Woollcott, Robert Benchley, and Dorothy Parker. Apart from its illustrators all contributors initially used pseudonyms; no names appeared on the cover, the magazine did not print letters to the editor, and except in very early issues there was no masthead. Lionel Trilling remarked that the magazine's "corporate" existence fostered its polite, remote, and aseptic style. Others criticized the tone of the magazine, which Dwight Macdonald (later a contributor) likened to that of a cocktail party. Early on the magazine set itself apart from its competitors by maintaining a strict separation between its editorial and business offices, by insisting on scrupulous editing and fact checking, and by printing long, discursive pieces: an entire issue was devoted to John Hersey's "Hiroshima" in 1946. Ross's successor, William Shawn, published such influential pieces as James Baldwin's "The Fire Next Time" (1962), Hannah Arendt's "Eichmann in Jerusalem" (1963), Truman Capote's "In Cold Blood" (1965), and Charles Reich's "The Greening of America" (1970).

The *New Yorker* acquired a reputation as an institution, a reputation that it did everything to encourage. It adhered for decades to the graphic and typographic formulas established in its first issues, and on every anniversary it reprinted its first cover illustration—Rea Irvin's drawing of a dandy in a top hat named Eustace Tilley observing a butterfly through a monocle. But as the readership aged and advertising revenues declined, the *New Yorker* in the 1980s and early 1990s underwent changes in ownership and editorial practice. In 1985 the magazine was purchased by Advance Publications for $142 million and Shawn was replaced by Robert Gottlieb, who was in turn replaced by Tina Brown in 1992. The magazine departed from its traditional layout (by no longer insisting that advertisements conform to its three-column format), content (by devoting greater attention to popular culture and including letters to the editor), graphics (by printing photographs by staff photographer Richard Avedon and color illustrations), and tone (by eliminating features beginning with such phrases as "A friend in the country writes," a device widely parodied). At the same time as the magazine underwent editorial changes, for many years it was embroiled in a controversy over its publication in 1983 of a profile by Janet Malcolm of Jeffrey Masson, a former head of Freud's archives in London. A libel suit by Masson alleging that quotations attributed to him had been fabricated resulted in two trials, the second lasting until 1994, in which the author was faulted but the magazine was essentially exonerated.

Over the years contributors to the *New Yorker* have included the writers Katharine Sergeant Angell, Janet Flanner, Wolcott Gibbs, Lois Long, Ogden Nash, John O'Hara, S. J. Perelman, James Thurber, John Updike, E. B. White, and Edmund Wilson, and the cartoonists Charles Addams, Peter Arno,

Helen Hokinson, and Saul Steinberg. The magazine has also published theater criticism by Brendan Gill and film criticism by Pauline Kael, reviews of fiction and coverage of baseball by Roger Angell, and political coverage by Elizabeth Drew (from Washington) and Andy Logan (from City Hall).

Published from offices on West 43rd Street for more than 60 years, after the magazine was purchased by Condé Nast Publications its offices moved to 4 Times Square. David Remnick replaced Tina Brown as editor in 1998. As the magazine celebrated its 75th aniversary in 2000, it launched its first annual literary and arts festival. In 2004 the *New Yorker*'s circulation passed 1 million.

James Thurber, *The Years with Ross* (Boston: Little, Brown, 1957); Jane Grant, *Ross, the New Yorker, and Me* (New York: Reynal, 1968); Brendan Gill, *Here at the New Yorker* (New York: Random House, 1975)

Brenda Wineapple

New Yorkers for Parks. Nonprofit, independent watchdog for New York City's parks, beaches, and playgrounds, formed in 2001. The organization grew out of the Parks Council, organized in 1970 to preserve the city's open spaces and improve its recreational facilities. The Parks Council was established by a merger of the Park Association of New York City (formed in 1905 as the Parks and Playgrounds Association) and the Council for Parks and Playgrounds, a neighborhood organization dedicated to improving play facilities.

Ann L. Buttenwieser

New Yorker Staats-Zeitung. Weekly newspaper launched by G. A. Neumann in 1834 as an organ of the Democratic Party. It achieved a circulation of about 5000 by 1845 when Neumann sold it to Jakob Uhl, who began daily publication (1849) and increased circulation to more than 14,000. After Uhl's death in 1854 Oswald Ottendorfer became the editor and began directing the paper toward the German American business elite of the city. Circulation was nearly 50,000 by the early 1870s, and the newspaper's headquarters were moved to Printing House Square in 1873. Control of the newspaper passed successively to Hermann Ridder in 1890 and to his sons Bernard and Victor in 1915. When American participation in World War I undermined the position of their leading competitor the *Herold,* the Ridders absorbed it and renamed their newspaper the *Staats-Zeitung und Herold.* An attempt in 1933 by a Nazi agent authorized by Rudolf Hess to take over the newspaper was prevented by Victor Ridder. By 1938 the newspaper was the leading German American opponent of Nazi anti-Semitism, but it continued to advocate neutrality until Pearl Harbor. In the 1950s readership fell and the newspaper was forced to resume weekly publication. By 1991 its readership fell to 25,000 a week. It closed in 1993.

Stanley Nadel

New Yorker Volks-Zeitung. Newspaper launched in 1876 as the *Arbeiter-Stimme,* the official organ of the Workingmen's Party. It was transformed into a popular labor newspaper by Alexander Jonas and Adolf Douai, who took over as its editors in 1878, changed the name, and increased daily circulation to 10,000. By 1890 circulation exceeded 20,000 and the *Volks-Zeitung* was the leading socialist newspaper in the United States. It broke with the Socialist Labor Party in 1899 and helped to form the Socialist Party, which flourished until the anti-German and antisocialist campaigns of World War I. Under the editorship of Ludwig Lore after the war the newspaper was brought into the orbit of the Communist Party. After Lore was expelled from the party in 1925, he and the newspaper maintained an independent left-wing perspective. In 1932 the newspaper changed its name to *Neue Volks-Zeitung* and began publishing weekly; at the time it had 23,000 subscribers. It remained an important leftist and anti-Nazi force until it ceased publication in 1944.

Stanley Nadel

New York Evening Graphic. A tabloid newspaper launched in 1924 by Bernarr Macfadden. Edited for five years by Emile Gauvreau, it competed with the *Daily News* and the *Daily Mirror.* Beneath large headlines the newspaper propagated Macfadden's ideas on health and attacked organized medicine and censorship. Among its features were the first columns written by Walter Winchell and Ed Sullivan; contests; comic strips; advice and information columns; titillating photographs; stories emphasizing sex, sensation, and crime; and "Composographs," in which the faces of people in the news were superimposed on outlandishly inappropriate bodies. In libel suits totaling $7 million the *Graphic* lost only $5290. Although its circulation reached 600,000 the newspaper was eschewed by advertisers and it ceased publication in 1932.

Lester Cohen, *The New York Graphic: The World's Zaniest Newspaper* (Radnor, Pa.: Chilton, 1964)

Robert Ernst

New York Film Festival. Festival founded at Lincoln Center in 1963. The Film Society of Lincoln Center, established in 1969, hosts the festival, which features both American and foreign films and has introduced such directors as François Truffaut and Pedro Almodóvar to the United States. The festival is open to all genres and usually includes about 40 films. There are no categories and no prizes, although competition to be included is fierce.

Kate Lauber

New York Foundation. Charitable organization incorporated on 5 April 1909 by Alfred M. Heinsheimer. Initially, the foundation focused on medical care and research, social welfare, and education. In the 1950s programs in the arts and recreation were added, and the foundation began to contribute to regional and national organizations. Except during the period from 1950 to 1975, giving has been confined to New York City. In 1991 the New York Foundation had assets of $54.4 million and made grants totaling $2.7 million. In 2008 it gave $4.5 million in grants, half of which were geared toward youth or the elderly, and mostly poor communities. Its original headquarters were at 350 Fifth Avenue; in the twenty-first century the foundation relocated to 10 East 34th Street.

Kenneth W. Rose

New York Foundling Hospital. Institution formed on 11 October 1869 at 117 East 12th Street in Manhattan by Mary Irene Fitzgibbon (1823–96), a member of the New York Sisters of Charity who was inspired by the needs of abandoned infants in New York City and by similar institutions in Europe. The hospital moved to 3 South Washington Square in 1870, to Lexington Avenue at 68th Street in 1873, to Third Avenue at 68th Street in 1958, and finally to 590 Sixth Avenue in 1988, where it was still located in the early twenty-first century. It manages more than 40 programs for infants, youths, young parents, and families and emphasizes home care. The hospital opened the Mott Haven Academy Charter School in 2008, enrolling students in kindergarten through second grade, with plans to eventually serve about 300 students in grades K–8. The school is designed to meet the needs of children in the foster care and child welfare system, integrating social and educational goals.

Elsie Essmuller Vignec, *Children of Hope: Some Stories of the New York Foundling Hospital* (New York: Dodd, Mead, 1964)

Mary Elizabeth Brown

New-York Gallery of the Fine Arts. Art gallery opened in 1844 with the collection of Luman Reed by Jonathan Sturges and Reed's son-in-law Theodore Allen (1800–50). It was the first permanent art collection in the city and the nucleus of a national gallery. Additional paintings were donated by such artists as Thomas Cole, Asher B. Durand, and William Sidney Mount. The collection was exhibited at the National Academy of Design (1844, 1850–52) and the Rotunda in City Hall Park (1845–48) before being donated to the New-York Historical Society in 1858.

Timothy Anglin Burgard

New York Genealogical and Biographical Society. Formed in 1869, the organization is located at 122 East 58th

Street and is open to both members and nonmembers. The society hosts an extensive library with 75,000 volumes of published material and 30,000 manuscripts. Its collection is geared toward New York State (but also includes materials regarding other states and nations) and includes federal and state census records, burial and land records, New York City directories dating to 1786, and New Amsterdam court documents. The society also publishes the *New York Researcher,* formerly the *Bulletin* and the *Record* before 2004, which as of 2006 was the second-oldest journal of its kind in the nation.

Thomas E. Bird

New York Giants (i). Baseball team formed in 1883 as the New York Gothams when the National League expanded and awarded a franchise to John B. Day, already an owner of the Metropolitans of the American Association. The new team shared a field with the Metropolitans near the northern end of Central Park at Fifth Avenue and 110th Street, an area formerly used for polo matches. The manager, Jim Mutrie, called the players his "giants," a name that the team eventually adopted. Led by the pitchers Tim Keefe and Mickey Welch and the outstanding hitter Roger Connor, it won championships in 1888 and 1889, defeating St. Louis and Brooklyn. During the 1890s the team suffered financial difficulties and moved uptown to the new Polo Grounds, at Coogan's Bluff on 155th Street; there it remained for 67 years. In 1900 the pitcher Christy Mathewson joined the team, which in 1903 was purchased for $125,000 by John T. "Tooth" Brush. The catcher Roger Bresnahan and the pitcher Joe McGinnity were acquired from the Baltimore Orioles, and under its manager John J. McGraw the team had the second-best record in the league in 1903 and the best in 1904, although it refused to play the Boston Red Sox in the World Series (at the time an unformalized competition). In the first formal World Series (1905) the team defeated the Philadelphia Athletics, managed by Connie Mack, when Mathewson pitched three shutouts. McGraw's team dominated baseball for a generation, winning 10 pennants and three World Series between 1904 and 1924. Despite the addition of the pitcher Rube Marquard it lost the pennant to the Chicago Cubs in 1908 after Fred Merkle, playing in his first season, failed to touch second base on an apparent winning hit. The Giants lost a deciding playoff game amid rumors of bribery involving McGraw, who was later exonerated by a committee led by Brush.

When fire destroyed the original wooden grandstands of the Polo Grounds in 1911 the oddly proportioned stadium was rebuilt in concrete, a symbol of the importance of baseball in New York City. The Giants won four pennants there between 1911 and 1917, but no World Series. Two members of the team were banned from baseball for attempting to rig the outcome of games in 1919, as were a player and a coach in 1924 for arranging a bribe. The team was purchased in 1919 for $1 million by Charles A. Stoneham in a transaction arranged by McGraw, who received shares of the team, and the gambler Arnold Rothstein. The team proceeded to win four consecutive pennants (1921–24) and twice defeated the New York Yankees in the World Series. McGraw was succeeded in 1932 by Bill Terry, a player-manager who along with the power hitter Mel Ott and the pitcher Carl Hubbell led the team to three pennants: it defeated the Washington Senators in the World Series in 1933 but lost two series to the Yankees in 1936–37. The Giants are perhaps best known for their bitter rivalry with the Brooklyn Dodgers, and in particular for their defeat of the Dodgers for the National League pennant in 1951. Managed by Leo Durocher and including such players as the pitcher Sal Maglie and the center fielder Willie Mays (playing his first season), the team won the deciding game when Bobby Thomson hit a home run off Ralph Branca that became known as the "shot heard 'round the world." The team won another pennant in 1954, when Mays achieved a batting average of .341 and hit 41 home runs; it won its eighth World Series by winning four consecutive games against the Cleveland Indians, who had been heavily favored. After the end of the 1957 season Horace Stoneham moved the team to San Francisco, just as the Dodgers left Brooklyn for Los Angeles. See also Sports.

Jeffrey Scheuer

New York Giants (ii). Football team. Formed in 1925 by Tim Mara, a bookmaker (at the time a legal trade), whose son Wellington later became president of the team; it played its home games in the Polo Grounds until 1955, winning three National Football League (NFL) championships (1927, 1934, and 1938). Financial losses plagued the team during its early days and brought it to the verge of financial collapse toward the end of the first season; only when more than 70,000 spectators attended its last game, against Red Grange and the Chicago Bears, was a heavy debt turned into a modest profit. In 1930 the team easily won an exhibition game against former stars from the University of Notre Dame, thus demonstrating the appeal of professional football to a public that was still skeptical, while raising $115,153 for the New York Unemployment Fund.

The late 1950s and early 1960s was one of the finest periods in the history of the Giants, which had such outstanding players as Frank Gifford, Y. A. Tittle, Roosevelt Brown, Sam Huff, Andy Robustelli, and Emlen Tunnell and played for the NFL championship five times in seven years, winning the NFL title in 1956. The championship game of 1958, which the team lost in overtime to the Baltimore Colts by a score of 23–17 at Yankee Stadium, is often referred to as the greatest football game ever played. The team played its home games in Yankee Stadium from 1956 to 1973 and then at the Yale Bowl (1973–74) in New Haven, Connecticut, and Shea Stadium (1975), before moving to Giants Stadium in East Rutherford, New Jersey, in 1976.

The team struggled in the 1970s but after Bill Parcells became the head coach in 1983 its fortunes improved. In 1987, the Giants, led by quarterback Phil Simms and linebacker Lawrence Taylor, defeated the Denver Broncos in Super Bowl XXI by a score of 39–20. In 1991, the team won Super Bowl XXV against the Buffalo Bills, 20–19. From 1992 to 2006, the Giants made the playoffs five times, including a Super Bowl loss to the Baltimore Ravens in 2001. Coached by Tom Coughlin and led by veteran defensive end Michael Strahan and young quarterback Eli Manning, the Giants won Super Bowl XLII by a score of 17–14 in 2008, against the New England Patriots, who were trying to win their fourth Super Bowl of the decade and complete only the second undefeated season in NFL history.

Joseph A. Horrigan, David White

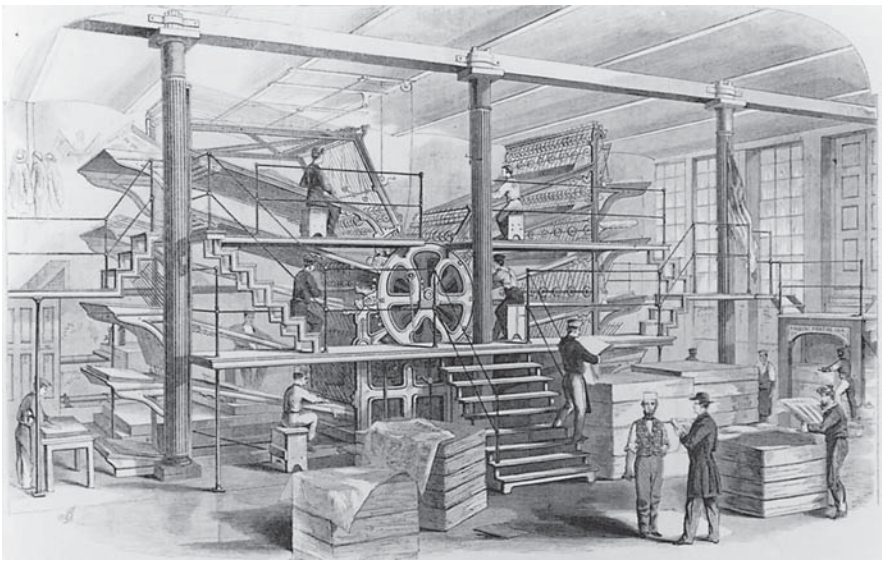
New York Golden Gloves. Amateur boxing tournament. *The Ring* magazine claims it was started first in Chicago in 1926, an idea promoted by Arch Ward, a sportswriter for the *Chicago Tribune.* But in 1927 Paul Gallico, sports editor of the New York *Daily News,* conducted an amateur boxing tournament and named it Golden Gloves. Ward suggested that the New York Golden Gloves champions come to Chicago to fight the Chicago champions in the Chicago Coliseum in 1928, thus beginning a rivalry that lasted until 1961. The Golden Gloves tournament spread to other cities, organized on a territorial basis to give all sections of the country representation, leading to a national Golden Gloves tournament. Some of the great champions to come out of the New York Golden Gloves are Sugar Ray Robinson, Floyd Patterson, Emile Griffith, and Mike Tyson.

Frank Dyer

New York Gold Exchange. Financial exchange that began in 1862 as Gilpin's Gold Room in a basement on New Street. At the time the Union was financing the Civil War by issuing paper money rather than raising taxes, and trading in gold was a popular means of speculating on the course of the war. Although such trading was banned by the New York Stock Exchange as unpatriotic and Gilpin's Gold Room itself was briefly banned in 1864, gold speculation continued in brokerage offices and shops along Broad and New streets and the room reopened as the New York Gold Exchange in October. Gold trading played

an important role in the nation's foreign trade, but most trading was done for speculative purposes. In 1869 the gold market became unsettled when financier Jay Gould made an attempt to corner it by secretly buying up all available supplies and bribing members of President Ulysses S. Grant's inner circle to prevent sales of gold by the U.S. Treasury. Informed on 23 September by his contacts in the White House that the Treasury planned to sell gold nevertheless, Gould arranged for his associate Jim Fisk to execute numerous buy orders the next day to support the price while Gould sold his holdings. Gould and other members of his group made as much as $40 million in profits, but when it became widely known that gold was being sold by the Treasury, its price quickly fell: the ensuing panic ruined a number of brokers and many speculators (not including Fisk, who refused to honor his agreement to buy gold at a higher price), prompted an investigation by the U.S. Congress, and became known as "Black Friday." Gold trading slowed after 1870 as speculators turned their attention to Wall Street and as the price of gold stabilized, making speculation less profitable. From 1865 the New York Gold Exchange was part of the New York Stock Exchange. It ceased operations after specie resumption on 1 January 1879.

George Winslow



New York Guild for the Jewish Blind. Name used until 1960 by the Jewish Guild for the Blind.

New York Hall of Science. Originally built as a pavilion for the 1964–65 World's Fair, it was converted into a museum from 1966 to 1979. In 1986 the museum reopened with 25,000 square feet (2300 square meters) of space for more than 400 hands-on science exhibitions. The museum is dedicated to biology, chemistry, and physics education for children, families, and educators. It offers after-school programs, interactive workshops, and resources for educators. The museum is located at 47-01 111th Street in Queens.

Stephanie Miller

New York Harbor. See Port of New York.

New York Herald. Daily newspaper launched in 1835 by James Gordon Bennett, Sr. A pioneer in the use of railroads, steamships, and the telegraph to gather news, it became known for its thorough reportage on finance and society and its organized network of European correspondents. Its sensationalistic approach to scandal and crime, notably its coverage of the trial of Richard Robinson in 1836 for the murder of the prostitute Helen Jewett, led to widespread denunciation and a boycott against the newspaper in 1840. Despite these protests the newspaper had a circulation of 77,000 by 1860, the largest of any daily newspaper in the United States. It was usually Democratic in its politics and was considered more sympathetic toward the South than any other newspaper in the North, but it supported the Union during the Civil War, to which it assigned 63 correspondents in the field. The *Herald* was owned in turn by James Gordon Bennett, Jr. (1872–1918) and the publisher Frank A. Munsey before being purchased in 1924 by the Reid family and merged with the *New York Tribune* to form the *New York Herald Tribune.*

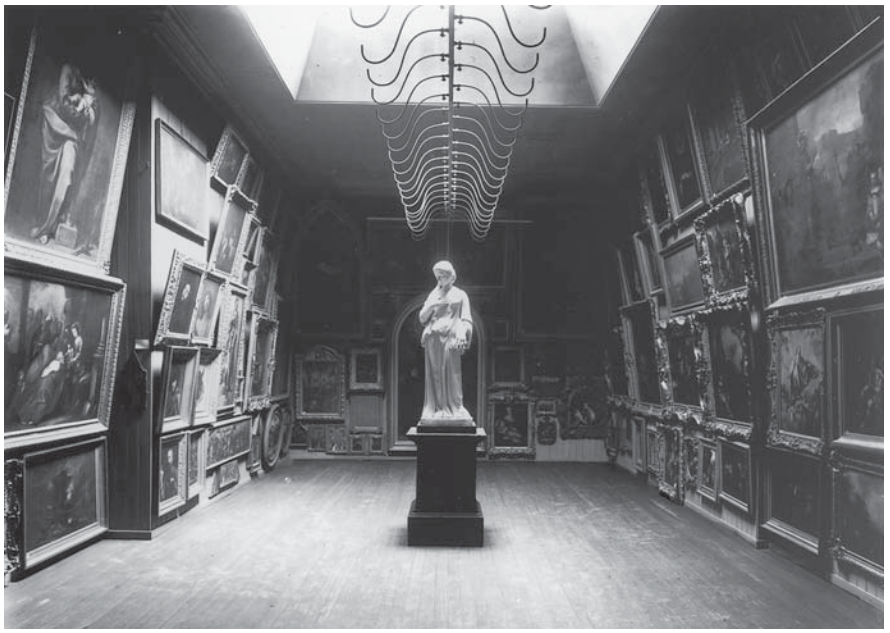
Steven H. Jaffe

New York Herald Tribune. Daily newspaper formed in 1924 when the *New York Tribune,* under the direction of Ogden Reid, bought the *New York Herald,* owned by Frank Munsey. After Stanley Walker became its city editor in 1927, the newspaper gained a reputation for elegant writing and became one of the leading papers in the country. Among those who wrote for the newspaper were the war correspondents Marguerite Higgins and Homer Bigart; the columnists Joseph Alsop, Walter Lippmann, and Dorothy Thompson; and the sportswriter Red Smith. Under the direction of Helen Rogers Reid and her sons Whitelaw Reid and Ogden Reid, Jr., the *Herald Tribune* was rigorously anticommunist and supported such moderate Republican presidential candidates as Wendell Willkie (1940) and Dwight D. Eisenhower (1952). In 1958 it was purchased by the financier John Hay Whitney, who in 1963 introduced the magazine *New York* as a Sunday supplement to the newspaper. The writers Tom Wolfe and Jimmy Breslin began their careers at the *Herald Tribune* before it was merged in 1966 into the short-lived *New York World Journal Tribune* and ceased publication.

Richard Kluger, *The Paper: The Life and Death of the New York Herald Tribune* (New York: Alfred A. Knopf, 1986)



Steven H. Jaffe

New York Highlanders. Name used by the New York Yankees from their inception in 1903 until 1913.

New York Hilton. Hotel at 1335 Sixth Avenue between 53rd and 54th streets, designed by William B. Tabler and opened in 1963 to accommodate business travelers and others. It has 2200 rooms, a conference center, and the Executive Tower, a separate building six stories tall. The New York Hilton owns an art collection that includes about 8500 paintings, sculptures, and lithographs. In the Mirage cocktail lounge stand two large marble sphinxes designed by V. Fontaine in Paris during the 1860s; they are adorned with bronze collars, ruffs, and saddles. A $148 million redesign was completed in 2006, with new features including an expanded lobby, a new full-service fitness club and spa, two new lounges, and two new restaurants.

Kevin Kenny

New-York Historical Society. Society formed in 1804 by business and government leaders, including Mayor DeWitt Clinton and John Pintard, the city inspector, to collect and preserve materials relating to the history of the United States and New York State; it is the oldest museum in continuous operation in the city, one of the most distinguished American independent research libraries, and the second-oldest historical society in the United States. Its first president was Egbert

Art gallery at the New-York Historical Society

New-York Historical Society, 2009

Benson, former chief justice of the Second U.S. Circuit Court, and its first quarters were rented rooms at the building on Wall Street formerly occupied by the federal government. Its first permanent building was erected in 1857 at Second Avenue and 11th Street, and the collection expanded in 1858 when the society received the holdings of the New York Gallery of the Fine Arts, which included works by nineteenth-century contemporary American artists such as Thomas Cole, Asher B. Durand, and William Sidney Mount. This was the city's only art museum until the Metropolitan Museum of Art was formed in 1872. Important acquisitions included 432 of the 435 watercolor illustrations used in John James Audubon's *Birds of America* (1827–38) in 1864 and the paintings by European masters collected by Thomas J. Bryan (1802–70) in 1867. In 1908 the society moved into its own building at 77th Street and Central Park West, where it still resides. From 1917 to 1980 it published the *New-York Historical Society Quarterly* (known as the *Quarterly Bulletin* until 1946).

In addition to its collections of fine art, the Historical Society's holdings include early American household utensils, needlework, shop signs, weathervanes, porcelain, and silver; a print collection that includes rare eighteenth-century engravings and nineteenth-century lithographs; political caricatures and posters; a large number of photographs; and documents and drawings from the city's architecture firms, including those of Cass Gilbert and McKim, Mead and White. Its library has one of the finest collections of eighteenth-century newspapers from the city; a complete file of city directories dating from the first one in 1768; seventeenth-century atlases of voyages and exploration; and slavery and antislavery pamphlets. Among its approximately two million manuscripts are letters from Charles II to Edmund Andros (1674) authorizing the takeover of New Netherland from the Dutch governor; the articles of General John Burgoyne's surrender; an orderly-book record of Nathan Hale's execution; letters of George Washington; orderly books and related papers from the French and Indian War through World War II; and papers of elite as well as ordinary New Yorkers.

In the late 1980s the New-York Historical Society experienced a financial crisis that forced it to close parts of its collections, and briefly in 1993, its entire collections. Potential mergers with the Museum of the City of New York or the New York Public Library ultimately failed. In 1994, Historical Society president Betsy Gotbaum oversaw a period of stabilization and revitalization that included deaccessioning the museum's European Old Masters, as well as the opening in 2000 of the Henry Luce III Center for the Study of American Culture, a permanent display of more than 40,000 treasures from the collections. During the presidency of Kenneth T. Jackson, the Historical Society collected artifacts and art associated with the terrorist attacks of 11 September 2001 and mounted 13 exhibitions on the World Trade Center. At this time the Historical Society began a $40 million renovation of the landmark building and signed a partnership agreement with the Gilder Lehrman Institute of American History, whose collection of more than 60,000 documents moved from the Morgan Library to the Historical Society. In 2004 Historical Society president Louise Mirrer led an institutional directive to focus its mission toward documenting the broader history of the United States as seen within the context of New York City and State. Once an exclusive institution that catered to New York City's white Protestant elite, the New-York Historical Society in the early twenty-first century is attracting a racially, religiously, and ethnically diverse constituency that is reflected in its board of trustees.

Ella M. Foshay, Valerie Paley

New York Hospital. Medical facility granted a charter by George III on 13 June 1771. It was located on Broadway between Anthony Street (now Duane Street) and Catharine Street (now Worth Street). Established as a voluntary general hospital, it treated mostly charity cases. The governors recognized that insanity was a treatable illness, and mental patients were among the first to be admitted. From 1776 to 1791 the hospital was used variously as a military barracks, a home for destitute immigrants, a hall for anatomical lectures, and a meeting place for the state legislature. Books were purchased for a medical library as early as 1796. The federal government entrusted the care of merchant and naval seamen to the hospital from 1799 to 1870. In 1821 the Bloomingdale Asylum, a psychiatric division of the hospital, opened in a rural area at what is now 116th Street and Broadway. A special marine department was set up in its own building in 1825.

By 1870 the original hospital had become too small and outmoded. While a new facility was being constructed the hospital maintained the Chambers Street House of Relief, which provided mostly emergency care. The new hospital, between Fifth and Sixth avenues at 15th and 16th streets, opened on 16 March 1877. In the same year the governors established a training school for nurses, thus guaranteeing a high quality of care for patients. The House of Relief moved in 1884 to Hudson Street, where it operated a clinic and provided emergency treatment to the community of lower Manhattan until 1917.

In 1912 New York Hospital became formally affiliated with Cornell University Medical College. The two institutions agreed on 14 June 1927 to build the New York Hospital–Cornell Medical Center on York Avenue between 67th and 68th streets, which began receiving patients on 1 September 1932. An ambulatory care facility was added in 1985. As of 2007 the hospital had 814 beds. Its better-known facilities include the Payne Whitney Clinic, a psychiatric division. New York Hospital is the oldest hospital in New York City and the second-oldest in the United States.

Adele A. Lerner

New York Industrial Congress. Citywide assembly convened in June 1850 to work for labor reforms. It moved into a wing of City Hall in July 1850, where it coordinated efforts to reform the trades similar to those undertaken by the Luxembourg Commission under the direction of Louis Blanc in 1848: the proposals debated included those for land reform, municipal reform, banks run by the trades, and the replacement of the wage system with producers' cooperatives. The congress drew its energy from the revival of the trade-union movement in the summer of 1850 and especially from a militant tailors' strike. Irish and German craftspeople were prominent among the leaders, as were middle-class reformers like Horace Greeley and George Henry Evans. The congress evaded the turbulent national debate over expanding slavery and ignored the controversy over fugitive slaves' rights, focusing instead on city and state elections in the autumn of 1850. By forming nominating committees that were independent of Tammany Hall and by interrogating nominees, it helped a number of reform candidates to win. Its success as an independent organization was short-lived. Some delegates were loosely tied to the Democratic Party, which they hoped to reform from within, and during a meeting on 3 June 1851 the assembly was taken over and reorganized by politicians associated with Tammany Hall. The New York Industrial Congress briefly provided a vital forum for social, political, and labor reform; many of the ideas debated by its members were taken up in wider circles after the Civil War, including proposals for an independent labor party and a legislative campaign for an eight-hour workday.

Iver Bernstein

New York Institute for Special Education. Private, nonprofit school for disabled children. It was formed in 1831 as the New York Institution for the Blind by the book publisher Samuel Wood, who on a visit to the city almshouse in the preceding year had been struck by the neglect of children left blind by a severe outbreak of conjunctivitis. With the help of Samuel Akerly, a Quaker physician who was the superintendent of the New York Institution for the Deaf, he sought to provide children with manual training and "moral education." From 1833 the institute occupied quarters at Ninth Avenue and 34th Street. It was the first institution in the United States to provide formal education for blind children and the only school of its kind in New York State until 1865; it remained the most prominent and innovative even as other schools opened around the country later in the century. In 1866 William Wait, long the director of the institute, developed a method of reading for the blind called the New York point system that became increasingly popular until it was supplanted in 1890 by Braille, a system more adaptable to the new process of machine embossing. Among the instructors at the school were Grover Cleveland (for two years) and Fanny Crosby, a writer of Methodist hymns who had earlier been a student there.

In 1912 the school changed its name to the New York Institute for the Education of the Blind and replaced its curriculum, which had been principally vocational, with the fuller one of the state, including preparation for the examinations of the New York State Board of Regents. After the school was enabled by a bequest from F. Augustus Schermerhorn to move in 1924 to 999 Pelham Parkway in the Bronx, it gradually expanded its programs to help children with a wider range of disabilities, beginning with a program in 1940 for the deaf blind. By the 1980s it taught children who were blind, as well as those with emotional and learning disabilities, infants and preschoolers who were developmentally delayed, and children with multiple disabilities. To reflect its expanded programs the school adopted its current name in 1986.

Sandra Opdycke

New York Institute of Technology. Private college opened in 1955 in Brooklyn; it at first offered a two-year course of study and granted associate degrees in applied science. In 1958 the college moved to 61st Street and Broadway in Manhattan, a site now known as the Metropolitan Center. It became a four-year college in 1960 and went on to open two campuses on Long Island. In the early twenty-first century the New York Institute of Technology had 11,000 students on its three campuses and offered associate, bachelor's, and master's degrees and a doctorate in osteopathy.

Erica Judge

New York Jets. Football team. Formed in 1960 as the New York Titans by Harry Wismer, it was an original member of the American Football League (AFL). The team played its home games at the Polo Grounds from 1960 to 1963 before moving to Shea Stadium in 1964 and then to Giants Stadium in East Rutherford, New Jersey, in 1984. The AFL took over its operations in November 1962 after Wismer was unable to meet his payroll. In 1963 the team was bought by a syndicate led by MCA-TV president David A. "Sonny" Werblin, who renamed the team the Jets and hired Weeb Ewbank as the head coach and general manager. The team's 1965 draft of University of Alabama quarterback Joe Namath resulted in a contract reportedly worth more than $427,000 over three years. Namath brought instant credibility to both the Jets and the AFL. He was named AFL Rookie of the Year in 1965 and in 1967 became the first professional player to pass for more than 4000 yards in a season.

In 1969 the Jets recorded one of the most famous upsets in the history of professional football when it became the first AFL team to win a Super Bowl (Super Bowl III), defeating the Baltimore Colts by a score of 16 to 7. The Colts had been heavily favored to win by as many as 21 points. The following year the Jets lost to Kansas City in the first round of the playoffs. Namath, Don Maynard, and Ewbank, all part of the 1969 Super Bowl team, were elected to the Pro Football Hall of Fame.

The Jets qualified for the playoffs four times during the 1980s and twice during the 1990s. In 1982 and 1998 they reached the American Football Conference championship game but each time fell a win short of making it back to the Super Bowl. The team reached the playoffs multiple times during the first decade of the twenty-first century under head coaches Herman Edwards and Eric Mangini.

Joseph A. Horrigan

New York Journal–American. Daily newspaper launched in 1937 by Clarence J. Shearn, who sought to rescue William Randolph Hearst's empire from bankruptcy by combining his three newspapers in New York City: the *American* (acquired in 1895 as the *New York Journal*), the *Evening Journal* (launched in 1896), and the *Mirror* (a tabloid launched in 1924). Although Hearst himself had nominally retired by this time, the newspaper reflected his isolationist views on foreign policy and stressed sensational news and entertainment features, much like his earlier newspapers. Under the city editor Paul Schoenstein the staff won a Pulitzer Prize in 1944 after the newspaper had wielded its influence to obtain the rare drug penicillin for a small child. William Randolph Hearst, Jr., won a second Pulitzer Prize in 1955 after leading a team of editors for the *New York Journal–American* to Moscow, where they were permitted to report on events in the Soviet Union without hindrance. The newspaper was best known for its columns, most of long standing, including "Cholly Knickerbocker" by Maury Paul, "New York Day by Day" by O. O. McIntyre, and "Hollywood News" by Louella Parsons. Despite the newspaper's popularity, circulation and advertising declined during the early 1960s because of shifts in population. To stave off bankruptcy the newspaper merged with the *New York Herald Tribune* and the *New York World–Telegram* in 1966 to form the *World–Journal Tribune,* which lasted less than a year. For many years the newspaper was published at 220 South Street.

Julian S. Rammelkamp

New York Journalistic Fraternity. Original name of the New York Press Club.

New York Kehillah. Community organization formed in 1908 by Jews in New York City to handle religious, educational, and social problems. Its formation marked the first attempt by the Jewish community to govern itself along the lines of a traditional Jewish polity since colonial times. The group was begun in response to a statement by Theodore Bingham, the police commissioner, that Jews were responsible for 50 percent of the city's crime. The charge aroused calls for his resignation and also rekindled concern about Jewish prostitution and gambling. The Kehillah was nurtured by Judah Magnes, a Reform rabbi, and consisted of bureaus for education, social morals, labor relations, and the supervision of dietary laws. Its most successful efforts were training a core of teachers and providing Jewish education. Undercover agents of its Bureau of Social Morals provided the police with information about criminal activity. The Kehillah met with opposition from some quarters, especially Orthodox Jews and socialists, who never offered their full cooperation in its efforts. Paralyzed by forces within the community by 1917, the organization suffered from a lack of legal enforcement for its sanctions and ceased operations in 1922.

Arthur A. Goren, *New York Jews and the Quest for Community: The Kehillah Experiment, 1908–1922* (New York: Columbia University Press, 1970)

Henry Feingold

New York Knicks. Professional basketball team. An original member of the Basketball Association of America, a forerunner of the National Basketball Association (NBA), the team played its first game on 1 November 1946, defeating the Toronto Huskies by a score of 68 to 66. Coached by Joe Lapchick, the Knicks made the playoffs in each of their first 10 seasons, including three appearances in the championship series, which they lost in 1951 to Rochester and in 1952 and 1953 to Minneapolis. The team was led in its early years by Carl Braun, Harry Gallatin, Dick McGuire, and Nat "Sweetwater" Clifton, one of the first black players in the NBA. The team had mixed success from the late 1950s into the 1960s.

The Knicks enjoyed their greatest success after Red Holtzman took over as head coach in 1968; in 1969–70 they won their first league title. Led by Willis Reed, the team also included Walt Frazier, Bill Bradley, and Dave DeBusschere (all four were later elected to the Basketball Hall of Fame) and Dick Barnett. One of the most memorable moments in NBA and Madison Square Garden history occurred in the decisive game seven of the 1970 championship series, when an injured Willis Reed, who was not expected to play, emerged from the locker room for the game's opening tip-off to raucous cheers from the Garden crowd. While ineffective for most of the night, Reed scored the team's first two baskets of the game and was widely credited as having inspired the Knicks to their 113–99 victory. Reed's example has been referenced by the media ever since when an injured athlete takes part in a crucial competition. Earl "the Pearl" Monroe joined the Knicks in 1971–72 to form an outstanding backcourt with Frazier, and in the following year the team won its second league title.

After reaching the playoffs for nine consecutive seasons the Knicks played unremarkably from the mid-1970s until 1984, when they forced a seventh game in the semifinals of the Eastern Conference of the NBA against the Boston Celtics (who eventually won the championship). They reached the playoffs in 1987–88 for the first time in four years and in 1988–89 won the Atlantic Division for the first time in nearly two decades. Coach Pat Riley then built the foundation for a team that made the playoffs every year in the 1990s. The early part of the decade was marked by a resurgent fan base, memorable playoff games, and heated rivalries with the Chicago Bulls, who won six championships in the 1990s, and with the Indiana Pacers. The team reached its pinnacle in 1994, returning to the NBA finals for the first time in 21 years, but squandered a three games to two lead and lost the championship to the Houston Rockets in seven games. After Riley left the Knicks in 1995 to coach the Miami Heat, his new team became one of the Knicks' biggest rivals for the latter half of the decade, during which the Knicks reached the NBA finals in 1999.

The trade of Patrick Ewing at the twilight of his career in September 2000 marked the end of one of the most successful eras in the franchise's existence and ushered in one of the worst periods in its history. The Knicks made the playoffs in 2001 but failed to do so for the next eight seasons. In December 2003 the Knicks' management was overhauled when former Detroit Pistons Hall of Famer Isiah Thomas was made general manager. From 2004 to 2010 the Knicks continued to lose, and the team management was ridiculed extensively in the New York City and national media for having the highest payroll, yet one of the worst records in the league.

Albert Figone, David White

New York Landmarks Conservancy. Private, non-for-profit organization founded in 1973 dedicated to preserving, revitalizing,

and reusing architecturally significant buildings. Early in its history, it fought to save the Custom House and the Fraunces Tavern Block, both in lower Manhattan, and St. Ann and the Holy Trinity Church in Brooklyn Heights. The conservancy's work has expanded into providing technical assistance to owners of historic buildings; providing loans, through a revolving fund created as part of the conversion of the Federal Archive Building in Greenwich Village into apartments; and assisting historic religious properties with grants and loans through its Sacred Sites program.

Andrew S. Dolkart

New York Law Institute. Private subscription library opened in 1828 to make legal materials available to judges and lawyers practicing in New York City. The institute moved frequently during the nineteenth century to remain close to the federal courts; in 1915 it settled in the Equitable Building at 120 Broadway, where it housed a collection of more than 300,000 law reports, legal treatises, and scholarly journals. In the early twenty-first century it remained the oldest—and the only circulating—law library in the city.

Elliott B. Nixon

New York Law School. Private law school. It was founded in 1891 by George Chase, who resigned from Columbia Law School after a dispute with the president of the university, Seth Low, an opponent of the practical approach to legal education practiced by Theodore Dwight; several professors and students also left Columbia for the new institution. The school rented space in the Equitable Life Assurance Building and by 1906 had 1000 students, at the time the highest enrollment of any law school in the United States. It moved to the McBurney Young Men's Christian Association on West 23rd Street in 1919. Hurt by the Depression and war, the school closed in 1941; it was able to reopen in 1947 at 244 William Street, in part because of the G.I. Bill. The school moved to its current address at 57 Worth Street in Manhattan in 1962 and later expanded to three adjacent buildings. In the early twenty-first century the school had more than 80 full-time faculty members, who taught more than 1500 students. Among those who have taught at New York Law School are Charles Evans Hughes (1893–1900), Woodrow Wilson (1891–98), Roy Cohn (1950–60), William Kunstler (1952–60), and Nadine Strossen (from 1988), president of the American Civil Liberties Union. Alumni include Senator Robert F. Wagner (i; 1900), the poet Wallace Stevens (1903), the Supreme Court justice John Marshall Harlan (1924), and Chester F. Carlson (1939), who invented xerography.

Marc Ferris

New York Ledger. Literary magazine. It began as the weekly trade publication the *New York Merchant's Ledger,* which was bought by the publisher Robert Bonner in 1851; he transformed it into what he called a "family weekly," a story newspaper containing short novels, poems, and sketches; editorials on topics ranging from New York City to faithless husbands; a section of "wit and humor"; and an advice column. The newspaper enjoyed enormous success and was widely imitated, marking the beginning of an ebullient phase in the city's popular literary culture. From 1850 to 1870 it attracted many popular writers, including E. D. E. N. Southworth, Fanny Fern (Sara Parton), Lydia Sigourney, and Sylvanus Cobb, Jr., as well as Henry Ward Beecher, Horace Greeley, Edward Everett, George Bancroft, Charles Dickens, and Edgar Allan Poe. Bonner was perhaps best known for his sensationalist advertisements in other newspapers (he allowed no advertising in his own); he bought full pages in the *New York Tribune* and the *New York Herald* to announce the latest "thrilling story" in the *Ledger* and sometimes to settle feuds with other publishers. He also caused a sensation with other promotional tactics, among them the firing of 100 cannons in City Hall Park to advertise Cobb's story "The Gun-maker of Moscow." The *Ledger* was overshadowed in the 1870s by other newspapers, including the *Family Story Paper* and the *New York Weekly.* After Bonner's retirement in 1887 it was left to his sons and ceased publication in 1903.

Alice Fahs

New York Liberty. Women's professional basketball team. One of the eight original members of the Women's National Basketball Association (WNBA), the Liberty has played its home games every summer at Madison Square Garden since the franchise's inception in 1997. The team reached the playoffs in all but three of its first 12 seasons, but failed to win a championship, losing in the finals four times. Teresa Weatherspoon was the team's star player from 1997 until 2003 and made one of the most memorable shots in league history when she scored from halfcourt as time expired to force a decisive final game against the Houston Comets in the 1999 finals. The Liberty played six games at Radio City Music Hall in 2004 as Madison Square Garden was prepared for the Republican National Convention. In July 2008 it played in the first outdoor regular season game in league history.

David White

New York Life Insurance Company. Firm of life insurers formed as the Nautilus Insurance Company in 1845 by Pliny Freeman. A mutual firm, it had its first headquarters at 44 Wall Street and adopted its current name in 1849. The first board of directors included such distinguished New Yorkers as Albert Woodhull, Caleb Woodhull, Henry W. Hicks, and Loring Andrews; the first president was James De Peyster Ogden, a businessman and former president of the New York State Chamber of Commerce. The firm was one of the first to introduce soliciting and soon devised the general agency system, under which an agent controlled a territory, recruited and trained a sales force at his or her own expense, and received a percentage of sales from the home office. Branches were opened nationwide, and a 12-story headquarters of white marble was built at 346 Broadway in 1870 and redesigned between 1894 and 1898 by the firm of McKim, Mead and White (designated a landmark in 1987). Annual sales rose from $22 million in 1880 to $159 million in 1890; during the same decade several men who later became influential joined the firm, including John A. McCall, George W. Perkins, Darwin P. Kingsley (1862–1932), and Thomas A. Buckner. At the turn of the twentieth century the firm became the first in the world to have more than $1 billion of policies in force.

New York Life Insurance Building (designed by Cass Gilbert) between 26th and 27th streets along Madison Avenue, ca *1935–40*

Kingsley, president from 1907 to 1931, sought to expand the firm's operations abroad and develop new policies. Under one program, "Nylic for Agents," agents earned a monthly income for life after 20 years of service. The firm remained successful during the first decades of the twentieth century despite World War I and the influenza epidemic of 1918–19, which doubled the company's payments of death benefits. Headquarters designed by Cass Gilbert were built in 1928 at Madison Avenue between 26th and 27th streets, the former site of Madison Square

Garden. In 1929 Calvin Coolidge, the former president, joined the board of directors. After World War II the firm enjoyed continuous prosperity and funded several housing developments in the city; the best known were the Fresh Meadows Housing Development (1949), a project built on 166 acres (67 hectares) in Fresh Meadows, and Manhattan House (1951), a 19-story building covering the block bounded by 66th Street, Second Avenue, 65th Street, and Third Avenue. By the twenty-first century New York Life was one of the oldest life insurers in the United States.

James Bradley

New York Lung Association. Organization formed in 1902 as the New York Society for the Prevention of Tuberculosis. Its first headquarters were on West 43rd Street. The association focuses its efforts on the local population; it sponsors research fellowships and educational programs about smoking, asthma, and tuberculosis.

A Half Century's Progress against Tuberculosis in New York City, 1900 to 1950 (New York: New York Tuberculosis and Health Association, 1952)

Andrea Balis

New York magazine. Weekly magazine that originated in 1963 as a supplement to the Sunday edition of the *New York Herald Tribune.* In 1964 Clay S. Felker became the editor, and in 1967 he bought the rights to the name. With his partner, the graphic designer Milton Glaser, he launched *New York* as an independent magazine in the following year: they mixed humor and seriousness in a format that emphasized graphics and typography and made the magazine one of the most widely imitated publications of its time. In the first issues it printed stories on subjects as diverse as celebrity watching in the Hamptons (by Jimmy Breslin) and the conditions of skid row (by Tom Wolfe). Felker supported efforts by Wolfe and others to propound a style of writing known as "new journalism," which employed the tone and descriptive techniques of fiction writing. Nicholas Pileggi, who became a contributing editor in 1968, wrote investigative pieces on corruption in city government and organized crime. The magazine became known for its opinionated and at times sardonic tone. Among its more popular writers were Breslin; Gloria Steinem; Pete Hamill; Gael Greene, who used sensual images in her restaurant reviews; and the theater critic John Simon. In January 1977 the magazine was bought by the Australian newspaper magnate Rupert Murdoch, who merged it in 1980 with *Cue,* a weekly guide to cultural events and entertainment. In 1991 Murdoch sold it to K-III Communications, a group headed by Henry Kravis, and in 2003 Bruce Wasserstein bought it for $55 million. The magazine has won numerous awards and has a popular Web site.

Rachel Sawyer

New York Manumission Society. Organization established in 1785 to promote the abolition of slavery in New York State. The group was founded as the New-York Society for Promoting the Manumission of Slaves, and Protecting Such of Them as Have Been, or May Be Liberated. It was composed of prominent white men such as John Jay, Alexander Hamilton, and James Duane. Some were members of the Religious Society of Friends, or Quakers, which opposed slavery, while other members were slaveowners themselves, including the organization's first president, John Jay. Perhaps influenced by this, the organization advocated gradual rather than immediate abolition. The society was successful in pressing the New York State legislature for the passage of the 1799 Gradual Emancipation Law. It also encouraged individual slaveowners to manumit their slaves voluntarily, provided legal representation to slaves seeking manumission, and protected blacks from kidnappers wanting to sell them elsewhere. In 1787 the society opened the first of seven AFRICAN FREE SCHOOLS for free and slave black children in New York City. It wanted to provide education for black children as well as prepare them for what it viewed as the responsibilities of freedom. The schools educated thousands of children until 1834, when they became part of the New York City public school system. The Manumission Society continued its work even after slavery in New York had been abolished. As the society's importance diminished, it dissolved in 1849 and had its assets transferred to the Association for the Benefit of Colored Orphans.

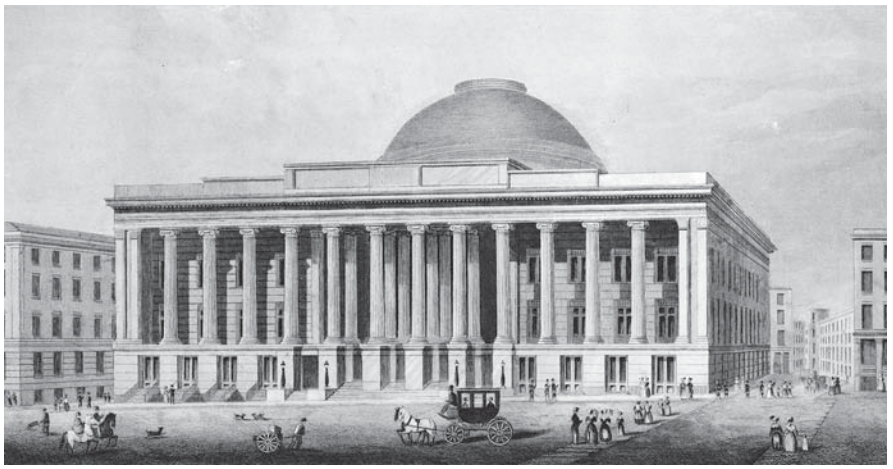
Maurita Baldock

New York Medical College. Medical school formed in 1860 as the New York Homoeopathic Medical College at Third Avenue and 20th Street. The first president of its board of trustees was the poet William Cullen Bryant, a long-time advocate of homoeopathy. Although the college was the first in the city with a homoeopathic orientation, it was receptive from the outset to traditional (allopathic) medical practice. Early in its history the college had its own teaching hospital (Metropolitan Hospital), and it also maintained clinical facilities at Hahnemann Hospital (later reorganized as Fifth Avenue Hospital), Flower Hospital, and Ward's Island Hospital. A pioneer in women's medical education, in 1918 the college absorbed the New York Medical College for Women (founded in 1863). By the 1920s the college no longer offered instruction in homoeopathy, and in 1936 it assumed its current name. In 1938 it became part of an institution known as New York Medical College, Flower and Fifth Avenue Hospitals. The college moved in 1972 to suburban Westchester County, while maintaining its affiliations with clinical teaching hospitals in the city.



Leonard P. Wershub, *One Hundred Years of Medical Progress: A History of New York Medical College, Flower and Fifth Avenue Hospitals* (Springfield, Ill.: Charles C. Thomas, 1967)

Francesco Cordasco

New York Medical Repository. Medical and scientific journal, the first in the United States, launched in 1797 by Samuel Latham Mitchill and Elihu Smith, both physicians of New York City, and published quarterly. The contents were edited primarily by Mitchill and reflected his wide-ranging interests in medicine, chemistry, biology, botany, zoology, mineralogy, agriculture, geography, and meteorology. Each issue included original scientific essays, weather observations, news of scholarly work in Europe, and book reviews. Mitchill was particularly interested in the prevention of epidemics; Smith, a physician at New York Hospital, died in an epidemic during the journal's first year, and another collaborator, Edward Miller, who was a resident physician for the city, died in an epidemic in 1812. Mitchill retired in 1821 and the journal ended publication in 1824.

Sandra Opdycke

New York Mercantile Exchange [NYMEX]. Commodities and futures exchange formed in 1872 as the Butter and Cheese Exchange by a group of wholesale grocery merchants on the West Side of Manhattan, and given its current name in 1882. It moved in 1886 to the corner of Hudson and Harrison streets. In the early years, trading in eggs, butter, and other foodstuffs was mostly in cash; futures in butter and eggs were traded as early as 1903. Potato futures were introduced in 1941 and soon dominated trading. During the 1960s and 1970s NYMEX sought to increase its volume by offering trading in more futures and in new commodities such as platinum. It introduced a highly successful contract in heating-oil futures in 1978, and eventually it came to play an important role in setting oil prices around the world. In 1977 NYMEX moved to 4 World Trade Center. In 1994 it merged with the New York Commodities Exchange (COMEX) and in 1997 moved to its current

New York Mercantile Exchange, 1850

World Financial Center location at 1 North End Avenue. On 17 November 2006 the parent company NYMEX Holdings began trading publicly on the New York Stock Exchange.

George Winslow

New York Metropolitans. Baseball team. Formed in September 1880, the team competed in the American Association from 1883 to 1887 and played its home games at the Polo Grounds. After winning the championship of their league in 1884, the Metropolitans lost three consecutive games to the Providence Grays of the National League in a playoff that some baseball historians describe as the first World Series. The Metropolitans were owned by John B. Day, a businessman who also controlled the New York Giants of the National League. Day's sale of the Metropolitans to Erastus Wiman in 1885 was unsuccessfully challenged by the American Association, which sought to expel the club. After a court blocked the expulsion Wiman sold the team to the Brooklyn Trolley-Dodgers of the American Association in 1887. Although this sale marked the end of the Metropolitans, their name was revived in 1962 when the New York Mets joined the National League.

George B. Kirsch

New York Metropolitan Transportation Council [NYMTC]. Metropolitan planning organization responsible for coordinating and allocating federal transportation funds in the tri-state region. It was created in 1982 after the Tri-State Regional Planning Commission was dissolved. NYMTC absorbed the remaining staff and files of Tri-State, focusing on the downstate New York area including New York City and five of its 26 suburban counties—Nassau, Suffolk, Westchester, Putnam, and Rockland. Each suburban county, New York State (Department of Transportation), New York City (Department of Transportation and City Planning Commission), and the Metropolitan Transportation Authority have representatives on the council, and current rules call for voting by consensus. Nonvoting members include the Port Authority of New York and New Jersey, New Jersey Transit, the North Jersey Transportation Planning Authority, the New York State Department of Environmental Conservation, the Federal Highway Administration, the Federal Transit Administration, and the U.S. Environmental Protection Agency. NYMTC has continued many of the transportation planning programs begun by Tri-State, although at a less ambitious level of detail. The terrorist attacks of 11 September 2001 destroyed NYMTC's offices and files, and three staff members died. The agency has since operated out of new headquarters in lower Manhattan.

George Haikalis

New York Mets. Professional baseball team, formed as one of two new teams in the National League in 1962. New York City received the franchise largely through the efforts of William A. Shea, who was charged by Mayor Robert F. Wagner with bringing a team to the city after the Brooklyn Dodgers and the New York Giants left for California in 1957. Joan Whitney Payson was the principal owner of the new team, which played its first two seasons at the Polo Grounds in upper Manhattan (former home of the Giants). It chose as its colors blue (to represent the Dodgers) and orange (to represent the Giants) and as its logotype a stylized rendering of the city's skyline. During its first season the team compiled a record of 40 wins and 120 losses, second worst in the history of the major leagues, and it fared little better during the years immediately following. It saw itself through this trying period by cultivating an image of likable ineptness and relying on the showmanship of its manager, Casey Stengel. In 1964 the team moved to Shea Stadium in Queens, a venue more accessible to residents of the suburbs, and in 1965 Wes Westrum replaced Stengel as the manager. By this time a number of fine players were emerging from the team's farm system, including outfielders Cleon Jones and Ron Swoboda, shortstop Bud Harrelson, and pitchers Tom Seaver, Jerry Koosman, Jim McAndrew, Nolan Ryan, and Gary Gentry. The team also acquired outfielder Tommy Agee and the first baseman Donn Clendenon through trades. Gil Hodges, who had played first base for the team early in its history, managed the team from 1968 to 1972.

The Mets in 1969 accomplished a feat with few parallels in professional sports. Having failed in each of its first seven seasons to win as many games as it lost or to finish higher than ninth among 10 teams, the team overtook the Chicago Cubs late in the season to win the championship of the Eastern Division, winning 100 games and losing 62. The team then defeated the Atlanta Braves for the National League pennant in three games and won the World Series in five games against the heavily favored Baltimore Orioles. The feeling of optimism and confidence generated in New York City by the Mets' victory is widely regarded as having helped to reelect Mayor John V. Lindsay. The Mets remained competitive for the next five years, winning the National League pennant in 1973 under manager Yogi Berra before losing the World Series to the Oakland Athletics in seven games.

The Mets foundered under lackluster ownership after Payson's death in 1975. The decision to trade Seaver to the Cincinnati Reds in 1977 is considered the low point in the team's history. Managed by Berra, Joe Frazier (1976–77), Joe Torre (1977–81), George Bamberger (1982–83), and Frank Howard (1983), the Mets between 1974 and 1983 finished last five times and next to last three times. Rebuilding began in 1980, when publisher Nelson Doubleday and real estate executive Fred Wilpon bought the team. Wilpon became the team's sole owner in 2002. A new general manager, Frank Cashen, assembled a powerful team by combining players developed through the farm system, notably Dwight Gooden, Darryl Strawberry, and Wally Backman, with others, such as Keith Hernandez, Gary Carter, and Howard Johnson, acquired through trades. The team was competitive between 1984 and 1990 under manager Davey Johnson, winning 108 games and the World Series in 1986 and the Eastern Division of the National League in 1988. The Mets rallied on their last strike in the sixth game of the 1986 World Series to overcome a two-run lead by the Boston Red Sox.

The Mets underwent a sharp decline during the early 1990s, finishing last in the Eastern Division in 1993 (59 wins, 103 losses). Bud Harrelson replaced Johnson as the manager in 1990. Jeff Torborg (1991–93), Dallas Green

(1993–96), Bobby Valentine (1996–2002), Art Howe (2003–4), and Willie Randolph (2005–) subsequently managed the team. Under Valentine, the Mets won two consecutive Wild Cards in 1999 and 2000. Led by pitcher Al Leiter and catcher Mike Piazza, the team defeated the Arizona Diamondbacks, three games to one, in the 1999 National League Divisional Series before losing to the Atlanta Braves in the League Championship Series, four games to two. After winning the National League pennant in 2000, the Mets lost the 2000 World Series, the first Subway Series since 1956, to the crosstown Yankees. A Mets 3–2 victory over the Atlanta Braves 10 days after the terrorist attacks of 11 September 2001, highlighted by Mike Piazza's eighth-inning home run, is seen as beginning the city's comeback after the tragedy.

In the mid-2000s general manager Omar Minaya built the Mets around Latino players Carlos Beltran, Pedro Martinez, and Jose Reyes, who along with Tom Glavine, Billy Wagner, and David Wright signed long-term contracts. Shea Stadium, the site of seven Mets postseason appearances and a staging area for relief efforts after 9/11, was replaced on the same site in 2009 by Citi Field, designed to resemble Ebbets Field, home of the Brooklyn Dodgers until 1957.

Harold S. Wechsler

New York Mothers' Home of the Sisters of Misericordia. Original name of Our Lady of Mercy Medical Center.

New York Nautical Training School. Original name of the Maritime College.

New York Naval Shipyard. Official name of the Brooklyn Navy Yard.

New York/New Jersey Metrostars. Major League Soccer team in New York City, renamed the New York Red Bulls in 2005.

New York Newsday. Daily newspaper launched in 1985. Its parent newspaper, *Newsday,* was founded in 1940 in Hempstead, Long Island, by Alicia Petterson, who as the editor and publisher shaped it into a tabloid best known for its local investigative reporting. The newspaper began expanding its circulation into New York City after being purchased by the Times–Mirror Company in 1970. *New York Newsday* maintains its own headquarters in Manhattan and a separate editorial staff. In 2004 it was revealed that beginning in 2000 the newspaper had inflated its circulation numbers by more than 100,000 copies. In 2006 its daily circulation was more than 400,000, and it was home to several widely read columnists, including Sydney Schanberg, Murray Kempton, Jimmy Breslin, and Liz Smith.

Robert F. Keeler, *Newsday: A Candid History of the Respectable Tabloid* (New York: William Morrow, 1990)

Madeline Rogers

New York Newspaper Guild. Labor organization formed in New York City in November 1933; its members elected Allen Raymond of the *New York Herald Tribune* their first president and Heywood Broun of the *New York World–Telegram* their vice president. The organization was instrumental in forming the American Newspaper Guild.

Michael Green

New York Observer (i). Weekly newspaper launched on 17 May 1823 by Sidney E. Morse and Richard C. Morse and published until 30 May 1912. It reflected Presbyterian orthodoxy and was the first religious newspaper published in New York City. Soon after it began publication the newspaper began a fervent campaign against the city's theaters. For many years it was edited by Samuel Irenaeus Prime, who published a popular series of letters under the pseudonym "Irenaeus" and exploited anti-Catholic sentiment among evangelical Protestants. By mid-century he broadened the scope of the newspaper beyond a denominational readership. The founders of the newspaper, sons of the geographer Jedidiah Morse, introduced in 1839 a wax-engraving technique suitable for printing maps. Their brother, the artist and inventor Samuel F. B. Morse, was a contributor to the *Observer;* his letter from Paris published on 20 April 1839 was the first American report of the daguerreotype.

Mariam Touba

New York Observer (ii). Weekly newspaper launched in 1987 by investment banker Arthur L. Carter. Printed on peach-colored paper in a broadsheet format, it aimed to offer bold, irreverent coverage of cultural, social, political, and business life in New York City. The newspaper catered unabashedly to the wealthy and powerful elite of Manhattan. It became well-known for its regular columns on politics by Joe Conason and Terry Golway, on the arts by Hilton Kramer, on nightlife by Rex Reed, and on film by Andrew Sarris; it also published Candace Bushnell's column "Sex and the City," on which a popular television series of the same name was based. In 2006 Carter sold the *Observer* to Jared Kushner, a graduate student in business and law at New York University. In 2007 Kushner transformed the newspaper from a broadsheet to a tabloid. In 2010 the *Observer* had a paid circulation of 52,000.

James Bradley

New York One [NY1]. Twenty-four-hour local news channel owned by Time Warner. Richard Aurelio of Time Warner founded the channel in 1991 and became its first president; it began broadcasting in 1992 in a studio at 460 West 42nd Street. In 2002 NY1 moved to new studios in the Chelsea Market Building at 75 Ninth Avenue.

Kate Lauber

New York Palace. Luxury hotel on Madison Avenue between 50th and 51st streets, designed by the firm of Emery Roth and Sons

Interior of the New York Palace Hotel, 1980

and completed in 1986; it is built over the Villard Houses, a palazzo designed by the firm of McKim, Mead and White in 1882. Known as the Helmsley Palace from 1981 to 1992, the hotel has 55 stories, 962 rooms, a courtyard facing Madison Avenue, and a facade of dark bronzed glass and anodized aluminum; its two-story marble lobby was designed by Tom Lee. Four antique Florentine lanterns adorn the main entrance, and two tiers of nineteenth-century bronze and glass marquees overhang the other two. The great hall of the palazzo is known for its spectacular features, including a red Verona marble fireplace in the grand foyer of the upper lobby (designed by Augustus Saint-Gaudens) and a clock decorated with the signs of the zodiac (Saint-Gaudens and Stanford White). Some of the most elegant rooms are the Drawing Room and the Madison Room, designed by White for the newspaper publisher Whitelaw Reid. In 2007 renovation was completed, transforming the fourth and fifth floors of the Villard Houses into a luxurious 13,000-square-foot (1200-square-meter) venue dubbed the Mansion Rooms.

Janet Frankston

New York Peace Society. Forerunner of the American Peace Society.

New York Philharmonic. Oldest orchestra in the United States. Officially the Philharmonic-Symphony Society of New York, it was formed in 1842 as the Philharmonic Society, a cooperative organization of musicians led by conductor Ureli Corelli Hill. The first concert took place on 7 December in the Apollo Rooms on lower Broadway, with 63 musicians performing before an audience of 600; the concert began with Hill conducting Beethoven's Symphony no. 5. German music and musicians dominated the orchestra in its early years, during which the conductor's post was shared by several men, chiefly Theodore Eisfeld and Carl Bergmann. During 1877–78 and 1879–91 performances were brought to a virtuoso level by the German-born Theodore Thomas. His successor Anton Seidl (1891–98) was a conductor of Wagner whose Romantic interpretations inspired both adulation and controversy.

After a group of wealthy patrons formed the Guarantors' Committee in 1909, the orchestra enjoyed financial stability. The guarantors were responsible for engaging Gustav Mahler as the principal conductor of the orchestra and for expanding the performance season. Under the leadership of Josef Stransky (1911–23) the orchestra broadened its repertory to include works by American composers as well as new Europeans such as Debussy, Schoenberg, and Stravinsky and made its first commercial recording in January 1917. Willem Mengelberg first conducted the orchestra in 1921; during his tenure concerts were also conducted by Stravinsky, Wilhelm Furtwängler, and Arturo Toscanini. The orchestra absorbed several others: in 1921 the National Symphony Orchestra (formed as the New Symphony in 1919), in 1923 the City Symphony Orchestra (formed in 1922), and in 1928 the Symphony Society of New York (formed in 1878 by Leopold Damrosch). This period marked the beginning of an expanded educational program, radio broadcasts (1922), summer concerts at Lewisohn Stadium (1922), and children's concerts under the direction of Ernest Schelling (1924).

Toscanini became the conductor of the newly combined orchestra in 1929. Nationwide radio broadcasts began in 1930 and continued until 1967. From 1936 the orchestra was led principally by John Barbirolli and Artur Rodzinski (to 1947), whose assistant conductor Leonard Bernstein made a spectacular debut leading the orchestra as a substitute for Bruno Walter. The years following Rodzinski's resignation were dominated by Walter, Leopold Stokowski, Dimitri Mitropoulos, and Bernstein (from 1957), whose tenure was a period of great change and growth. Two television series were begun in 1958, and in 1962 the orchestra left Carnegie Hall after 69 years and moved to Philharmonic Hall (now Avery Fisher Hall) at Lincoln Center. In 1964 it became the first American orchestra to offer a year-round contract to its members, leading to expanded programming. In the autumn of 1969 Bernstein was given the orchestra's first lifetime position of laureate conductor. Pierre Boulez, the music director from 1971, became known for his emphasis on twentieth-century music and his innovative programming. Zubin Mehta, music director from 1978 to 1991, specialized in late Romantic composers. Kurt Masur became the music director in September 1991; he was succeeded by Lorin Maazel in 2002, who was himself succeeded in 2009 by Alan Gilbert. In the early twenty-first century the orchestra continued to support contemporary composers, commissioning and performing John Adams's Pulitzer Prize–winning *On the Transmigration of Souls,* a piece inspired by the terrorist attacks of 11 September 2001. In 2006 it led other major orchestras in the digital age as the first to produce downloadable concerts. The New York Philharmonic has 106 permanent musicians and performs about 180 concerts a season; it has performed more than 14,000 concerts since its founding.

Music Directors, Music Advisers, and Principal Conductors of the New York Philharmonic

Term	Name
1842–49	Ureli Corelli Hill, Henry Timm, Alfred Boucher, Louis Wiegers, Denis Etienne, William Alpers, George Loder

Barbara Haws

New York Pops. Largest independent symphonic orchestra in the country. Founded in 1983 by Skitch Henderson, the Pops employs 77 musicians and performs popular American music, including works by Leonard Bernstein, Irving Berlin, Aaron Copland, Duke Ellington, George Gershwin, and Cole Porter. In 1990 the orchestra began free education programs in New York City public schools. Its annual series is held at Carnegie

Hall, and its Summermusic concerts are performed throughout the city.

Kate Lauber

New York Port of Embarkation. Military command during World War II. Between 1942 and 1945 it organized the shipping overseas of three million U.S. soldiers and their equipment and more than 63 million tons of additional war supplies. Its facilities included a complex network of railroad lines, highways, waterways, wharves, and warehouses. At its peak in 1944 the port comprised 10 terminals and three areas for staging troops and employed more than 55,000 men and women. Its three principal facilities were the Brooklyn Army Terminal, where the commander of the port, Major General Homer M. Groninger, had his headquarters; Bush Terminal, which extended from 28th to 50th streets along First and Second avenues in Brooklyn and comprised 26 eight-story warehouses built between 1895 and 1926; and Staten Island Terminal. Together these terminals handled about half the wartime shipments from the port. Other facilities on Staten Island included Fox Hills Terminal and Howland Hook Terminal, the principal point from which petroleum, oil, and lubricants were shipped. In Manhattan the North River Terminal, at 12th Avenue and 46th Street, was an important point of embarkation for troops. Seven piers on the Hudson River permitted the loading of troop ships and ocean liners. The Army Postal Terminal, at 464 Lexington Avenue in Manhattan, handled more than three billion pieces of mail during the war. Across the harbor in New Jersey were the terminals of Port Johnson and Claremont. The Special Service Supply Terminal had offices in Manhattan and Brooklyn. Troops bound overseas were routed into the port from three staging areas: Camp Kilmer (New Brunswick, New Jersey), Camp Shanks (Orangeburg, New York), and Fort Hamilton (Brooklyn).

Joseph F. Meany, Jr.

New York Post. Daily newspaper. Launched in 1801 by Alexander Hamilton as the *Evening Post* with William Coleman as its first editor, it was produced in offices on Pine Street and published shipping notices and anti-Jeffersonian invective. Coleman was succeeded on his death in 1829 by William Cullen Bryant, under whose guidance the newspaper abandoned its conservative politics and broadened its appeal. During the party realignments of the 1820s and 1830s it supported Andrew Jackson and the Democratic Party, and opposed high tariffs, the Bank of the United States, and the nullification acts of South Carolina. Bryant tempered the blustery, radical brand of Jacksonianism embraced by his associate William Leggett (to 1836), and avoided the sensationalism of the penny press, notably the *Herald* of James Gordon Bennett, Sr. With his later associate John Bigelow (from 1848) he opposed slavery and expressed frustration with the Democrats for equivocating on the issue. In 1850 the offices of the newspaper were moved to the corner of Liberty and Nassau streets. Bigelow introduced a broad range of new issues through a weekly column of fictional interviews with a "Jersey ferryman" that related political gossip, and in 1851 he published an exposé of Jared Sparks's sanitized edition of George Washington's correspondence.

In 1855 the *Post* became a supporter of the Republican Party. Bigelow left the newspaper in 1860 and was replaced by Charles Nordhoff, who supported Abraham Lincoln and advocated the vigorous prosecution of the Civil War. During the draft riots (1863) he wrote an account of 8000 words suggesting that the riots had been instigated by Copperhead Democrats, and after attaching a hose to the steam boiler of the newspaper's offices he threatened to repel attackers with blasts of scalding water. After the war Bryant and Nordhoff backed President Andrew Johnson's mild Reconstruction program and the 14th Amendment, and opposed Johnson's impeachment and a silver-based monetary system. The offices of the *Post* were moved to Broadway and Fulton Street in 1875, at a time when the newspaper was faring well commercially. Bryant died in 1878 and was succeeded as the chief editor of the newspaper by his son-in-law Parke Godwin. In 1881 the newspaper was purchased by Henry Villard, who installed the editorial triumvirate of Horace White, E. L. Godkin, and Carl Schurz. Under their leadership the newspaper continued to oppose free silver and supported lower tariffs and civil service reform. As the sole editor from 1883 Godkin waged a relentless attack against Tammany Hall: in 1890 he published a series of scathing biographical sketches of its leaders, whom he described as "liquor-dealers," "pugilists," "dive-keepers," and "convicted murderers."

The Villard family relinquished control of the *Post* in 1917, which under the ownership of Thomas Lamont (1917–22) and Cyrus Curtis (from 1924) became a forum for more conservative views. The political perspective changed again in 1936 when the newspaper was bought by J. David Stern, a supporter of the New Deal. By this time the newspaper was declining in profitability, and when Dorothy Schiff assumed control in 1939 it ranked third in circulation among afternoon newspapers in the city. In an effort to attract readers Schiff and her third husband, Theodore O. Thackrey, emphasized scandal and human-interest stories, and in 1942 the format was changed from broadsheet to tabloid. James A. Wechsler, the chief editor from 1949, crusaded for civil liberties, attacked Senator Joseph R. McCarthy, and was himself attacked for his early association with the Young Communist League; in 1954 vandals splashed red paint on the newspaper's building on West Street. Paul Sann assumed the editorship in 1961 and increased coverage of crime and sports.

By 1967 the *New York Post* was the only afternoon newspaper left in the city. It benefited little from the demise of its competitors, because the same demographic and cultural changes that had driven them out of business were hurting the *Post* as well. Financial losses led Schiff to sell the newspaper in 1976 to the Australian press magnate Rupert Murdoch, who sought to replace the newspaper's traditional readership, which was largely white, middle class, and aging, with a newer one that was racially diverse, working class, and young. Murdoch introduced marked changes: a stridently conservative editorial stance, frequent blurring of the distinction between reporting and opinion, sensationalistic and at times smirking coverage of crime, sex, accidents, scandal, and celebrities, and deliberately outrageous headlines, of which perhaps the most memorable was "Headless Body in Topless Bar." The newspaper also ran sweepstakes that it promoted aggressively, and within a few years circulation increased sharply. The *Post* nevertheless remained unprofitable, largely because of its inability to sell display advertising to large retailers (who recognized that most readers of the *Post* also read other newspapers, and therefore believed that advertising in the *Post* was redundant). Murdoch lost about $150 million by 1988, when he was forced to sell the newspaper because of a federal regulation barring common ownership of television stations and newspapers in the same market. The *Post* was purchased by the real estate investor Peter Kalikow, who won $22 million in concessions from the newspaper's labor unions. Kalikow in turn sold the newspaper in 1993 when he became bankrupt. Granted a waiver of the regulation that had forced him to sell the newspaper years before, Murdoch again became the owner in 1993. In 2000 it cut its price from 50 cents to 25 cents. As of 2009 it had 508,000 weekday readers and 343,000 Sunday readers. It is the only paper in the United States to have published daily for 200 years continuously.

Robert Stinson

New York Presbyterian Hospital. First academic medical center in the world to combine a major hospital with a medical school. It resulted from an affiliation spearheaded by

Edward S. Harkness between Presbyterian Hospital and Columbia University's College of Physicians and Surgeons in 1911 to advance medical care, education, and research. However, intensive planning did not begin on the center until after the hospital and university signed a second affiliation agreement in 1922. The center opened in 1928 in Washington Heights between 165th and 168th streets and between Broadway and Fort Washington Avenue on 22 acres (9 hectares) donated by Harkness and his mother, Mrs. Stephen Harkness, along with construction funds. Presbyterian Hospital moved into a facility with 694 beds that included the Harkness Pavilion (150 private-room beds) and the Squier Urological Clinic. Its affiliates—the New York State Psychiatric Institute and Hospital, Sloane Hospital for Women, Vanderbilt Clinic, Babies Hospital, and the Neurological Institute—also moved into new facilities in Washington Heights. In 1933 the center opened the Institute of Ophthalmology with 100 beds; this was integrated with the Herman Knapp Memorial Eye Hospital in 1939. The Mary Harkness Convalescent Home was opened in Port Chester in 1937 on land donated to the center. In 1938 the center added an additional 7.5 acres (3 hectares) to its property holdings between 163rd and 165th streets between Fort Washington Avenue and Riverside Drive. To meet the demand for semiprivate beds, the Harkness Pavilion was enlarged to accommodate an additional 500 beds. As a result of negotiations begun in 1940 with the city for a cancer hospital, the Francis Delafield Hospital, a 300-bed facility funded by the city, opened in 1950 at the center. The New York Orthopaedic Dispensary and Hospital, affiliated with Presbyterian Hospital from 1945, moved to the center in 1950. Expansion continued with the opening of the Millstein Pavilion (1988) and the Allen Pavilion (1989). Along with the College of Physicians and Surgeons, the center is home to Columbia University's Mailman School of Public Health, College of Dental and Oral Surgery, and School of Nursing. By the 1980s the center was the leading organ transplant center in the Northeast, a federally designated comprehensive cancer center, and renowned for its neonatal care and work with patients suffering from Parkinson disease. By the mid-1990s, Columbia–Presbyterian Medical Center was the largest hospital in New York City, with 1548 beds, and as many as 35 percent of its patients were from outside the city. Clinical advances made by Columbia faculty include the blood test for cancer, medical use of the laser, and successful transfer of genes from one cell to another. To fulfill the center's research mission, affiliated research centers are located on the campus that also receive funding from government agencies, corporations, and private benefactors. They focus on research in molecular neurobiology; cancer; diabetes; nutrition; sickle cell anemia; biotechnology; aging brain, Alzheimer disease, and other degenerative neurological conditions; immunology; and rheumatology. In 1997 the New York–Presbyterian Healthcare System was formed with the merger of the Cornell and Columbia medical centers and New York and Presbyterian Hospitals and the network of all their affiliated hospitals in the tri-state region to create one of the most comprehensive hospitals in the world. A merger between the two hospitals and medical centers had been explored approximately 70 years earlier (1916) and rejected. In 2003 the center was renamed Columbia University Medical Center. In its 2009–10 Honor Roll, *U.S. News and World Report* ranked New York–Presbyterian University Hospitals of Columbia and Cornell as sixth best in the nation, with top rankings in the country for kidney disease, neurology and neurosurgery, psychiatry, gynecology, endocrinology, urology, cardiology, orthopedics, and pediatrics.

Jane E. Mottus

New York Press Club. Professional organization of members and former members of the news media. Originally formed in 1872 as the New York Journalistic Fraternity, it was incorporated in 1874 under its current name. Its activities included charity work as well as banquets and shows at which such speakers as Governor Alfred E. Smith and Mayor James J. Walker appeared. The club disbanded in 1933 after going into receivership but was revived in 1948. In the twenty-first century it sponsors debates and speeches, aids reporters charged with libel or contempt, and works to protect the freedom of the press, publicize election debates, and recognize excellence in journalism. It hosts an annual award ceremony to recognize all branches of media and publishes *Byline Magazine* annually. Its headquarters are at 1636 Third Avenue.

Michael Green

New York Printers' Union. Original name of New York Typographical Union no. 6.

New York Produce Exchange. Commodities market formed in 1861 as the New York Commercial Association by merchants and ship brokers who gathered outside the Merchants' Exchange; it was renamed in 1868. It was at first a cash spot market: merchants based their transactions on samples from individual lots of grain rather than on inspection, grades, and negotiable warehouse receipts (the system used in Chicago). Members included agents of European firms buying for shipment abroad, often through other ports. The leaders of the exchange overcame the resistance of exporters and in 1874 established trading "pits" for transactions in inspected and graded grains. From 1885 the exchange was housed in a building at 2 Broadway. As the nation's leading export market for wheat, flour, lard, and cottonseed oil, the exchange attracted many respected merchants. In the 1870s Franklin Edson, later mayor of New York City, was its president for three terms. Shrinking foreign trade after 1920 forced the exchange to broaden its scope and offer both spot and futures trading in such commodities as hay, hops, butter, and cheese. Later retrenchment confined its operations by the

New York Produce Exchange, 1890

1950s to trading in cottonseed oil, tallow, fishmeal, and pepper. After several years of heavy losses, the New York Produce Exchange was reorganized in 1973 into a real estate investment trust, and its commodities business was taken over by other exchanges.

Morton Rothstein

New York Public Library [NYPL].

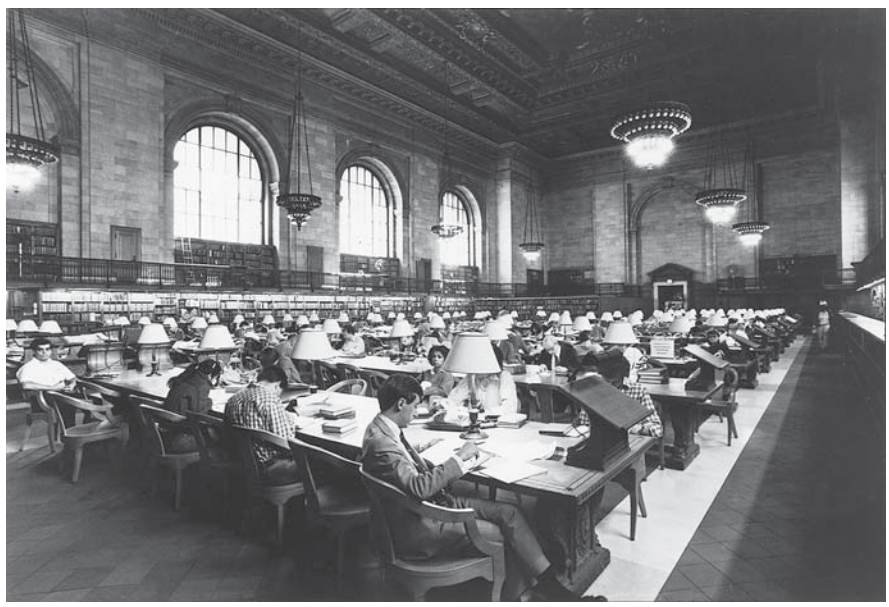
Library formed in 1895 by the consolidation of the Astor and Lenox libraries and the Tilden Trust. New York City had no major library when John Jacob Astor provided a bequest of $400,000 for a library in the 1830s. In 1854 the Astor Library was erected on Astor Place on a noncirculating basis open to the public free of charge. Although members of the Astor family continued to make contributions, the library often suffered financial difficulties. James Lenox (1800–80) transferred land and his collection of books and art to the Lenox Library, incorporated in 1870. Opened in 1877 in a building designed by Richard Morris Hunt, the library was used primarily for art exhibitions, and its books were so poorly cataloged that they could not easily be consulted. Under public pressure the library gradually extended its hours and eased its admission policies even as it faced recurrent financial problems. In 1886 Samuel J. Tilden, the former Democratic governor and presidential candidate, left the city a trust to set up a free library. Family members contested the will and were awarded the entire estate by a court decision in 1891, but one heir donated Tilden's personal library and more than $2 million to the trust. Negotiations to merge the trust and the Astor Library were eventually extended to include the Lenox Library; they ended on 23 May 1895 with the formation of the New York Public Library, Astor, Lenox and Tilden Foundations, a private institution open to the public.

Confronted with the task of building a strong institution from two weak ones, the board of trustees appointed as their first director John S. Billings, a former army surgeon who had built the country's foremost medical library. He combined the often inaccessible Astor and Lenox collections into the reference department, a major noncirculating research library intended as a library of record. Maintained by the Astor, Lenox, and Tilden endowments, it was especially strong in Americana, English and American literature, music, dance, theater, foreign languages, and genealogy and had comprehensive collections of illustrated books, periodicals, government publications, maps, and newspapers. Billings reorganized the staffs of the former libraries, built new collections, devised a unique classification scheme, and drew a sketch that became the basis for the main building at Fifth Avenue and 42nd Street, which was designed by John M. Carrère and Thomas Hastings and opened to the public on 23 May 1911. The trustees left open the possibility of adding neighborhood branches. The city's existing free libraries were small, independent institutions sponsored primarily by charitable and religious organizations to promote the moral, civic, and intellectual growth of immigrants and workers; they were popular but lacked coordination and financial support. The branches of the New York Free Circulating Library (formed 1878), the largest of the city's free libraries with 11 branches by 1899, were absorbed by NYPL in 1901 and converted into a circulation department.

New York Public Library at Seventh Avenue, ca *1910*

A month after the circulation department was formed, Andrew Carnegie offered $5.2 million to erect 65 branches if the city would provide the sites and maintenance. The city agreed, and between 1902 and 1914, 37 branches operated by NYPL under contract with the city were built in Manhattan, the Bronx, and Staten Island. In 1906 the superintendent of work with children (now the office of children's services) was established, one of the first libraries to welcome children regardless of age. During the same year the superintendent of work with schools (now the office of young adult services) was also established, the first office of its kind in the United States. By 1921 there were 43 branches. Shifts in population placed new demands on the library: in such areas as the Lower East Side, where there were several branches, the population was decreasing, while in others such as the Bronx there were few libraries for a population that was rapidly expanding. Seven branches opened between the world wars, but inflation and a lack of municipal funds left some needs unmet. The library responded by opening 14 subbranches with abbreviated hours and deposit stations in community institutions and by providing "bookmobiles" to unserved areas of the Bronx and Staten Island. Severe strains developed during the Depression. Staff was furloughed, hours were shortened,

New York Public Library, 40th Street and Fifth Avenue, 1911



New York Public Library (designed by Carrère and Hastings), 42nd Street and 5th Avenue, ca *1945*

and book purchases declined. At the same time the reference department experienced such an increase in use that it became known as the "people's university." Some library operations were maintained in part by workers in federal relief programs.

After World War II the branch system demanded renovations and additions, forcing the library to seek new sources of income. During the 1940s it shifted its goals from large gifts to a greater number of small gifts in annual campaigns. It also revamped its administration, adding an office of adult services (1946) and departments of public relations and personnel. After 1950 state and city funding for the circulating department rose sharply. Between 1945 and 1956 the number of branches grew from 50 to 80, and they gave attention to such materials as films, discs, and tapes; developed radio and television programs for audiences of all ages; and expanded their range of free programs to include film screenings, concerts, dramatic readings, art exhibitions, and lectures. The branch libraries during the 1960s intensified their efforts in neighborhoods dominated by ethnic minorities. NYPL in 1965 established a Library for the Performing Arts at Lincoln Center (now the New York Public Library for the Performing Arts, Dorothy and Lewis B. Cullman Center). The reference department developed programs in book preservation, microfilming, exhibits, and bibliographic publications and was renamed the research libraries in 1966. In 1974 the library helped to form the Research Libraries Group, a cooperative for sharing resources.

In 1970 the first large circulation building opened in midtown Manhattan. The branch staffs were reduced by 20 percent in the early 1970s because of budget cuts, and the situation was exacerbated by high inflation and the city's fiscal crisis of the mid-1970s. From 1975 branch programs and hours were curtailed, deficits grew, and hours for the central building, until then open 84 hours a week, were reduced by nearly half. Finances improved in the late 1970s with an influx of funds from New York State, the federal government, and private contributors. Circulation and hours did not increase again until the early 1980s, and the system did not fully regain its earlier service levels. The appointment of Vartan Gregorian as president in 1981 was an important step toward revitalization. During his tenure the library renovated the central building and many branches, introduced new programs, reduced cataloging backlogs, increased hours, and successfully completed a campaign to raise $300 million. The research libraries continued to be supported primarily by private endowment, the branch libraries by the city.

Lack of space became a problem in the late twentieth and early twenty-first century. During the Bryant Park restoration of the late 1980s, a plan was formulated to expand stack space underneath the park, which is adjacent to the main library at 42nd Street and Fifth Avenue. Excavations began in 1988 and in 1991; 40 miles (64.3 kilometers) of subterranean shelf space were completed. Under Paul LeClerc, who became president of NYPL in 1993, the main library's space was further increased: its open-air courtyard was enclosed, and a six-story glass structure designed by Davis Brody Bond opened in its place in 2002. The addition, called South Court, added 40,000 square feet (3716 square meters) of classrooms, the 178-seat South Court Auditorium, and office space. In 2006, after renovations, the Bronx Library Center (formerly the Fordham Library Center) opened with greatly expanded facilities, including a 150-seat auditorium. In 2008 NYPL announced a $1 billion plan to transform the entire library system. Stephen A. Schwarzman, chairman of the Blackstone Group,

South Reading Room at the New York Public Library, 42nd Street and Fifth Avenue

donated $100 million toward the plan, the largest gift in the library's history. In recognition, the trustees renamed the main facility, the Humanities and Social Sciences Library at 42nd Street and Fifth Avenue, the Stephen A. Schwarzman Building. As part of the planned transformation, the Schwarzman Building will be renovated to include both circulating and reference collections; large hub libraries will be built in Manhattan, the Bronx, and Staten Island; and the library's online catalog and digital collections will be revamped.

The New York Public Library holds about 50 million items in its research and circulating collections. The Schwarzman Building houses research divisions and sections devoted to economics and public affairs; the history of the United States, local history, and genealogy; the humanities and social sciences; Judaica; the Far East; the Slavic and Baltic regions; periodicals; maps; and science and technology. Nearly one million rare items are held in the library's special collections, including the Miriam and Ira D. Wallach Division of Art, Prints, and Photographs; the Rare Books and Manuscripts Division; the Carl H. Pforzheimer Collection of Shelley and His Circle; the George Arents Collection on the History of Tobacco and Tobacco-Related Literature; the Spencer Collection of Illustrated Books, Illuminated Manuscripts, and Fine Bindings; and the Berg Collection of English and American Literature. In addition to the Schwarzman Building's main research collections and the Library for the Performing Arts, NYPL operates two other special research libraries: the Schomburg Center for Research in Black Culture, in Harlem, and the Science, Industry, and Business Library, on Madison Avenue and 34th Street. The library issues borrowers' cards to anyone who lives, works, or attends school in New York State. In the early twenty-first century there were 87 branch libraries containing seven million circulating items; 15 million people visited the library annually, and there were 1.86 million cardholders.

Robert Sink

New York Public Library for the Performing Arts. Research center of the New York Public Library, opened at Lincoln Center in 1965. The Lincoln Center facility, now named the New York Public Library for the Performing Arts, Dorothy and Lewis B. Cullman Center, allowed the library to unite all its performing arts collections, which had previously functioned as separate units. It houses some nine million items and offers exhibitions and live events, including dance and music performances, panel discussions and lectures, films, and play readings. The research collections are devoted to dance, music, recorded sound, and theater. Among the holdings of the Jerome Robbins Dance Division are choreographic records, costume and set designs, photographs and moving images, and recorded interviews. It houses archives related to many eminent dance figures, including Vaslav Nijinsky, Agnes de Mille, and Merce Cunningham. The music division's resources range from classical music and opera to spirituals, jazz, and musical comedy, to rock and contemporary music. The division contains manuscripts of works by Bach, Mozart, and Beethoven, as well as more recent materials, such the extensive American Music Collection. The Rodgers and Hammerstein Archives of Recorded Sound include wax roll recordings of early twentieth-century Metropolitan Opera performances and Fiorello H. La Guardia's radio broadcasts. Staff undertake special recording projects to augment the collection. The Billy Rose Theatre Collection comprises approximately five million items related to the theatrical arts, including scripts, production designs, and more than 4500 video recordings of performances, documentaries, and interviews.

Helen Graves

New York Rangers. Ice hockey team formed on 15 May 1926, sometimes called the Broadway Blues. The team played its first game on 16 November 1926 in Madison Square Garden under the direction of Lester Patrick, the coach and manager. In 1928 it won the Stanley Cup after defeating the Montreal Maroons in five games; it also reached the Stanley Cup finals in 1929 and 1932 largely because of the efforts of Frank Boucher, Ivan "Ching" Johnson, and brothers Bill and Bun Cook. The team won the Stanley Cup in 1933 and again in 1940 when it defeated the Toronto Maple Leafs in six games: members of the team included Babe Pratt, Lynn Patrick, Art Coulter, Neil Colville, and Bryan Hextall. The Rangers finished first in the National Hockey League in 1941–42 and reached the finals in 1949–50, but they failed to win consistently again until 1965–66, when Emile Francis became the coach. During the 1960s and 1970s the team had such well-known players as Rod Gilbert, Jean Ratelle, Brad Park, Ed Giacomin, and Phil Esposito. The Rangers made the Stanley Cup finals in 1972 and 1979 and finished first in the Patrick Division in 1989–90 and 1991–92 but failed to win the league championship.

In 1994 players such as Brian Leetch, Adam Graves, Mark Messier, and Mike Richter led the team to its first Stanley Cup championship in 54 years after successively defeating the New York Islanders, the Washington Capitals, the New Jersey Devils, and the Vancouver Canucks. In 1996 the team signed hockey legend Wayne Gretzky for the final three years of his career. Beginning in 1998–99, the Rangers failed to make the playoffs for seven consecutive seasons until team captain Jarmoir Jagr and goalie Henrik Lundqvist led them back in 2005–6.

James Duplacey

New York Red Bulls. Major League Soccer (MLS) team known as the New York/New Jersey MetroStars until it was bought and rebranded in March 2006 by Red Bull Company GmbH. The MetroStars played its first game as one of the league's original 10 teams on 13 April 1996 against the Los Angeles Galaxy at the Rose Bowl. The club had 10 managers during its first 11 years and compiled a 146–168–54 record. The team reached the MLS Cup semifinals in 2000 and was a runner-up in the 2003 U.S. Open Cup. The Red Bulls currently play home games in Red Bull Park, a 25,000-seat soccer-specific stadium in Harrison, New Jersey.

Joshua Robinson

New York Review of Books. Literary magazine, published every two weeks, launched as a book review by Robert Benjamin Silvers and Barbara Epstein during a newspaper strike in February 1963. Once jokingly called the "New York review of each other's books" by the historian Richard Hofstadter, it took up the cause of the New Left and was soon one of the most influential publications of its kind in academe. Its rise coincided with the decline of intellectuals of New York City as a cohesive group. The *Review* became known for publishing long, wide-ranging essays about several books. In the 1960s the magazine *Commentary* criticized it for publishing leftist material, particularly a detailed cover illustration of a "Molotov cocktail." Among frequent contributors were Noam Chomsky, Joan Didion, Theodore Draper, Stephen Jay Gould, Andrew Kopkind, Felix G. Rohatyn, and I. F. Stone, and the cartoonist David Levine. Over the years the *Review* evolved into a sober journal of ideas open to different political points of view and not strongly oriented toward writers from New York City. In the early twenty-first century its circulation was about 140,000.

Philip Nobile, *Intellectual Skywriting: Literary Politics and the New York Review of Books* (New York: Charterhouse, 1974)

Thomas E. Bird

New York Road Runners. Running organization founded on 4 June 1958 by some 40 dedicated long-distance runners who met at Macombs Dam Park in the Bronx. Its first president was Ted Corbitt. Over the course of the twentieth century New York Road Runners expanded to more than 50,000 members, the largest organization in the world of its kind, and became a leading presence in the local, national, and international running communities. Under the leadership of president Fred Lebow, the club organized the first New York City Marathon in Central Park in 1970, growing it into an internationally renowned event that by 2009 took nearly 50,000 runners on a trip through all five boroughs. In the early twenty-first century the club was led by president Mary Wittenberg and continued to serve as the organizer of the New York City Marathon as well as more than 50 additional road races held throughout the year. New York Road Runners also became a pivotal force in helping to develop New York City's parks, world-class distance running in the United States, and the World Marathon Majors series. In addition, through the NYRR Foundation, the club establishes community running programs throughout the city to serve children who have little access to athletic programming. Its headquarters are located at 9 East 89th Street in Manhattan.

David White

New York School. Name given to a group of abstract expressionist artists in New York City who became well known after World War II and were active throughout the 1950s. The painters included William Baziotes, Elaine de Kooning, Willem de Kooning, Helen Frankenthaler, Arshile Gorky, Adolph Gottlieb, Philip Guston, Grace Hartigan, Hans Hofmann, Franz Kline, Lee Krasner, Norman Lewis, Robert Motherwell, Barnett Newman, Jackson Pollock, Ad Reinhardt, Mark Rothko, Hedda Sterne, Theodore Stamos, Clyfford Still, Bradley Walker Tomlin, and Jack Tworkov. Sculptors included David Hare, Herbert Ferber, Isamu Noguchi, Ibram Lassaw, Seymour Lipton, Theodore Roszak, and David Smith. This diverse group drew inspiration from many sources: European abstract and surrealist artists living in New York City during the 1940s, including John Graham, Max Ernst, Marcel Duchamp, André Masson, Piet Mondrian, Yves Tanguy, and the Chilean Roberto Matta Echaurren; exhibitions on cubism and surrealism held in New York City; the psychoanalytic theories of Carl Jung; Greek myth; existentialism; and American Indian art. Rejecting social realism and American scene painting, many sought through form to express inner states of feeling. The work of these artists was shown at the galleries of Peggy Guggenheim, Betty Parsons, Charles Egan, Sam Kootz, and Sidney Janis and championed by the art critics Clement Greenberg, Harold Rosenberg, Tom Hess, and Meyer Schapiro.

Patricia Hills

New York School for Fine and Applied Art. Former name of the Parsons The New School for Design.

New York School of Chiropody. Original name of the New York College of Podiatric Medicine.

New York School of Interior Design. Private college at 170 East 70th Street. It was founded in 1916 as the School of Interior Decoration by the architect Augustus Sherrill Whiton (1887–1961) and several other designers, artists, and decorators. It offers certificates, associate degrees, and bachelor's degrees. In the early twenty-first century the school had some 750 students and 70 faculty members.

Marc Ferris

New York School of Social Work. Institution that later became the School of Social Work at Columbia University.

New York's Hotel Pennsylvania. Twenty-two-story hotel at 401 Seventh Avenue. Designed by the firm of McKim, Mead and White for the Pennsylvania Railroad, it opened in 1919 as the Hotel Pennsylvania under the management of Ellsworth Statler, a prominent hotel owner. Catering primarily to travelers who used the original Pennsylvania Station (the hotel had underground passages that connected to the station), it had 2200 rooms and the world's first high-rise elevator system. During the 1930s and 1940s it was famous for its Cafe Rouge Ballroom, a popular nightclub that featured Big Band musicians such as Benny Goodman, Count Basie, and Duke Ellington. The Glenn Miller Orchestra broadcast a "Live from the Cafe Rouge" segment, and in 1938 Miller immortalized the hotel's telephone number with his song "Pennsylvania 6-5000." The exterior of the building remains virtually unaltered. The hotel was successively renamed the Hotel Statler (1948), the Statler–Hilton Hotel (1954), the New York Statler Hotel (1979), and the New York Penta Hotel (1983); it took its current name in 1992.

Jessica Montesano, May N. Stone

New York Society Library. Public library opened by subscription in 1754 in City Hall to members who paid an annual fee. Most of its holdings were destroyed or lost during the American Revolution, after which it experienced financial problems and faced competition from the increasingly popular free public libraries. The library moved to Nassau Street in 1795 and in 1839 absorbed its rival, the New York Athenaeum. The city's upper classes accounted for most of its members, and as they moved uptown the library followed, to Broadway and Leonard Street in 1840 and then to University Place in 1856. From 1850 the library received several generous bequests that ensured its long-term prosperity, and from 1882 it offered delivery service to its patrons. The trustees considered leaving University Place as early as 1900 but delayed moving until 1937 when they renovated and expanded a five-story townhouse at 53 East 79th Street. By the time of its bicentenary the New York Society Library owned roughly 300,000 items, including many rare books and manuscripts. It is the oldest library in New York City and the fourth-oldest in the United States.

Cynthia A. Kierner

New York State Institute of Applied Arts and Science. Original name of New York City Technical College.

New York State Psychiatric Institute. Psychiatric research institute, now a teaching and research hospital that is part of the Columbia University Medical Center. Founded in 1895 as the Pathological Institute, it was the product of increasing interest in the scientific study of biological causes underlying mental illness. It was the first psychiatric facility in the country with a research and teaching mandate. The institute was originally located at Madison Avenue and 23rd Street before relocating to Wards Island for proximity to the clinical activities of the Manhattan State Hospital. It moved again to Washington Heights before becoming affiliated with Presbyterian Hospital in 1925.

Eric Hollingsworth

New York Stock Exchange [NYSE]. The principal securities market in the United States and the world's largest cash equities market. New York City had an active securities market by 1790, stimulated by the issuance in that year of bonds by Alexander Hamilton, the first secretary of the treasury, to consolidate and refund debts incurred during the American Revolution. There is, however, little evidence to support the claim that the "Buttonwood Agreement" of 1792 (signed by 22 stockbrokers and merchants on 17 May and by two more later in the year) marks the beginning of the NYSE itself. Within a few months of the bankruptcy of

William Duer in the spring of 1792 the city's securities market was largely inactive, not to be revived until after the War of 1812.

The NYSE was organized on 8 March 1817, when a group of 28 brokers adopted a constitution and set up formal membership rules. The initial name was the New York Stock and Exchange Board; the name New York Stock Exchange dates to 1863, and the exchange is popularly referred to as the Big Board. In its early years the exchange functioned as a call market, in which the name of each stock was called out in turn as brokers bid on only one security at a time. Its business at first consisted almost entirely of bank and insurance stock. Railroad securities began to dominate by the 1830s and 1840s and continued to do so until the end of the century. The early exchange was a small operation: only a few dozen brokers regularly attended the twice-daily calls, and daily volume was only a few thousand shares. Between 1817 and 1865, when the exchange opened its first permanent headquarters on its current site at Broad and Wall streets, it moved its base of operations 10 times.

The 1860s were a decade of major change at the NYSE. Fueled by wartime speculation, trading flourished at the exchange and at other sites in lower Manhattan. A number of rival exchanges opened, among them the Open Board of Stock Brokers, which from 1863 to 1869 often matched the NYSE in trading volume. When the NYSE absorbed its rival in 1869 it became a body of 1060 members, more than 10 times the number of a decade earlier. Membership on the exchange became a salable property right in 1868, with seats selling for $4000 in the 1870s. (The price remained relatively stable over the years, although it did surpass $1.1 million in 1987.) The number of seats increased to 1100 in 1880, and in another sign of growth the call market was replaced in 1871 by a continuous-auction market, which remains the principal means of trading.

Growth continued in the late nineteenth century, with occasional reverses. In 1873 the exchange closed for 10 days after the failure of Jay Cooke and Company. On 15 December 1886 the volume of shares traded first exceeded one million, and by the turn of the century industrial securities were traded for the first time. The coming of age of industrial listings was confirmed in 1901, when the newly formed U.S. Steel Corporation became the first company capitalized at more than $1 billion. In the same year the exchange witnessed perhaps the most remarkable of several attempted "corners," when Edward H. Harriman and Jacob Schiff battled James Hill and J. P. Morgan for control of the North Pacific Railroad: in the course of a single trading session the price of a share quintupled, to more than $1000. The struggle took place in borrowed quarters, the exchange having moved out of its former building while a new one was being erected on the same site. The new building, the current home of the NYSE, was designed by George B. Post and completed in 1903 at a cost of $2 million and features a magnificent Renaissance facade on Broad Street and a trading floor 100 feet (30 meters) wide, 183 feet (56 meters) long, and 79 feet (24 meters) high.

The NYSE was closed for six months in 1914 because of war, but it emerged from the war much stronger, as did the economy of the United States, which for the first time became a creditor nation. The exchange was in the forefront of the great securities boom of the 1920s, and 275 new seats were created in 1929. The boom ended abruptly with the stock market crash of the same year. On "Black Tuesday," 29 October, more than 16 million shares were traded (a record that stood for nearly 40 years), and by the end of the trading session the Dow Jones Industrial Average had declined more than 23 percent from its closing level of the preceding week. This marked only the beginning of the Depression: by the time the Dow Jones average reached its lowest level in the summer of 1932, it had only about one-tenth its value of three years earlier. Public confidence in the exchange was shaken, and after extensive congressional hearings the Securities and Exchange Commission (SEC) was formed in 1934. The commission tightened reporting and listing requirements and

Trading floor at the New York Stock Exchange, from Harper's Weekly, *10 September 1881*

implemented other reforms, arousing considerable opposition from an exchange that for decades had operated with little or no governmental oversight. The leader of the opposition was Richard Whitney, president of the exchange from 1930 to 1935, who in the view of his many enemies received his just reward in 1938 when he was convicted of swindling his customers. After his downfall the exchange accepted the reforms of the SEC, and in 1938 it initiated random supervisory audits of member firms to protect customers' assets in brokerage accounts.

After World War II the exchange mounted extensive advertising and promotional campaigns in an effort to attract small investors. But by the 1960s the dominant force was the institutional market, comprising private pension funds, trust funds, insurance companies, and open-end investment companies, or mutual funds. The reputation of the exchange as dependable and secure was reinforced by the successful resolution of the so-called salad-oil scandal in 1963. The crisis was brought on when the failure of a member firm, Ira Haupt and Company, endangered $450 million worth of its customers' cash and stock, which were pledged to banks as security for loans. Although under no legal obligation to do so, the NYSE set up a special trust fund to protect the firm's customers. When four member firms were liquidated in 1969 and 10 more followed in 1970, customers were protected against losses by the trust fund and by the Securities Investors Protection Corporation. In 1971 the NYSE was incorporated for the first time, as a nonprofit corporation. A long-standing rule mandating fixed commissions for stock transactions was repealed in 1975, leading to the rapid growth of discount brokers and to negotiable commissions from full-service brokers.

Further changes were brought about by the stock market crash of 1987, which followed an extended "bull market" during which prices and trading volume rose sharply. On 20 October 608 million shares were traded, with a value of about $21 billion, and the Dow Jones average declined by more than 500 points. Because much of the sudden decline in the market had been caused by "program trading," under which transactions are executed by computer when prices reach a certain level, the exchange implemented "trading collars" to make the market less volatile. Among these were special controls that take effect when the Dow Jones declines by 50 points from the closing level of the preceding day. By the early 1990s program trading still accounted for 12 percent of all trading volume on the exchange, but its tendency to exaggerate swings in the market had apparently been neutralized.

In a 12-year period beginning in the early 1980s the NYSE spent more than $1 billion on technology, to increase the volume of trading that could be handled to more than one billion shares each day, about four times the average daily volume in 1993. In the mid-1990s about 90 percent of all customers' orders were processed electronically, with the trade confirmed in seconds and a record of the transaction instantaneously made available to investors worldwide. As of January 2007 all stocks could be traded electronically except for a few very high priced ones. In 2005 the NYSE reorganized as a for-profit publicly traded company after it acquired the securities exchange Archipelago; it adopted the name NYSE Group in 2006. Then in 2007 the NYSE Group merged with the European electronic stock exchange Euronext to form the transatlantic holding company NYSE Euronext. NYSE Euronext exchanges are located in six countries and in the early twenty-first century had nearly 4000 listed companies with a market capitalization of $28.5 trillion.

New York Stock Exchange, 2009

The NYSE has 1366 members, a number fixed in 1953. A firm seeking to have its shares traded on the exchange must satisfy very strict requirements with respect to financial condition, reporting, and registration with the SEC. Membership on the NYSE is generally considered an endorsement of a firm's status and is eagerly sought after. NYSE Euronext is governed by an annually elected board of directors, the majority of whom are not affiliated with any other NYSE exchange board; it also includes an independent, nonexecutive chair and deputy chair and a chief executive officer and deputy chief executive officer.

New York Sun (i). Newspaper launched in 1833 by Benjamin Day. Its humorous crime reports, its coverage of murder trials, and its exploitation of sensational hoaxes soon gave it the highest daily circulation of any newspaper in the United States. In 1852 Moses Sperry Beach became the editor and sole proprietor of the *Sun*, which he sold in 1868 to a syndicate led by Charles A. Dana. Under Dana the newspaper emphasized human interest reporting and independent but largely Republican conservatism. It was celebrated as a school for journalists, including Julian Ralph, Arthur Brisbane, Jacob A. Riis, and Will Irwin. In 1897 Francis P. Church wrote the most famous editorial in American journalism, "Yes, Virginia, there is a Santa Claus," in response to a letter from an eight-year-old girl. The newspaper was purchased in 1916 by Frank Munsey. In 1950 the *Sun* was absorbed by the *New York World-Telegram.*

Steven H. Jaffe

New York Sun (ii). Newspaper. First published in 2002, it saw itself as a right-of-center alternative to the *New York Times*. The *Sun* was known for its broad coverage of Manhattan and New York State, its arts section, and its focus on Jewish-related issues. A conservative newspaper that nonetheless had the respect of the political left, the *Sun* was published five days per week until it ceased publication in September 2008 because of financial difficulties.

Elaine S. Abelson

New York Theological Seminary (i). Original name of Union Theological Seminary.

New York Theological Seminary (ii). Nondenominational Protestant seminary formed in 1900 as the Bible Teachers College in suburban Montclair, New Jersey, by Wilbert Webster White (1863–1944), a minister of the United Presbyterian Church. It moved in 1902 to New York City, where its classes were held first at the Broadway Tabernacle on Sixth Avenue and 34th Street (built 1859), then at an optician's office nearby, at a building on 49th Street between Lexington and Third avenues (from 1918), and at the Marble Collegiate Church on Fifth Avenue and West 29th Street (from 1976). The seminary was renamed successively the Bible Teachers Training School (to bring it into compliance with regulations of the New York Board of Regents) and the Biblical Seminary in New York (1921) before adopting its current name in 1965. The course of instruction reflected White's belief that scriptural study belonged at the center of the theological curriculum. As president of the seminary until 1940 White oversaw the training of scores of pastors, directors of Christian education, teachers, and

missionaries. Although enrollment declined in the 1950s and 1960s the fortunes of the seminary revived after it radically restructured its programs in 1970 to provide an affordable theological education for the growing black, Spanish-speaking, and Asian population in the metropolitan area. In 2002 it moved to Morningside Heights in Manhattan and began operating out of the Union Theological Seminary, Riverside Church, and the Interchurch Center. Although Bible study remained central to the curriculum, various experimental offerings sought to equip members of the clergy and lay leaders for diverse urban ministries; one innovative program known as the seminary behind bars was established to train prison ministers.

Peter J. Wosh

New York Times. Daily newspaper launched on 18 September 1851 by bankers from Albany, New York, led by Henry J. Raymond, who had worked for Horace Greeley's newspaper the *New York Tribune* and James Watson Webb's *Courier and Enquirer.* Although less influential and widely read at the time than the *New York Tribune* and the *New York Herald* of James Gordon Bennett, Sr., it became successful by offering comprehensive reporting while at the same time reflecting Raymond's sympathy toward the Whig and Republican leaders William H. Seward and Thurlow Weed. Its coverage during the Civil War lent the newspaper respect and helped Raymond not only to win a seat in the U.S. Congress but also to become the Republican national chairman. After the war Raymond's hesitancy to break with the conservative Reconstruction policies of President Andrew Johnson alienated him from the mainstream of the party and diminished the newspaper's circulation and power, though he reconciled with the Republican Party when he supported Ulysses S. Grant for the presidency in 1868. After Raymond's death in 1869 control of the newspaper passed to George Jones, who with Louis Jennings as his editor aggressively pursued and exposed William M. "Boss" Tweed in the early 1870s (this despite Tweed's demands that they desist and notwithstanding the risk of financial ruin). In 1884 the newspaper sided with liberal Republicans who endorsed the Democratic presidential candidate Grover Cleveland over his Republican opponent James G. Blaine, as a result of which the newspaper lost its old Republican support. Jones died in 1891; by 1896, in the unbusinesslike hands of its editor Charles R. Miller and several other staff members, as well as after the financial panic of 1893, daily circulation was down and the newspaper was nearly bankrupt.

Fortunes changed when Adolph S. Ochs became the principal owner of the *New York Times* in the hopes of earning revenue for his struggling newspaper the *Chattanooga Times.*

New York Times Building (designed by Eidlitz and MacKenzie), 1905

This was done with the proviso that he could become the sole owner if he were able to retire all the newspaper's debt. Having satisfied this condition he assumed control on 19 August 1896. Ochs improved the layout, increased the amount of financial news, and used the editorial page to print letters to the editor and articulate his own conservative Democratic positions. He also sponsored a contest for a slogan but eventually chose his own, "All the News That's Fit to Print," which first appeared on the front page on 10 February 1897. By late 1898 the sensational coverage of the Spanish–American War in the newspapers of William Randolph Hearst and Joseph Pulitzer cut into the circulation of the *Times.* In response Ochs reduced its price from three cents to one cent, and readership tripled within a year. Shortly after the turn of the century the newspaper moved from 41 Park Row in lower Manhattan to Long Acre Square, which soon became known as Times Square. In 1913 it moved again, to 43rd Street between Seventh and Eighth avenues.

Carr Van Anda became the managing editor in 1904 and during the next 20 years strove to make the *Times* the "paper of record," in part by emphasizing such scientific events as Robert Peary's exploration of the North Pole and Albert Einstein's discoveries. After Miller's death in 1922 his position as editorial page editor was filled successively by Rollo Ogden, John Finley, and Charles Merz. In 1923 Lester Markel began a 40-year tenure as editor of the Sunday newspaper; he introduced the "News of the Week in Review" among other sections. After Van Anda retired in 1925 his assistant Frederick Birchall discharged the duties of managing editor while formally remaining acting managing editor, owing to his British citizenship. At the end of 1932 the position of managing editor was assumed by Edwin L. James, a foreign correspondent distinguished for his coverage of World War I and the "lead" of his story about the first solo flight across the Atlantic: "Lindbergh did it." In the same year Arthur Krock became the chief of the Washington bureau; later a columnist, he enjoyed a career at the newspaper that lasted until 1966, during which he won four Pulitzer Prizes.

The new publisher of the *Times* after Ochs's death in 1935 was Arthur Hays Sulzberger, who had married Ochs's only child, Iphigene, and served a long apprenticeship as his assistant. He modernized the printing plants, named Anne O'Hare McCormick foreign affairs columnist, and added a crossword puzzle and sections on fashion and food. He made a large commitment of money and staff to covering World War II at a time when other newspapers were cutting back on the space devoted to news. Turner Catledge became the managing editor after James's death in 1951 and later served as editor in chief until 1968. In the following years Catledge added a feature called "Man in the News," demanded sharper writing, and gave charge of design and copyediting to Theodore Bernstein, a crusader for grammatical rectitude. He also chose the next generation of editors, mostly foreign correspondents: Clifton Daniel, his successor as managing editor; Harrison Salisbury, the first editor of the "op-ed" page when it began in 1970; and A. M. Rosenthal, who became city editor in 1963 and dominated news coverage at the newspaper until the mid-1980s. James Reston succeeded Krock as head of the Washington bureau in 1953, became one of the nation's most influential and popular columnists, and engaged the reporters and columnists Russell Baker, Tom Wicker, and Anthony Lewis. In 1954 C. L. Sulzberger, a nephew of the publisher, became the foreign affairs columnist. After Merz retired in 1961 Ochs's nephew John B. Oakes took charge of the editorial page.

During the early 1960s the newspaper changed publishers twice in two years: first in 1961 when Sulzberger was succeeded by his son-in-law Orvil Dryfoos, then in 1963 when Dryfoos died, just after the settlement of a printers' strike that lasted 114 days. About the same time an advertisement placed in the *Times* concerning civil rights in Montgomery, Alabama, led to a lawsuit against the newspaper for libel. The case resulted in a ruling in favor of the newspaper by the U.S. Supreme Court, which in *New York Times Company v. Sullivan* (1964) narrowed the definition of libel in cases concerning public figures and

reaffirmed the principle of freedom of the press. Sulzberger's son Arthur Ochs Sulzberger, who became the publisher in 1963, introduced changes in the newspaper's format and helped the owners to expand into magazine publishing and broadcasting.

Rosenthal became managing editor of the *Times* in 1969 and was executive editor from 1976 until he retired in 1986. With his longtime aide Arthur Gelb he oversaw the restructuring of the newspaper's format: after several years of being printed in only two sections, local editions were now being printed in four, which allowed more space for full-page advertising and increased revenues that underwrote the paper's commitment to worldwide reporting. Rosenthal directed major investigative stories about the Central Intelligence Agency and about the "Pentagon papers" in 1971, a government record of the Vietnam War that the federal government tried to prevent the *Times* and the *Washington Post* from publishing. By a decision of the U.S. Supreme Court, publication was allowed to proceed on the grounds that efforts to suppress the papers constituted "prior restraint" of free speech.

Restructuring continued under the executive editor Max Frankel, who during a decade in charge of the editorial page had made it more politically moderate and more literary, and the managing editor Joseph Lelyveld. Through the 1980s the *Times* maintained the traditional appearance that earned it the nickname the "great gray lady." In the 1990s the *Times* began color printing in most of its Sunday sections and expanded coverage of local news and sports. The *Times* also continued to dominate the Pulitzer Prizes: in 2008 it won its 97th, meaning it had won nearly 10 percent of all the prizes awarded since they began in 1917.

By the terms of a trust set up by Iphigene Ochs Sulzberger, on her death in 1991 at the age of 97 control of the newspaper passed to her four children, Arthur Sulzberger, Judith Sulzberger, Marian Heiskell, and Ruth Holmberg; on their death control would pass to their 13 children, including Arthur Ochs Sulzberger, Jr., who succeeded his father as publisher in 1992. In 2007 the *New York Times* moved into a new building on Eighth Avenue between 40th and 41st streets designed by Renzo Piano. Erected on property cleared by New York State through the use of eminent domain, the new *Times* building is the result of a joint venture between the newspaper and developer Forest City Ratner Companies. Standing 52 stories tall, the lower portion is used by the newspaper, and the upper tower remains in the hands of Forest City Ratner. The new building includes no printing facilities. Although the presses in the 43rd Street building were used until June 1997, in 2008 the *Times* relied on the printing plants it had opened in Edison, New Jersey, in 1993 and in College Point, Queens, in 1997.

In 2008 the *New York Times* had a daily circulation of 1.07 million and a Sunday circulation of 1.5 million. The *Times* published a national edition in half a dozen satellite plants around the country and shared ownership with the *Washington Post* of the *International Herald Tribune.* It also owned television and radio stations, magazines, and other newspapers, mostly in the South and Southwest.

Harrison Salisbury, Thorin Tritter

New York Times Building, 2009

New York Titans. Name by which the New York Jets were known from 1960 to 1963.

New York Trade School. Original name of Voorhees Technical Institute.

New York Transit Museum. Museum in Brooklyn, operated under the auspices of the New York City Transit division of the Metropolitan Transportation Authority (MTA) and displaying the history of mass transit in New York City. It is situated underground in the former Court Street station of the Independent Subway System (IND), at the corner of Schermerhorn Street and Boerum Place in Brooklyn Heights. Exhibits at the museum include antique signals, fareboxes, turnstiles,

and rapid transit maps dating from as early as 1892 (before the opening of the subway system). The museum holds an extensive collection of mosaics, friezes, terra-cotta plaques inspired by the "city beautiful" movement of the early twentieth century, and architectural drawings of ticket booths and stations that reveal a uniformly high quality of design. The lower level of the station, formerly the station's platform, houses many subway and elevated railway cars dating to 1903. These cars are occasionally employed as a "Nostalgia Train" by the MTA: for example, on 10 September 2007, a train composed of six pre–World War II cars was run on the Eighth Avenue A express line to celebrate the 75th birthday of the IND.

Barbara Grcevic

New York Tribune. Daily newspaper launched by Horace Greeley in 1841. It supported Whig politics and reformist causes favored by its publisher, including temperance, the labor movement, utopian socialism, and opposition to the expansion of slavery. The staff during the 1840s included Solon Robinson and George "Gaslight" Foster, who together wrote about the plight of the city's slum dwellers and sweatshop workers, and the feminist Margaret Fuller. It also published a weekly edition that was the most influential Republican newspaper in the nation and by the 1850s had a circulation of more than 200,000. The newspaper was instrumental in persuading Abraham Lincoln to enact the Emancipation Proclamation in 1863. It was purchased in 1872 by the editor Whitelaw Reid, under whose direction it took a more conservative turn and engaged in an eight-year battle (1884–92) with striking printers. In 1886 the *Tribune* was the first newspaper to install Ottmar Mergenthaler's slug-casting linotype machine, which revolutionized typesetting. Reid's son Ogden Reid, Sr., became the president and managing editor in 1912; with his wife Helen (Miles) Rogers Reid he revamped the newspaper's news coverage and layout. In 1924 the Reid family bought the *New York Herald* and merged it with the *Tribune* to form the New York Herald Tribune.

Steven H. Jaffe

New York Typographical Union no. 6. Trade union representing typographers, organized as the New York Printers' Union in Manhattan in 1850 by Horace Greeley, its first president. In 1852 it formed an affiliation with the National Typographical Union (renamed the International Typographical Union in 1869). Known as the "Big Six," the union at first included all craft workers in the trade; eventually it included only compositors and book and job printers when press operators, bookbinders, stereotypers and electrotypers, and photoengravers formed their own unions. Separate unions formed by female typesetters in 1868 and by German American printers in the following year were later reincorporated into the Big Six. The union represented most newspaper compositors and many workers in the larger commercial shops in the city. Known for aggressiveness, it engaged in prolonged strikes against newspapers in 1934 and 1962–63. The International Typographical Union (ITU) merged with the Communications Workers of America (CWA) in 1987 and the local became known as ITU Local 6/CWA Local 14156.

George A. Stevens, *History of New York Typographical Union No. 6* (Albany, N.Y.: J. B. Lyons, 1914); Harry Kelber and Carl Schlesinger, *Union Printers and Controlled Automation* (New York: Free Press, 1967)

William S. Pretzer

New York University. Private university formed in 1831 in Washington Square as the University of the City of New York by a committee led by Albert Gallatin, secretary of the treasury under Presidents Thomas Jefferson and James Madison. From the beginning it was the subject of debate over the purpose of education. The banker John Delafield and Dutch merchants such as Myndert Van Schaick argued that the university should provide practical instruction for those who could not afford to attend an expensive college; an influential group of Presbyterian and Dutch Reformed ministers advocated a religious approach to education and resisted any separation of science and morality. The first chancellor was James M. Mathews (1785–1870), a minister whose adoption of a traditional religious orientation for the university prompted Gallatin to resign as a trustee. He was followed by a succession of Dutch Reformed and Presbyterian ministers who tried to sustain the evangelical character of the institution and who were opposed by such prominent faculty members as Samuel F. B. Morse, professor of fine arts and inventor of the telegraph, and John Draper, chemist, historian, and an early developer of photography. In spite of the religious commitments of its leaders, the university's curriculum was nondenominational: religion was a central feature, but so were classics, natural history, and mathematics.

The first students reflected the evangelical inclinations of the first chancellors. During the 1830s and 1840s Presbyterian students were twice as numerous as those of any other denomination, and nearly all were from outside the city until the 1850s, when the proportion decreased to one half. By the 1890s the university drew 65 percent of its students from New York City and began to reflect the heterogeneity of the city. Virtually every Protestant denomination including Quakers was represented, as were Catholics and Jews. Henry Mitchell MacCracken (1840–1918), a professor of philosophy from 1884, became a vice chancellor in 1885 and chancellor in 1891: he transformed the university into a modern institution by moving the undergraduate college to a campus in the Bronx designed by Stanford White, and developing a graduate school of arts and sciences, a law school, and a medical school (which forged an affiliation with Bellevue Hospital). In addition he founded the university's graduate school of education (the first in the United States) and a school of commerce, accounts, and finance. These changes were effected without benefit of endowment, in part because enrollment increased from less than 100 to nearly 4000, and in part because a change in the by-laws authorized the university to acquire investment property. This rapid growth made for overcrowded classrooms, transient faculty, and fluctuating standards, and yet opened the university to students who had neither the means nor the preparation to study at more selective institutions. In 1896 the university took its current name.

New York University, Kimmell Center, 2009

Elmer Ellsworth Brown resigned from his position as commissioner of education under President William Howard Taft to succeed MacCracken in 1911. During his long tenure (to 1933) the university became one of the largest in the United States: between 1912 and 1917 alone enrollment increased from 4300 to 9300. Brown continued the emphasis on professional training by moving the school of business to Wall Street (1920), opening a school of dentistry (1925) and a school of fine arts (1928), and imposing more stringent requirements for admission to the schools of law (two years of college) and medicine (a college degree as of 1930). He also established New York University Press (1916) and strengthened the libraries. By the university's centenary in 1931 enrollment reached a peak of 40,000. After the Depression the chancellors Harry W. Chase (1883–1955) and Henry T. Heald (1904–75) reduced building and curtailed enrollment in an effort to raise academic standards. The School of Continuing Education (1934) and the School of Public Administration (1938, now the Robert F. Wagner Graduate School of Public Service) were the only new structures erected during their tenures. The GI Bill brought an influx of older

students after World War II who tended to raise the academic quality of the university. During the McCarthy period two popular professors were dismissed for their political views, bringing about a censure by the American Association of University Professors that was not lifted until the 1960s. Carroll V. Newsom (1905–90), an outspoken critic of McCarthyism, was inaugurated the university's 10th chancellor in 1956.

Efforts to improve academic standards and make the university a leading research institution were undertaken in the following decades by the chancellors James Hester, John Sawhill, and John Brademas. Visible symbols of these efforts were the construction of Warren Weaver Hall for the Courant Institute of Mathematical Sciences and of the Elmer Holmes Bobst Library on Washington Square (1967–72), a 12-story structure of red sandstone designed by Philip Johnson and Richard Foster. Sawhill and Brademas also mounted a successful campaign to increase the university's endowment. The campus in the Bronx was sold to the city in 1973 and eventually housed Bronx Community College. Several additional developments further concentrated the university's presence near Washington Square, notably the reorganization of the Tisch School of the Arts nearby and of the Robert F. Wagner Graduate School of Public Service, and the removal of the Leonard N. Stern School of Business to a modern facility designed by Robert Geddes. The construction of dormitories and the acquisition of apartments to enable students and faculty to reside on campus aroused protests from community groups, as well as from alumni who feared that the university's commitment to the commuting student would be undermined. Another sign of academic self-confidence was the appointment in 1991 of the historian L. Jay Oliva, the first president ever chosen from the ranks of the academic faculty.

In the early twenty-first century the university's growth was a central priority under the helm of John Sexton, a former dean of the law school who was appointed president in 2001. As of 2008 Sexton had raised $2.5 billion and aggressively expanded the university's physical presence both in New York and abroad. Greenwich Village residents, wary of the university's presence for decades, had a mixed response to Sexton's work. In the 1960s some residents opposed the construction of I. M. Pei's University Village: also known as the Silver Towers, the complex included two 32-story buildings housing faculty and one that was leased to a Mitchell–Lama cooperative for middle-income families. The buildings were constructed on land Robert Moses obtained during his controversial slum clearance program; residents feared the super block development would damage the character of the neighborhood and accused the university of working without community cooperation. Half a century later the 10-story Kimmel Center for Student Life, designed by Kevin Roche John Dinkeloo and Associates, replaced the old student center on Washington Square Park South; residents voiced concerns that it would overshadow the park, as they had when the nearby Bobst Library was built in 1967. NYU Plans 2031, the university's 25-year development plan, aimed to increase the university's footprint by 6 million square feet (557,418 square meters) (from almost 15 million square feet [1.4 million square meters] in Greenwich Village, the East Village, and Union Square). To facilitate a better relationship with neighborhood residents, the university began holding community open houses in 2007 and displayed plans for perusal. It expanded to the outer boroughs upon acquisition of the 150-year-old Polytechnic University, an engineering school in downtown Brooklyn, in 2008. Sexton also strove to establish the university globally, planning a campus in the United Arab Emirates, NYU Abu Dhabi, which opened the doors to its downtown campus in December 2009, with an inaugural class of 100 students entering in August 2010; its residential campus is expected to open in 2014. More than 40,000 students were enrolled in the university's 14 schools in the early twenty-first century, taught by 3100 full-time faculty; with more than 16,000 employees, it was one of the largest employers in the city.

New York University Medical Center. Teaching hospital, established in 1947 in Manhattan between 30th and 34th streets and First Avenue and FDR Drive. In 1948 the New York Post-Graduate Medical School and Hospital (renamed University Hospital) joined the center and the Howard A. Rusk Institute of Rehabilitation Medicine opened. Tisch Hospital (1963) is an acute-care general hospital. The center is now composed of Tisch Hospital, Rusk Institute of Rehabilitation Medicine, New York University Hospital for Joint Diseases, and New York University School of Medicine (1841) and its affiliated hospitals, which include Bellevue, Veterans Affairs, Lenox Hill, and North Shore University Hospitals and Gouverneur Healthcare Services. Its more than 50 centers and institutes focus on AIDS, biomolecular medicine, cancer, translational (patient-oriented) medicine, aging, dementia and Alzheimer's disease, brain health, epilepsy, heart and vascular disease, environmental medicine, mental health issues, spinal cord injury, and immunology and infectious diseases.

Jane E. Mottus

New York Water Taxi. Transportation company operating in the New York Harbor. Frequented by both local commuters and tourists, New York water taxis run on fixed schedules and carry up to 149 passengers. As of 2007 the company operated year-round commuter routes between lower Manhattan and downtown Brooklyn and Queens, South Brooklyn, and Yonkers during rush hour. During the warmer months the company offers shuttles to Mets games, assorted harbor tours and local cruises, and "hop-on, hop-off" routes for sightseers that travel between Long Island City in Queens, Fulton Ferry in Brooklyn, and many different stops in Manhattan; passengers can pay per ride or purchase one- and two-day unlimited use passes, allowing them to get on and off frequently and visit many parts of New York City for one price on their own schedule.

Ben Silk

New York Women's Trade Union League. Labor organization formed in 1903 by Jane Addams and other social reformers to help working women organize unions. During its early years the league was mistrusted by union leaders and working-class women because its executive board was dominated by reformers from the middle class. Leonora O'Reilly, an Irish shirtmaker and union organizer and the league's most influential working-class member, set out to remedy this by attracting talented trade-union women to the league. In 1905 she recruited as a member Rose Schneiderman, a Jewish immigrant cap maker who brought solid credentials as an organizer and as the first woman elected to the executive board of a national union (the United Cap and Hat Makers). Elected vice president of the league in the following year, Schneiderman brought a new perspective to the league's organizing work. She suggested that the league extend aid only to those working women who asked for it, asserted that previously they had acted more like social reformers than union organizers, and studied industries that had the worst conditions so they could organize their workers. Despite a severe depression in 1907–8, Schneiderman made progress among Jewish immigrant garment workers, laying the groundwork for a strike led by shirtwaist makers in 1909–10 called the "uprising of the

New York Water Taxi, 2009

thirty thousand." This was the largest strike by American women up to that time.

The uprising brought a dynamic group of women workers into the league, among them the Lithuanian-born shirtwaist maker Pauline M. Newman, and Clara Lemlich, a Ukrainian immigrant whose fiery speech moved the workers to strike over the objections of both male union leaders and the middle-class leadership of the league. But the emergence of a strong working-class core led to conflict. Some middle-class members, particularly the league's secretary, Helen Marot, argued that too much energy was being devoted to Russian Jewish immigrant women at the expense of American-born workers. This conflict highlighted the tensions of class and ethnicity that plagued the league in its early years. Schneiderman and Newman, supported by O'Reilly, complained that middle-class "allies" were too domineering and that the league should be run by working women. They contemplated resigning when Marot accused Russian Jews of being too emotional and unused to constructive work. Before World War I working-class members were unable to successfully challenge the middle-class officers, because the league drew its financial support not from unions but from wealthy women.

After 1917 the working-class leaders attracted a new group of wealthy supporters to the league who shared their belief that the organization should be run by working women themselves. In 1917 Schneiderman was elected president and Newman vice president. The two gathered around them an executive board made up almost entirely of working women, which shaped the policies of the league for the rest of its existence. From the 1920s until the 1940s the league adopted a strategy for improving the lives of working women that was based on education, organization, and legislation. It ran a school for working women from 1923 to 1955 that offered courses in history, literature, current events, and economics, as well as labor relations, labor history, and lobbying, and the school became a model for adult education in the United States. The league sought both to train women academically and to encourage the growth of a professional network that would extend beyond the classroom. In its organizing drives it took a special interest in unskilled workers overlooked by the American Federation of Labor and the Congress of Industrial Organizations. League organizers helped build the garment unions and supported them during the 1920s and 1930s; they embarked on a decades-long campaign to unionize the city's largely black and Puerto Rican laundry workers and hotel maids, and during the 1940s they were advocates for women in the defense industries.

Finally the league was instrumental in making New York State a testing ground for labor legislation. During the second decade of the twentieth century it successfully lobbied for maximum hours and occupational safety legislation for women workers. Over the next 30 years it fought for minimum wage, fire safety, equal pay, maternity insurance, and the extension of social security to domestic workers. It also fought for publicly funded child care and comparable worth (the principle that jobs of equal worth to an employer should be equally paid). Franklin D. Roosevelt and Eleanor Roosevelt gave it influence on a national level. It also enjoyed close relations with municipal and state officials, and during the late 1930s and early 1940s the state Department of Labor was dominated by league members. Dwindling financial support and the postwar "red scare" combined to cripple the league by the 1950s, and it disbanded in 1955.

New York Workers School. First communist adult school in the United States, opened on New York City's Lower East Side in October 1923 to train militants for the class struggle. In a typical term the school offered more than 100 courses, the basic ones being principles of communism, political economy, and Marxism–Leninism. Trade union issues were also taught, along with U.S. history, literature, elementary and intermediate Russian, and English. After two years of internal party disorganization Bertram R. Wolfe put the school on a firm basis. Teachers received $12 a week to instruct the students, men and women, communists as well as noncommunists, who attended the evening classes after day jobs in offices and light industries—and often marched with them in demonstrations and rallies. The school and its several annexes in the five boroughs flourished until a major split in the Communist Party developed in 1929. Wolfe was ousted and a long-time teacher at the Workers School, Abraham Markoff, became director in 1930 and guided the school through the Depression and into the Popular Front period. He died in 1938, and William Weinstone, a party leader, took over the Workers School, which was superseded in 1944 by the Communist Party's Jefferson School of Social Science.

New York World–Telegram. Daily newspaper launched in 1931 by Roy W. Howard, director of the Scripps–Howard chain, through a merger of the *New York Telegram,* which he acquired in 1925, with the *New York World,* formerly owned by Joseph Pulitzer. In the tradition of its politically liberal founder, Edward W. Scripps, the chain gave the newspaper autonomy in local news but maintained strict control over national coverage and the editorial page. The staff of the *World–Telegram* also adhered to the crusading tradition of Scripps even though Howard made the newspaper more conservative and was critical of the New Deal. The Pulitzer Prize was awarded to the newspaper in 1933 for its campaign against local misgovernment; in 1940 and 1941 to a group of its writers, including Westbrook Pegler, for helping to convict dishonest public officials; and in 1947 to Frederick Woltmann for exposing communist activity in the United States. In 1950 the newspaper absorbed Charles A. Dana's *Sun,* becoming the *World–Telegram and Sun.* Although its reporters won another Pulitzer Prize in 1963 for their coverage of an airplane disaster, the newspaper lost much of its circulation and advertising revenue by 1966 because of shifts in population. In 1966 the *World–Telegram* combined with the *New York Herald Tribune* and the *New York Journal–American* to form the *World–Journal Tribune,* which lasted less than a year. For many years the newspaper was published at 125 Barclay Street in lower Manhattan.

New York Yacht Club. Oldest yacht club in the United States, and one of the world's most influential and prestigious boating organizations. It was founded in 1844 by John Cox Stevens and eight other pleasure-boat sailors on Stevens's schooner *Gimcrack,* anchored off the Battery. The next year a simple one-room clubhouse was built at Elysian Fields, the commercial park owned by the Stevens family at Hoboken, New Jersey. Many early races started on the Hudson River, went out through the Narrows to the Lower Bay or into the Atlantic, and returned to finish off Elysian Fields. As the harbor became crowded during the 1850s the start and finish were moved to near Bay Ridge, Brooklyn. By 1900 the club was running most of its races on Long Island Sound or in New England waters.

After leaving Hoboken in 1869 the club had clubhouses on Staten Island and in 11 small buildings called "stations" between New York and Maine, while renting rooms in Manhattan

for winter gatherings. Since 1901 (when the membership was nearly 2000) the club has occupied a beaux-arts clubhouse (designated a U.S. National Historic Landmark in 1987) at 37 West 44th Street that was designed by Whitney Warren; it has so many maritime motifs that a visitor commented, "Except for the absence of motion, one might fancy oneself at sea." Since 1987 there has been a second clubhouse, Harbour Court, in Newport, Rhode Island.

The club has been a leader in writing racing rules and organizing races, including the first long-distance ocean race, from New York to England (1866), and the America's Cup, which the club held from 1851 until 1983. Although five Morgans, two Vanderbilts, and many other men of wealth have been the club's commodore (the equivalent of president), membership has been varied, and its squadron has consisted of boats of all sizes. The chief qualification for membership is a serious interest in sailing or powerboating. Women were first admitted as full members in 1984. In the early twenty-first century the club had more than 3000 members, with representation from across North America, the United Kingdom, Europe, Latin America, and the Pacific Rim.

New York Yankees. Baseball team. It began in 1903 as the New York Highlanders when Frank Farrell and Bill Devery acquired the Baltimore Orioles for $18,000 and moved them to New York City. The team played its home games at Hilltop Park, on the west side of Broadway between 165th and 168th streets. One of its first outstanding players was the pitcher Jack Chesbro, who won 41 games in 1904, a major league record. The Highlanders played well for a few years but gradually weakened and ended last in their league in 1912. In the following year they were renamed the Yankees and abandoned Hilltop Park for the Polo Grounds. Farrell and Devery sold the club in 1915 for $460,000 to Colonel Tillinghast L'Hommedieu Huston, a wealthy engineer, and Colonel Jacob Ruppert, a millionaire who owned a brewery and had served four consecutive terms as a Democratic congressman from New York City (1899–1907). In 1920 Ruppert and Huston bought from the Boston Red Sox the contract of Babe Ruth, with whom the Yankees, managed by Miller Huggins, won their first American League pennant in 1921 and their first World Series in 1923. Ruth and his teammates, including first baseman Lou Gehrig who started in 2130 consecutive games but whose brilliant career and life were cut short by illness in 1941, became known as "murderer's row" because of the difficult task opposing pitchers faced against the Yankee lineup. The team won six American League pennants and three World Series titles in the 1920s. Ruth electrified the world of baseball with his unprecedented skill at hitting home runs. His popularity led the Yankees to build their own ballpark, Yankee Stadium, at River Avenue between 157th and 161st streets in the Bronx, across the Harlem River from the Polo Grounds. More than 74,000 fans attended its dedication on 18 April 1923; nearly 25,000 others were turned away. The sportswriter Fred Lieb of the *New York Evening Telegram* referred to the magnificent new stadium as "the house that Ruth built," a name that continued to be used until it was closed in 2008. Ruppert bought Huston's share in the team in 1923 and remained the sole owner until his death in 1939.

In 1927 the Yankees won 110 games and lost only 44, one of the best records in the history of baseball, but in 1929 Huggins died and the early 1930s saw the retirement of many players, including Ruth. By the late 1930s another strong team had been assembled: led by Joe DiMaggio, Tommy Henrich, Charlie Keller, and Bill Dickey and managed by Joe McCarthy, it was acquired in 1945 for $2.8 million by Dan Topping, Larry MacPhail, and Del Webb. This team won seven pennants and six World Series between 1936 and 1943. The team that emerged in the 1950s was managed first by Casey Stengel and later by Ralph Houk, and included Phil Rizzuto, Mickey Mantle, Roger Maris, Whitey Ford, and Yogi Berra. The team won the World Series every year from 1949 to 1953, and between 1954 and 1964 won four World Series and nine pennants. Elston Howard became the first black member of the Yankees in 1955. Topping and Webb sold the team to the Columbia Broadcasting System (CBS) for $14 million in 1964.

The Yankees were mediocre in the late 1960s and early 1970s but improved when a syndicate controlled by George Steinbrenner, a shipbuilder from Cleveland, bought them from CBS in 1973, reportedly for $10 million. In 1974 and 1975 the team played at Shea Stadium while Yankee Stadium was being renovated. When the cost of the project reached $100 million, well over its budget, the City of New York agreed to assume ownership of Yankee Stadium and pay for its renovation; the Yankees signed a lease to remain there for a quarter century, until 2002. Under Steinbrenner's ownership the Yankees aggressively sought free agents, and with Catfish Hunter, Reggie Jackson, Thurman Munson, Sparky Lyle, and Ron Guidry the team won the World Series in 1977 and 1978 and pennants in 1976 and 1981. The Yankees played poorly in the 1980s, a period marked by Steinbrenner's summary dismissal of several managers: Billy Martin (1928–89) alone was dismissed five times.

Beginning in 1995, the team made the playoffs for 13 consecutive seasons, winning the World Series in 1996, 1998, 1999, and 2000. Joe Torre was the team's manager for all four championships and its star players included Derek Jeter, Mariano Rivera, Bernie Williams, Paul O'Neill, Andy Pettite, and Tino Martinez. The Yankees lost the World Series in 2001 four games to three to the Arizona Diamondbacks, but won two memorable extra inning games at Yankee Stadium, and the team was widely credited for providing the city with an emotional lift in the aftermath of the 11 September 2001 terrorist attacks. The team reached the World Series again in 2003 but lost to the Florida Marlins and a year later fell one game short of making it to the series when they squandered a three games to zero lead in the American League Championship Series to the archrival Boston Red Sox. In 2008 George Steinbrenner turned over control of the team to his sons Hal and Hank. In 2009 the Yankees played their first game in the new Yankee Stadium, located across East 161st Street from the old stadium, which was to be taken down and replaced by park land. The New York Yankees, often known as the "Bronx Bombers," dominated baseball from the early 1920s and are perhaps the most famous team in the history of sport. By 2009 they had won 27 World Series and 40 American League pennants.

Niblo's Garden. Entertainment center at Broadway and Prince Street. When purchased in 1823 by the Irish impresario William Niblo, the site was known as the Columbian Gardens and frequented for open-air events. Niblo added the Sans Souci Theatre to the landscaped grounds in 1827; with the further addition of a saloon and hotel the complex was renamed Niblo's Garden and opened on 18 May 1829. The facility could seat 3000 and soon became famous for fashionable entertainment. It was the site of first performances by Joseph Jefferson, Charles Kean, Edwin Forrest, James and Lester Wallack, Charlotte Cushman, Dion Boucicault, and Adelina Patti and of early performances by the Philharmonic Society; also, the polka was reportedly introduced there in 1844. Destroyed by fire in 1846, the facility reopened in 1849. On 27 September 1855 George F(rederick) Bris-

Niblo's Garden

tow's *Rip van Winkle,* the first American opera on an American subject, premiered there. Niblo retired in 1858, and Niblo's Garden was soon acquired by A. T. Stewart. The last performance in the theater was given on 23 March 1895.

Marion R. Casey

Nicholas Brothers. Team of tap dancers, consisting of the brothers Fayard (Antonio) Nicholas (*b* Mobile, Ala., 20 Oct 1914; *d* Toluca Lake, Calif., 24 Jan 2006) and Harold Nicholas (*b* Winston–Salem, N.C., 17 March 1921; *d* New York City, 3 July 2000). Their parents were musicians in a vaudeville pit band, and the boys learned to dance by watching other performers. The family moved from Philadelphia to Harlem in 1932, and the brothers were soon the regular final act at the Cotton Club, where they worked alongside performers Duke Ellington, Cab Callaway, and Ethel Waters. They combined classical tap dancing with ballet and rigorous acrobatics, using their entire bodies with the grace and agility of the most skilled adult tap dancers. In 1930 they made their debut on Broadway in the first production of *Babes in Arms* (choreography by George Balanchine). They performed at the Cotton Club throughout the 1930s even while they made their first motion pictures; they also appeared in many musicals in Hollywood, among them *Stormy Weather* (1943) with Lena Horne and *The Pirate* (1948) with Gene Kelly. In 2003 the Nicholas Brothers were inducted into the National Museum of Dance and Hall of Fame in Saratoga Springs, New York.

nickel fare. By the late nineteenth century most urban railways in the United States charged passengers a standard fare of five cents for a single ride of unlimited distance. This uniform nickel fare was adopted in 1900 in the original contract between the City of New York and the Interborough Rapid Transit Company (IRT) and retained in 1913 when the IRT and its competitor, the Brooklyn Rapid Transit Company, signed contracts for additional lines. Inflation before and during World War I lowered the real value of the nickel of 1904 to 2.25 cents by 1920, so that in the 1920s and 1930s even the poor could ride the subway frequently. But the low fare also deprived the transit companies of the income they needed to maintain service: between 1916 and 1919 the cost of steel increased from $30 to $90 a ton and that of coal from $3.23 to $6.07 a ton, and the cost of brake shoes increased by 150 percent. The companies kept wages low, introduced labor-saving machinery such as turnstiles and automatic door openers, and deferred maintenance. The result was that the subways physically declined. Company demands for an increase in the fare were extremely unpopular. In his reelection campaign in 1921 Mayor John F. Hylan called the nickel fare a "property right" for middle- and working-class citizens; his landslide victory was widely attributed to his strong position on the issue. As a result the five-cent fare became an article of faith honored by every mayor until 1948, when Mayor William O'Dwyer reluctantly doubled it.

Clifton Hood

Niebuhr, Reinhold (*b* Wright City, Mo., 21 July 1892; *d* Stockbridge, Mass., 1 June 1971). Prominent theologian and social theorist. The son of a midwestern German pastor, he graduated from Elmhurst College (1910) and Eden Theological Seminary (1913) and earned a bachelor's degree in divinity (1914) and a master of arts (1915) at Yale University. From 1915 to 1928 he was the pastor of Bethel Evangelical Church in Detroit. He moved to New York City in 1928 to teach "applied Christianity" at Union Theological Seminary, remaining there until 1960. While in the city he wrote more than a dozen books and hundreds of articles and was a speaker and consultant for many groups. From its formation in 1941 he edited *Christianity and Crisis,* a religious journal of social and political commentary. He sought election to Congress as a Socialist in 1930, but by 1936 gravitated to the Democratic Party; he later became a consultant to the State Department and after World War II helped to form the Americans for Democratic Action. Considered "neo-orthodox" by many, he renounced the ideals of human goodness, inevitable progress, and adaptive personality that were central to liberal Protestantism and urged his followers to embrace a brand of realism in which they recognize and repent for the evils they necessarily commit. He considered life fraught with paradox and tension and explicable only by dialectical analysis, believing that God demands mankind's intense engagement in history, which nonetheless acquires meaning only through his transcendent purposes. Liberal in his theological method, to which he gave broad secular applications, Niebuhr was instrumental in reshaping Protestantism to protest an age of totalitarianism, economic depression,

and impersonality. A part of West 120th Street between Broadway and Riverside Drive is named in his honor.

James D. Bratt

Nielsen, A. C. See ACNielsen.

Nightingale–Bamford School. Private girls' elementary and secondary school opened in 1920 in Manhattan as Miss Nightingale's School by Frances N. Nightingale, a teacher since 1906, and Maya Stevens Bamford. It took its current name in 1929, when it moved to 20 East 92nd Street. In 1989 the original schoolhouse was renovated and an adjacent brownstone was added. In the twenty-first century the school offers a classical, 13-year college preparatory program for 560 students; it had only five headmistresses in its first 70 years.

Richard Schwartz

Nine Eleven (9/11). See September 11.

92nd Street Y(M-YWHA). Jewish community center at 1395 Lexington Avenue in Manhattan, formed in 1874 as the Young Men's Hebrew Association (YMHA) by German Jews as a social and literary society for Jewish young adults. In 1882 a branch for Russian Jewish immigrants opened on the Lower East Side, which evolved into the Educational Alliance (1889). A broad range of social, religious, educational, and recreational activities was developed in the late 1890s to appeal to young people who were not reached by synagogues and to encourage support from the Jewish community. Jacob H. Schiff purchased the 92nd Street property and paid for construction of a building, occupied from 1900 to 1928. This facility was replaced in 1930 by the present structure, to which an addition was made in 1968. In 1942 the 92nd Street Y absorbed the Young Women's Hebrew Association (YWHA, founded in 1902), which moved its programs to 92nd Street from Harlem and at the same time opened Jewish neighborhood centers in other areas of the city. Reincorporated in 1945 as the YM-YWHA, the 92nd Street Y merged in 1962 with the Clara de Hirsch Home for Working Girls (1897), which had begun as a trade school and residence for immigrants and had become solely a residence during the 1920s.

In the twenty-first century the 92nd Street Y remains a nonsectarian agency offering diverse cultural, educational, and recreational activities, including concerts, lectures, and films, as well as classes in Jewish education, the humanities, dance, fine arts, and music. It also operates a nursery school and kindergarten, after-school programs, summer day camps, adult travel programs, a health and fitness center, a senior adult center, a residence for young adults, and a library and archives.

Steven W. Siegel

Nixon, Richard M(ilhous) (*b* Yorba Linda, Calif., 9 Jan 1913; *d* New York City, 22 April 1994). Thirty-seventh president of the United States. After graduating from law school in 1937 he failed to secure a position on Wall Street and returned to California to work for a law firm in Whittier and enter politics. He served in the U.S. Congress from 1947 to 1953 and as vice president of the United States under Dwight D. Eisenhower from 1953 to 1961. After running unsuccessfully for the presidency in 1960 and for the governorship of California in 1962 he moved with his family to New York City, where he lived at 810 Fifth Avenue and worked for the law firm of Mudge, Rose, Guthrie and Alexander. He soon became a partner in the firm and began to rebuild his political career with the help of his colleague John N. Mitchell. After being elected president of the United States in 1968 he left the city for Washington, D.C. (Mitchell served as his attorney general). Reelected in 1972, he resigned in 1974 during the Watergate scandal and moved to San Clemente, California. In 1980 he returned with his wife to New York City, where he took up residence in a cooperative apartment at 142 East 65th Street and rented an office suite at 26 Federal Plaza. He sold the apartment in 1981 and moved to suburban New Jersey. In 1984 he tried to buy a cooperative apartment at 760 Park Avenue but withdrew his offer in the face of objections from other residents. He moved his office in 1988 to Short Hills, New Jersey.

Stephen E. Ambrose, *Nixon* (New York: Simon and Schuster, 1987–89)

Edward T. O'Donnell

Nizer, Louis (*b* London, 6 Feb 1902; *d* New York City, 10 Nov 1994). Lawyer. After moving to New York City, he lived in Brooklyn where his father had a cleaning and dyeing shop. After graduating from Columbia College (where he won two oratory prizes) and Columbia Law School (1924) he studied copyright law and started the law firm of Phillips, Nizer, Benjamin, Krim and Ballon. He worked for such celebrities as Johnny Carson, Salvador Dali, Julius Erving, Charlie Chaplin, and Mae West. In 1954 he won a libel suit on behalf of Quentin Reynolds against the columnist Westbrook Pegler and the Hearst Corporation, inspiring a play on Broadway, *A Case of Libel* (1963). In 1962 he represented Henry Faulk, a CBS radio personality, who was accused of being a communist. His success in this case led to the end of blacklisting in broadcasting. The Motion Picture Association of America became his client in 1966. Nizer's published writings include *My Life in Court* (1961), *Implosion Conspiracy* (1972), and *Catspaw* (1992). He was also a prominent Jewish philanthropist, and Yeshiva University honored him in 1957 with an award for "honoring the spiritual and cultural heritage of Judaism in America."

George J. Lankevich

NL Industries [National Lead Industries]. Firm of lead and titanium producers. Incorporated in New Jersey on 7 December 1891 as the National Lead Company, by 1920 it operated plants in Brooklyn, Long Island City, Staten Island, and four other places around the United States. It became one of four firms that produced 90 percent of all American-made white lead used in the manufacture of paint. After heavy investment in titanium pigments the firm acquired the Titanium Pigments Company (1932), which soon became a major division. In 1935 the largest titanium pigment plant in the United States opened at Sayreville, New Jersey. Additional foreign and domestic acquisitions further diversified the firm, and on 16 April 1971 it took its present name. The firm long maintained its headquarters at 445 Park Avenue in Manhattan but by the early twenty-first century operations had moved to Texas.

David B. Sicilia

Noah, Mordecai M(anuel) (*b* Philadelphia, 19 July 1785; *d* New York City, 22 March 1851). Journalist, public official, and playwright. He edited six newspapers in New York City, including the lively and influential *National Advocate* (1817–24), the *New-York Enquirer* (1826–29), and the *Evening Star* (1833–40). His variable political loyalties ranged across the spectrum from Tammany Democrat to Jacksonian to Whig, and he served the city in various patronage positions: sheriff, judge, and surveyor of the Port of New York. His promotion of Jewish causes and his successful presidency of the Hebrew Benevolent Society (1842–51) made him the most visible spokesman of American Jewry. Among his plays are *She Would Be a Soldier* (1819) and *Marion; or, the Hero of Lake George* (1821). Noah was a spirited nationalist with an interest in many social and municipal reforms.

Mariam Touba

Nobel Prize. Named for the scientist and inventor Alfred Nobel, the Nobel Prizes have been awarded every year since 1901. As of 2009, about 150 people born in New York City or who have affiliations with city institutions have been honored with the Nobel Prize.

Nobel Laureates Associated with New York City Institutions at Time of Award

Name	Nobel Prize	Institution
Richard Axel	Physiology or Medicine (2004)	Columbia University
Nicholas Murray Butler	Peace (1931)	Columbia University
Martin Chalfie	Chemistry (2008)	Columbia University
André F. Cournand	Physiology or Medicine (1956)	Bellevue Hospital
Clinton Davisson	Physics (1937)	Bell Telephone Laboratories
Robert F. Engle III	Economic Sciences (2003)	New York University
Robert F. Furchgott	Physiology or Medicine (1998)	SUNY Health Science Center
Eric R. Kandel	Physiology or Medicine (2000)	Columbia University
Tsung-Dao Lee	Physics (1957)	Columbia University
Robert A. Mundell	Economic Sciences (1999)	Columbia University
Edmund S. Phelps	Economic Sciences (2006)	Columbia University
Isidor Isaac Rabi	Physics (1944)	Columbia University
James Rainwater	Physics (1975)	Columbia University
Dickinson W. Richards	Physiology or Medicine (1956)	Columbia University

Hideki Yukawa	Physics (1949)	Columbia University

Source: Nobelprize.org

In addition to recognizing achievements in the fields of physics, chemistry, economics, literature, and physiology or medicine, the Nobel Peace Prize is given for excellence in humanitarian efforts. The first Nobel Peace Prize was awarded to native New Yorker Theodore Roosevelt in 1906. A small sampling of the New York laureates includes Kenneth Arrow (Economics, 1972), Nicholas Murray Butler (Peace, 1931), Richard Feynman (Physics, 1965), and Steven Weinberg (Physics, 1979).

Noble, John A(lexander) (*b* Paris, 17 March 1913; *d* New York City, 15 May 1983). Maritime artist. Noble moved to the United States in 1919 with his parents, American impressionist painter John "Wichita Bill" Noble and Amelia Peische Noble. He attended Friends Seminary and the National Academy of Design in the city and began working as a seaman when he was 15, settling in Staten Island in his late 20s. In the 1940s he devoted himself fully to his art, building a floating studio across the Kill van Kull in suburban Bayonne, New Jersey. Noble named his studio Graveyard; there he depicted the New York harbor in oil paintings, charcoal drawings, and stone lithographs. The Noble Maritime Collection opened at the Snug Harbor Cultural Center in 2000.

Kate Lauber

No Deal Party. Political party formed in 1945 by Mayor Fiorello H. La Guardia to provide a position on the ballot for Newbold Morris, president of the City Council and a candidate to succeed La Guardia as mayor. Morris's candidacy was a deliberate effort to draw votes away from the Republican Party, with which La Guardia was engaged in a dispute. The party drew 21 percent of the vote and disbanded soon after the election.

Chris McNickle

Noguchi, Hideyo [Seisaku] (*b* Inawashiro, Japan, 24 Nov 1876; *d* Accra [now in Ghana], 21 May 1928). Bacteriologist, parasitologist, and immunologist. He moved to the United States in 1899 after meeting the American microbiologist Simon Flexner, with whom he joined the Rockefeller Institute at its inception in 1904; he remained there for the rest of his career and conducted innovative studies of syphilis, rabies, polio, and yellow fever. On a trip to Africa to study the relationship between the South American and African strains of the virus that causes yellow fever he contracted the disease and died.

Joseph S. Lieber

Noguchi, Isamu (*b* Los Angeles, 17 Nov 1904; *d* New York City, 30 Dec 1988). Sculptor. In 1923 he moved to New York City to study medicine at Columbia University. He turned to sculpture in 1924 after taking classes at Leonardo da Vinci Art School and set up his first studio at 127 University Place. From 1935 to 1966 he created set designs for the choreographer Martha Graham. In 1938 he designed his first fountain, Ford Fountain (destroyed), for the 1939 New York World's Fair. In 1940 his stainless-steel relief *News* was installed over the entrance of the Associated Press Building at 50 Rockefeller Plaza. In sculptures that took the form of a waterfall wall and undulating ceiling (1956–58, aluminum and steel), he incorporated sound and light into the design of a lobby installation at 666 Fifth Avenue. His first sculpture garden in the city, at Chase Manhattan Bank Plaza (1961–64), used granite and basalt rocks imported from Kyoto. Placed in a glass enclosure below ground, it is open to the sky and visible from above. In 1968 a major retrospective of his work was held at the Whitney Museum of American Art, his sculpture *Red Cube* was permanently installed at 140 Broadway, and his autobiography *A Sculptor's World* was published. His many unrealized designs for the city included playgrounds at the United Nations and in Riverside Park and a sculpture garden for the courtyard of Lever House. From the early 1950s until the end of his life he divided his time between studios in New York City and Japan. In 1985 the Isamu Noguchi Garden Museum, designed and built by the artist to display his works, opened across the street from his studio in Long Island City in Queens.

Harriet F. Senie

NoHo. Neighborhood and historic landmark district in lower Manhattan (2010 pop. *ca* 5000), bounded to the north by Ninth Street, to the east by Third Avenue and the Bowery, to the south by Houston Street, and to the west by Mercer Street; its name is an acronym for the phrase "north of Houston." The land was once the site of Jacob Sperry's Botanic Gardens, which were purchased in 1803 by John Jacob Astor for development. In the 1830s the area attracted fashionable residents such as Warren Delano, Philip Hone, Julia Ward Howe, and James Roosevelt and became known as Astor Place. Commercial ventures such as publishing moved in after the Civil War. Later the area was variously considered part of the Lower East Side, part of the East Village, and part of the warehouse

district (which also included SoHo and Tribeca). In the 1970s NoHo became trendy after artists, such as Chuck Close, Robert Mapplethorpe, Robert Rauschenberg, and Frank Stella, moved into century-old loft buildings. The population is generally economically middle class and includes many artists and professionals, as well as celebrities such as Cher, Lauren Hutton, Keith Richards, Russell Simmons, and Britney Spears.

Val Ginter

noise. From its founding New York City was filled with noise, such as the sounds of commerce, drinking songs, and animals freely roaming the streets. During the nineteenth century the din of horse-drawn carriages clattering over cobblestones was deafening, and in the 1870s and 1880s several city ordinances attempted to control noise. As horses disappeared, they were replaced with screeching elevated railways and honking automobiles. Antinoise campaigns ensued. In 1906 Julia Barnett Rice formed the Society for the Suppression of Unnecessary Noise, recruiting Mark Twain as president of a committee that persuaded children to be quiet near hospitals. The city passed its first comprehensive noise code in 1972 despite significant opposition by the construction industry; the code, which is overseen by the Department of Environmental Protection, was overhauled in 2005. The code placed restrictions on construction work, one of the biggest auditory culprits, by limiting most work to weekdays from 7 a.m. to 6 p.m. Even ice cream trucks were barred from playing their jingles while stationary. The new code expanded restrictions on music from bars and restaurants by taking into account bass sounds as well as decibel level. Barking dogs, air conditioners, garbage trucks, cars, and motorcycles were addressed in the code, which made honking illegal except in an emergency. In the early twenty-first century complaints about noise topped the list at 311, the city's government hotline.

Kate Lauber

Nooten Eylandt. Former name of Governors Island.

Norddeutscher Lloyd. See North German Lloyd Steamship Lines.

Normal College High School. Former name of Hunter College High School.

Normal College of the City of New York. Name used from 1870 to 1914 by Hunter College.

Normandie. Ocean liner built in France during 1931–32. At more than 1000 feet (300 meters) long and 83,000 tons, it was the largest and heaviest vessel at that time. The ship crossed the Atlantic regularly until 1939 when the outbreak of World War II prevented its return to Europe. Moored at Pier 88, the Coast Guard boarded the ship toward the end of 1941 and claimed it for the federal government. While being converted into a troopship in 1942, the SS *Normandie* caught fire and rolled onto one side, remaining thus until the superstructure was stripped and the hull raised and taken to Columbia Pier in Brooklyn. Two portals salvaged from the ship are now part Our Lady of Lebanon Maronite Cathedral.

Harvey Ardman, *Normandie: Her Life and Times* (New York: Watts, 1985)

James E. Mooney

North Beach. A former resort in northwestern Queens, lying along the shoreline of Bowery Bay and the East River from 80th Street to the shore of Flushing Bay. It was opened on 19 June 1886 as Bowery Bay Beach by the piano maker William Steinway, who wished to provide a local beach resort for workers, with financial support from the brewer George Ehret. The resort was renamed North Beach in February 1891. Between 1895 and 1915 it reached its peak: there were hotels, carousels, scenic railways, restaurants, shooting galleries, dance halls, beer gardens, Ferris wheels, swimming pools, theaters, bowling alleys, picnic grounds, weekly fireworks displays, and boat rides known as chutes. Steamboats carried large crowds from Manhattan and the Bronx, and trolleys ran from Long Island City and Brooklyn. During World War I attendance began to decrease, and it ceased altogether during Prohibition. In the 1920s some of the land was used for Glenn L. Curtiss Airport, which opened in 1939 and was later renamed La Guardia Airport. The runways entirely cover the old pleasure grounds and beach.

Vincent Seyfried

North Brother Island. Island in the western arm of the East River, at the entrance to Long Island Sound. It has an area of 20.5 acres (8.3 hectares) and is part of the Bronx. The Dutch called the island and its neighbor South Brother Island (about a third of a mile, or half a kilometer, to the west) the Gezellen (Companions). For many years North Brother Island was in private hands, until it was purchased in 1871 by the Town of Morrisania. A tuberculosis hospital built there by the Sisters of Charity closed in 1885 when the city took possession of the island and built Riverside Hospital for the treatment of infectious diseases, mostly victims of smallpox. The best-known patient was Typhoid Mary (Mary Mallon). That year the hospital was moved to Welfare (now Roosevelt) Island. On 15 June 1904 the steamboat General Slocum, with passengers on a church-sponsored excursion, caught fire in the East River and was beached on the shore off the island; about 1200 people, mostly women and children, died. With the severe housing shortage after World War II, the city rented out the disused hospital and some Quonset huts to returning veterans studying under the GI Bill. The hospital was later used as a drug rehabilitation center before closing in 1964. In the early twenty-first century the island was off-limits to the public, with its deteriorating buildings obscured by dense vegetation.

Gerard R. Wolfe

Northern Dispensary. Privately funded clinic opened in 1827 to provide health care for the residents of Greenwich Village at little or no cost. The clinic moved in 1831 to a triangular building at the intersection of Waverly Place, Grove Street, and Christopher Street. It became a dental clinic after World War II and remained so until 1989, when a shortage of funds compelled it to cease operations and transfer its land and building to the Roman Catholic Archdiocese of New York.

Northern Dispensary: By-Laws for the Government of the Board of Trustees (New York: William Van Norden, 1829)

Elliott B. Nixon

Northfield. Former administrative district in northwestern Staten Island, bounded to the north by the Kill van Kull, to the east by Rockland and Brielle avenues, to the south by Richmond Road, Richmond Creek, and Fresh Kills Creek, and to the west by the Arthur Kill. The area was known variously as the North Side, the North Division, and the North Quarter until after the American Revolution, when it became one of four administrative districts on the island. Towns within its boundaries included Port Richmond, Mariners Harbor, Old Place, Graniteville, Bulls Head, Travis, Chelsea, and New Springville. The district became obsolete when the city was consolidated in 1898; the last seat was Port Richmond.

Marjorie Johnson

North German Lloyd Steamship Lines [Norddeutscher Lloyd]. A German shipping firm formed in 1858 to connect its home port of Bremen with New York City. Service began in June with crossings by the *Bremen,* the first of three steamships, and in 1863 the firm acquired extensive dock facilities in Hoboken, New Jersey. From the 1860s emigrants from Germany and eastern Europe accounted for much of the westbound traffic. When the United States was still neutral during the early years of World War I, several of the firm's ships sought refuge in New York City, only to be seized by the U.S. Navy when the United States entered the war in 1917. Service to New York City resumed in 1920 but

was later interrupted by World War II when several ships again sought refuge in the city; one that did not was the *Bremen,* which raced across the North Atlantic to Murmansk in the Russian Soviet Federative Socialist Republic before safely reaching Bremen several months later. After service resumed in 1951 Lloyd ran the *Bremen* (reconditioned), the *Europa,* and the *Berlin* from New York City to Bremerhaven until 1971. In 1970 it merged with its longtime competitor Hamburg–America Lines. The new firm, Hapag–Lloyd, continued into the 1990s to offer container service to New York City and to operate the *Europa* as a cruise ship. The fleet of North German Lloyd included some ships that held speed records: in 1881 the steamer *Elbe* sailed from Southampton to New York City in eight days, a record that held until 1900, and in 1929 the new *Bremen* set a record for the fastest transatlantic crossing.

Otto J. Seiler, *Bridge across the Atlantic: The Story of Hapag–Lloyd's North American Liner Services* (Herford, Germany: Mittler and Sohn, n.d.)

Rohit T. Aggarwala

North New York. Disused name for a part of the southwestern Bronx lying within the present Mott Haven and bounded to the north by 147th Street, to the east by the neighborhood of Port Morris, to the south by 134th Street, and to the west by Third Avenue. Irish factory workers settled the area during the 1840s, the name North New York first being used as a postal address in 1862. After World War II the neighborhood became the site of two low-income, high-rise housing projects, John Purroy Mitchel Houses and Mott Haven Houses. Some brick apartment buildings from the turn of the century survive; the northern section is more commercial. The population in 2010 is mostly black and Latin American.

Lloyd Ultan

North River. Name by which the Hudson River is known at its southern end.

North River Steamboat. See Clermont.

North Side [Great North Side]. Name applied between 1874 and 1898 to the land north of the East River in what is now the Bronx. Its use was promoted by the North Side Board of Trade (organized on 6 March 1894) as an alternative to the name Annexed District, which many residents disliked. Among the organizations and businesses that used the name were the North Side Savings Bank, the North Side Brewing Company, the North Side Hotel, and the *North Side News,* a Democratic newspaper launched in April 1897. The name fell into disuse after the Bronx became a borough in 1898.

The Great North Side (Bronx: North Side Board of Trade, 1897)

Gary D. Hermalyn

Northside Center for Child Development. Social service organization founded in 1946 by Kenneth B. Clark and Mamie Phipps Clark to provide psychological counseling for troubled youth in Harlem. It was originally called the Northside Testing and Consultation Center and started in a basement apartment of the Dunbar housing project on 135th Street. In 1974 it moved to its present location in the Schomburg Houses on Fifth Avenue and 110th Street. In the twenty-first century the organization offers mental health and educational services to children and families.

David Rosner

North Side News. Democratic newspaper launched on 4 April 1897 and published weekly; it was the first important newspaper in the North Side, the familiar name for the Annexed District, which later became part of the Bronx. The newspaper appeared daily from October 1901 until it ceased publication in the mid-1950s.

Stephen Jenkins, *The Story of the Bronx* (New York: G. P. Putnam's Sons, 1912)

Gary D. Hermalyn

North Side Savings Bank. Savings bank founded in 1905 in the Bronx where there were few similar institutions at the time. The first president was John J. Barry, a wealthy builder born in Ireland, and the first office was at 3196 Third Avenue (near 161st Street); it moved in 1910 to 3230 Third Avenue (near 163rd Street). The bank grew along with the Bronx, and in 1951 the main office was moved to 185 West 231st Street, adjacent to the Major Deegan Expressway. In 1986 the bank was converted from mutual to stock ownership, and in 1997 it was acquired by North Fork Bancorporation.

Chad Ludington

Norton, C(harles) McKim (*b* Lake Forest, Ill., 6 Jan 1907; *d* Lexington, Mass., 10 May 1991). Planner. After graduating from Harvard College in 1929 and Harvard Law School in 1932, he worked as a lawyer in New York City. Norton was elected in 1937 to the board of directors of the Regional Plan Association (RPA), of which his father, Charles Dyer Norton, had been the founding chairman. At RPA, he was responsible for developing a second regional plan for greater New York in the late 1950s. The plan was notable for its public involvement and for its acknowledgment of the dangers of urban sprawl. Norton advocated clustered urban development, strong downtowns, and public parks. He was instrumental in creating the 26,000-acre (10,522-hectare) Gateway National Recreation Area, the country's first urban national park. A supporter of public transit, he also helped to form the Metropolitan Transportation Authority (MTA) in 1968. Norton retired as president of RPA in 1969.

Shan Jayakumar

Norwegian Lutheran Deaconesses' Home and Hospital. Forerunner of the Lutheran Medical Center.

Norwegians. Norwegians emigrated in the seventeenth century to New Amsterdam, where they became shopkeepers, innkeepers, carpenters, traders, and shipbuilders, and introduced a style of clapboard house that became common in the colony. One immigrant was Anneken Henriksen from Bergen, who in 1650 married Jan Arentzen van der Bilt, forebear of the Vanderbilt family. The bustling port of New York attracted Norwegian sailors, carpenters, and those skilled in other aspects of maritime industry.

More Norwegians settled in the city and its environs after 1825. About 6000 lived there in 1869, and by the end of the century many were concentrated in Brooklyn. The largest neighborhood was around the docks, piers, and shipyards along Hamilton Avenue near what is now Red Hook. Several humanitarian organizations were formed, including the Independent Order of Good Templars (1879), a secret temperance society in Brooklyn. The Voluntary Relief Society for the Sick and Poor among Norwegians in New York and Brooklyn, organized in 1883 by the Lutheran deaconess Sister Elizabeth Fedde (1850–1921) and eight clergymen, was incorporated in 1892 as the Norwegian Lutheran Deaconesses' Home and Hospital and situated at Fourth Avenue and 46th Street in Brooklyn. Important churches in Brooklyn included the Trinity Lutheran Church (411 46th Street), established in 1890, and Our Saviour's Lutheran Church (414 80th Street). For many years the Norwegian Seamen's Church owned an impressive edifice at 33 First Place in Carroll Gardens before moving to smaller quarters in Manhattan. The weekly newspaper *Norway Times/Nordisk Tidende,* one of the major Norwegian newspapers in the country, began publication in 1891; among its influential editors was Andreas Nilsson Rygg (1912–29). Many Norwegians settled about the turn of the century in Bay Ridge, a Brooklyn neighborhood that supported a wide range of Norwegian cultural institutions and businesses. The year 1895 saw the formation of the national fraternal order the Sons of Norway and of the American-Scandinavian Foundation, with headquarters in Manhattan; the foundation in 1913 began publishing the quarterly journal *Scandinavian-American Review* (now known as *Scandinavian Review*) and also distributed books, translations, and scholarly works about the five Scandinavian countries. Social clubs and athletic clubs became an essential part of Norwegian culture in the city.

The Norwegian National Federation, formed in 1905, had 40 societies affiliated with it by 1914.

As many as 55,000 first- and second-generation Norwegians lived in New York City in 1940, most of them in Bay Ridge. From 1940 to 1963 Carl Soyland was the editor of the *Norway Times* and was instrumental in promoting Norwegian cultural affairs, especially plays produced with the help of the actress Borgny Hammer. During World War II tons of food and clothing were sent to Norway by American Relief for Norway. The Norwegian Lutheran Deaconesses' Home and Hospital merged in 1956 with the Lutheran Hospital of Manhattan, was renamed the Lutheran Medical Center, and later became a city hospital at Second Avenue in the 50s in Brooklyn. Other health facilities included the Norwegian Children's Home on 84th Street in Dyker Heights, the Norwegian Christian Home and Health Center for the elderly on 67th Street in Brooklyn, and the Eger Home on Staten Island. Bay Ridge lost some of its Scandinavian character during the later decades of the twentieth century as second- and third-generation Norwegians moved to the suburbs. In the mid-1980s the *Norway Times* began to print most of its contents in English, and by 1990 the Norwegian population in the city had fallen to about 10,000. The Sons of Norway continued to operate six lodges in the metropolitan area. More than 20,000 people reported Norwegian ancestry in 2007. Prominent Norwegian immigrants to the city and its environs have included Ole Singstad, who built the Holland Tunnel, and Thor Solberg, a pioneer aviator who in 1935 was the first person to fly solo from the United States to Norway.

A. N. Rygg, *Norwegians in New York, 1825–1925* (New York: Norwegian News, 1942); Erik J. Friis, ed., *They Came from Norway* (New York: Norwegian Immigration Sesquicentennial Commission, 1975)

Erik J. Friis

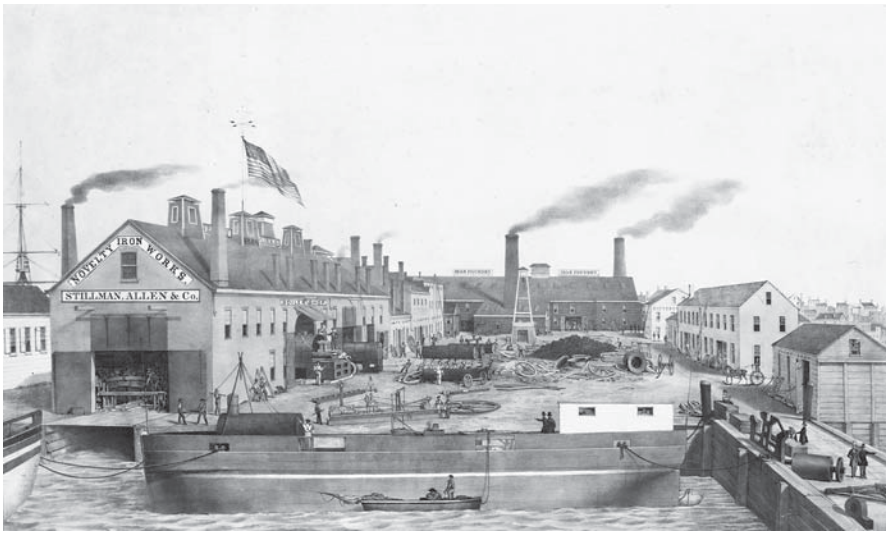
Norwood. Neighborhood in the northwestern Bronx, bounded to the north by Van Cortlandt Park and Woodlawn Cemetery, to the east by Bronx Park, and to the southwest by Mosholu Parkway. The name is probably a contraction of "north wood." During the American Revolution the area was the site of several skirmishes around the Valentine-Varian House. Although the Williamsbridge Reservoir was built in the area by the city in 1888, most of the land until 1905 was part of a dairy farm belonging to the Varian family. Development began in the early twentieth century after the extension of the Third Avenue elevated line and the subway system created shopping streets along 204th Street and Jerome Avenue. Montefiore Hospital was built in the neighborhood in 1912. Starting in the 1980s and continuing into the early twenty-first century, Norwood attracted a diverse population of new residents, including many from Puerto Rico, the Dominican Republic, India, Cambodia, Vietnam, Korea, the Philippines, and Ireland. There is also a sizable Jewish population. The housing stock consists of apartment buildings and one- and two-family houses.

Lloyd Ultan

Noticias del Mundo. Daily Spanish-language newspaper, launched in 1980 by the Korean spiritual leader and businessman Sun Myung Moon. It covered local, national, and international news from a politically conservative point of view. The newspaper ceased operations in April 2004.

James Bradley

Novelty Ironworks. Firm of iron founders between 12th and 14th streets on the East River in Manhattan, just north of where the Jacob Riis Houses now stand. It was formed in the mid-1830s by the president of Union College, Eliphalet Nott, to build an engine for his anthracite-burning steamboat the *Novelty* (1836), and under the leadership of Thomas B. Stillman and Horatio Allen from 1842 it became the city's largest foundry. The firm made castings for a variety of machinery, and, because it specialized in steam engines, for oceangoing ships during the shipbuilding boom of the early 1850s. Eighteen departments occupied two city blocks and two slips along the river and employed more than 1000 men, most of whom were skilled machinists earning some of the highest wages in the city. Operations were carried out on a vast scale: the bedplate alone for the engine of the steamboat *Arctic* weighed 60 tons (54 metric tons). The immensity of operations at the works and the consequent need for thorough organization and supervision made it the best-known industrial workplace in New York City and a symbol of industrial progress. From the late 1850s engine-building businesses moved their operations to Philadelphia, and although the iron industry prospered during the Civil War most of the large works in the city were in financial straits by the late 1860s. The Novelty Ironworks closed in 1870.



Richard Stott

Novoye Russkoye Slovo [New Russian Word]. Independent, illustrated Russian-language daily newspaper, launched in 1910 as *Russkoye Slovo;* it describes itself as the oldest continuously published newspaper of its kind in the world. Renamed in 1920, it was edited for 50 years by Mark Weinbaum and after 1973 by Andrei Sedych. Until the last years of the Soviet Union the newspaper published material that could not be published there. As of 2007 the circulation was about 45,500. Local news is emphasized, but it also includes reports on international and national events as well as pieces on literary and historical topics.

Thomas E. Bird

Novy Zhurnal. Russian-language quarterly journal launched in June 1942 in New York City by Mark Aldanov and Mark Zetlin. Initially known for publishing a wide range of items, it later espoused values of traditional Russian culture and advocated the defense of individual freedoms, publishing material censored in the Soviet Union. It was edited for about 25 years by the influential scholar Ro-

Novelty Ironworks, at the foot of 12th Street

man Gul and, since 1994, by Vladimir Kreid. The journal is especially important to Russians living in the city, who contribute memoirs, correspondence, and bibliographies.

Thomas E. Bird

Nowy Dziennik [Daily News]. Polish-language newspaper, launched in 1971 and published six days a week in New York City. It focuses on Polish and Polish American affairs. In the twenty-first century, it remained one of the major Polish-language daily newspapers in the United States and was headquartered at 333 West 38th Street.

James S. Pula

Nowy Swiat [New World]. Polish-language newspaper published in New York City from 1919 to about 1971. It provided detailed coverage of Polish politics and during the interwar period was a leading supporter of Joseph Pilsudski's regime.

James S. Pula

NRA. See National Rifle Association.

numbers. Term used for illegal gambling operations that usually involve wagers on three-digit numbers from 000 to 999. The winning number, or "hit," is a well-publicized number agreed on by custom: sometimes it is taken from the financial or sports pages (for example, the last three digits of the daily handle, or total amount wagered, at a racetrack). The bettor chooses a number and places a "policy" (a nickname derived from the penny insurance once popular in poor neighborhoods); a "runner" or "writer" usually records bets on slips of paper and takes them to a "spot" (where bets are also accepted) or "store." Betting slips are then collected by "pick-up men" and taken to a "controller" who takes them to the "policy bank," a central facility where the day's hits are tallied and the split of the profits among the spots and runners is figured. Because the payoff on a winning number is usually 600 to 1 and the odds of winning are 999 to 1, about 40 percent of the total amount wagered accrues to the operators, a higher return than in other forms of gambling.

One of the first well-known numbers operators in New York City was Al Adams, who dealt in favors for Tammany Hall and William M. "Boss" Tweed. He had about 1000 policy shops in the 1880s and was known as the meanest gambler in the city because by rigging the numbers he drove other operators out of business. The 1910s and 1920s saw the development of penny ante numbers, a game intended for residents of the poorest neighborhoods. It became popular and was soon the most lucrative kind of numbers game for its operators. Influential operators like Madame St. Clair and Casper Holstein, both of Harlem, made fortunes by running numbers banks. Numbers operators often became influential figures, giving charity as well as investing numbers money in legitimate businesses and other rackets in their neighborhoods. St. Clair's racket, as well as many others in Harlem, was taken over by Dutch Schultz, who terrorized "bankers" into buying his protection and then took control of their businesses. Schultz's underling, Otto "Abbadabba" Berman, later developed a rigging system that prevented numbers heavily bet on from winning. After Schultz's murder in 1935 the racket in Harlem was taken over by white mobsters Lucky Luciano, Meyer Lansky, and Vito Genovese.

The numbers game remained widely played through the 1970s, often operated by organized crime with the complicity of bribed police officers. In 1966 New York State instituted its first lottery, which initially didn't do as well as expected because of the relative simplicity of the numbers, popular trust in the numbers banks, and the numbers' tax-free payoffs. In recent years law enforcement and growing public use of official lotteries have significantly cut into the business of the numbers rackets still in operation in the twenty-first century.

Jesse Drucker, Ben Silk

numismatics. Numismatics, or coin collecting, became popular in the United States in 1857 when the replacement of the large cent by the flying-eagle cent led many enthusiasts to collect a cent from each year since 1793. The American Numismatic Society, formed in New York City on 6 April 1858 as the second such society in North America (after the Numismatic and Antiquarian Society of Philadelphia), was for many years a collectors' club. In 1908 it moved to its own building on 155th Street and focused on scholarship. This shift in emphasis led to the formation of the New York Numismatic Club in the same year, which included among its members Victor D. Brenner, the designer of the Lincoln cent. The Brooklyn Coin Club was organized on 12 November 1932, followed by the Bronx Coin Club on 10 October 1933. Other coin clubs in the city have included those operated in association with the Chase Manhattan Money Museum, the Numismatic Forum of New York, and the Flushing Coin Club. Since 1952 the American Numismatic Society has conducted a summer seminar, which trains graduate students in history, art history, and the classics in numismatics. In 2003 the American Numismatic Society moved from 155th Street to Fulton and William streets in downtown Manhattan.

John M. Kleeberg

Nurses' Settlement. Name by which the Henry Street Settlement was known from 1898 to 1913.

nursing. Until the early twentieth century medical and nursing care was usually administered at home. At the first hospitals in New York City, opened during colonial times primarily to quarantine infected sailors and immigrants, nursing care was provided by untrained attendants and recovering patients. The first recorded effort to train nurses in the United States was made at New York Hospital in 1798 by Valentine Seaman, a doctor who taught a course in maternity and child care. Nursing of a more professional sort was provided in 1817 by the Sisters of Charity, who were sent to Manhattan from their motherhouse in Maryland by Mother Elizabeth Bayley Seton. After serving in schools, hospitals, and orphanages they founded St. Vincent's Hospital (1849), the Half Orphan Asylum (1856), and New York Foundling Hospital (1869); they also worked at the contagion hospitals on Wards Island, Blackwell's Island, and Randalls Island during outbreaks of smallpox, cholera, and yellow fever.

Racial segregation led to the founding in 1839 of Lincoln Hospital by the Society for the Relief of Worthy, Aged, Indigent Colored Persons. Only African American women were admitted to the training program for nurses offered there from 1898. A training program for nurses was established at the New York Infirmary for Women and Children (1857) by three doctors: Elizabeth Blackwell, the first woman in the United States to earn a medical degree, her sister Emily Blackwell, and their colleague Marie E. Zakrzewska. Elizabeth Blackwell also trained nurses at Bellevue Hospital in 1861 for service in military hospitals during the Civil War. The brutality of war demonstrated the need for better nursing care. The State Charities Aid Association, formed after the war by the philanthropist Louisa Lee Schuyler, sponsored visiting committees to investigate conditions in schools, asylums, and hospitals in the city. After finding filth and depravity at Bellevue Hospital the association in 1873 opened there the first Nightingale school for nurses' training in the United States. Student nurses cared for patients under the supervision of only a superintendent and one or two head nurses, who taught them procedures. Their formal education consisted of lectures delivered sporadically by hospital physicians at night. Admitting women students of good character and holding them to a strict regime of discipline was considered critical to the success of the school's reform mission.

Nightingale schools opened at many other hospitals in the city, where by the 1920s most nursing was provided by students. Graduates of the nursing programs found work mainly in private households but also joined the public health sector and filled the few positions available on hospital staffs. The women's branch of the New York City Mission and Tract Society established Visiting Nursing in 1877, the first organization in the United States to send trained nurses into the homes of indigent patients. The American School for Male Nurses opened in 1886 in connection with the City Training School on Blackwell's Island, followed by the Mills Training School for Male Nurses in 1888 at Bellevue. In 1893 the National League for Nursing was formed and Lillian Wald, a graduate of the nursing school at New York Hospital, organized a settlement later known as the Henry Street Settlement, which became the model for visiting nursing programs in the United States. The American Nurses Association was formed in the city in 1896. The *American Journal of Nursing* was first published there in 1899, and during the same year a course on hospital economics was given at Teachers College, from which a program in higher education for nurses evolved. The Division of Nursing Education at Teachers College later granted advanced degrees and led the effort to professionalize nursing during the first half of the twentieth century. Legislation was passed to set standards (in 1903 for New York State), control practice, and register nurses. M. Adelaide Nutting became the first professor of nursing in the world at Teachers College in 1906. The first meeting of the National Association of Colored Graduate Nurses (NACGN) was held in New York City in 1908. Fifty-eight organizations employed 372 visiting nurses by 1909 to serve the city's neighborhoods. From 1912 to 1950 the National Organization of Public Health Nurses had its headquarters in the city.

Following the influential efforts of female nurses during World War I, education in the field began to grow in popularity particularly for women. In 1932, a College of Nursing was added to New York University while medical education became more accessible and popular within the city and the United States. In 1980, New York City College of Technology began to offer two professional nursing programs as part of the School of Professional Studies in which students can receive an associate's degree in applied science and a bachelor of science required by the New York State Education Department for all registered nurses (RNs). Pace University also added the Leinhard School of Nursing in 1966.

Pregnant women were cared for principally by midwives and nurse-midwives, some of whom were immigrants trained at Bellevue Hospital, which had a program in midwifery from 1911 to 1935. Despite opposition, community-based maternity centers were organized, such as the Maternity Center Association in 1915. The first birth control clinic in the nation was opened in Brooklyn on 16 October 1916 by Margaret Sanger, a nurse who led the struggle to provide birth control to women. Nurses in the city's health department initiated preventive care in school health and child hygiene programs and home visits to postpartum women and their infants.

By the 1920s Lincoln Hospital had the largest nursing school for African Americans in the United States. Before closing in 1961 it granted diplomas to 1864 nurses. Another nursing school for black women opened in 1923 at Harlem Hospital. Through the efforts of the NACGN under the leadership of Adah Belle Thoms, Geneva Estelle Massey Riddle, and Mabel Keaton Staupers discrimination against black nurses was contested and racial quotas in the armed services were eliminated during World War II.

After the war nursing care became increasingly complex. Several levels of certification developed, including those of licensed practical nurse and research nurse (which requires a doctorate). The GI Bill and federal grants financed college education for nurses, and university and college programs gradually replaced the hospital schools: only two of the 26 programs that trained registered nurses in the city in 1989 were offered by hospitals; of the rest nine were senior (baccalaureate) programs and 15 were associate degree programs in community colleges. In 1989 a survey of registered nurses in New York State showed that of those in the five boroughs 49 percent were white, 29 percent African American, 18 percent Asian, 5 percent Puerto Rican and Latin American, and fewer than 1 percent American Indian.

In the mid-1990s nurses in New York City began to earn doctorates and conduct research, and manage large hospital budgets, in addition to providing bedside care in hospitals, visiting the sick in their homes, and ministering to the needy in the community. In 2009 New York State registered 252,662 individuals licensed and registered as professional nurses. According to the New York State Nurses Association, New York City employed over 6400 registered professional nurses in city health care facilities as of 2007.

nursing-home scandals. Nursing homes in New York City have been the subject of several major scandals. In the late 1950s night raids by the city's department of investigations revealed poor living conditions and lax management at several nursing homes, and other investigations by the welfare department uncovered extensive overcharging by the homes. Several nursing homes were closed as a result, including 10 owned by Bernard Bergman (1911–84). In 1960 a report by the city's investigations commissioner, Louis I. Kaplan, depicted widespread abuse and neglect at the city's nursing homes. None of these investigations attracted much publicity or led to major reforms. The government's initial failure to crack down on rogue nursing-home operations had serious repercussions, because illegal activities worsened after the advent of Medicaid and its system of reimbursements in 1967.

In October 1974 a four-part series in the *New York Times* by John L. Hess broke open the nursing-home scandals. Other journalists also exposed nursing-home fraud, including Jack Newfield of the *Village Voice* and Steve Bauman of the television station WNEW. Governor Hugh L. Carey then appointed a special prosecutor, Charles J. Hynes, to investigate nursing homes throughout New York State, and Assemblyman Andrew Stein of Manhattan held dramatic hearings that brought widespread corruption to light. The most notorious figure to emerge from the scandals was Bergman, who controlled 37 nursing homes in the city, notably the Park Crescent and the Towers Nursing Home on the Upper West Side. Convicted of Medicaid fraud and bribery, he served a year in prison and paid nearly $2 million in fines. Eugene Hollander, who owned four nursing homes in the city, achieved particular notoriety for having purchased valuable paintings with Medicaid payments. He avoided prison by agreeing to divest himself of all his nursing-home interests.

In the end the city's worst nursing homes, including Bergman's, were closed, and a permanent office of special prosecutor was established to oversee the business. The nursing-home scandals also played a role in bringing down two leaders of the state assembly: Stanley Steingut of Queens and Albert H. Blumenthal of Manhattan. The scandals launched the political careers of Stein, who became borough president of Manhattan and president of the City Council, and Hynes, who became district attorney of Brooklyn.

James Bradley

Nutten Island. Former name of Governors Island.

Nutting, M(ary) Adelaide (*b* Frost Village, Quebec, 1 Nov 1858; *d* New York City, 3 Oct 1948). Nursing educator. She moved to New York City in 1899 after becoming known at Johns Hopkins University as a champion of

improved nursing education and better working conditions for nurses. She taught in various departments at Teachers College, Columbia University (1899–1925) and in 1906 became the first professor of nursing in the world. One of the most prominent figures in modern nursing, she was instrumental in establishing the Department of Nursing and Health at Teachers College and was the first person to lead it (1910–25).

Joseph S. Lieber

Nuyorican Poets Cafe. A meeting and performance space opened in October 1975 at 505 East Sixth Street in Manhattan. It was established by members of the Nuyorican movement, an informal association of Puerto Rican artists, musicians, and writers living in New York City (the term *Nuyorican* is a blending of "New York" and "Puerto Rican"), whose art focused on their experiences as members of the Puerto Rican diaspora in the city. The cafe was an outgrowth of a salon held from 1973 by Miguel Algarín and Richard August at their apartment in the East Village, which attracted such writers as Lucky Cienfuegos, Miguel Piñero, Pedro Pietri, Tato Laviera, Bittman "Bimbo" Rivas, and Sandra Esteves and where works such as Piñero's *Short Eyes* (1974) and Pietri's *Puerto Rican Obituary* (1974) were written and revised. Although many of the writers associated with the cafe were Spanish-speaking, it also drew such figures as Allen Ginsberg, Gregory Corso, Amiri Baraka, and Ntoszake Shange. The cafe moved in 1980 to an abandoned tenement building at 236 East Third Street. Closed in 1983, it reopened in 1989. In addition to sponsoring readings of poems and screenplays, the Nuyorican Poets Cafe produced more than two dozen plays and published poetry anthologies such as *Aloud: Voices from the Nuyorican Poets Cafe* (1994).

Roland Legiardi-Laura

N. W. Ayer and Partners. Advertising agency formed in 1869 in Philadelphia as N. W. Ayer and Son. The firm opened an office in the Flatiron Building in New York City in 1903, and the city gradually became its unofficial headquarters; the headquarters were formally moved to New York City in 1973. Over the years the firm became known for several innovations in advertising, including the first color print advertisement (1893) and the first radio advertisement (1922); for long-running campaigns on behalf of such clients as the National Biscuit Company, Steinway and Sons, and American Telephone and Telegraph (an association that began in 1908 and continued into the early twenty-first century); and for several memorable advertising slogans, including "A Diamond Is Forever" (for DeBeers Consolidated Mines), "Reach Out and Touch Someone" (for American Telephone and Telegraph), and "Be All That You Can Be" (for the U.S. Army). In 2002 N. W. Ayer and Partners merged with the Kaplan Thaler Group, another advertising agency, and began operating under the Kaplan Thaler name. Up until this merger, it was the oldest agency in continuous operation in the United States.

Nyad, Diana (*b* New York City, 22 Aug 1949). Long-distance swimmer and radio commentator. On 6 October 1975 she swam around Manhattan Island in record time—seven hours, 57 minutes—and in 1979 she set the world distance record, 102.5 miles (165 kilometers). Since 1980 she has been a commentator for CNBC, National Public Radio, Fox, and ABC Sports.

NYANA. See New York Association for New Americans.

NYC Condom. The nation's first official city-branded condom, unveiled by the New York City Department of Health and Mental Hygiene on 14 February 2007. Health department clinics have distributed condoms for free since 1971. The program expanded to include community-based organizations during the 1980s after the AIDS epidemic was recognized as a public health crisis. In 2005 the health department launched an Internet-based system for bulk ordering, a move that increased distribution to more than 1.5 million condoms per month through clinics, community centers, bars, clubs, and retail and commercial centers. On Valentine's Day 2007 more than 150,000 newly designed NYC Condoms were distributed throughout the city in an initiative that directed attention toward New York City's awareness of the importance of sexual health and free condom distribution. That year, the health department handed out 39 million free condoms in more than 900 locations, a distribution growth of 120 percent. In February 2008 industrial designer Yves Béhar redesigned NYC Condom packages and dispensers. For this, he won an International Design Excellence Award in the Design Strategy category.

Anne Epstein

NYPL. See New York Public Library.

O

Oakland Gardens. Neighborhood in northeastern Queens, bounded to the north by Oakland Lake and 48th Avenue, to the east by Alley Pond Park, to the south by Union Turnpike, and to the west by Cunningham Park. A housing development of the same name is bounded by the Long Island Expressway, Cloverdale Boulevard, 69th Avenue, and Springfield Boulevard. The area was settled in 1645 by John Hicks, one of the original patentees of Flushing. In the early nineteenth century his property passed into the Lawrence family, and about 1847 Frederick Newbold Lawrence built a mansion named the Oaks, which lent its name to the nearby lake. Manhattan restaurateur John Taylor bought the estate in 1859 and with John Henderson transformed it into a horticultural establishment of more than 30 greenhouses specializing in roses and orchids. In 1886 Taylor's son, John H. Taylor, inherited the property; he organized the Oakland Golf Club in 1896 and became its first president. Among the members were Alfred E. Smith, Robert F. Wagner (1), and Bernard Baruch. After 1911 the club bought the golf course; the Draper Realty Company of Manhattan bought the rest of the land and divided it into building lots. Morton Pickman of Forest Hills bought the club in 1952. His plan to erect high-rise apartment buildings was blocked, and he sold the property to Marvin Kratter in 1958. The City of New York bought the golf club in the early 1960s and built Public School 203, Benjamin Cardozo High School, and a new 34-acre campus for Queensborough Community College (1978). In 1963 Alexander Muss and Sons bought the remaining 65 acres of the golf course and built about 700 one- and two-family houses (initially selling for $33,745 to $45,240). William K. Vanderbilt's Long Island Motor Parkway (1908) cuts through Oakland Gardens east from Cunningham Park. In the early 1960s many homes were demolished and others moved for the Clearview Expressway. Oakland Lake, a glacial kettle pond, was part of Flushing's water system; it was degraded by development and drainage of the wetlands in the twentieth century, but in 1988 the New York State Department of Environmental Conservation designated the lake area as a protected wetland. In the twenty-first century, the lake has been rehabilitated and is home to many species of fish and birds.

Jeffrey A. Kroessler

Oakwood. Neighborhood in east central Staten Island, lying near the southern shore and bounded to the north by Ebbitts Street, to the east by the Atlantic Ocean, to the south by Great Kills Park, and to the west by the tracks of the Staten Island Railway (SIR); it stretches along a flat corridor between the Atlantic Ocean and the hilly interior of the island. During the nineteenth century the area was an ocean resort. Development increased for a time after a subway tunnel under the Narrows was proposed in the 1920s that would have linked the SIR and the Fourth Avenue subway (now the R line to Bay Ridge). The commercial thoroughfare Hylan Boulevard splits the neighborhood between the beach to the southeast and Oakwood Heights to the northwest. In the early twenty-first century Oakwood was a middle-class neighborhood of one- and two-family homes and garden apartments; overdevelopment had become a neighborhood concern.

Andrew Sparberg

Obama, Barack (Hussein) (*b* Honolulu, 4 Aug 1961). The 44th president of the United States of America. Barack Obama was born in Hawaii. After his parents divorced, Obama moved with his mother and stepfather to Jakarta, Indonesia, in 1967, but returned to live with his grandparents in Hawaii in 1971. In 1979 Obama moved to Los Angeles to attend Occidental College but transferred two years later to Columbia University. In his memoir, *Dreams from My Father,* he tells the story of being locked out of his apartment at 142 West 109th Street and sleeping in an alleyway between 108th and 109th streets near Amsterdam Avenue. In his senior year Obama moved to 339 East 94th Street. Following his graduation from Columbia in 1983 with a degree in political science, Obama worked for a few months at the Business International Corporation to pay off his student loans, then as a community organizer for the New York Public Interest Research Group located at the City College of New York.

Obama moved to Chicago in 1985 and worked as a community organizer before entering Harvard Law School in 1988. After graduation Obama returned to Chicago, where he served as a lecturer at the University of Chicago Law School for 12 years. In 2004 he won election to the U.S. Senate, and on 4 November 2008 he became the first African American president.

Anne Epstein

Obelisk. See Cleopatra's Needle.

Obie Award. Award instituted in 1955 by the *Village Voice* to acknowledge the achievements of Off-Broadway theater (and later Off-Off-Broadway theater). Citations are given for acting, directing, playwriting, and design, with special awards for distinguished or sustained achievement.

Ross Wetzsteon, ed., *The Obie Winners: The Best of Off-Broadway* (New York: Doubleday, 1980)

D. S. Moynihan

O'Brien, John P(atrick) (*b* Worcester, Mass., 1 Feb 1873; *d* New York City, 22 Sept 1951). Mayor. After a successful career as the corporation counsel of New York City and surrogate, he won a special election in 1932 to finish James J. Walker's unexpired term as mayor. His ineptitude in public relations turned voters against him, and he finished third in the election of 1933, which was won by Fiorello H. La Guardia.

Frank Vos

Observatory Place. One of the five open spaces provided for in the pivotal 1811 Commissioners' Plan. Consisting of 26 acres, it ran from 89th to 94th streets between Fourth Avenue (Park) and Fifth Avenue. The land was private. Starting in the 1830s, portions were sold off for building lots. It was abolished in 1865 in order to extend local streets.

Lisa Keller

occupational health. In the late nineteenth and early twentieth centuries, reformers working with the urban poor focused on improving health and safety in the workplace. Such crusaders as Alice Hamilton and Florence Kelley, who were associated with the settlement movement, paid particular attention to the link between illness and working conditions. In 1890 workers for charities and settlement houses in New York City found that nearly one person in every four families died of tuberculosis (then called consumption); in poorer neighborhoods the toll was higher and entire communities were devastated. The Triangle Shirtwaist fire, which killed 146 workers, shocked the public and persuaded the state legislature to organize a factory inspection commission. The commission held hearings on the dangers of several occupations and issued a report that marked a turning point in efforts to prevent occupational disease and accidents. The publicity surrounding these hearings spurred the passage of workers' compensation laws in New York City, and several members of the commission later played an important role in the administration of Franklin D. Roosevelt, including Kelley, Frances Perkins, and Robert F. Wagner.

During the second decade of the twentieth century the Consumers' League joined forces with the International Ladies' Garment Workers' Union to seek better working conditions and control the spread of communicable diseases in the workplace; the "union label" attached to garments came to symbolize clean working conditions. Activist organizations like the Workers' Health Bureau of America continued to aid labor groups such as the

Bakers' and Confectioners' Union and the Amalgamated Clothing Workers in investigating hazards in the workplace. At the same time the widespread introduction of lead into paint and gasoline and the increased smelting of ores heightened awareness of dangers to workers and the public. John B. Andrews and the American Association for Labor Legislation, which had its headquarters in New York City, led the campaigns against "phossy jaw" and lead poisoning, and industrial hygienists and occupational physicians tested the exposure to lead of painters and battery workers.

As the political power of progressive reformers waned in the 1920s, professional industrial hygienists replaced labor advocates as custodians of health and safety in the workplace. Such organizations as the National Safety Council and the Industrial Hygiene Association encouraged workers and management to assume greater responsibility in reducing injuries and disease. The Workers' Health Bureau, based in New York City and led by progressive women, was one of the few organizations that maintained the traditional alliance with labor; it helped in particular to focus public attention on the plight of watchmakers who were suffering from chronic diseases because of their ingestion of radium. During the Depression labor unions regained their earlier power, and the number of liability suits increased. Among occupational diseases silicosis was of particular concern because it affected workers who inhaled silica dust in the rapidly growing construction industry. The Congress of Industrial Organizations used the deplorable health and safety conditions of these heavy industries as a vehicle for organizing unions.

The decline of heavy industry after World War II and the rise of white-collar and service industries led to a general belief that occupational diseases would be virtually eliminated. Instead, however, occupational health problems took on new forms. Dangers associated with the telecommunications and electrical industries received much attention, as did the proliferation of video display terminals: in the 1980s some studies suggested a link between exposure to low-level radiation from the terminals and miscarriages. Many office workers using computer keyboards also became afflicted with repetitive strain injuries such as carpal tunnel syndrome. The New York Committee on Occupational Safety and Health, an organization of industrial hygienists, union activists, and officials, has been in the forefront of efforts to protect the workforce since the early 1970s.

David Rosner

Ocean Breeze. Neighborhood in east central Staten Island, lying southeast of Hylan Boulevard. Often considered the southern section of South Beach, it was originally a summer beach colony of bungalows and tents; the beach is now part of the city parks system. Part of an effort to revitalize Staten Island beaches, the 835-foot Ocean Breeze Fishing Pier opened in 2003. Seaview Avenue is the main thoroughfare. Near Hylan Boulevard is a residential area of small one-family houses.

Marjorie Johnson

Ocean Hill. Neighborhood in east central Brooklyn, bounded to the north by Broadway, to the east by Van Sinderen Avenue, to the south by East New York Avenue, and to the west by Ralph, Atlantic, and Saratoga avenues. It was developed as an exclusive neighborhood in the 1890s. By the early twentieth century there were department stores, theaters, and some industrial facilities, and Broadway and Rockaway Avenue were the main thoroughfares. With neighboring Brownsville the neighborhood formed one of three districts designated in the 1960s to test community control over local schools, with support from the Ford Foundation. Conflict ensued between school leaders, members of the community, and the United Federation of Teachers, sparking a bitter teacher strike. After 1970 houses were abandoned, and many stores along Broadway were destroyed by fire during a blackout in 1977. In the twentieth and twenty-first centuries two- to four-family houses predominated; the city planned to rebuild one- and two-family houses on vacant lots and to renovate vacant apartment buildings along Eastern Parkway and multifamily houses. The East Broadway Merchants' Association and the Ocean Hill Bushwick Bedford–Stuyvesant Development Corporation undertook the improvement of Broadway, which remained an important thoroughfare. In the early twenty-first century the population was largely African American; a small Latino community lived in the northern section near Broadway. In 2009 a new, green, 41-unit condominium opened for area residents, built by Habitat for Humanity.

Ellen Marie Snyder-Grenier

Ocean Parkway. Divided thoroughfare running about 6 miles (10 kilometers) north to south from Prospect Park to the southeastern edge of Coney Island. The parkway was suggested in the 1860s in reports to the park commissioners of Brooklyn by Frederick Law Olmsted and Calvert Vaux, who together drew up a plan influenced by boulevards in Paris and Berlin. The city of Brooklyn acquired the land for Ocean Parkway in 1868 and began construction in 1874. It was completed six years later and resembled the Eastern Parkway: it had a width of 210 feet (64 meters), a central roadway, two malls, two side roads, and two sidewalks and was lined with trees, benches, and playing tables. The country's first bicycle path runs the length of the parkway. The central drive was used for horse and carriage races, hence its nickname, the Ocean Parkway Speedway. It ran through several neighborhoods, including Parkville and Windsor Terrace; later, other neighborhoods such as Kensington were built along the parkway. About the turn of the twentieth century, houses were constructed along the edges, attracting buyers from Bushwick, Bedford–Stuyvesant, and Brooklyn Heights. Many grand houses were built about the time of World War I, which marked the end of a period of suburban affluence in the neighborhood. In the 1920s rows of one- and two-family houses and small apartment buildings were erected, and the upper reaches of the parkway became the site of luxury apartment buildings with elevators; after World War II apartment buildings replaced older houses on streets near the parkway. Parallel to Ocean Parkway and several blocks to the east is Coney Island Avenue, an important commercial street. In 1975 the city designated Ocean Parkway as a scenic landmark.

Ellen Marie Snyder-Grenier

Ochs, Adolph S(imon) (*b* Cincinnati, 12 March 1858; *d* Chattanooga, Tenn., 8 April 1935). Newspaper publisher. He began his career in journalism in 1872 as an apprentice at the *Knoxville Chronicle* in Tennessee and worked as a printer in Knoxville and Chattanooga until 1878 when he borrowed money and bought the struggling daily *Chattanooga Times.* The newspaper thrived under his stewardship, but after the financial panic of 1893 he was forced to seek new sources of capital. In 1896 he rescued the *New York Times* from receivership, quickly making the newspaper profitable and respectable by emphasizing objective news rather than opinion and sensationalism. He coined the slogan "All the News That's Fit to Print" and resolved to keep the newspaper in his family. For many years he lived at 308 West 75th Street (later the site of the Manhattan Day School); he was active as the publisher of the *Times* to the end of his life.

Harrison Salisbury

O'Connor, John Joseph Cardinal (*b* Philadelphia, 15 Jan 1920; *d* New York City, 3 May 2000). Roman Catholic cardinal. He moved from being a Philadelphia priest (1945–52), to naval chaplain (1952–79), to bishop of Scranton, Pennsylvania (1983). In 1984 he became archbishop of New York and cardinal

in 1985. Upon arrival in New York, he joined a coalition that successfully challenged in the courts a directive prohibiting employment discrimination on the basis of sexual orientation. In 1984 he clashed with vice presidential candidate Geraldine Ferraro over abortion; in 1990 he warned that Catholic politicians who deviated from church teaching risked excommunication. His condemnation of homosexuality and birth control led protesters in 1989 to disrupt his Mass at St. Patrick's Cathedral. Other of his decisions proved more popular. O'Connor defended labor and kept parishes open that had lost most of their communicants. He advocated new charities, opening a hospice for people with AIDS (1985), and forming a religious order, the Sisters of Life (1991). He tendered his resignation at the age of 75 as canon law required, but Pope John Paul II kept him in his position until his death from brain cancer. He is buried beneath St. Patrick's Cathedral, and his papers are in the archdiocesan archive.

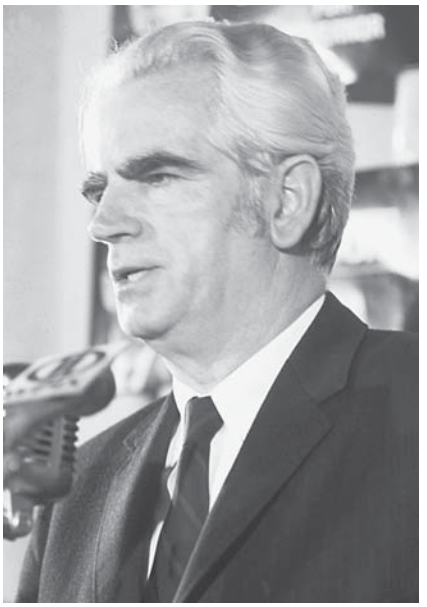
Mary Elizabeth Brown

Octagon Tower. Restored former ruin on Roosevelt Island, built in 1839 as the New York City Lunatic Asylum. It consists of a rotunda 62 feet (19 meters) tall surrounded by a spectacular flying staircase. The structure once served as the hub between the southern and western wings of a much larger building. The wings were demolished in 1970, and the dome was destroyed by fire in 1982. In 1994 the Roosevelt Island Operating Corporation asked for permission to stabilize the building and open part of it to the public, and Octagon Park was created in 1995. In 2004 the corporation gave approval to the firm of Becker and Becker to build the Octagon, a 500-unit residential development in Octagon Park. In 2006 they restored the tower, which became the main lobby of the building and houses the exercise room, community room, lounge, and offices. It is flanked on both sides by luxury apartments built on the site of the razed wings of the asylum.

Kenneth T. Jackson



Odets, Clifford (*b* Philadelphia, 18 July 1906; *d* Los Angeles, 14 Aug 1963). Theater director, playwright, and actor. He began his career as an apprentice actor in New York City with the Group Theatre, an experimental troupe led by Harold Clurman, Lee Strasberg, and Cheryl Crawford. In 1933 he rented an apartment at 82 Horatio Street, where he lived until moving to 1 University Place. He gained national prominence in 1935 for his militant one-act play *Waiting for Lefty;* several weeks later the Group Theatre mounted his second play, *Awake and Sing!* with the actors Stella Adler, Morris Carnovsky, and John Garfield. During an association with the company that lasted seven years he wrote *Golden Boy* (1937) and several other plays. He then moved to Hollywood, where he struggled as a screenwriter. His success as a playwright nevertheless continued, and his play *The Country Girl* (1950) was staged on Broadway. In 1952 Odets testified before the House Un-American Activities Committee about his political activities in the 1930s.

Paul O'Dwyer, 1968

O'Dwyer, (Peter) Paul (*b* Bohola, County Mayo, Ireland, 29 June 1907; *d* Goshen, N.Y., 24 June 1998). Lawyer and reformer, brother of William O'Dwyer. He grew up in Brooklyn, attended law school at St. John's University, and worked as a lawyer on behalf of miners in Kentucky and blacks in Mississippi and Alabama. In 1958 he joined with Eleanor Roosevelt, Herbert H. Lehman, and others in establishing the Committee for Democratic Voters, which marked the beginning of the Democratic reform movement in New York State. As the Democratic nominee for the U.S. Senate in 1968 he was defeated by Senator Jacob K. Javits. He was president of the City Council of New York from 1974 to 1977. He wrote *Counsel for the Defense: An Autobiography* (1979).

B. Kimberly Taylor

O'Dwyer, William (*b* Bohola, County Mayo, Ireland, 7 July 1890; *d* New York City, 24 Nov 1964). Mayor, brother of Paul O'Dwyer. As the district attorney of Brooklyn during 1940–41 he successfully prosecuted members of the criminal organization Murder Incorporated. He won the Democratic mayoral nomination in 1941 but was defeated in the general election by Fiorello H. La Guardia. In 1945 he was elected mayor as the candidate of the Democratic and American labor parties. He had a reputation as a capable administrator responding ably to a postwar surge in labor unrest and to the need for affordable housing for returning veterans, and for investments in infrastructure deferred since the Depression. He also helped bring the United Nations headquarters to New York City. His career was marked by accusations

William O'Dwyer, 1949

of an unpredictable personality and allegations of complicity with organized crime. Reelected in 1949, he resigned in 1950 and became U.S. ambassador to Mexico.

Chris McNickle

Off Broadway. Medium-sized commercial theaters in New York, having more than 100 but fewer than 499 seats. Unlike Broadway theaters, which primarily offer productions that run as long as they can be sustained, many Off-Broadway theaters offer three or four play seasons with limited runs and rely heavily upon a subscription base. This means that many of them seek to establish a reputation for a certain kind of work, such as classic revivals (Classic Stage Company), drama of certain nations (Irish Repertory), new plays and musicals (Manhattan Theatre Club), revivals (Second Stage), or particularly innovative new work (New York Theatre Workshop). There were about 200 Off-Broadway theaters in the five boroughs in the early twenty-first century.

Marvin Carlson

Off Off Broadway. Performing groups and theaters in New York with audiences of fewer than 100 people. Off Off Broadway began in the late 1950s in Greenwich Village as a reaction to Off Broadway, which was seen as becoming too commercial and conservative. Off Off Broadway is found throughout New York City and is extremely varied in its offerings. Some companies have their own home, such as the Ontological-Hysteric Theater of Richard Foreman or the Performing Garage of the Wooster Group, but most use found spaces or ongoing Off-Off-Broadway venues like the Café La Mama, HERE, or St. Ann's Warehouse in DUMBO.

Marvin Carlson

Off-Track Betting (Corporation, New York City) [OTB]. Public-benefit corporation formed in April 1971 by the state legislature of New York to allow wagering at locations away from the racetrack on thoroughbred and harness races. Although objections were raised by opponents of gambling and by the New York Racing Authority, which represented racetracks throughout the state, the supporters of off-track betting promoted it as a means of producing revenue for the city and state, weakening the illegal gambling operations of organized crime, and reviving horse racing. The corporation was overseen by a board of directors appointed by the mayor. The first head of OTB was Howard Samuels, a successful businessman active in Democratic politics. Patrons could bet on local races and on events outside the state, including the Kentucky Derby and the Preakness; they placed their bets at small outlets, modeled after betting parlors in Britain, that were the first of their kind in the United States, as well as by telephone. Although the betting outlets were not initially intended as gathering places, they eventually included restrooms, snack bars, and television monitors on which races were broadcast. By 1978 157 branches were scattered throughout the city. From that time the volume of wagers declined because of competition from the state lottery and other forms of gambling, the general decline in the popularity of horse racing, and the imposition by OTB of an unpopular surtax on winnings. In 1990 OTB had 100 branches in the city, employed 1700 workers full time and 600 part time, and raised $40 million for the city, $17 million for the state, and $8 million for other local governments. In the early 1990s OTB became unprofitable and remained that way as of 2010, despite the state taking over control in 2008. There were 65 branches in 2010, but the future remained uncertain as an interim agreement was to be put in place to prevent the closure of all facilities because of bankruptcy.

Edward T. O'Donnell

Ogilvy, David (Mackenzie) (*b* West Horsley, near Guildford, England, 23 June 1911; *d* Touffou, France, 21 July 1999). Advertising executive. After attending Oxford University he worked in Paris as a chef and in Scotland as a door-to-door stove salesman until his brother Francis helped him secure a position with the advertising firm Mather and Crowther in London in 1935. He went to the United States in 1938 to learn about American advertising and decided to stay; from the following year he conducted 439 nationwide surveys for George Gallup. He served during World War II with the British embassy in Washington. In 1948 he formed the advertising agency Hewitt Ogilvy Benson and Mather with Anderson Hewitt in New York City: he became well known for distinctive campaigns such as one for Hathaway shirts featuring a man with an eye patch, and for placing advertisements in respected publications such as the *New Yorker*. In 1975 he retired as the chairman of Ogilvy and Mather International and became its worldwide creative head, a position from which he retired in 1983. He wrote *Confessions of an Advertising Man* (1963), *Ogilvy on Advertising* (1983), and an autobiography, *Blood, Brains, and Beer* (1978).

Marjorie Harrison

O'Hara, Frank [Francis Russell] (*b* Baltimore, 27 March 1926; *d* Mastic Beach, N.Y., 25 July 1966). Poet. He studied at Harvard University (AB 1950) and served in the navy during World War II. He moved to New York City in 1951 and worked at the Museum of Modern Art, becoming assistant curator of the Department of Painting and Sculpture Exhibitions in 1960. Influenced by abstract expressionist painting, he cultivated friendships with Jackson Pollock and Franz Kline and became associated with the New York School of poetry. He developed an unconstrained poetic style characterized by spontaneous observations of everyday life; the collection *Lunch Poems* (1964) provides a quasi-photographic view of New York City at midday. Many of his other works, such as *Love Poems* (1965), celebrate his homosexuality. After O'Hara's death in an automobile accident his friend Allen Ginsberg paid tribute to him in the poem "City Midnight Junk Strains" (1966).

Shan Jayakumar

O. Henry [Porter, William Sydney] (*b* Greensboro, N.C., 11 Sept 1862; *d* New York City, 5 June 1910). Short-story writer known for surprise endings. After leaving school at age 15 he lived in Texas and Honduras and spent three years at the Ohio State Penitentiary for embezzlement, though it is not certain whether the charge was accurate. He wrote his first short stories in prison and coined the pen name O. Henry upon release. He lived briefly in Pittsburgh before settling in New York City in 1902. He lived at 55 Irving Place from 1903 and in 1906 moved to the Caledonia Hotel at 28 West 26th Street; he kept a room there for writing after moving to the Chelsea Hotel at 222 West 23rd Street. O. Henry wrote dozens of stories a year, many of them inspired by life in the city, and published them in such collections as *The Four Million* (1906) and *The Voice of the City* (1908).

James E. Mooney

Ohrbach's. Firm of clothing retailers. It began as a store opened in 1923 in Union Square by Nathan M. Ohrbach (*b* Vienna, 31 Aug 1885; *d* New York City, 19 Nov 1972), who sold ready-to-wear clothing at low prices. He profited by selling in bulk for cash, offering minimal sales service, and forgoing delivery, decorative wrappings, and alterations. His slogan was "More for less, or your money back"; customers who could prove that another store had undersold his were refunded their money and also received 10 percent of the competitor's selling price. After the store moved to 5 West 34th Street, its annual sales exceeded $30 million. Ohrbach later specialized in inexpensive copies of European designer clothes and fulfilled his aspiration of becoming to discount retailing what Bergdorf Goodman was to high-priced retailing. The firm was later sold to the Brenninkmeyer family of the Netherlands, then ceased operations in February 1987.

Leslie Gourse

O'Keeffe, Georgia (*b* Sun Prairie, Wis., 15 Nov 1887; *d* Santa Fe, N.Mex., 6 March 1986). Painter. She moved to New York City in 1907 to study at the Art Students League with William Merritt Chase and first encountered modern art in the following year at Alfred Stieglitz's gallery "291." After working as an illustrator in Chicago (1909–10) and studying at the University of Virginia (1912), she returned to the city in 1914 to study with Arthur Wesley Dow (1857–1922) at Teachers College, Columbia University. In South Carolina she completed abstract drawings that in 1916 gained the attention of Stieglitz, who included her work in two group exhibitions, presented the first solo exhibition of her drawings and watercolors in 1917, and invited her to leave a teaching post in Texas and return in 1918 to New York City, where from July to the end of 1920 she lived and worked at 114 East 59th Street. After the two were married in 1924 she moved into the Hotel Shelton at 525 Lexington Avenue, which became her residence in the city for the next 10 years. During this period she also spent time in Lake George (New York) and New Mexico. Her work from these years ranges from organic abstractions to floral still lifes, stark landscapes, and "precisionist" paintings and drawings inspired by the dramatic architecture of the city (1924–29). She lived from the autumn of 1936 at 405 East 54th Street and from October 1942 at 59 East 54th Street. On Stieglitz's death in 1946 she organized and dispersed his art collection and operated An American Place gallery, which lasted until 1950. The Metropolitan Museum of Art and the Whitney Museum of American Art own important examples of O'Keeffe's work.

Eldredge, *Georgia O'Keeffe* (New York: Harry N. Abrams, 1991)

Judith Zilczer

Olatunji, Babatunde Michael (*b* Ajido, Nigeria, 7 April 1927; *d* Salinas, Calif., 6 April 2003). Drummer. After attending Baptiste Academy in Lagos he earned his BA from Morehouse College in 1954 and in 1958 opened the Center for African Culture at 43 East 125th Street, which became a national center for African drumming and culture; for more than 25 years he taught students from all over the world and introduced to new audiences such performers as John Coltrane, Ladji Camara, and Yusef Lateef. His first album, *Drums of Passion* (1959), brought traditional African music into the commercial mainstream, and his song "Jingo-lo-ba" became well known through a version done by Carlos Santana in 1968. He and Bill Lee wrote the score for the Spike Lee film *She's Gotta Have It* (1986). Olatunji's students and associates included the percussionists Chief James Hawthorne Bey, Taiwo Duvall, Moses Miann, Ladji Camara, Kehinde Stewart O'Uhuru, Montego Joe, Sonny Morgan, Sule Greg C. Wilson, and Mickey Hart of the Grateful Dead. Olatunji moved to California and taught at the Esalen Institute before his death.

Sule Greg C. Wilson

Old Blazing Star. An early name for the area on the shore of the Arthur Kill near Rossville in Staten Island. The name refers to a comet, but its origin is unknown. The *Blazing Star* ferry to New Jersey docked there from 1722, and later there was also a Blazing Star Tavern. When a new ferry service was begun at Long Neck north of Blazing Star, the "old" was added, and after 1837 the name was changed to Rossville.

Barnett Shepherd

Oldenburg, Claes (Thure) (*b* Stockholm, 28 Jan 1929). Sculptor. He studied at Yale University (BA 1951) and the Art Institute of Chicago (1952–54). He moved to New York City in 1956. His early works include *The Street* (1960), constructed of debris from the streets of New York City. In the 1960s he became widely known for his outdoor public works—oversized soft sculptures of everyday objects, often made of vinyl, papier-mâché, or canvas and stuffed with kapok or a similar material. Typical examples include *Soft Typewriter* (1963) and *Bacon, Lettuce and Tomato* (1963). Exploring the relationship between architecture and sculptor, he has collaborated with architects such as Frank Gehry.

Shan Jayakumar

Old Place. Neighborhood in northwestern Staten Island, near the approach to the Goethals Bridge. The original settlement grew up around a tide mill built by the 1750s on Old Place Creek, which empties into the Kill van Kull. The eastern portion of the settlement, along Forest Avenue, was called Summerville. Old Place remained largely uninhabited because of its marshes, swamps, and creeks, and the mosquitoes with which they were infested. Much of the marsh was filled in and the land zoned for industrial use. Procter and Gamble had a factory on Western Avenue from 1907 to 1991; known as Port Ivory, in the 1920s it employed 1500 workers. The remaining marshland has been designated as Wetlands; the nearly 70-acre Old Place Creek Wetland is part of the larger Harbor Herons Wildlife Complex.

Marjorie Johnson

Old Town. Former neighborhood in northeastern Staten Island, lying east of Richmond Road. The first permanent European settlement on the island was made near the beach adjoining Fort Wadsworth in 1661 by Dutch, French, and English farmers and fishermen. The town was called Dover by the English but became known as Old Town when a new town was formed at New Dorp. In the late nineteenth century the beach area became a summer resort and amusement park known as South Beach, and a spur line of the railroad was built to accommodate tourists. After the turn of the century many western, war, and adventure films were shot at the farm of Fred Scott just inland from the beach. Hylan Boulevard, which runs the length of Staten Island, bisects the area and is its principal commercial thoroughfare. Below Hylan Boulevard is a large marshy area that has been designated a protected Wetlands. Staten Island Railway crosses the northern section of the area; in the early twenty-first century Old Town was less a neighborhood than a train stop.

Marjorie Johnson

Olinville. Neighborhood in the north central Bronx, bounded to the north by 215th Street, to the east by White Plains Road, to the south by Burke Avenue, and to the west by the Bronx River. It began as Olinville no.1 and Olinville no. 2, two villages named for Stephen Olin, a bishop in the Methodist Church, that were formed in the 1840s after a railroad station of the New York and Harlem River Railroad

opened nearby in Williamsbridge. The villages were separated by Olin Avenue (formerly Gun Hill Road between the Bronx River and White Plains Road) and incorporated between 1852 and 1854. The population grew after the Third Avenue elevated line was extended to meet the recently completed branch of the subway to White Plains Road. In 2005 the neighborhood was rezoned to preserve its low-density character. In 2010 most of the population was African American. Many who live in the neighborhood consider themselves residents of Williamsbridge.

Gary D. Hermalyn

Olitski, Jules [Demikovsky, Jerd] (*b* Snovsk, Russian SFSR [now Shchors, Ukraine], 27 March 1922; *d* New York City, 4 Feb 2007). Painter and sculptor. He was taken as a baby to New York City after his father had been executed by the Bolsheviks on political charges. He demonstrated artistic talent at an early age and trained in Manhattan at the National Academy of Design and at the Beaux-Arts Institute of Design. He won critical attention with a solo show at the Alexander Iolas Gallery in New York City in 1958. In the 1960s Olitski became a leading exponent of color field painting, an outgrowth of American abstract expressionism, and in 1969 he became only the third living artist to have a one-man show at the Metropolitan Museum of Art. Ultimately, he had more than 150 exhibitions around the world.

Kenneth T. Jackson

Olmsted, Frederick Law (*b* Hartford, Conn., 26 April 1822; *d* Belmont, Mass., 28 Aug 1903). Landscape architect. After moving to New York City in 1840 he worked as a clerk in a mercantile house and lived from 1848 to 1854 in Staten Island at what is now Woods of Arden Road (his farmhouse stands at 4515 Hylan Boulevard). Several accounts of his travels in the southern United States were published during the 1850s and 1860s. He became best known for his work as a landscape architect from 1858 with Calvert Vaux; together they designed Central Park (the construction and use of which Olmsted oversaw as its architect-in-chief and superintendent), Riverside Park, and smaller recreational areas in Manhattan; proposed a street plan for Washington Heights; and were the landscape architects of Prospect Park, Fort Greene Park, Ocean Parkway, Eastern Parkway, and several smaller parks in Brooklyn. Olmsted also prepared comprehensive plans for the Bronx (with the engineer J. J. R. Croes) and Staten Island and for a resort at Rockaway Point. In addition to working as a landscape architect he was an experimental farmer on Staten Island and a founder of the Union League Club and the Metropolitan Museum of Art.

Olmsted's career in the city was hindered and eventually cut short by politics. He fought bitterly against Tammany Hall, reform Democrats (notably Andrew Haswell Green), and Republicans, whom he accused of interfering with his designs and according more importance to patronage than to the proper administration of the parks. After his dismissal by the Department of Public Parks in 1878 he moved in 1882 to Brookline, Massachusetts, but continued to concern himself with the fate of the public parks in New York City. During his last years he opposed the addition to the parks of neoclassical structures designed by McKim, Mead and White and other architects and oversaw the construction of parks that he had designed in southern Brooklyn. Ill health forced his retirement in 1895.

In his designs Olmsted sought to provide relief from the density, congestion, and incessant pace of New York City. He considered his landscapes both works of art and social experiments that would have a civilizing influence. He denounced the gridiron system of streets as a relic of an earlier stage of urbanization and envisioned instead a compact business district surrounded by more open residential neighborhoods and spacious, naturalistic parks; this vision is most clearly set forth in his proposals for the Bronx and for the parkways in Brooklyn. Although often frustrated by political maneuvering and competing ideas of what a park should be, Olmsted and his collaborators had a profound influence on New York City.

Laura Wood Roper, *FLO: A Biography of Frederick Law Olmsted* (Baltimore: Johns Hopkins University Press, 1973); Charles C. McLaughlin et al., eds., *The Papers of Frederick Law Olmsted* (Baltimore: Johns Hopkins University Press, 1979–)

David Schuyler

Eastern Parkway (designed by Frederick Law Olmsted), ca *1895*

Olvany, George W(ashington) (*b* New York City, 20 June 1873; *d* New York City, 15 Oct 1952). Lawyer and politician. After Charles F. Murphy's death in 1924 Olvany was named head of Tammany Hall. Citing poor health, he resigned in March 1929 after his close political ally Governor Alfred E. Smith had failed to win the presidential election of 1928. An investigation of government corruption by Samuel Seabury in 1931 revealed that during Olvany's tenure as the boss of Tammany Hall his law firm, Olvany, Eisner and Donnelly, had taken bribes from real estate interests and fixed licenses.

Frank Vos, Max Seppo

Olympia and York. See Brookfield Properties.

omnibuses. See Buses.

Omnicom Group. Advertising holding group formed in 1986 by the merger of Batten, Barton, Durstine, and Osborn; Doyle Dane Bernbach; and Needham Harper. It operates three independent agency networks: BBDO Worldwide Network, DDB Needham Worldwide Network, and TBWA International (acquired in 1993). It also manages specialty advertising companies through Diversified Agency Services (DAS) and Omnicom UK. It has offices at 437 Madison Avenue in Manhattan.

Janet Frankston

Onassis [Kennedy; née Bouvier], **Jacqueline (Lee)** (*b* East Hampton, N.Y., 28 July 1929; *d* New York City, 19 May 1994). Editor. As a young woman she lived in her family's apartment on Park Avenue. She married John F. Kennedy in 1953 and moved to the White House in 1961 when he was elected president. After his 1963 assassination, she chose to live permanently in New York City and purchased a cooperative apartment on Fifth Avenue in 1964. She married Aristotle Onassis in 1968 and often lived abroad until his death in 1975. She was a consulting editor at Viking Press until she moved to Doubleday in 1978 where she became a senior editor. A leader in the city's landmarks preservation

movement, she was instrumental in protecting Grand Central Terminal from destruction. She also helped to form the 42nd Street Development Corporation and was a member of the Municipal Art Society, the International Center of Photography, and the Century Association. After her death the reservoir in Central Park was renamed in her honor.

Patricia U. Bonomi

Onderdonk House. Historic house at 1820 Flushing Avenue in Queens, also known as the Vander Ende–Onderdonk House. It was built in 1709 by Paulus Vander Ende in a blend of English, Georgian, and Dutch styles found only in the metropolitan area and along the Hudson River. It was bought in the 1820s by Adrian Onderdonck, a farmer who had married a member of the Wyckoff family, and was occupied by his descendants until 1905. After a devastating fire in the mid-1970s the house was restored by the Greater Ridgewood Historical Society between 1975 and 1981. In 1977 it was listed on the National Register of Historic Places, and in 1978 was added to the New York State Register of Historic Places. In 1996 it received New York City Landmark status. The Onderdonk House was the oldest surviving farmhouse in the area in the early twenty-first century.

Eric Wm. Allison

O'Neill, Eugene (Gladstone) (*b* New York City, 16 Oct 1888; *d* Boston, 27 Nov 1953). Playwright. Born in room 236 of Barrett House, on 43rd Street off Broadway, he spent much of his life in New York City. As a child he toured with his father, the romantic actor James O'Neill (1847–1920), and after a year at Princeton University he worked in a variety of jobs and as a seaman. He contracted tuberculosis and while recovering in a sanitarium decided to become a playwright. In 1916 he became the leading writer for a theater group on Cape Cod that moved to Greenwich Village as the Provincetown Players. He joined the troupe in New York City, living at 38 and 42 Washington Square South and spending time at Jimmy the Priest's, a boardinghouse at 252 Fulton Street that is the setting of his play *Anna Christie,* and at the Hell Hole (on Fourth Street and Sixth Avenue), an Irish saloon where he often slept. The Provincetown Players gave the premieres in Off-Broadway theaters at 133 and 139 MacDougal Street (1916–19) of 10 of his one-act plays, and on Broadway of his first full-length play, *Beyond the Horizon* (1920), for which he won a Pulitzer Prize; he also won the prize for *Anna Christie* (1921), *Strange Interlude* (1928), produced by the Theatre Guild, and *Long Day's Journey into Night,* his best-known work, completed in 1941 and produced posthumously in 1956. Other major works include *The Emperor Jones* (1920), *Desire under the Elms* (1924), *Mourning Becomes Electra* (1931), and *The Iceman Cometh,* first produced in 1946 but not recognized as a work of genius until its revival in 1956 at the Circle in the Square, staged by José Quintero and featuring Jason Robards.

Although he experimented in a wide range of theatrical genres and production styles, O'Neill is best known for his stark, realistic drama. His plays offer intense psychological treatments of alcoholism, insanity, suicide, and sexual passion. Most of his works are autobiographical and draw on his experiences in waterfront hovels and in Greenwich Village. He received the Nobel Prize for literature in 1936.

Martha S. LoMonaco

Onion. Fake news organization with headquarters in New York City that publishes satirical content via a weekly free newspaper, a Web site, and video and radio/podcast segments on the Web. It was founded in Madison, Wisconsin, in 1988; it moved to New York City in 2001. The newspaper satirizes all of the major components of a real paper, including national and international news, human interest stories, op-eds, on-the-street polls, news graphics, and weather, wedding, funeral, real estate, stock, and television listings. The "AV Club" section contains nonsatirical pop-culture interviews and reviews. The paper has local editions in New York City and nine other cities that include local advertising and entertainment coverage. The paper claims a national print circulation of 690,000. In 1999 the organization started its book series by publishing *Our Dumb Century: The Onion Presents 100 Years of Headlines.* Its Web site, launched in 1996, was redesigned and fully developed in 2005 when the Onion Radio News was added. In 2007 television-style news broadcasts were added to the Web site under the name Onion News Network. *The Onion Movie,* a direct-to-DVD film, was released in 2008. The *Onion* has its own fictional history, according to which the paper was founded in the mid-1700s by Herman Ulysses Zweibel. Its motto is *Tu Stultus Es* ("You Are Stupid," in Latin).

Jacqueline Lalley

Opdyke, George (*b* Kingwood Township, near Frenchtown, N.J., 7 Dec 1805; *d* New York City, 12 June 1880). Merchant and mayor. He became a prosperous clothing manufacturer and moved to New York City in 1832 to open the first large clothing factory there. In 1846 he turned the business over to his brother-in-law and became an importer of wholesale dry goods. A millionaire by 1853, he later organized a bank and was elected to the state assembly, where he advocated various reforms. As mayor during the draft riots of 1863 he refused to compromise with rioters and abandoned City Hall for the shelter of St. Nicholas Hotel.

James E. Mooney

Open Theater. Avant-garde theater company founded in New York City in 1963 by Joseph Chaikin (1935–2003), a former member of Living Theatre, and Peter Feldman (*b* 1936). The group created collaborative productions in workshops, often using the concept of "transformations," where actors transformed from one character or object into another. Its most significant works included *American Hurrah* (1965) and *Viet Rock* (1966), which were created with playwrights Jean-Claude van Itallie and Megan Terry and staged at La Mama Experimental Theatre Club. Its later works included *The Serpent* (1968), *Terminal* (1969), *Mutation Show* (1969), and *Nightwalk* (1973). Open Theater dissolved in 1973.

Kate Lauber

opera. Although rooted in a repertory and a tradition dating largely from the nineteenth century, opera in New York City is as cosmopolitan and varied as its audience. The earliest opera performances in the city took place in 1750, when the Nassau Street Theatre presented ballad operas such as John Gay's *The Beggar's Opera,* musical plays, and pastiches (selections by different composers). Carl Maria von Weber's *Der Freischütz* was performed in English at the Park Theatre in 1825 by a troupe including the celebrated tenor Manuel García and four members of his family; the youngest, Maria Felicia, achieved early success in the city before building an important career in Europe as Maria Malibran. That year the troupe staged the first foreign-language operas in the city, a series of 80 performances sponsored by the wine importer Dominick Lynch with encouragement from Lorenzo da Ponte, who taught in New York City after writing librettos for Mozart; the series included operas by Rossini and Mozart, all sung in Italian. Signora Bartolini sang "operatic airs between the plays" at Chatham Garden, near City Hall; in 1832 the French tenor Jacques Montresor presented an Italian series at Richmond Hill, Aaron Burr's former mansion at Varick and Charlton streets.

The Austin-Wood and Inverarity companies, run by English and Scottish singers, performed at the Park Theatre in the 1830s, while the Shireff-Seguin-Wilson troupe (also English) followed at the National and at Niblo's Garden (at Broadway and Prince Street), where admission cost only 50 cents. Da Ponte helped to form the Rivafinoli troupe and in 1833 raised money to build the Italian Opera House, the first in the city. The venture had a single season of 60 performances before the theater burned in 1839; Palmo's Opera House on Chambers Street came to a similarly abrupt end in 1844. In late 1847 the Astor Place at Broadway and Eighth Street also opened for a single brief season. Although its boxes were likened to "pens for wild beasts," the Park Theatre remained the principal venue for opera in the city until 1848, when it also

burned. Jenny Lind made her American debut in 1850 at Castle Garden, a venue that appealed to the masses much as the Park Theatre had appealed to the elite. Among the few American operas to be performed were George Frederick Bristow's *Rip van Winkle* (1855) and William Henry Fry's *Leonora* (1858).

As the city grew northward its first major opera house, the Academy of Music (seating 4600), was built on Irving Place at 14th Street. The inaugural season began in October 1854 with Vincenzo Bellini's *Norma* sung by Giulia Grisi and her husband, the tenor Mario Grisi. In the same year 16-year-old Adelina Patti made her opera debut in Gaetano Donizetti's *Lucia di Lammermoor*; she was a mainstay of the Academy of Music during the management of Max Maretzek and later of the English impresario James H. Mapleson. Destroyed by fire in 1866, the house was rebuilt but eventually overshadowed by the new Metropolitan Opera House, built in 1883. As the nineteenth century progressed, the dominance of European singers was challenged by American performers, including Clara Louise Kellogg, Minnie Hauk, and Annie Louise Cary. At the same time the Metropolitan Opera consolidated its position as the leading company in the city. Its only serious competitor was the Manhattan Opera House, opened on 34th Street by Oscar Hammerstein in 1906, where the performers included Mary Garden, Emma Calvé, Luisa Tetrazzini, and John McCormack and much of the repertory was French; backers of the Metropolitan Opera bought out Hammerstein in 1910. The City Center Opera, formed in 1943 at the former Mecca Temple on 54th Street, established itself as the second-most important company in the city when it moved to Lincoln Center in 1966 and became the New York City Opera.

Dozens of local opera companies have come and gone in New York City, including the Amato Opera Theater (founded in 1948), the Queens Opera (1961), the Bronx Opera Company (1967), the New York Grand Opera (1973), Dicapo Opera Theatre (1981), and the Opera Company of Brooklyn (2000). The Opera Orchestra of New York, formed in 1968 by Eve Queler, specialized in concert readings of rarely heard works. The Brooklyn Academy of Music became an active presenter of operas in the late 1980s. In the early twenty-first century operas were also performed by students at the Juilliard School, the Manhattan School of Music, and Mannes College the New School for Music.

John W. Freeman

Opportunity: A Journal of Negro Life. The journal of the National Urban League, launched in 1923 and issued monthly for most of its duration. Associated with the Harlem Renaissance, the journal published news of the National Urban League and its local affiliates, including the work of black artists and writers, and discussed issues of interest to blacks. Its first editor, Charles Johnson, was succeeded in 1928 by Elmer Carter. In 1943 the journal became a quarterly. Editorial direction was assumed in 1945 by Madeline Aldridge and in 1947 by Dutton Ferguson. In 1949 *Opportunity* ceased publication.

Cheryl Greenberg

Opus Dei. Catholic organization with U.S. headquarters in New York City founded in 1928 by the Spanish priest Josemaría Escrivá. It first came to the United States in 1949. The organization was made a personal prelature of the pope in 1982. It has been criticized by some who say that it is secretive and a radical form of Catholicism. The U.S. headquarters are located on East 34th Street, and there is also a dormitory for men, called the Riverside Study Center, located on the Upper West Side. Opus Dei, which means "the work of God," is involved in many social programs, including a supplementary education program in the South Bronx.

Nathan Morgante

Orange Order. Fraternal organization formed in Ireland in 1795 "to maintain and uphold the Protestant faith." Named for William III, prince of Orange, who defeated James II at the Battle of the Boyne in Ireland (1690), it advocates the continued membership of Northern Ireland in the United Kingdom. During its early years in New York City the order organized an annual parade on 12 July: in 1824 Thomas Addis Emmet, an exiled member of the United Irishmen, recorded that the marchers received a "humiliating thrashing" from the "green" Irish. More violent disruptions in 1870 and 1871 became known as the Orange riots. A sharp decline in Irish Protestant immigration during the late nineteenth century weakened the order in the city, and the parades were eventually discontinued.

Tony Gray, *The Orange Order* (London: Bodley Head, 1972); Michael A. Gordon, *The Orange Riots: Irish Political Violence in New York City, 1870 and 1871* (Ithaca, N.Y.: Cornell University Press, 1993)

William McGimpsey

Orange riots. Violence that occurred during parades in 1870 and 1871 held to commemorate the anniversary of a major victory of the Protestants over the Catholics in Ireland, that of William III, king of England and prince of Orange, over King James II at the Battle of the Boyne. On 12 July 1870 a group of Irish Protestants (Orangemen) held a parade up Eighth Avenue to Elm Park at 19th Street; they were followed and harassed by 200 Catholic Irish, who with 300 Irish laborers working near the park attacked the Orangemen. The police intervened, but eight persons were killed in several skirmishes nearby. The following year the police commissioner, James J. Kelso, banned the parade, fearing another outbreak of violence. He was quickly overruled by Governor John T. Hoffman, who ordered that the marchers be protected by the police and the militia: Tammany Hall was then under attack from reformers and felt obliged to prove that it could maintain order among the people who were the source of its power. The parade went forward with an escort of several hundred police officers and five regiments of the National Guard. With provocation but without orders, many of the guardsmen fired into the crowd. Sixty-seven persons (including militiamen and police officers) were killed and more than 150 were injured. The incident further compromised Tammany Hall and led to efforts to improve the National Guard.

Russell S. Gilmore

Oratorio Society of New York. The oldest amateur chorus in New York City, founded in 1873 by Leopold Damrosch. In 1873 it started the tradition of performing Handel's *Messiah* each Christmas. It gave the American premieres of Berlioz's *Romeo and Juliet* (1882) and Wagner's *Parsifal* (1886). Early performances were given at the Metropolitan Opera House and Steinway Hall. In 1888 Andrew Carnegie became president of the society, a position he retained for 30 years, and in 1891 he built it a new home, Carnegie Hall. In 1973 it was given the Handel Medallion, the city's highest cultural award. In 1977 it started what is now known as the Lyndon Woodside Oratorio Solo Competition. It was honored again in 1998 by Mayor Rudolph Giuliani in its 125th year. Many famous conductors have led the Oratorio Society, including Tchaikovsky, Leonard Bernstein, and Aaron Copland.

James Bradley

Orbach, Jerry [Jerome Bernard] (*b* Bronx, 20 Oct 1935; *d* New York City, 28 Dec 2004). Actor. Though born in New York City, Orbach lived in numerous places before returning to New York in 1955 to study at the Actor's Studio in Manhattan. After starring in an Off-Broadway production of *The Threepenny Opera,* Orbach achieved acclaim for his performance in *The Fantasticks.* In 1992 he joined the cast of *Law and Order* as Detective Lennie Briscoe, a role he played until his death. In 2002 Orbach and *Law and Order* cast mate Sam Waterston were named "Living Landmarks" by the New York City Landmarks Conservancy. In 2007 a stretch of 53rd Street near Eighth Avenue, in the Manhattan neighborhood where Orbach lived for many years, was renamed Jerry Orbach Way.

Anne Epstein

Orchard Beach. The only beach in the Bronx, located on Pelham Bay in Pelham Bay Park. It is 1.1 miles (1.77 km) long and 115 acres

(46.54 hectares) with a promenade of shops, playgrounds, picnic areas, and more than two dozen sports courts. The beach was the vision of Parks Commissioner Robert Moses, who designed it to be the "Riviera of New York." Originally a well-established campsite in the 1930s, the beach was named for the orchards that used to grow on private estates in the area. Moses devised a plan to renovate the area and create a place the entire city could enjoy. The renovation was completed in 1938, but heavy demand led to an early opening in 1936 while sand and facilities were still being put in place. Following budgetary cutbacks in the 1970s, the beach was neglected, but in the early twenty-first century it was being restored.

Meryl Cates

O'Reilly, Leonora (*b* New York City, 16 Feb 1870; *d* Brooklyn, 3 April 1927). Labor activist. The child of Irish immigrants who appreciated activism and were involved with labor unions, she was three when her father died, and her mother, a garment worker, raised her in Brooklyn and introduced her to radical politics. At age 11 O'Reilly began work in a shirt collar factory, and a few years later, in 1886, she helped to organize the Working Women's Society, both a trade union and a mutual aid society. The organization impressed the philanthropist Josephine Shaw Lowell, who drew O'Reilly into social reform circles, where she won the admiration of influential reformers like Lillian Wald of the Henry Street Settlement and Felix Adler of the Ethical Culture Society. In 1897 O'Reilly organized the first women's local of the United Garment Workers of America and a garment workers' cooperative. She helped to form the New York Women's Trade Union League in 1903 and remained an active member until 1915, attracting thousands to unionism with her moving speeches. A believer in the importance of education, she attended the Brooklyn Pratt Institute and went on to teach at the Manhattan Trade School for Girls from 1902 to 1909. She was also an impassioned antiwar activist, helped found the National Association for the Advancement of Colored People (NAACP), and in 1909 was active in the labor division of the state's Woman Suffrage Party. She also worked to the end of her life for the independence of Ireland.

Annelise Orleck

organized crime. The business of crime in New York City is defined by three eras. From the mid-nineteenth century to the early twentieth, its rackets were locally oriented and conducted with the approval of political organizations. With the onset of Prohibition in the 1920s, organized-crime figures in the city became pivotal in national organizations and so powerful that they influenced city government. After the 1960s a combination of law enforcement initiatives, the aging and weakening of old crime families, and the emergence of new criminal combinations forced a restructuring of organized crime in the city.

During the first of these three stages the distinction between ward leader and gang leader sometimes blurred. Street gangs controlled the ballot box on behalf of politicians who in return gave protection to saloons, brothels, and gambling houses. Gambling was the major source of revenue for these combines, which provided a base for a generation of politicians. Among the best known was John Morrissey, a prizefighter and Democratic politician who opposed efforts by the Anti-Gambling Society to raid gambling houses in 1867. Leaders of Tammany Hall, police officers, and gamblers cooperated, and the chain of influence reached from the neighborhoods, where gamblers made deals with leaders of assembly districts, to the county party organizations to the highest levels of municipal government. Morrissey amassed wealth and power through his scheming, as did others later, such as Big Tim Sullivan, a ward boss from the Bowery. But their machinations were local, rooted in backroom politics and the give and take of the city streets, and had little effect beyond New York City and its environs.

The first generation of Jewish and Italian criminals around the turn of the century did little to alter the localism of organized crime. Like their predecessors they formed gangs: the mostly Italian Five Points Gang of Paul Kelly, included such criminals as Al Capone, Lucky Luciano, Frankie Yale, and Johnny Torrio; it enjoyed connections to Democratic organizations. Shadowy "black hand" gangs run by Italians conducted extortion rackets, but they confined their activities to Italian neighborhoods and in retrospect it seems that their power and cohesion were exaggerated. In the early twentieth century a number of widely publicized murders linked to organized crime helped to give the city a reputation for corruption and intrigue. The murder in 1909 of police lieutenant Joseph Petrosino while he was pursuing an investigation in Palermo, Sicily, was suspected by some of being part of an international conspiracy. In a case of official corruption a few years later police lieutenant Charles Becker and four accomplices were executed for the killing in 1912 of the gambler Herman Rosenthal. Becker's guilt was later called into question but not before his case had advanced the career of Charles Whitman, the Republican district attorney who prosecuted Becker and was later elected governor.

Italian gangs in the early 1920s were parochial and somewhat inflexible. Old gang leaders such as Giuseppe "Joe the Boss" Masseria recruited members according to their place of origin in Sicily or Italy. They disdained cooperation with those who were not Italian but were willing to wage gang wars against those who were. In the late 1920s, for example, Masseria fought for control of the rackets against Salvatore Maranzano in what was known as the Castellammarese War.

With the onset of Prohibition in the 1920s organized crime became more sophisticated. Those who controlled the rackets in the city were now in charge of a national operation. Neighborhood hoodlums put aside their ethnic and regional differences and agreed to divide responsibilities and territories rather than battle with each other. Within the Mafia there developed a peculiarly American institution known as the "family." In most American cities one Mafia family was in control; in New York City there were five families, known by the surnames of their leaders: Genovese, Bonanno, Gambino, Profaci, and Lucchese. The new generation of organized-crime leaders included Lucky Luciano, Meyer Lansky, Frank Costello, and Joe Adonis and followed the businesslike example set by the gambler Arnold Rothstein. Luciano took charge of efforts to eliminate the influence of the older generation by ingratiating himself with Masseria and then engineering in 1931 the killing of both Masseria (at a restaurant in Coney Island) and Maranzano. He also cultivated his power in city government, as in 1931 when his gunmen threatened Harry Perry, a district leader from the Lower East Side who subsequently chose not to seek reelection and was replaced by Luciano's preferred candidate, Albert Marinelli.

The actions of Luciano and his organization of enforcers, known in the tabloid newspapers as Murder Incorporated, became a source of fascination among the press, in works of fiction and films, on radio, and later on television. Perhaps for this reason they have sometimes been exaggerated: the killing of older organized-crime leaders was not indiscriminate, and the new national crime syndicate did not run as smoothly as a legitimate business. Nevertheless, Luciano and his accomplices gave organized crime in New York City a stability and structure that it had lacked and helped to make it a formidable force in American life.

Mayor Fiorello H. La Guardia inveighed against organized crime during the 1930s and campaigned successfully to ban Costello's slot machines. At the same time Thomas E. Dewey launched his own political career by winning convictions of Luciano on charges of prostitution in 1936 and of the Democratic district leader James J. Hines on charges of protecting the numbers racket of Dutch Schultz. Although Luciano managed to retain some of his power when he went to prison in 1936, his enforced absence made possible a grander role for Costello, who like others was compelled by the repeal of Prohibition in 1933 and the consequent end of the vast bootlegging business to seek different sources of profit. Gambling, loan-sharking, labor racketeering, and prostitution were reinvigorated; most organized-crime leaders were involved in the sale of illegal drugs (contrary to widespread belief); and Lansky used his financial and organizational abilities to channel illegitimate

gains into legitimate businesses such as casinos and resorts. Criminals infiltrated the garment industry, vegetable markets, and other businesses that were disorganized and decentralized. Often they entered a business by force; at other times labor or management invited them.

During the 1940s organized-crime leaders used their newly gained wealth to colonize Tammany Hall. Whereas earlier the racketeers had flourished with the sufferance of political leaders, they were now political leaders themselves. Adonis wielded political influence in Brooklyn while controlling the drug trade and the docks. Costello established even more extensive connections in government and used the money he made in gambling and from a slot machine network in Louisiana to function as a kind of political patron. He gained a large measure of control over a Tammany Hall weakened by La Guardia's reform mayoralty and appears to have rigged some judicial appointments. During the 1950s Costello lost power in the rackets to Vito Genovese, who had fled the United States for Italy to avoid a murder charge but returned after World War II. Genovese failed in an attempt on Costello's life but succeeded in one against Costello's ally Albert Anastasia in the Park Sheraton Hotel. Costello was eventually persuaded to retire. Genovese was soon undone by internal struggles with rivals: Costello, Lansky, and Luciano are widely believed to have arranged the arrest on a federal drug charge that led to his imprisonment in 1959.

The 1950s and early 1960s saw repeated challenges to organized crime in New York City. Mayor William O'Dwyer, who became well known for prosecuting the members of Murder Incorporated, was forced to resign from office in 1950 because of allegations that he himself had links to organized crime and gamblers. In that year an investigatory committee in Washington, D.C., led by Senator Estes Kefauver began hearings on organized crime. Costello's testimony before the committee revealed his connections to Tammany Hall and also gave credence to the allegations surrounding O'Dwyer. In the city, political reforms weakened the bonds between organized crime and politics. From 1952 district leaders were chosen by direct election, which lessened the chances that the process could be manipulated and freed the office of district leader from its disreputable past. Mayor Robert F. Wagner, who rose in politics with Tammany support, eventually repudiated his sponsors. By the end of the decade the longstanding ties between organized crime and the Manhattan Democratic machine had been broken.

Organized crime in New York City was further weakened in the 1960s by the enforcement efforts of Robert F. Kennedy during his tenure as attorney general of the United States, the extent of information about criminal activities revealed by Joseph Valachi to the U.S. Department of Justice and in testimony before an investigatory committee of the U.S. Senate, and the aging of the organized-crime families, which often fought brutally for control of the rackets. Early in the decade the Profacis prevailed against the Gallos in a violent dispute over the rackets in Brooklyn; later in the decade the Bonannos unsuccessfully waged the so-called banana war in an effort to expand their power.

By the late 1960s Carlo Gambino emerged as the dominant organized-crime leader in the city (he died of natural causes in 1976). Joey Gallo, imprisoned during the struggle with the Profacis, was freed in 1971 and soon became something of a celebrity. He advocated bringing blacks into organized crime to broaden the base and effectiveness of criminal combinations, much as Luciano had once advocated an alliance between Italians and Jews. About the same time Joe Colombo, who had emerged as the head of the Profaci family, organized the Italian-American Civil Rights League to bring pressure to bear against stereotypes of Italians as organized-crime figures. Carmine Galante, who had taken charge of the Bonanno family in the mid-1970s, moved to expand his power at the end of the decade. Colombo was shot and paralyzed at a rally in 1971; Gallo was fatally shot in Little Italy in 1972; and Galante was fatally shot at a restaurant in Brooklyn in 1979.

The means of prosecuting organized crime changed radically after Congress passed the Racketeer Influenced and Corrupt Organizations (RICO) laws as part of the Organized Crime Control Act of 1970. The laws made it easier for the government to prove criminal conspiracies and to prosecute criminal organizations instead of only individuals; they also imposed heavy penalties on those convicted and enabled prosecutors to seize the assets of criminal enterprises. After the death in 1972 of J. Edgar Hoover, director of the Federal Bureau of Investigation, the bureau no longer focused its energies on the fight against communism and began to work more closely with the Drug Enforcement Agency. Local police also devoted more of their resources to fighting organized crime. In New York City federal prosecutor Rudolph W. Giuliani gained renown and political power from a series of highly publicized cases. Organized crime also became less glamorous in the city owing to its heavy involvement in the heroin trade, which by the early 1970s had caused a drug-abuse problem of dangerous proportions. Some of the glamour attached to organized crime was restored by Mario Puzo's novel *The Godfather* (1969) and the motion pictures that it inspired: organized-crime leaders were no longer depicted only as parasites who preyed on the city but also as exemplars of ethnic pride, old-fashioned men of honor, and businessmen who supplied needed if morally questionable services.

As organized-crime families continued to weaken, they were governed increasingly by younger and inexperienced criminals. At the same time new rackets and new gangs appeared. Asian gangs based in Chinatown thrived on extortion, racketeering, gambling, and drug dealing. Black and Latin American gangs gained enough power to control drug operations once dominated by the Mafia, which was weakened by the breaking in 1987 of a heroin-smuggling ring known as the "pizza connection" that operated under the cover of pizza parlors. Criminal immigrants from Russia and Cuba transferred their illicit operations to the United States. The five original organized-crime families, however, continued to pursue illegal activities ranging from waterfront rackets to the theft of stock certificates and to infiltrate legitimate businesses in the meatpacking, garbage disposal, construction, and garment industries. During the 1990s state and federal efforts, complemented by municipal action under Mayor Giuliani, further diminished the strength of organized crime in New York City, and the five families were gravely damaged. The Bonanno organization revived briefly under the leadership of Joseph Massino, but his 2004 conviction for racketeering undid his efforts.

With the leadership of organized crime disrupted and organizational discipline weakened, the image of the mob in the media changed. Up until 1992, when he was convicted on felony charges and imprisoned, the best-known racketeer in New York City was the flashy John Gotti. When Gotti died behind bars in 2002, the city's best-known racketeer was the beleaguered Tony Soprano, a fictional character in a television series who lived and worked in New Jersey but occasionally conducted business in New York. The business of crime persists in New York City, particularly in drug dealing with ties to Latin America and in gangs with Asian and Russian roots. But the traditional five families, while still active in rackets such as credit card fraud and CD bootlegging, entered the twenty-first century in a weakened state.

Robert W. Snyder

Original Celtics. Professional basketball team. Frank McCormack founded the New York Celtics in 1915 with a group of teenage basketball players from Manhattan's West Side. Unable to use the old name, James Furey reorganized the team in 1918 as the Original Celtics after it had disbanded during World War I. The Original Celtics had older players, traveled frequently, and were managed and promoted professionally. The Celtics dominated most of their opponents in the 1920s,

compiling 700 victories and only 60 losses during the decade. Whirlwind national tours took the team more than 150,000 miles per year to play 140 games. With its unparalleled success and travel schedule, the team popularized professional basketball in the United States. On 16 April 1921, at the 71st Regiment Armory, the Celtics played in front of 11,000 fans, the largest crowd to ever watch a basketball game at the time. The team gradually lost popularity from the 1930s to 1950s as it faced greater competition from other professional leagues and teams, including the Harlem Globetrotters, which purchased the Celtics as a minor league team in 1949. The team played its final game in 1953. Throughout their history the Celtics frequently hosted games at the Amsterdam Opera House on West 44th Street, the Central Opera House at 205 East 67th Street, the second Madison Square Garden at Madison Avenue and 23rd Street, and the Hippodrome on Sixth Avenue between 43rd and 44th streets.

David White

orphanages. For information on orphanages see CHILD WELFARE.

Orphan Asylum Society. Charitable organization formed in 1806 by a group that included Isabella Graham, her daughter Johanna Bethune, Sarah Hoffman, and Elizabeth Hamilton (widow of Alexander Hamilton). It occupied a small rented house on Raisin Street where six recently orphaned children received care. Rapid growth prompted the society to purchase land for a new building on Bank Street in 1807; in the following year the state legislature raised $5000 for the orphanage by lottery. The orphanage moved in 1836 to Riverside Drive and 73rd Street, where there was room for about 200 children. In 1899 the society named its first professional superintendent as part of a plan to emphasize higher education. Scholarship support was soon provided by a legacy from Mrs. R. G. Dun, wife of the founder of Dun and Bradstreet. In 1902 the society decided to sell its property in Manhattan to Charles Schwab and buy a site in suburban Hastings-on-Hudson in Westchester County.

The Orphan Asylum Society was an innovative institution that was among the first to employ the "cottage system," under which about 20 children of various ages, separated by gender, lived in a cottage under the supervision of house parents. At the age of 11 or 12 each child was indentured to a family, which paid $25 at the outset and an additional $25 to the child when he or she turned 18. The program required that each family taking part belong to a Protestant church and that the father be employed. In 1929 the society was renamed the Graham School in honor of its founder; in 1989 the name became Graham Windham.

The society celebrated its bicentennial in 2006 and continues to provide vital preventive services, education, protection, and assistance to the most disadvantaged and vulnerable children of New York City.

Orphan Train Movement. Program of resettlement for urban poor children and a small number of adults from the east westward. Named after the new railroads that carried them, the orphan trains ran roughly from 1850 to 1930 and traveled mostly to midwestern and western states. The program was the idea of Charles Loring Brace of the Children's Aid Society, which was based in New York City, but was soon imitated by other organizations, including the New York Foundling Hospital. Because of variances in record keeping between organizations, the exact number of children "placed out" is uncertain but estimated to be around 250,000. Brace viewed rural America as expanding and in need of labor. Some of the children sent west were orphans but many had living parents who were simply unable to take care of them. Taken from city streets or from orphanages, the children generally went out in groups of five to 30 with an adult agent. Some children were placed with prearranged families whereas others were selected by families at stops along the route. The children not chosen would continue on the train line until they had all been placed. There was generally no screening of foster parents and little follow up. Some children were mistreated or ran away. The Children's Aid Society trains were also criticized for placing non-Protestant children with Protestant families. The orphan trains ended in the late 1920s with the development of foster care, legal adoption, and the notion that having children stay with their original families was a better option.

Maurita Baldock

Osborn, Henry Fairfield (*b* Fairfield, Conn., 8 Aug 1857; *d* Garrison, N.Y., 6 Nov 1935). Biologist. He was appointed in 1891 to a dual position at Columbia University and the American Museum of Natural History, where he established programs in biology and vertebrate paleontology. As president of the museum during 1908–33 he promoted worldwide expeditions and oversaw the construction of massive exhibition halls. Osborn was also president of the New York Zoological Society and took part in opening and administering the Bronx Zoo.

Ronald Rainger

Oscar of the Waldorf. Nickname of the headwaiter Oscar (Michel) Tschirky (*b* Switzerland, 28 Sept 1866; *d* New York City, 6 Nov 1950) at the Waldorf Hotel in New York City. He arrived in the city with his mother on 14 May 1883 and the next day began working as a busboy at the Hoffman House. Over the next four years he advanced to the rank of waiter in its private dining room, and he then worked as a waiter at Delmonico's. In 1893 he became the headwaiter at the Waldorf Hotel (which had recently opened) and eventually he was the most famous one in New York City. He originated the Waldorf salad and many other recipes, which he published in a collection of nearly 1000 pages called *The Cook Book, by "Oscar" of the Waldorf* (1896). In 1943 he took an advisory position with the hotel.

Karl Schriftgiesser, *Oscar of the Waldorf* (New York: E. P. Dutton, 1943)

Allen J. Share

Oscar Wilde Bookshop. Opened in 1967 by gay activist Craig L. Rodwell, the store on Mercer Street was one of the world's first gay bookstores that refused to stock pornography. In 1973 the store moved to 15 Christopher Street, one block from Stonewall. More than a bookstore, it served as a meeting place and discussion site for the gay and lesbian community. After financial troubles in the first decade of the twenty-first century, the store closed in 2009.

Jessica Montesano

O'Sullivan, John Louis (*b* Harbor of Gibraltar, 15 Nov 1813; *d* New York City, 24 Mar 1895). Writer and diplomat. He earned degrees from Columbia College in 1831 and 1834, practiced law, and in 1837 launched the *Democratic Review,* a literary journal in which he coined the term *manifest destiny* to refer to the westward expansion of the United States. He was elected to the state legislature and with Samuel J. Tilden launched the *New York Morning News,* which he edited from 1844 to 1846, and was a regent of New York State University until 1854. O'Sullivan was a diplomat in Portugal until 1879 when he returned to the city.

James E. Mooney

Oswald, Lee Harvey (*b* New Orleans, La., 18 Oct 1939; *d* Dallas, Tex., 24 Nov 1963). Assassin of John F. Kennedy. He lived in New York City for 17 months about a decade before his role in the assassination of President John F. Kennedy. In August 1952 he moved to the city with his mother, the two living successively with his half-brother at 325 East 92nd Street in Manhattan, in a basement apartment at 1455 Sheridan Avenue in the Bronx, and at 825 East 179th Street in the Bronx (from

January 1953). During this period he attended Trinity Evangelical Lutheran School (to 26 September 1952), Public School 117 (from 30 September 1952 to 16 January 1953), and Public School 44 (from 23 March 1953), but because of his perpetual truancy he was remanded to Youth House for psychiatric evaluation on 16 April 1953. His problems at school continued after he re-enrolled at Public School 44 on 24 September. Oswald and his mother left New York City for New Orleans in early January 1954. Oswald was killed while in police custody in Dallas shortly after the assassination of President Kennedy.

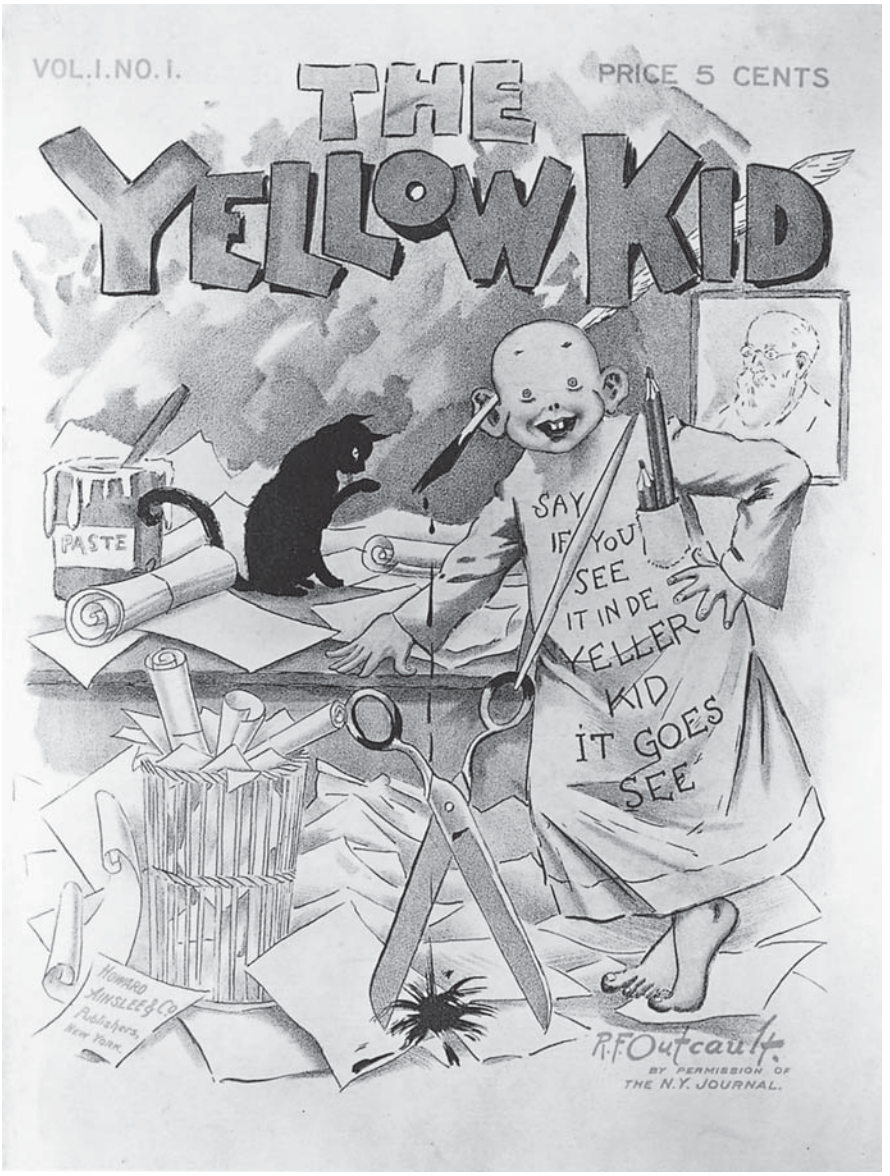
OTB. See Off-Track Betting.

Ott, Mel(vin Thomas) (*b* Gretna, La., 2 March 1909; *d* New Orleans, La., 21 Nov 1958). Baseball player. A popular outfielder for the New York Giants from 1926 to 1947, he was one of the leading power hitters in the National League, leading the league in home runs six times and compiling a lifetime batting average of .304. He became known for a distinctive batting style that involved raising the front leg before swinging. Ott retired with 511 career home runs, a league record at the time. From 1942 to 1948 he managed the Giants. He was inducted into the Baseball Hall of Fame in 1951.

Milton J. Shapiro, *The Mel Ott Story* (New York: Messner, 1959)

Jeffrey Scheuer

Ottley, Roi (*b* New York City, 2 Aug 1906; *d* New York City, 1 Oct 1960). Writer and broadcaster. Born to Grenadian parents Jerome P. and Beatrice (Brisbane) Ottley, he excelled at track and earned a scholarship to St. Bonaventure University in upstate New York. Ottley contributed articles to the university's literary magazine and newspaper. He then worked as a reporter, columnist, and editor for the *Amsterdam News* until 1935 when he became an editor for the Federal Writers' Project. His first book, *New World A-Coming,* which called for full racial equality, was published in 1943. Ottley became a commissioned officer in the U.S. Army in 1948 and covered the Korean War as the first African American war correspondent. He wrote for the *Chicago Tribune* and hosted his own radio program in Chicago. Ottley's published writings include *Black Odyssey* (1948), *No Green Pastures* (1951), *The Lonely Warrior* (1955), and (with William J. Weatherby) *The Negro in New York: An Informal Social History* (1967).



Our Lady of Lebanon Maronite Cathedral. Cathedral at the intersection of Remsen and Henry streets in Brooklyn Heights housing an Eastern Catholic, or Maronite, congregation. Designed in the Romanesque Revival style by Richard Upjohn, the cathedral was built between 1844 and 1846 and opened as the Church of the Pilgrims (Congregational). When the congregation merged with nearby Plymouth Church in 1934, the cathedral's Tiffany windows were moved to Hillis Hall behind Plymouth Church, which was renamed Plymouth Church of the Pilgrims. The doors at the western and southern portals of the cathedral depict Norman churches and were salvaged from the ocean liner *Normandie,* which caught fire in 1942. The Maronites purchased the cathedral in 1944, and it took its current name in June 1977 when the Eparchy of St. Maron was transferred to Brooklyn. In 2010 the congregation consisted of about 600 Lebanese families and a handful of Syrians, and services were offered in English, Aramaic, and Arabic.

Thomas E. Bird

Our Lady of Mercy Medical Center. General-care hospital started by the Misericordia Sisters of Montreal. Opened on Staten Island in 1887 as a home for unwed mothers, it was originally called the New York Mothers' Home of the Sisters of Misericordia. The facility moved in 1888 to 106 West 123rd Street in Manhattan and in 1889 to East 86th Street. It expanded to a general-care hospital known as Misericordia Hospital by 1905. The affiliated Misericordia School of Nursing began graduating nurses in 1913. In 1958 the hospital moved to East 233rd Street in the Bronx; in 1976 the Archdiocese of New York assumed control of the hospital, which took its current name in 1984. The center, a university affiliate of New York Medical College, became a member of the Montefiore Health System in 2007. The Misericordia Sisters continue to sponsor Rosalie Hall, a residential program for unwed mothers.

Matthew J. Brennan

Outcault, R(ichard) F(elton) (*b* Flushing [now in Queens], 14 Jan 1863; *d* Lancaster,

Richard Felton Outcault, The Yellow Kid

Ohio, 5 Sept 1928). Cartoonist. He is regarded as having created the first comic strip: a series of cartoons about immigrants in New York City that appeared in the *New York World* as "Hogan's Alley" from the mid-1880s to 1896. Retitled "The Yellow Kid" after its central character, the strip was published from 1896 to 1898 in a color supplement to the *New York Journal* called *American Humorist*. He also drew the comic strip "Buster Brown" (*New York Herald* 1902–5, *New York Journal* 1906–20); Buster Brown, his friend Mary Jane, and his bulldog Tige were among the first comic strip characters used to merchandise products. Outcault lived in Flushing.

Patricia A. Perito

outdoor advertising. Billboards promoted circuses and theaters as early as the 1840s, when P. T. Barnum used huge banners and woodcuts to advertise his American Museum at Broadway and Ann Street. In the antebellum period the first sandwichmen, or "walking billboards," paraded on busy thoroughfares such as Broadway, often advertising entertainments or patent medicines. Gaslight signs, favored especially by entertainment halls, taverns, and tobacco shops, became widely used by the end of the Civil War. The development of roads, streetcars, and elevated lines spurred larger and more numerous billboards, often in color. Posters covered the pillars of the elevated trains, and fences lining streetcar routes were covered with bills promoting such products as Hood's sasparilla, Quaker oats, Dutch cleanser, Sapolio soap, St. Jacob's oil, Bull Durham tobacco, and five-cent cigars. The largest early outdoor advertising firms in New York City were those of Kissam and Allen (1872–78), Bradbury and Houghtaling (1870–83), and O. J. Gude of Brooklyn. Until the business began to regulate itself in the late nineteenth century, bill stickers would post their advertisements atop those of competitors.

When chromolithography was developed in the 1880s, advertisements grew larger and more colorful. The first lithograph for a billboard was an illustration for a theatrical production of *Uncle Tom's Cabin,* depicting Eliza fleeing the bloodhounds across the ice floes. O. J. Gude put up the first electric sign in 1891 on a rooftop in Madison Square, composed of 1457 lamps that spelled out "Manhattan Beach Swept by Breezes" to advertise Manhattan Beach. By 1910 posters covering more than 200 square feet (19 square meters) were common, and often posted in multiple copies. Riverside Drive and Central Park, where carriages paraded on Sundays, were bordered with huge signs, and posters were affixed to fences surrounding construction sites. Reformers criticized these large displays as an eyesore and complained that they provided a hiding place for "immoral acts." In response, outdoor advertisers erected neater, permanent signboard stands of metal and often landscaped the area around them.

During the Progressive era the Municipal Art Society and adherents of the "city beautiful" movement raised a great outcry against outdoor advertising. Raymond Fosdick, the commissioner of accounts for New York City, led a commission that investigated the "billboard nuisance" in 1912. By 1918 the city had passed an ordinance regulating billboards, allowing them only outside residential and scenic areas and prohibiting the posting of small bills by individuals; far from ruining the billboard business, this helped it by eliminating a source of informal competition. Neon signs were popular by the 1920s, and Times Square became well known as a center of outdoor advertising: an advertisement for Wrigley's Spearmint chewing gum that depicted a "spearman" launching his weapon took up more than two blocks along Broadway. In the 1930s movie theaters in midtown erected enormous lighted signs to promote their attractions. The spot beneath the Budweiser sign, which showed a team of Clydesdale horses hauling a great wagon of barrels, was a favorite meeting place in Times Square, as was that beneath the Pepsi-Cola waterfall atop the Bond Building. During both world wars giant outdoor displays urged the public to buy war bonds.

Theaters and movie houses in the 1950s continued to commission both lighted displays and giant billboards, which often depicted shapely, reclining actresses and provoked some public indignation. Outdoor advertising became the subject of several films: *It Should Happen to You* (1953), directed by George Cukor, tells the story of an actress who rents a billboard on Columbus Circle to promote herself, and the signs of Times Square are featured in William Klein's *Broadway by Light* (1958). Audacious cutout figures and moving designs appeared on billboards during the 1960s, and in 1966 the Sunkist "smellacular" sign emitted a citrus aroma over the West Side Highway. In the following decades Times Square increasingly became the site of advertisements for the products of Japanese electronics firms.

A major concern of many environmentalists in the city was the amount of energy consumption required for the advertisements in and around both Times Square and Broadway. Above the Chase sign at 42nd Street and Seventh Avenue, Ricoh Americas Corporation developed a billboard entirely powered by wind and sunlight in 2008. When no wind or sun is usable, the billboard goes dark and has no alternative source of energy.

While billboards line the highways throughout the five boroughs, they also line the subway platforms in the form of large-scale posters and on the trains themselves and inside the tunnels. In 1998 CBS Outdoor, a division of the CBS conglomerate, gained limited rights to handle advertising space within subway stations and began selling wall space and floor space to advertisers, while the Metropolitan Transit Authority (MTA) handles advertising space on the station walls. In 2009 the *New York Times* and MTA placed ads on the walls of subway tunnels for the 1, 2, 3, 4, 5, 6, 7, and shuttle trains. The History Channel became the first company to develop a marketing campaign specifically designed for display on the exterior of the shuttle between Times Square and Grand Central Terminal in 2008 for the show "Cities of the Underworld." The advertisements were a version of those that appeared on the sides of MTA buses. These campaigns were often placed in a string of transit locations, including the station walls, interior of subway cars, buses, and bus stops. In addition to advertisements within the tunnels and on the exterior car panels, the MTA organized the sale of advertising space on turnstiles, digital screens inside stations and above station entrances, and projections against subway station walls as a means of aiding the MTA's financial struggles. See also Advertising.

Kathleen Hulser, Meghan Lalonde

Outerbridge Crossing. Steel cantilevered bridge spanning the Arthur Kill between southwestern Staten Island and Perth Amboy, New Jersey. It was designed by Alexander Waddell and opened to traffic on 29 June 1928 at the same time as the smaller Goethals Bridge (built upstream and also designed by Waddell). The two bridges were the first crossings for motor vehicles between Staten Island and the mainland. The bridge has a span of 750 feet (229 meters), clears Arthur Kill by 135 feet (41 meters) and has a long-graded approach viaduct, making the total length 10,140 feet (3093 meters). Outerbridge Crossing is named for Eugenius Outerbridge, the first chairman of the Port of New York Authority and a resident of Staten Island.

Rebecca Read Shanor

Overseas Press Club of America. Club based in New York City for both foreign correspondents and American reporters. Its formation was first suggested by Charles Ferlin, a longtime reporter for the Associated Press and the United Press, at a meeting on 2 April 1939 at the Algonquin Hotel, where the club first set up offices. The club holds banquets and meetings, and gives annual awards for outstanding reporting; it has also published several volumes of reporting and recollections by its members, including *The Inside Story* (1940). It came under fire for commending NPR's controversial coverage of the Israeli–Palestinian conflict in 2006. It also awards 12 scholarships annually to students aspiring to careers as foreign correspondents. The offices are at 40 West 45th Street.

Michael Green

Ovington, Mary White (*b* Brooklyn, 11 April 1865; *d* Newton Highlands, Mass., 15 July 1951). Writer, social worker, and civil rights activist. After becoming the registrar at the Pratt Institute in 1893 and the head social worker at the Greenpoint Settlement in 1895, she helped to form the National Association for the Advancement of Colored People (NAACP) in 1909, of which she was later executive secretary, treasurer, and chairwoman of the board. Her book *Half a Man: The Status of the Negro in New York* (1911) examined racial discrimination encountered by blacks seeking employment or housing. She also wrote a novel, children's books, and *The Walls Came Tumbling Down* (1947), both a memoir and a history of the NAACP.

R. L. Harris, Jr.

Oxford University Press. University press in England, the American branch of which was formed in 1896 at 91 Fifth Avenue to facilitate the marketing and sale of Oxford Bibles in the United States. In the following year the branch took over from Macmillan the American marketing of all books published by its parent. The American office underwent rapid growth between 1928 and 1936, eventually becoming one of the leading university presses in the United States. Its primary emphasis is on scholarly and reference books, Bibles, and college and medical textbooks. In 1995 it moved its offices to the former B. Altman building at 198 Madison Avenue.

Eileen K. Cheng

Oyster Bar at Grand Central. Old-style seafood restaurant, located on Grand Central Terminal's lower level since 1913. When the Oyster Bar opened in the new Grand Central, it was distinguished by the vast herringbone-patterned, tile-vaulted ceiling fabricated by the Guastavino Fireproof Construction Company. After a devastating fire in 1997, the restaurant was quickly rebuilt. With a substantial raw bar and an extensive menu, it boasts 28 different kinds of oysters on the half shell.

Margaret Latimer

Oyster Island. Island that no longer appears on charts of Upper New York Bay, surviving only as a patch of shoal water to the south of Liberty Island. Well into the nineteenth century three islands were shown on charts roughly equidistant in a line from north to south: Ellis Island, Bedloes (later Liberty) Island, and Oyster Island. The name came from the oystering industry important in the area until it succumbed to overharvesting and pollution.

Norman J. Brouwer

Oyster vendor, ca *1890*

oysters. Up until the late 1920s oysters were important in New York City life. The *Crassostrea virginica,* the dominant oyster on the eastern seaboard from Labrador to the Gulf of Mexico, flourishes in brackish water, particularly where freshwater runs into seawater, such as the estuary of the Hudson River. Oysters grew in the Hudson River as far up as Ossining, in the East River, in Jamaica Bay and around Rockaway, on the coast of Brooklyn, all around Staten Island and City Island, along the New Jersey coast to Keyport, and along the Keyport, Hackensack, and Raritan rivers. They surrounded Ellis Island and Liberty Island, which was why the Dutch named them Little Oyster Island and Great Oyster Island. Some historians estimate that at the time of Dutch New Amsterdam, New York Harbor contained half of the world's oysters.

Before the arrival of Europeans, the Lenape and the native peoples before them ate copious quantities of oysters, leaving tremendous piles of shells, called shell middens, which have been found throughout the New York City area. Some of these middens are as deep as 4 feet (1.2 meters) and are the most common marker of pre-European settlement around the mouth of the Hudson. One such midden gave Pearl Street its name. As recently as the end of the nineteenth century huge shell middens were seen on the Rockaway peninsula, especially the Bayswater section of Far Rockaway. Many middens in Manhattan and Westchester were lost in the nineteenth century when the Hudson rail line was built; however, middens still sometimes turn up when construction workers start digging. The oldest dated shell midden was in Dobbs Ferry and was carbon dated to about 6950 BCE.

Most of the early Europeans who traveled to New Amsterdam commented on the great size and fine flavor of the oysters, though some chroniclers were more pragmatic, such as Rev. Jonas Michaëlius, who arrived in New Amsterdam in 1628 and wrote of the "large quantity of oyster shells to burn for lime." Burned oyster shells were the standard material for mortar in early New York City buildings, including Trinity Church, until a 1703 ordinance banned the practice because of complaints about the noxious smoke. In Dutch times settlers simply walked to the water's edge and picked up their dinner. But eventually, boats traveled around the waters of the city, gathering oysters to sell from stalls on every street corner. They were featured in sleazy basement bars known as oyster cellars, always marked from the sidewalk stairway with a red balloon and known as places to meet prostitutes. Until the late nineteenth century oysters were sold grilled, fried, stewed, or raw at large outdoor food markets. People who worked in Manhattan and lived in Brooklyn would stop for oysters before taking a ferry home. The markets bought the oysters from barges that tied up along the Hudson or East rivers and maintained an office for running a wholesale trade and a deck on which shuckers worked.

Oysters were cheap, and it was said that the poor of New York City had nothing to eat but bread and oysters. In the nineteenth century restaurants offered what was known as the "Canal Street plan," named after the popularity of oyster cellars along Canal Street, which meant all the oysters one could eat for six cents. Nevertheless, oysters were also popular with the wealthy and were often featured at extravagant New York City banquets and in grand restaurants. The city was so associated with the consumption of oysters, millions of them a year by the nineteenth century, that when someone traveled to New York City it was common to say to them, "Enjoy the oysters." With the building of the Erie Canal, the western railroads, and faster transatlantic crossings, oysters became an export product

to markets in San Francisco, London, and elsewhere.

As early as the eighteenth century New York oyster beds started showing signs of exhaustion and would have been completely stripped by the nineteenth century if oystermen had not learned how to plant seed oysters, or fingernail-sized young oysters, from other areas. Tremendous quantities of seed oysters were brought up from the Chesapeake Bay and planted in the famous New York beds from Stratford to Bridgeport. The planting process brought many free blacks from Virginia and Maryland to pre–Civil War New York City where they enjoyed greater freedom. One important free black oystering community was called Sandy Ground in southern Staten Island. African Americans became involved in the New York oyster trade, particularly as street vendors and oyster cellar operatives. Thomas Downing, who ran the most famous oyster cellar in the city before the Civil War, was one of the city's first prominent African Americans.

Eventually, centuries of dumping untreated sewage in water around the city forced oyster beds to close down because of health risks. In 1927 the last New York City oyster bed, in Raritan Bay off Staten Island, was closed. In the twenty-first century city water is once again clean enough for oysters to grow, and environmentalists have been replanting some beds, but the presence of polychlorinated biphenyls (PCBs) and heavy metals in the water continues to make New York City oysters unsafe to eat.

Mark Kurlansky, *The Big Oyster: History on the Half Shell* (New York: Ballantine Books, 2006)

Mark Kurlansky

Ozone Park. Neighborhood in southwestern Queens, bounded to the north by Atlantic Avenue, to the east by 104th Street, to the south by Liberty Avenue, and to the west by 96th Street. It was developed by the music publisher Benjamin W. Hitchcock and Charles C. Dunton after railroad service was extended to the area in 1880 by the New York, Woodhaven, and Rockaway Railroad, which provided a direct route to Brooklyn and Rockaway Beach. Hitchcock and Dunton filed a survey map in July 1882, and their land was divided into 25-by-100-foot lots. In 1883–84 they bought more land, enlarging Ozone Park from 316 to 630 lots that were sold at auction; streets and sidewalks were laid out and shade trees planted. A post office opened in 1889 when the number of residents reached the required level of 600. The population reached 1100 by 1900 and 3000 by 1910, and consisted mostly of young families from Brooklyn. Development was spurred by the need to house workers at the tinware plant of Lalance and Grosjean in Woodhaven.

The success of Ozone Park led to the development in 1896 of Ozone Park Heights, which extended as far south as Rockaway Boulevard, and the formation of the Ozone Park Home Company. The area's popularity increased after the Brooklyn Rapid Transit extended the Fulton Street elevated line along Liberty Avenue to Lefferts Boulevard (119th Street) in September 1915, enabling residents to commute to Manhattan for only 5 cents. The neighborhood became entirely built up as the demand for housing increased during the 1920s; the last open spaces were used for blocks of row houses and attached houses. In April 1956 the Independent subway was connected at Grant Avenue to the Fulton Street elevated line, which became obsolete. The neighborhood is home to Aqueduct Racetrack at Rockaway Boulevard and Southern Parkway, opened in 1894, and John Gotti kept his headquarters at the Bergin Hunt and Fish Club at 98–04 101st Avenue. During the late twentieth century most inhabitants were of German, Irish, Italian, and eastern European ancestry; by the early twenty-first century the number of residents from the Caribbean, Latin America, and Asia had increased.

Vincent Seyfried

P

Pace University. University incorporated as Pace College in 1947. Its forerunner was a course developed by Homer St. Clair Pace to tutor candidates for state certifying examinations for public accountants. With his brother Charles Ashford Pace he opened a school of accountancy in 1906 at the New York Tribune Building in lower Manhattan. The two also offered the Pace Standardized Course in Accounting at Young Men's Christian Associations in Brooklyn, Manhattan, and New Jersey. Enrollment in the metropolitan area exceeded 300 by 1909 and 4000 by 1919; in 1927 the school moved from the Hudson Terminal Building on Church Street to the new Transportation Building on Broadway. Pace Institute was incorporated in 1935 as a nonprofit institution of higher education. In 1942 it received its permanent charter and the administration was taken over by Homer Pace's sons Robert Scott Pace, who became president, and C. Richard Pace, who became secretary. When the institute became Pace College, Edward J. Mortola was appointed an assistant dean. The college bought the New York Times Building on Park Row in 1951; in 1953 it moved into its new quarters and was authorized to grant bachelor's degrees. It offered the master of business administration from 1958 and in 1961 inaugurated Mortola as its third president. During his administration the school opened a campus in suburban Pleasantville, New York (1962), and schools of arts and sciences, education, and nursing (1966); introduced graduate programs in education (1969); completed the Pace Plaza Building in lower Manhattan (1970); attained university status (1973); effected a merger with the Colleges of White Plains (1975); opened a law school and a midtown campus (1976); acquired the former campus of Briarcliff College (1977); and began a doctoral program in school and community psychology (1979) and a school of computer science and information systems (1983). On being named chancellor in 1984 Mortola was succeeded by William B. Sharwell, who oversaw the introduction of a master's program in publishing (1985) and new programs in information systems (1986), as well as the opening of the Lubin Graduate Center in White Plains, New York (1987). In 1990 Patricia O'Donnell Ewers was named president of the university. During the Ewers administration undergraduate programs in Westchester were consolidated on the Pleasantville campus (1995) and the Ann and Alfred Goldstein Academic Center opened in Pleasantville (1995). In 1996 the Lubin School of Business became accredited and the university acquired both a midtown center and the World Trade Institute. At the end of the decade a new law school academic building was dedicated on the White Plains campus (1999). In 2000 David A. Caputo became Pace's sixth president. A year later the university lost staff members, alumni, and its World Trade Institute facilities in the terrorist attacks on the World Trade Center. In 2007 Caputo was succeeded by Stephen J. Friedman as president.

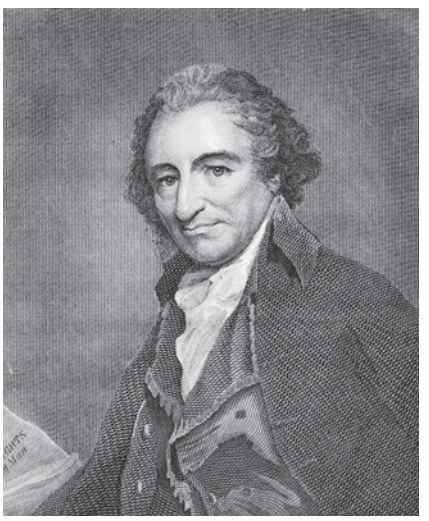
Marilyn E. Weigold

Packer Collegiate Institute. Private coeducational elementary and secondary school opened in 1854 as the Brooklyn Female Academy. It is the oldest independent school in Brooklyn and the fifth-oldest in New York City. The college division of the school in 1919 became the first junior college to be approved by the Regents of the State of New York. In 1972 the school became coeducational and the junior college was discontinued. Packer is known for its magnificent neo-Gothic chapel, designed by Minard Lafever, and for its alumni garden, awarded the National Nurserymen's Prize for best urban school garden in 1980.

Richard Schwartz

Paderewski, Jan Ignace (*b* Kuryłnowka, Podolia, 12 Nov 1860; *d* New York City, 29 June 1941). Pianist, composer, and statesman. The most popular pianist in the world during his lifetime, he made many concert tours to New York City and lived there on several occasions. He died in the city shortly after returning to the United States to plead the case for Poland when the nation was overrun by the German army in the early days of World War II.

Kenneth T. Jackson



Paerdegat Basin. A channel in Brooklyn 1¼ miles (2 kilometers) long that empties into Jamaica Bay, and by extension the surrounding neighborhood, which is bordered by Canarsie, Flatlands, and Bergen Beach. After the city failed to transform Jamaica Bay into a major port in the 1920s, the area remained undeveloped until the 1960s. In 1972 local residents defeated a proposal to construct a city-sponsored complex of garden apartments for nearly 4000 residents. Paerdegat Basin now consists of one- and two-family suburban houses.

Stephen Weinstein

Page, Geraldine (*b* Kirksville, Mo., 22 Nov 1924; *d* New York City, 13 June 1987). Actress. In 1945 she moved to New York City and made her debut in a production of *Seven Mirrors* by the Blackfriars Guild. She studied voice with Alice Hermes and acting with Uta Hagen at the Berghof Studios and the Theater Wing School. In 1952 she became well known for her performance in Tennessee Williams's *Summer and Smoke* at the Sheridan Square Theater in Greenwich Village. In the following year she played the role of Lily Barton in Vina Delmar's *Midsummer* at the Vanderbilt Theater, for which she won the Theater World Award, the Donaldson Award, and the Drama Critics Award; after this she seldom left the city or the public eye. She made her first motion picture, *Hondo* (with John Wayne), in 1954. During the 1960s she worked with the Actors Studio in the city and played many roles on Broadway in productions directed by Lee Strasberg. With her second husband, the actor Rip Torn, she formed the Sanctuary Theater Company. Known for the enthusiasm she brought to her roles, she performed in dozens of plays, films, and television productions and won two Emmys, as well as an Academy Award for her performance in *A Trip to Bountiful* in 1985. At the end of her life she lived at 435 West 22nd Street and appeared on Broadway as Madame Arcate in Noël Coward's *Blithe Spirit.*

Chad Ludington

Paine, Thomas (*b* Thetford, England, 29 Jan 1737; *d* New York City, 8 June 1809). Political theorist and writer. After a series of false starts as a corset maker, excise official, and pamphleteer, he left England in 1774 and settled in Philadelphia. He was drawn into political controversy and became a brilliant proponent of American independence. His popular pamphlet *Common Sense* (1776) laid out the patriot case and galvanized public opinion. Regarded as a leading spokesman for democracy well into the 1790s, he ran afoul of respectable opinion for his activities in connection with the French Revolution and especially after publishing *The Age of Reason* (1795), a deist critique of Christianity. This and other writings were condemned in the United States as irrelevant to American political concerns

Thomas Paine, 1827

by some, and as blasphemy by others. After returning to the United States in 1803 he settled at his farm in New Rochelle, New York, a gift from the state assembly after the American Revolution. He was drawn back to New York City repeatedly to spend time with sympathetic freethinkers and Republicans, and also to escape his pious, unfriendly neighbors. In 1804 he lived at 16 Gold Street before moving to 36 Cedar Street. He settled permanently in the city in 1806, moving successively from 85 Church Street to 63 Partition Street (now West Fulton Street) in 1807 and to 309 Bleecker Street in 1808. During the following year he lost many friends in quarrels and suffered bouts of apoplexy that left him an invalid; he also wrote prolifically, replying to personal attacks, lambasting the Federalists, and encouraging his friends and supporters. (His fiery example inspired several young admirers who became leading radical spokesmen during the 1820s and 1830s.) Lonely and ill, in May 1809 he begged a longtime friend from his days in France, Marguerite Bonneville, to take him into her household. She grudgingly agreed and rented a house for him at 59 Grove Street adjoining her own.

Sean Wilentz

Paine Webber. Firm of securities brokers, formed in 1942 as Paine, Webber, Jackson and Curtis by the merger of Jackson and Curtis (1879) and Paine, Webber and Company (1880). Originally based in Boston, the firm moved its headquarters to New York City in 1963. It became a publicly owned corporation in 1972 and took its current name in 1974. Although best known for its nationwide network of retail brokerage offices, the firm also provides institutional investment banking services. Shares in Paine Webber are traded on the New York Stock Exchange. The headquarters were at 1285 Sixth Avenue in Manhattan. In 2000 it merged with UBS AG of Switzerland, and in 2003 "Paine Webber" disappeared from the company name.

Paine, Webber and Company, 1880–1930: A National Institution (Boston: Paine, Webber, 1930)

Owen D. Gutfreund

painting. During the eighteenth century in New York City several artists made their living painting portraits of wealthy residents. The most successful painters were the members of the Duyckinck family, especially Gerardus Duyckinck II (1723–97), who had skills in varnishing, Japanning, gilding, silvering, and glazing. Several painters trained in Europe visited the city, including John Smibert, who had settled in Boston, and John Watson, from Perth Amboy, New Jersey. The most cosmopolitan artist of the period was London-born John Wollaston, who worked in New York City from 1749 to about 1752, when he moved to Maryland. Other portrait painters working in the late eighteenth century included Lawrence Kilburn, Thomas McIlworth, John Mare (*b* circa 1737; *d* 1795), and Abraham Delanoy. John Durand (*fl* 1766–82), Matthew Pratt, Gilbert Stuart, and John Singleton Copley worked only briefly in the city.

In the early years of the republic, portraiture continued to employ painters such as Samuel Lovett Waldo and his student William Jewett, who together formed a portraiture business. By the 1820s many painters also pursued other interests, such as Robert Fulton (1765–1815) and Samuel F. B. Morse. John Trumbull, a history painter, was president of the American Academy of Fine Arts. William Dunlap, a painter and playwright, helped to found the National Academy of Design; his *History of the Rise and Progress of the Arts of Design in the United States* (1834) set the standard for art criticism. After years of living in France, portraitist John Vanderlyn settled in New York City in 1815 and exhibited his panorama *Palace and Gardens of Versailles* (Metropolitan Museum of Art) in a specially built rotunda in City Hall Park. Charles Loring Elliott and Daniel Huntington continued to fill major portrait commissions during the antebellum years. Publishers often commissioned views of the city, which were popular among both residents and tourists. William Guy Wall (*b* Ireland, 1772; *d* circa 1864), Nicolino Calyo, and Francis Guy (*b* Burton-in-Kendal, England, 1760; *d* Brooklyn, 1820) were artists painting city scenes.

A rising elite of merchants, bankers, and railroad directors such as Luman Reed, Jonathan Sturges, Philip Hone, and Marshall O. Roberts bought the work of the artists of the Hudson River School, including Thomas Cole, Asher B. Durand, John Frederick Kensett, and later Jasper F. Cropsey (1823–1900), Sanford Robinson Gifford (1823–80), Albert Bierstadt (1830–1902), Thomas Worthington Whittredge (1820–1910), and Frederic E. Church. The collections of Reed and Sturges eventually were left to the New-York Historical Society. Popular historical painters included Henry Peters Gray (1819–77), Daniel Huntington, Thomas P. Rossiter (1818–71), and Emanuel Leutze (1816–68). At the several private clubs of the city, notably the Century Association, patrons socialized with artists, and with literary figures such as the poet and journalist William Cullen Bryant, they promoted American art through the American Art-Union (1839–52).

Although landscape painting dominated in terms of numbers at the annual exhibitions of the National Academy of Design, genre paintings appealed to art writers and journalists at mid-century and during the two decades after the Civil War. The first generation of genre painters included the banker Francis Edmonds (1806–63); William Sidney Mount; Henry Inman; James H. Cafferty (1819–96); Arthur Fitzwilliam Tait (1819–1905), who often drew for Currier and Ives; and the eccentric John Quidor (1801–81), who painted scenes from the stories of Washington Irving. Two Ohio artists became successful in New York City: William Holbrook Beard (1824–1900) specialized in humorous depictions of anthropomorphized animals such as *Bulls and Bears of Wall Street* (New-York Historical Society), and Lilly Martin Spencer (1822–1902) painted sentimental pictures of domestic subjects. Many of the genre artists achieving prominence during the 1840s and 1850s, including John George Brown (1831–1913), Thomas Hicks (1823–90), John Whetten Ehninger (1827–89), and Eastman Johnson, studied in the European centers of art—London, Düsseldorf, and Paris.

At the onset of the Civil War the artists Sanford Gifford and Jervis McEntee enlisted in the Union army. Johnson, Edwin Forbes, and Winslow Homer followed the troops—Johnson to find subjects for his genre scenes, Forbes as a staff artist for *Frank Leslie's Illustrated Newspaper,* and Homer as an artist for *Harper's Weekly.* Artists and patrons together organized the art exhibition of the Metropolitan Fair (1864) to raise funds for the U.S. Sanitary Commission.

The moralizing genre painting and the detailed landscape painting of the Hudson River School declined after the Civil War. At that time younger American painters, including William Merritt Chase and Julian Alden Weir, flocked to Paris and Munich to learn cosmopolitan European styles and new attitudes about art. In 1877 Augustus Saint-Gaudens, Walter Shirlaw (1838–1909), Wyatt Eaton (1849–96), and Helena de Kay Gilder (1848–1916) formed the Society of American Artists to promote the new trends in art. From 1878 the society held annual exhibitions that displayed the work of Chase, Weir, Will Hicok Low (1853–1932), Maria Richards Oakey (1845–1927), George Inness (1825–94), Albert Pinkham Ryder (1847–1917), John La Farge, Homer Dodge Martin (1836–97), Thomas Dewing (1851–1938), and John Singer Sargent (1856–1924). The Society of American Artists merged with the National Academy of Design in 1906.

The major tendencies in painting at the end of the nineteenth century included the poetical landscapes of Ryder and Ralph Blakelock and the impressionism of Chase and Childe Hassam, a founding member of the group Ten American Painters (1898). Academic, neoclassical styles of painting still flourished: their exponents included Edwin Howland Blashfield (1848–1936) and Kenyon Cox (1856–1919), both of whom painted murals for the numerous private mansions and public buildings then being constructed.

Early in the twentieth century Robert Henri led a group of artists who rejected impressionism and insisted on a realism that represented the "spirit" of the people and the new age of

urbanization. Influenced by Walt Whitman, the European tradition of graphic realism, and the realist novelists, the painters George Luks, William James Glackens, John Sloan, and Everett Shinn depicted the leisure life of the working classes. To counter the conservatism of the National Academy, Sloan and Henri organized an exhibition at the Macbeth Gallery (1908) that included their own work as well as that of Luks, Glackens, Shinn, Arthur B. Davies (1862–1928), Ernest Lawson (1873–1939), and Maurice Prendergast (1859–1924); the participants in this show became known as "The Eight," and later "the Ashcan School." In 1912 Sloan became the unpaid art director of the radical socialist publication *The Masses,* edited by Max Eastman, which also featured the drawings of George Bellows and Stuart Davis.

The early twentieth century saw the development of a semiabstract style that expressed the responses of artists to the increasing mechanization of the modern era. The photographer and gallerist Alfred Stieglitz brought European cubism and African art to New York City through exhibitions at his Little Galleries of the Photo Secession (also known as "291") at 291 Fifth Avenue. He showed the work of avant-garde photographers and the paintings of John Marin (1870–1953), Abraham Walkowitz (1878–1965), Max Weber, and Georgia O'Keeffe, which conveyed the vitality of the city. Other early modern artists included Alfred H. Maurer (1868–1932) and Joseph Stella, who painted Coney Island and the Brooklyn Bridge using an abstract style.

The realists and semiabstractionists together organized the International Exhibition of Modern Art, known as the Armory Show, which opened at the 69th Regiment Armory in New York City in 1913 with more than 1600 European and American works. The critical reception of the show was largely negative and focused on the controversial work of the French artist Marcel Duchamp, whose *Nude Descending a Staircase* (1912, Philadelphia Museum) was humorously called "Explosion in a Shingle Factory." Duchamp and the American artist Man Ray were part of the dadaist movement, which grew out of a wartime cultural malaise, emphasized the mental conception of an artwork rather than its craftsmanship, and was often highly irreverent. Many of the avant-garde artists frequented the weekly salons of Louise and Walter Arensberg, Mabel Dodge, and the Stettheimer sisters Ettie, Carrie, and Florine.

During the 1920s and 1930s Charles Sheeler, Charles Demuth (1883–1935), and Niles Spencer (1893–1953) depicted industrial America in a modernist style often called precisionism or cubist realism and characterized by precise lines and reductive forms. O'Keeffe, Marsden Hartley, and Arthur B. Dove (1880–1946) developed a style based on natural forms. The society figure and sculptor Gertrude Vanderbilt Whitney created many important exhibition spaces, including the Whitney Studio (1914–17), the Whitney Studio Club (1918–28), and the Whitney Studio Galleries (1928–30), which regularly showed the paintings of Sloan, Alexander Brook (1898–1980), and Guy Pène du Bois (1884–1958). In 1930 she founded the Whitney Museum of American Art. Sloan, du Bois, and Kenneth Hayes Miller taught at the Art Students League.

When the Depression began many artists in New York City joined the John Reed Club, which served as a social club for artists who advocated an art by and for the working classes. Among those active as organizers or as cartoonists and writers for leftist political journals were the artists Rockwell Kent, Hugo Gellert (1892–1985), William Gropper (1897–1977), Louis Lozowick (1892–1973), Ben Shahn, Bernarda Bryson Shahn, and Philip Evergood; the most prominent journal was *Art Front,* the monthly magazine of the Artists' Union, edited successively by Davis, Joe Solman, and Clarence Weinstock (1910–64). Lozowick, Raphael Soyer, and Philip Reisman (1904–92) were among the teachers at the John Reed Club School of Art. Politically oriented artists organized protests when the mural *Man at the Crossroads* painted by the Mexican painter Diego Rivera for Rockefeller Center was covered over and then destroyed in 1933–34.

In the mid-1930s, with the rise of fascism in Europe, leftist groups of artists, including those friendly with the Communist Party, formed alliances with liberal groups. Together they organized the American Artists' Congress, which held a conference in February 1936 attended by artists, musicians, and such writers as Lewis Mumford and Meyer Schapiro. Not all figurative artists at the time were overtly political in their painting: Isabel Bishop (1902–88) was more inclined to paint the shop girls of Union Square; Reginald Marsh depicted bathers at Coney Island and derelicts of the Bowery; Thomas Hart Benton, living in the city for the first half of the 1930s and influencing artists through his teaching at the Art Students League, painted murals for the New School for Social Research that celebrated the various regions of the United States. Edward Hopper, who did not join groups, avoided politics altogether.

Harlem during the late 1920s and 1930s was another lively artistic center. Aaron Douglas and Charles Alston (1907–77) painted murals that incorporated African and black American imagery with modernist techniques. Romare Bearden and Jacob Lawrence (1917–2000) were heirs to the ideals and institutions of the Harlem Renaissance and learned from such dynamic figures as the sculptor Augusta Savage. Other painters associated with Harlem were William H. Johnson, Palmer Hayden, Malvin Gray Johnson, and Norman Lewis (1909–79).

The major patron for artists in the late 1930s was the federal government. In December 1933 the Public Works of Art Project was formed to provide relief for unemployed artists; in New York City the project was directed by Juliana Force (then head of the Whitney Museum) and lasted about five months. A more ambitious program, the Federal Art Project of the Works Progress Administration (1935–43), hired artists to supply paintings to government offices or execute murals for public schools, housing projects, and radio stations. The Section, a program operated by the Department of the Treasury, commissioned murals for post offices, other federal buildings, and airports. These government programs for the most part supported figurative painting, but they also employed such abstract artists as Stuart Davis, Arshile Gorky, Burgoyne Diller (1906–65), and Ilya Bolotowsky (1907–81).

During the late 1930s and the 1940s the Museum of Modern Art presented exhibitions of modern European abstract, cubist, and surrealist paintings, yet its curators tended to ignore American abstraction. Thus, the American Abstract Artists was formed in 1936; its members, including George L. K. Morris, worked in a hard-edged abstract style. A more expressive form of abstraction began to develop because of the influence of émigré abstract and surrealist artists, including Duchamp, John Graham (1881–1961), Max Ernst, Yves Tanguy, Hans Hoffman (1880–1966), and the Chilean artist Roberto Matta Echaurren. Its adherents, who became known as the New York School, drew on mythology, American Indian art, and their experiences with psychoanalysis to create paintings that focused on self-examination and the work of art itself. Jackson Pollock and Willem de Kooning emerged as the leading exponents of this new style, variously called abstract expressionism and "action painting" (a term coined by the critic Harold Rosenberg).

Painting after World War II represented a diversity of styles, and art galleries flourished. Artists such as Yasuo Kuniyoshi, Stephen Greene, Rico LeBrun (1900–64), Alice Neel, Fairfield Porter (1907–75), and Raphael Soyer practiced a figurative art ranging from naturalist to expressionist. By the mid-1950s Robert Rauschenberg and Jasper Johns were drawing on images from popular culture, foreshadowing the movement later known as pop art.

A number of new painting styles took hold during the 1960s. Pop art by Andy Warhol, Roy Lichtenstein, and James Rosenquist celebrated the banality of everyday objects; the hard-edged painting of Ellsworth Kelly, Jack Youngerman, and Jules Olitski was based on simple shapes; minimalist works by Frank Stella, Agnes Martin, and Robert Ryman used stripes, grids, and patterns; and the lyrical abstraction of Helen Frankenthaler was

characterized by broad areas of thin paint that penetrated the surface of the canvas. New realists in the 1960s and 1970s included Larry Rivers, Philip Pearlstein, Alex Katz, and Janet Fish; photorealists included Richard Estes and Audrey Flack. Political art by Rudolf Baranik, Leon Golub, Nancy Spero, and May Stevens criticized imperialism, sexism, and racism during the 1970s and 1980s. At the end of the twentieth century a number of women, blacks, Asian Americans, American Indians, and Latin Americans came to the forefront of painting, notably Emma Amos, Ida Applebroog, Luis Cruz Azaceta, Jean-Michel Basquiat, Howardena Pindell, Katherine Porter, Faith Ringgold, Juan Sanchez, Miriam Schapiro, Joan Semmel, Sylvia Sleigh, Joan Snyder, and Joyce Kozloff. However, by the beginning of the twenty-first century many artists were working as video, installation, performance, and new media artists.

Patricia Hills

paints, dyes, and varnishes. There was little demand for paints, dyes, and varnishes in New York City during the colonial period: for cultural reasons early settlers refrained from painting buildings, and as of 1712 lampblack was the only pigment legally produced in the colony of New York. In 1754 William Post began mixing, grinding, and importing pigments at a shop on Fletcher Street that was the forerunner of the Devoe and Raynolds Company. New Yorkers in the 1770s made dyes from dogwood, redwood, and indigo and had halted much of the importation of dyed goods, linseed oil, and related products. William Partridge began grinding dyestuffs at a horse-propelled capstan mill in Greenwich Village in 1798 and introduced into the United States argols, lac dye from India, Nicaragua wood, and potassium dichromate for use as a mordant; his enterprise was the precursor of the American Dyewood Company (1904), the first giant in the field. Several patents were issued for dyes and leads during the early nineteenth century. In 1819 Mordecai Lewis began making lead pigments, and Joel West opened a turpentine distillery. The New York Chemical Manufacturing Company (1823) made paints and dyes, and by 1825 several small plants ground imported white lead and colored paints. Pascal B. Smith developed a spar varnish at his shop on East Sixth Street in 1827 and built a large business. In the same year the merchant David Leavitt, the distillers Augustus and John Bell Graham, and others formed the Brooklyn White Lead Works, and in 1827 the brothers Whitehead, Peter, and George Cornell formed the Union White Lead Company of Brooklyn (incorporated in 1841).

Several large lead factories opened between 1840 and 1850: Robert Colgate formed the Atlantic White Lead Company of New York (which became the nucleus of the National Lead Company), and John Jewett and Sons opened a plant in Staten Island. After the Civil War Hall, Bradley and Company built a large plant in Brooklyn, the Bradley White Lead Company. In 1865 the production of aniline dyes began in Brooklyn at the plant of Thomas and Charles Holliday, and by 1880 factories in New York State accounted for all of the 80,000 pounds (36,000 kilograms) of aniline dyes produced in the United States. But manufacturers of dyes could not compete with the flood of German imports, which eliminated most domestic producers by 1900; one of few that remained was the American Dyewood Company, which in 1904 had sales of $3 million. From about the turn of the century factories moved from Manhattan to Brooklyn and other surrounding communities where tall stacks carried off the noxious fumes. Paint and varnish manufacturers in New York City continued to prosper: between 1890 and 1919 they increased in number from 27 to 113, in employment from 783 to 5243, and in the total value of their products from $3.8 million to $31.2 million (an increase only partly explained by the consolidation of the city in 1898), and in 1919 the metropolitan area accounted for half of all the varnish made in the United States. In 1929 the value added for the 206 paint and varnish makers in the region was $58.6 million. Production levels in New York City were uneven in the 1970s and 1980s, but there was a clear trend toward the consolidation of firms. In the late 1970s only 115 producers of paint and allied products remained in the metropolitan area, with a total value added of $78.4 million.

Notes for a History of Lead (New York: D. Van Nostrand, 1888); Williams Haynes, *American Chemical Industry,* vol. 1, *Background and Beginnings, 1609–1911* (New York: D. Van Nostrand, 1954)

David B. Sicilia

Pakistanis. Muslims from India arrived in the United States in the early 1900s. Pakistan achieved independence from India in 1947, but it was not until 1965 that immigration restrictions were lifted and allowed Pakistanis to immigrate to New York City in larger numbers. Between 1990 and 2000 the city's Pakistani population more than doubled in size. According to the Asian American Federation of New York, in 2000, 47 percent of Pakistani immigrants lived in Queens, 33 percent in Brooklyn, 10 percent in the Bronx, 8 percent in Manhattan, and 2 percent in Staten Island. Neighborhoods with large Pakistani populations include Bensonhurst, Kensington, Midwood, Astoria, and Flushing. An annual parade to commemorate Pakistani independence is held annually in Manhattan in late August. Pakistanis ranked 18 in the top 20 foreign-born groups in New York City in 2000.

Penelope Gelwicks

PAL. See Police Athletic League.

Palace Theatre. Theater at Seventh Avenue and 47th Street, built by the impresario Martin Beck. It opened in 1913 and through several questionable transactions was taken over by E. F. Albee, head of the Keith vaudeville circuit, under whose management it became the pinnacle of vaudeville. Performers there could win a national audience, and the sidewalks outside were often crowded with those seeking bookings. The top floor was used for offices by agents preparing cross-country tours for performers. During the Depression vaudeville was largely replaced by sound motion pictures, and in 1932 the Palace became a movie house. The management then introduced a combination of films and live acts before offering films alone from 1935 to 1949. After a performance in the 1950s by Judy Garland the theater became a national stage for Danny Kaye, Jerry Lewis, Harry Belafonte, and others. From 1960 to 1965 it reverted to showing motion pictures. It was bought by the Nederlander family and reopened as a theater for live performance in 1966. During a complicated review of its historic status the interior was named a landmark, but the building surrounding the auditorium was destroyed and replaced by a hotel. The auditorium reopened in 1991 for a performance of the musical *The Will Rogers Follies,* and in 1994 *The Beauty and the Beast* had a five-year run there. In the early twenty-first century the theater continued to host main stage productions.

Pale Male. Red-tailed Hawk who lives in a nest at 927 Fifth Avenue. A group of Central Park birdwatchers first spotted Pale Male in 1991 and named him for his light color; he and his mate First Love built the first known hawk nest in the park's history on the southwest corner of the Great Lawn. In 1993 Pale Male and his new mate Chocolate built their nest on the 12th-floor ledge of an apartment

building at 927 Fifth Avenue, near 74th Street. Pale Male has returned to the nest yearly, siring more than 20 baby hawks whose descendents have been spotted breeding in nests all over the city. Since 2004 Pale Male and his mate Lola have been unable to successfully reproduce although they have built a new nest on the building each year.

Palestinians. After the formation of Israel in 1948 many Palestinians moved to the United States, and large numbers came to New York City starting in the late 1960s. More immigrants came after the Lebanese civil war in the 1980s and the Gulf War in the early 1990s. Palestinians initially lived near Syrian and Lebanese enclaves in lower Manhattan but later settled primarily in Brooklyn. Organizations such as the Union of Palestinian Women's Associations (1986), the Palestinian American Youth Club, the Palestinian–American Community Center, and various student groups encouraged their members to be politically active, especially in working toward an independent Palestinian state. In the mid-1990s the largest Palestinian community in the city was in Sunset Park. Many Palestinians belong to village clubs like the Al-Bireh and Beit Hanina clubs and the Ramallah Federation. Religious institutions include the Al-Faruq Mosque and St. Nicholas Cathedral, both in Boerum Hill. Because a Palestinian may carry a passport from one of several nations, estimates of the Palestinian population in the city are rough, ranging from 10,000 to 40,000 in the early twenty-first century. A well-known Palestinian was Edward Said (1935–2003), an influential literary theorist and professor of English and comparative literature at Columbia University from 1963 until his death.

Inea Bushnaq

Paley, William S. (*b* Chicago, 28 Sept 1901; *d* New York City, 26 Oct 1990). Entrepreneur. He moved to New York City in 1928 and consolidated a loosely connected group of radio stations to form the Columbia Broadcasting System (CBS). Under his direction the firm invested in Broadway musicals and made acquisitions ranging from the New York Yankees to the piano makers Steinway and Sons. Paley was also an art collector and the longtime president and trustee of the Museum of Modern Art. From the mid-1960s until his death he lived at 820 Fifth Avenue in Manhattan. Paley Park is on 53rd Street.

Paley Center for Media. Museum opened in 1975 as the Museum of Broadcasting by William S. Paley, founder and chairman of the Columbia Broadcasting System, to collect and preserve radio and television programs and make them available to the public. Its collection covers more than 70 years of broadcast history and has more than 40,000 programs, including news, public affairs, documentary, performing arts, children's, sports, comedy, and dramatic programming, as well as advertising. Exhibitions and seminars highlighting the museum's extensive collection are presented annually. In 1991 the museum was renamed the Museum of Television and Radio and moved into a new building at 23 West 52nd Street. On 5 June 2007 it was renamed the Paley Center for Media, reflecting emerging broadcasting technologies such as the Internet and mobile video.

Laura Gwinn

Palm. Steakhouse, opened by Pio Bozzi and John Ganzi in 1926 at 837 Second Avenue. For decades it was a popular meeting place for writers and members of the media. The Palm is also known for its caricatures of celebrities on the walls.

Jessica Montesano

Palmer [née Worrall]**, Phoebe** (*b* New York City, 18 Dec 1807; *d* New York City, 2 Nov 1874). Evangelist and writer. Born to a devout Methodist family, she married Warren C. Palmer, a Methodist physician, and with him underwent a religious renewal from 1832 to 1837 that led her to believe in "entire sanctification," an ideal of total personal consecration achieved in a distinct experience. Her idea adapted Wesleyan perfectionism to Victorian standards of urban domesticity and moderate social reform and was crucial in shaping the American holiness tradition. She spread her ideas in books, in her magazine *Guide to Holiness* (1864–74), and in weekly meetings at her home. She held revival meetings across the eastern United States and Canada during the 1850s and in the British Isles during the Civil War but otherwise lived in New York City for her entire life.

Palmer Raids. A series of nationwide roundups of radicals launched by the federal government on 7 November 1919 and 2 January 1920. The raids were organized by the Department of Justice under the leadership of Attorney General A. Mitchell Palmer in response to public concern over the threat of radicalism during the year following the end of World War I. Thousands of strikes and the formation in the United States of organizations inspired by the Bolshevik Revolution of 1917 convinced many Americans that there was an organized effort to overthrow the U.S. government. The threat appeared to be confirmed on 2 June when eight bombs exploded in eight different cities, including New York City where the home of a federal judge was damaged and a watchman killed. The Palmer Raids were intended to eliminate the revolutionary threat by expelling foreign-born radicals under a law that made it a deportable offense for an alien to advocate the overthrow of the government.

The November raids targeted the Union of Russian Workers (URW), an organization that had been formed in 1907. Simultaneous raids in 12 cities seized 300 URW officers and members. In New York City federal agents supported by local police entered the Russian People's House at 133 East 15th Street shortly after 9 p.m., searching for members of the URW, which had an office there. Most of the people in the building were Russian immigrants attending night classes. More than 200 people were arrested, and many were beaten and seriously injured. Most were later released; only 39 were held for deportation. The next day 500 more suspected radicals were picked up at 70 locations in all five boroughs. These raids were conducted by local officials at the urging of a state legislative committee headed by state senator Clayton R. Lusk. The Lusk Committee had been investigating radical activity since the summer and had already conducted several smaller raids. Nearly 250 of the aliens seized during the two days of raids were declared to be deportable radicals and were held on Ellis Island. On 21 December, most of them sailed out of New York City under heavy guard aboard an old government ship, the *Buford.* Thirty-five men arrested in the raids were prosecuted under the New York criminal anarchy law, including Benjamin Gitlow, a former socialist assemblyman from the Bronx, and James Larkin, an Irish labor leader. Both were convicted and sentenced to five to 10 years in Sing Sing Prison.

An even larger series of raids was launched on 2 January 1920 and captured 3000 people across the country. In New York City agents held deportation warrants for 800 members of the Communist Party and the Communist Labor Party and immediately seized several hundred. However, the raids failed to achieve their goal of deporting all foreign-born radicals after Louis F. Post, an official of the Department of Labor, declared that most of the people caught in the raids were not a threat and canceled more than 2000 deportation orders. In the end, the government deported more than 800 communists.

The war against radicalism continued in the city for several more months. The New York Assembly declared that members of the Socialist Party could not be loyal Americans and

expelled four socialist representatives from the city. The Lusk Committee also persuaded the legislature to pass several laws aimed at suppressing radicalism. By then, however, the Red Scare had begun to wane. Governor Alfred E. Smith opposed the expulsion of the socialists and vetoed the Lusk laws as violations of the First Amendment.

Palmo's New York Opera House. Opera house opened in February 1844 at 67 Chambers Street by Ferdinand Palmo (1785–1869), an Italian immigrant. It initially attracted a genteel clientele and was the focus of a brief vogue for Italian opera during the mid-nineteenth century. The house was the site in 1845 of the local debut of the German Opera Company (in productions that were a critical success and a popular failure) and in 1847 of the first performance in New York City of an opera by Giuseppe Verdi (*I Lombardi*). In the end Palmo's was hurt by its location too far downtown, and in 1848 it was sold to William Burton, who abandoned opera in favor of dramatic performances.

Marc Ferris

Panamanians. Panamanians of West Indian origin settled in New York City before 1950 to work in conjunction with the shipping and air routes from Panama. Panama was exempt from the immigration quotas imposed in 1924 and 1952. During the 1950s a sizable number of Panamanians immigrated to the United States because of changes in employment in the Canal Zone, a large-scale retirement of older workers, and the voluntary entry of young men looking to serve in the U.S. armed forces during the Korean War. The U.S. Bureau of the Census first recorded the country of origin of immigrants from Central and South America after 1960, when the largest number of Panamanian immigrants settled in the city.

Panamanians who arrived before 1970 were of different backgrounds. They were West Indian, of black and mixed race, and originated from the Canal Zone and the cities of Panamá and Colón. They settled in the Haitian and Caribbean enclaves and African American neighborhoods of Brooklyn and in Spanish-speaking enclaves in Queens, Manhattan, and the Bronx. A military coup in 1968 spurred an influx of Panamanians of European ancestry who settled mostly in Miami and in wealthy neighborhoods in Manhattan and Queens. During the 1970s and 1980s the number of poor Panamanian immigrants increased, accounting for part of the purportedly large undocumented population in the city before the passage of the Immigration Reform and Control Act of 1986. Legal status was granted to canal workers (many of West Indian origin) who were displaced by the terms of a treaty signed by General Omar Torrijos and President Jimmy Carter in 1979. One of the few organizations in New York City intended strictly for Panamanians was Las Servidoras, formed by Sarah Anesta Samuel in Brooklyn in 1953; later renamed the Dedicators, by the mid-1990s it had provided hundreds of thousands of dollars in college scholarships for Panamanian immigrants and other minority students. Panamanians in the city also joined alumni associations affiliated with secondary schools in the Canal Zone and organized large groups that traveled to Panama for an annual festival. The *Panama Chronicle,* a bilingual quarterly newspaper published from 1977 to 1992, was distributed free of charge and provided news about events in Panama. Prominent Panamanians include the state assemblyman Ed Griffith, the former state senator Waldaba Stewart, the composer Roque Cordero, the singer and actor Rubén Blades, the playwright Carlos Quintero, the classical pianist Jaime Ingram, the baseball players Hector Lopez and Rod Carew, the bantamweight boxing champion "Panama Al" Brown, and the basketball player Rolando Blackman. According to the federal census more than 23,000 Panamanians lived in New York City in 2000, most of them in Brooklyn and Queens.

Marcia Bayne-Smith, Roy S. Bryce-Laporte

Pan American Airways. International airline formed in 1927 by Henry "Hap" Arnold and taken over in the same year by Juan Trippe, a World War I naval pilot. Headquartered on East 42nd Street, the airline was so successful in cultivating the favor of regulators in the United States and Latin America that by 1931 its routes covered 20,308 miles (32,676 kilometers) in 20 countries. As the only international carrier in the United States from 1931 to 1942, it helped to establish New York City as a center of international aviation and was responsible for a number of innovations in air travel. Scheduled transatlantic service from the city began on 20 May 1939 from the Marine Air Terminal at La Guardia Airfield (at the time unfinished) and was provided by Boeing 314 seaplanes that traveled at 193 miles (311 kilometers) an hour and could carry 74 passengers or provide berths for 40. Between 1942 and 1945 the airline was active in the planning of what later became John F. Kennedy International Airport. Service around the world was inaugurated in 1947; the airline also introduced jet service from New York City to London with the Boeing 707 (26 October 1958) and the first "jumbo" jet, the Boeing 747 (from Kennedy Airport in 1969). In 1964 it opened new headquarters at 200 Park Avenue, at the time the largest office building in the world. Pan American was the dominant international airline in the United States until the early 1980s but toward the end of the decade encountered financial difficulties. The airline's headquarters building was acquired by the Metropolitan Life Insurance Company; in 1991 it sold its European routes to Delta Airlines and was forced to cease operations in 1992. The Pan American name was bought in bankruptcy proceedings, and the new company offered limited service until the early twenty-first century.

Panorama of New York City. A huge, three-dimensional reproduction of New York City at the Queens Museum in Flushing Meadows–Corona Park. Constructed as the New York City exhibit for the World's Fair of 1964–65, it is the world's largest scale model, occupying 9335 square feet (867 square meters). At a scale of 1200:1 it reproduces the city's 860,000 buildings, thousands of streets and parks, and dozens of major bridges. The project was conceived by Robert Moses, the long-time municipal builder and president of the World's Fair Corporation, and fabricated by the model-making firm of Lester Associates. The task took more than three years and required the full-time labor of hundreds of workers. Visitors to the museum observe the model from overhead. Completely renovated between 1992 and 1994, with lighting and other updates performed from 2004 to 2005, the Panorama of New York remains the best way to understand the geography and infrastructure of the metropolis.

Kenneth T. Jackson

Pantoja, Antonia (*b* San Juan, Puerto Rico, 13 Sept 1922; *d* New York City, 24 May 2002). Educator and community activist. She was born into a poor, working-class family, became a teacher, and moved to New York City in 1944. She formed a network of community institutions, including the Puerto Rican Association for Community Affairs (1953), the Puerto Rican Forum (1957), and Aspira (1961), that she viewed as tools for progressive struggle. Pantoja established Universidad Boricua in New York City, which became Boricua College in 1970. Later she returned to Puerto Rico and formed an economic development corporation called Producir with Wilhelmina Perry. She received the Presidential Medal of Freedom in 1996. Pantoja's autobiography,

Memoir of a Visionary: Antonia Pantoja, was published in 2002.

Virginia Sánchez Korrol

Papanicolaou, George N(icholas) (*b* Kimi, Greece, 13 May 1883; *d* Miami, Fla., 18 Feb 1962). Inventor of the Papanicolaou test, or Pap test. After earning his MD from the University of Athens (1904) and doctorate from the University of Munich (1910), he moved to New York City and became a professor in the department of anatomy at Cornell University Medical College. During an association with the college lasting 47 years, he invented the gynecological procedure named after him (also called the Pap smear) that allows for the early detection of cervical cancer. He also perfected the diagnostic techniques of exfoliative cytology, which are used to find malignant cells in many other areas of the body, and wrote the *Atlas of Exfoliative Cytology* (1954). His work is considered an important contribution to modern cancer research.

Daniel Erskine Carmichael, *The Pap Smear: Life of George N. Papanicolaou* (Springfield, Ill.: Thomas, 1973)

Adele A. Lerner

paper. For American colonists, paper was not a vital necessity and the little they did need was imported from Europe. The first paper mill in America began production in 1690 in Philadelphia using rags as its raw material. It was owned and operated by William Bradford who moved to New York City in 1693 and became well known as a printer and publisher. He may have printed the first book in New York City, a testimonial to the martial exploits of Colonel Benjamin Fletcher, who served as governor of New York beginning in 1692. In 1725 Bradford established *The New York Gazette,* the city's first newspaper. In 1775 Robert Bowne opened Bowne and Company at 39 Queen Street (now Pearl Street) in Manhattan, selling writing papers, account books, quills and pens, binding and printing materials, and other dry goods. Within a few years he added printing to his business services. (In 2010 it was the oldest company listed on the New York Stock Exchange and still maintained offices in New York City.) During the American Revolution paper supplies were tight because of the British blockade but eased after the war. During the mid-1800s, as New York City became the commercial center of the country, it also became the information capital and home to many book, magazine, and newspaper publishers. By the late 1850s printing was the city's fastest growing industry, and demand for paper was strong. Its paper trade became centered in the area east of Printing House Square (now Park Row), also known as Newspaper Row. Up until the second half of the 1800s paper was generally made of recycled materials such as rags or linen, but after that time wood pulp became the primary raw material.

Over the past century the role of paper in the economic life of New York City has diminished. In 1987 International Paper Company, which had been based in New York City since its formation in 1898, moved its operational headquarters to Memphis, Tennessee. In the early 1990s there were 245 firms in the city employing more than 10,000 people making paper products worth $888.1 million. A decade later the paper industry in New York City produced shipments valued at $549.3 million. During the first half of 2007 there were 83 establishments and an average of 2545 people employed in the city's paper industry. More telling, in 1962, when New York City honored astronaut John Glenn, the first American to orbit the earth, with a ticker-tape parade, 3474 tons of paper fell to the streets. Forty-six years later, in February 2008, when the New York Giants marched up Broadway after their victory over the New England Patriots in the Super Bowl, only 36.5 tons were tossed in celebration.

Catherine Mathis

Papp, Joseph [Papirofsky, Yosl] (*b* Brooklyn, 22 June 1921; *d* New York City, 31 Oct 1991). Theater director and producer. Born to Jewish immigrants from Poland, he started the New York Shakespeare Festival in 1954. In 1957 the company was granted the use of Central Park for summer productions, with the Delacorte Theater being built in 1962 for use by the festival. Papp oversaw the conversion of the Astor Library on Lafayette Street into a multistage theater complex opened in 1967 as the Public Theater. There he staged both new works by young playwrights such as Caryl Churchill, Miguel Piñero, David Mamet, and Sam Shepard and innovative interpretations of standard works by Shakespeare, Bertolt Brecht, and Anton Chekhov. A number of productions first staged at the Public Theater transferred to Broadway, achieving great success and allowing Papp to use the profits they generated to support his less commercially successful artistic ventures. These include the musical *Hair,* which premiered at the Public Theater in 1967; *A Chorus Line* (1975) (which ran for a record 6137 performances on Broadway from 1975 to 1990); and a musical adaptation of Shakespeare's *Two Gentlemen of Verona,* which hit Broadway in December 1971. A strong supporter of experimental and noncommercial theater, Papp also worked to bring to light the work of minority playwrights and was among the first to cast minority actors in Shakespearean and other classical roles. He remained the artistic director of the Public Theater until his death in 1991. In 1992 the Public Theater was renamed the Joseph Papp Public Theater in his honor.

Patrick Barrett

parades. Among the first parades in New York City were military reviews and musters, which were common during the seventeenth century. The first St. Patrick's Day Parade was held in 1766 by Irish soldiers in the British army. Large annual parades during the late eighteenth century commemorated events of national importance: American independence, Evacuation Day (marking the evacuation of the British from the city in 1783), and the ratification of the Constitution in 1788. Civic and ethnic parades were sponsored by political parties, immigrant groups, and city government. In the first half of the nineteenth

Hudson–Fulton Parade, 1909

century New York City sponsored parades and festivities for prominent visiting foreigners. A large parade was given in 1824 to welcome the Marquis de Lafayette to the city, and another in 1851 for the Hungarian revolutionary Louis Kossuth. Important public works projects were also celebrated with parades, including the opening of the Erie Canal in 1825 and of the Croton Water Works in 1842. A spectacular parade in 1860 welcomed the Prince of Wales (later Edward VII), and the end of the Civil War was celebrated with a large parade in 1865. The Easter Parade, first held in the 1870s, became an annual event in which marchers (or more accurately strollers) gathered along Fifth Avenue on Easter Sunday to display new spring outfits and hats.

Ticker-tape parades were first organized by the city in the mid-1880s around Wall Street. Union Square was the site of many rallies and parades on May Day sponsored by radical groups and labor organizations; the first Labor Day Parade was held there in 1882. The frequency of these gatherings diminished after World War II as the American left declined, but an annual Labor Day Parade lasted until 1986, when it was canceled because of decreased popularity among union members. More than 110,000 marchers took part in the Business Men's Republican and Sound Money Parade of 1896 in support of William McKinley's presidential candidacy. In 1899 the Dewey Arch, an elaborate triumphal arch, was erected across Fifth Avenue at 23rd Street for a celebration of Admiral George Dewey's victorious return from the Philippines. Henry Hudson's explorations and Robert Fulton's invention of the steamboat were celebrated in 1909 with parades and performances in city parks.

Parades sponsored by commercial firms began in the twentieth century, including Macy's Thanksgiving Day Parade (annual from 1924), one of the most popular in the city. The Columbus Day Parade on Fifth Avenue began in 1929, and the Puerto Rican Day Parade began in 1958 in El Barrio, drawing about two million people annually in the early twenty-first century. Steuben Day, celebrated by German Americans, started in the 1950s and was typical of ethnic parades. The Halloween Parade in Greenwich Village was organized by the performance artist Ralph Lee in 1973 and became an annual event; its irreverence and wide participation caused it to outgrow the sidestreets of Greenwich Village, and it moved to Sixth Avenue. The American bicentennial (1976), the 100th anniversary of the Brooklyn Bridge (1986), and the reopening of the Statue of Liberty (1986) were celebrated with parades on land and water. The first Gay Pride Parade was organized in 1970. The nation's largest art parade, the annual Mermaid Parade in Coney Island, was founded in 1983 and celebrates the beginning of summer; it features paraders dressed

Gay and Lesbian Pride Parade, June 2009

Major Parades in New York City

African–American Day Parade (1969), Adam Clayton Powell Boulevard, 111st to 142nd streets, Manhattan, September
American Ethnic Parade, Columbus Circle, along Central Park South to Sixth Avenue to 43rd Street, Manhattan
Armenian Martyr's Day Parade [Armenian Genocide Remembrance Day Parade] (1961), Times Square, Manhattan, April
Brazilian Summer Carnival Parade (1986), Lower East Side, Manhattan
Bronx Week Parade (1971), Grand Concourse, 198th to 153rd streets, Bronx, May–June
Captive Nations Week Parade (1959), Fifth Avenue, Manhattan, July
Children's Parade for Peace, Manhattan, October
Chinese New Year Parade, Chinatown, Manhattan, February
Columbus Day Parade (1909), Fifth Avenue, 44th to 86th streets, Manhattan, 12 October
Cuban Day Parade (1904), Madison Avenue, 56th to 37th streets, Manhattan, May
Dance Parade (2007), Sixth Avenue, 28th Street to Tompkins Square Park, Manhattan, May
Dominican Day Parade (1981), Madison Avenue, 57th to 37th streets, Manhattan, August
Easter Parade (*ca* 1870), Fifth Avenue near St. Patrick's Cathedral and 50th Street, Manhattan, April
Ecuador Day Parade (1984), 35th Avenue, 70th to 89th streets, Queens, August
Flag Day Parade, Fulton and Water streets to Fraunces Tavern Museum, Manhattan, June
Greek Independence Day Parade (1893), Fifth Avenue, 62nd to 79th streets, Manhattan, March–April
Greenwich Village Halloween Parade (1974), Houston Street from West Street to Sixth Avenue, north to 14th Street, east to Union Square, Manhattan, 31 October
Hispanic Day Parade (1965), Fifth Avenue from 44th to 86th streets, Manhattan, October
Hispanic Parade of Queens (1976), 37th Avenue between 69th and 89th streets, Queens, September
India Day Parade, Madison Avenue, 54th to 26th streets, Manhattan, August
India Independence Day Parade, Madison Avenue, 41st to 23rd streets, Manhattan, August
International Cultures Day Parade, Sixth Avenue, 35th to 56th streets, Manhattan, June
International Immigrants Parade (1986), Madison Avenue, 37th to 57th streets, Manhattan, October

(continued)

Major Parades in New York City (*Continued*)

Korean American Day Parade (1980), Broadway, 40th and 24th streets, Manhattan, September
Krishna Procession, Fifth Avenue and 59th Street to Washington Square Park, Manhattan
Labor Day Parade (1882), Fifth Avenue, 44th to 79th streets, Manhattan, September
Lesbian and Gay Pride Day Parade (1970), Fifth Avenue, Columbus Circle, and Christopher Street, Manhattan, June
Loisaida Fair (1986), Avenue C, Third to 10th streets, Manhattan, May
Macy's Thanksgiving Day Parade (1924), Central Park West, 77th to 59th streets, down Broadway to 34th Street, Manhattan, November
Martin Luther King, Jr., Day Parade (1968), Fifth Avenue, 61st to 86th streets, Manhattan, January
Memorial Day Parade (1896), 72nd Street and Broadway, west on 86th Street to Soldiers' and Sailors' Monument, Manhattan, May
Mermaid Parade (1983), Steeplechase Park to West Fifth Street, Brooklyn, June
Norwegian Constitution Day Parade (1951), Fifth Avenue, 95th to 67th streets, Brooklyn, May
Pakistan Independence Day Parade, Madison Avenue, 41st to 26th streets, Manhattan, August
Parade of Liberty, 4 July
Presidents Day Parade, Fifth Avenue, 35th to 50th streets, Manhattan, February
Puerto Rican Day Parade (1956), Fifth Avenue, 44th to 86th streets, Manhattan, June
Puerto Rican Day Parade [Bronx] (1987), Grand Concourse, Bronx, May
Pulaski Day Parade (1937), Fifth Avenue, 26th to 52nd streets, Manhattan, October
Queens Purim Parade (1980), Main Street, 68th Drive to 73rd Avenue, Kew Gardens, Queens, March
Ragamuffin Day Parade, Brooklyn, October
St. Patrick's Day Parade (1853), Fifth Avenue, 44th to 86th streets, Manhattan, 17 March
Salute to Israel Parade (1964), Fifth Avenue, 57th to 86th streets, Manhattan, May–June
Solidarity Day Parade, Fifth Avenue, Manhattan, May
Steuben Day Parade (1957), Fifth Avenue, 67th to 86th streets, Manhattan, September
Three Kings Parade (1977), Third Avenue, 106th to 116th streets, Manhattan, January
Turkish-American Day Parade (1982), Madison Avenue, 56th to 47th streets, May
United Hispanic American Day Parade (1965), Fifth Avenue, 44th to 72nd streets, Manhattan, October
Veterans Day Parade (1918), Fifth Avenue, 39th to 23rd streets, Manhattan, November
Washington's Birthday Parade, Manhattan, February
West Indian–American Day Carnival and Parade (1967), Eastern Parkway, Utica Avenue to Washington Avenue, Brooklyn, September

as mermaids and other sea creatures, led by Queen Mermaid and King Neptune.

In the twenty-first century religious processions on Roman Catholic saints' days and holy days such as Good Friday continued in Latino neighborhoods on the Lower East Side and in Harlem, and in Italian neighborhoods in Greenwich Village and Brooklyn. In Greenpoint the *giglio* procession celebrated the festival of Our Lady of Mount Carmel and St. Paulinus, in which a tower 60 feet (18 meters) high is "danced" through the streets by young men from the parish. For the San Gennaro Festival in Little Italy in Manhattan a statue of the saint is carried in a procession. The West Indian Day Parade on Labor Day weekend in Crown Heights is one of the largest in the city. In 2001 new parades were banned from Fifth Avenue, the most famous parade route in the city, although any founded before July of that year could continue to use the route.

Gary Jennings, *Parades!: Celebrations and Circuses on the March* (Philadelphia: J. B. Lippincott, 1966)

Brooks McNamara

Paramount Communications. International conglomerate of entertainment and publishing firms. It began as a maker of automobile parts incorporated as Michigan Bumper in 1934; the business was renamed the Michigan Plating and Stamping Company in 1955, the Gulf and Western Corporation in 1958, and Gulf and Western Industries in 1960. It was headquartered in New York City from 1969 until 1994. During the 1960s the firm acquired many manufacturers of automobile parts, electronics, metals, plastics, and tools. It entered the field of communications in 1966 by acquiring a majority interest in the Paramount Pictures Corporation. In the 1970s and 1980s it increased its holdings in the entertainment and publishing industries, acquiring Madison Square Garden, the basketball team the New York Knicks, the hockey team the New York Rangers, cable television networks, chains of movie theaters, film production and distribution companies, the publishing house Simon and Schuster, several educational and trade publishers including Prentice Hall, and a number of companies providing computer software and electronic information services to business. In 1983 the firm was restructured, resulting in the divestiture of $1 billion of its securities portfolio and the sale of its consumer and industrial products group. It sold its consumer and commercial finance business, the Associates First Capital Corporation, to the Ford Motor Company for $3.4 billion in 1989 and changed its name to Paramount Communications. In 1990 the conglomerate had 117.6 million common shares outstanding, 30,000 stockholders, 12,400 employees, and gross revenues of $3.87 billion. In 1994 it was acquired for $10 billion by Viacom, which later that year agreed to sell its sports assets, including the Knicks and Rangers, for $1.1 billion. It sold its headquarters in Manhattan at 15 Columbus Circle to the Trump Corporation in 1997. In 2006 Viacom split in two, dividing the assets of the former Paramount Communications.

Edward T. O'Donnell

paratransit. Demand-responsive, point-to-point transit provided for disabled people. U.S. government regulations, first enacted in 1973 and later amended, mandate that mass transit agencies provide service to disabled individuals unable to use conventional public transportation. In New York City the city's Department of Transportation initially operated the paratransit service, Access-A-Ride (AAR); in 1993 the Metropolitan Transportation Authority assumed responsibility for AAR and contracted with private transportation companies to deliver the service. Small buses and vans with wheelchair accessibility are used for the prearranged trips. Paratransit customers are prescreened to ensure that their disabilities meet the legal requirements for such service and are issued identification cards documenting their eligibility. The fare is the same as a full-fare bus or subway trip. In 2000 AAR provided approximately 2.3 million trips; in 2005, 4.7 million trips.

Andrew Sparberg

Parish, Sister [Kinicutt, Dorothy May] (*b* Morristown, N.J., 15 July 1910; *d* Dark Harbor, Maine, 8 Sept 1994). Interior designer. Born to a wealthy family, she founded a one-room business in Far Hills, New Jersey, in 1933 that evolved into the noted decorating firm of Parish–Hadley Associates, based in New York City. She became the best-known woman in interior design and is credited with having originated the American country style during the 1960s. Her work was expensive, and she went to great lengths to please her

clients: in a single bedroom for William S. Paley, chairman of the Columbia Broadcasting System (CBS), she had a painter work for five months applying 18 coats of paint, including six shadings for the base alone. Parish lived on East End Avenue in Manhattan.

Kenneth T. Jackson

Park Avenue. Avenue in Manhattan and the Bronx between 32nd Street and Fordham Road. Originally known as Fourth Avenue within Manhattan, the stretch between 32nd and 133rd streets was renamed between 1860 and 1900. Metro-North (originally New York Central) Railroad tracks follow Park Avenue continuously from 42nd Street northward using tunnels, viaducts, and open cuts. Grand Central Terminal's construction between 1906 and 1913 created Park Avenue's upscale business and residential districts between 46th and 96th streets.

Andrew Sparberg

Park Avenue Hotel. Building opened in April 1878 on the west side of Park Avenue between 32nd and 33rd streets. A seven-story building of cast iron with a mansard roof, it was built for the merchant and philanthropist A. T. Stewart by his favorite architect, John Kellum. It began as a working women's hotel, but strict residence rules for the women soon caused its failure. Reopened after two months as a stylish public hostelry popular for its palm court and band music, it was demolished in 1927.

"The Women's Hotel," *Harper's Weekly*, 3 April 1889, pp. 294–97

Margot Gayle

Parkchester. Housing development and neighborhood in the eastern Bronx, bounded to the north by East Tremont Avenue; to the east by Purdy Street, St. Raymond Avenue, and Olmstead Avenue; to the south by McGraw Avenue; and to the west by White Plains Road. It was once the site of the New York Catholic Protectory, a self-sufficient farm and trade school for wayward boys opened by the Christian Brothers after the Civil War. It had a bakery and printing, carpentry, shoemaking, and tailor shops. The playing fields were also used by semiprofessional baseball teams for many years. Between 1938 and 1942 a complex designed and owned by the Metropolitan Life Insurance Company was built on a site of 129 acres (52 hectares) as the largest housing development in the United States that was not itself a city. There were 12,273 units divided among buildings of seven to 13 stories each, standing in four quadrants around landscaped grounds; amenities included a large shopping area with more than 100 stores (among them the first branch outside Manhattan of Macy's), a movie theater, and a bowling alley. The design of the residential buildings was based on three

Parkchester Oval, 2009

core plans and five wing plans (and their variants). A wing consisted of two dwelling units, each having two to five rooms. The facades were of sheer brick, patterned at the tops of buildings and around entrances, and there were also small decorative sculptures. Parking could accommodate 3000 automobiles. Storefronts had curving facades, art deco detailing, and stylized signage. The development was named for two adjoining neighborhoods, Park Versailles (a name that went out of fashion) and Westchester. In the mid-1960s the Metropolitan Life Insurance Company was accused by the city's commission on civil rights of limiting tenancy to whites. The neighborhood became more diverse racially as a result, and in 1968 Metropolitan Life sold Parkchester to the large real estate firm Helmsley–Spear, which converted the north quadrant of the project into a condominium. Helmsley–Spear was dogged by allegations of neglect, and the development declined until the late 1990s. In 1998 the Helmsleys sold Parkchester to the Community Preservation Corporation. Meanwhile, many new immigrants settled there, mostly from Jamaica, the Dominican Republic, Guyana, the Soviet Union, India, China, and the Philippines.

Park East Synagogue. Orthodox synagogue at 163 East 67th Street. It was originally called the Congregation Zichron Ephraim after Ephraim Weil, whose sons Jonas and Samuel provided the land and funds for the building in 1888. Schneider and Herter designed the elaborate Byzantine temple, which was completed in 1890. In 2008 Pope Benedict XVI made history by attending a service at Park East and becoming the first pope to visit an American synagogue.

Kate Lauber

Parker, Charlie [Charles, Jr.] (*b* Kansas City, Kans., 29 Aug 1920; *d* New York City, 12 March 1955). Saxophonist and composer. He worked with a number of big bands in Kansas City and moved in 1939 to New York City, where he worked as a dishwasher at Jimmy's Chicken Shack in Harlem and lived

Charlie Parker, ca *1940–45*

from the early 1940s at 411 Manhattan Avenue. He performed in 1942 as a featured soloist with Jay McShann's big band at the Savoy Ballroom, and during jam sessions held after hours at nightclubs in Harlem such as Minton's Playhouse and Monroe's Uptown House, he experimented with new sounds that laid the groundwork for bop in the early 1940s. When the focus of bop shifted to 52nd Street in the mid-1940s, he played there regularly at several clubs. His first recordings as a leader were made in November 1945 and include *Now's the Time* and *Ko-Ko*; his sidemen were trumpeters Dizzy Gillespie and Miles Davis, double bass player Curly Russell, pianist Sadik Hakim, and drummer Max Roach. Parker left for Los Angeles in December 1945, returned to New York City in April 1947, and formed a quintet with Davis and Roach. About this time he lived in a series of hotels, among them the Dewey Square Hotel on West 117th Street, which inspired his composition *Dewey Square* (1947). From 1946 he worked with the record producer Norman Granz, under whose direction he performed at a famous concert at Carnegie Hall in September 1949 and took part in several recording sessions in which he was backed by a string section. During this period he lived with his companion, Chan Richardson, at 151 Avenue B in the East Village. He made his last public appearance on 5 March 1955 at the club Birdland (so called after his nickname "Bird"); he died in a friend's suite at the Hotel Stanhope at 995 Fifth Avenue. His death received little notice in the newspapers, but his fans paid him tribute by scrawling the words "Bird Lives!" on walls throughout the city. Among his compositions inspired by New York City is *Scrapple from the Apple* (1947); *52nd Street Theme,* though composed by Thelonious Monk, was closely associated with Parker, and he used it to open and close many of his sets. A virtuoso alto saxophonist, Parker was the most important figure in the evolution of bop.

Peter Keepnews

Parker [née Rothschild]**, Dorothy** (*b* West End [now in Long Branch], N.J., 22 Aug 1893; *d* New York City, 7 June 1967). Writer. She grew up at 57 West 57th Street and worked as a staff writer for *Vanity Fair* (1917–20), from which she was discharged for writing unflattering reviews of three major plays. Her epigrammatic, satiric verses won her a devoted readership, as did her trenchant book reviews in the *New Yorker* (1927–33), signed "Constant Reader." As one of the first members of the Algonquin Round Table and one of its few female members, she became well known for her mordant wit. She was also a critically successful but not prolific writer of short stories, in which she exposed the urbane world of sophisticates with wry, Swiftian clarity. She was arrested in 1927 for demonstrating against the execution of Sacco and Vanzetti. Parker lived from 1953 to the end of her life at the Volney Hotel, 23 East 74th Street; she left her estate to Martin Luther King, Jr., and asked that it eventually be ceded to the National Association for the Advancement of Colored People.

Brenda Wineapple

Parker, James (*b* Woodbridge, N.J., *ca* 1714; *d* Burlington, N.J., 2 Jul 1770). Colonial printer and newspaper editor. Apprenticed to William Bradford and financially supported by Benjamin Franklin, he began publishing the city's third newspaper, the *New-York Weekly Post-Boy* in 1743, building up a successful printing business through occasional, acrimonious partnerships with William Weyman and John Holt. While holding various administrative positions in the postal system, serving as keeper of the city's lending library, and maintaining presses in Woodbridge and Burlington, New Jersey, and New Haven, Connecticut, Parker acted for 16 years as public printer for the province of New York. A technically able printer, he issued four short-lived periodicals, and his volume of psalms was the first book of music set from type in America. Parker published two of the colonial city's defining documents: Daniel Horsmanden's justification of the prosecution of the 1741 "Negro plot," *A Journal of the Proceedings in the Detection of the Conspiracy* (1744), and Alexander McDougall's 1769 incendiary anonymous broadside *To the Betrayed Inhabitants of the City and Colony of New York.* Parker's reluctant testimony, just before his death, identifying McDougall as the author led to the latter's imprisonment and the launch of New York's revolutionary movement of the 1770s.

Mariam Touba

Parkhurst, Charles H(enry) (*b* Framingham, Mass., 17 April 1842; *d* New York City, 8 Sept 1933). Minister. After graduating from Amherst College and serving as a minister in Lenox, Massachusetts, he served at Madison Square Presbyterian Church on 24th Street and Madison Avenue from 1880 to 1918, when it merged with First Presbyterian Church. A leader in the Social Gospel movement, he became president of the Society for the Prevention of Crime in 1891. During a rousing sermon on 14 February 1892 he inaugurated a campaign to root out "the polluted harpies that under the pretense of governing this city, are feeding day and night on its quivering vitals." He visited saloons, brothels, and gambling dens in disguise and revealed the names of dishonest politicians in sermons and in court testimony. His exposés contributed to the establishment of the Lexow Commission, the election of William L. Strong as a reform mayor (1894), the appointment of Theodore Roosevelt as chairman of the Police Board (1895), and the consolidation of New York City in 1898. He resigned from the Society for the Prevention of Crime in 1908. Parkhurst wrote *Our Fight with Tammany* (1895) and *My Forty Years in New York* (1923). He lived at 133 East 35th Street.

Charles Parkhurst

David Meerse

parking. Parking became a concern in New York City in the late 1920s but only at special times and at special events. Simple on-street parking rules were instituted in business districts in the 1930s. After World War II, when New Yorkers started to acquire motor vehicles for routine personal use, the problems of storing them for shorter or longer periods intensified. To date, the city has not been able to develop a simple and effective parking policy. Automobile owners tend to believe that they have a right to use street space as they see fit; retailers and restaurateurs insist that they will lose business if their customers cannot park conveniently; and traffic managers have concluded that the best ways of controlling the volume of street traffic and level of air pollution is to ban or restrict parking. Another reason why parking policies and programs are confusing is the presence in New York City of widely different districts, each with their own parking needs and possibilities.

Per capita automobile ownership in New York City is only half as large as in other U.S. communities (205 registered cars per 1000 population, compared with the national average of 465), but the concentration of business districts, hospitals, and sports venues; the trend toward large retail stores; the heightened priority placed on personal comfort and

Muni-Meter, 2009

convenience (use of the car rather than public transportation); and expected future population growth all mean that the parking demand will become much larger. Contrary to popular belief, most of the motorists who drive to work in New York City are local residents, not suburbanites.

In midtown and lower Manhattan business districts, off-street parking spaces in commercial garages can almost always be found, but they are expensive, and the locations are not always convenient. Legal curbside parking for ordinary users, however, simply does not exist during the workday as such space is reserved for loading, commercial and diplomatic vehicles, taxis, bus lanes, and other priority functions. A special problem in high-intensity districts in New York City is the presence of large numbers of vehicles with privileged plates (such as medical doctors, members of the press, judges, clergy, federal agents, police), which are not always engaged in official duties. Diplomats have immunity from local regulations, and the city on a few occasions has been on the verge of starting an international incident by battling flagrant abuses—until a protocol of agreement was signed with the diplomatic corps in 2002.

The first parking meter was introduced in New York City in 1951, and the city's 63,000 meters are a common presence in all business districts and along major arteries. Muni Meters (machines that dispense a receipt that is left on the vehicle dashboard) were introduced in 1999, and their numbers are growing. Parking in high-intensity districts largely has been supervised by uniformed parking enforcement officers since 1960. Originally, these were the "meter maids" (under the Department of Traffic), later expanded to a force of "brownies" (under the New York City Department of Transportation), whose traffic responsibilities were progressively broadened but who also encountered jurisdictional disputes with the New York Police Department (NYPD). In 1996 all these functions were assumed by the NYPD Traffic Control Division, which has their own traffic enforcement agents. Classified as civilian employees, they wear a uniform closely resembling that of regular police, generating more respect and fewer personal attacks by irate motorists. The 800 agents assigned to parking control issue some 25,000 tickets each average weekday; others are written by regular police officers and fire and sanitation inspectors.

A Parking Violations Bureau was established under Mayor John V. Lindsay (1966–73) to "decriminalize" parking violations and streamline the collection of fines. These goals were achieved, but the bureau experienced several scandals in the handling of funds and contracts. Parking fines are now collected by the city's Department of Finance. Before collection procedures were improved, some scofflaws managed to accumulate more than $10,000 in fines; the worst offenders were diplomats and federal agents.

The parking regulations in New York City central business districts are elaborate and complex—not to deliberately discourage motorists but to squeeze the last drop of utility from scarce space. A distinction is made among *parking* (the driver leaves the vehicle), *standing* (the driver remains in the vehicle), and *stopping* (the vehicle halts for less than a minute), which is banned in many areas. The common signs "Do not even THINK about parking here!" and "No Parking, No Standing, No Stopping, NO KIDDING!" became internationally famous. In the core of lower Manhattan a Blue Zone has been established in which all parking and standing is banned from 7 a.m. to 7 p.m. on weekdays. Such constraints challenge the ingenuity of New Yorkers, and a common strategy is the "car sitter"—a second person who remains in the vehicle while the driver runs errands—and drivers take chances with double and triple standing. Despite restrictions, regulations, and improved enforcement practices, traffic loads have continued to grow, except where they have reached capacity ceilings. The peak period for parking demand in midtown is 4 to 6 p.m., when entertainment traffic overlaps with normal business traffic.

Given that traffic volumes have reached a saturation point for most of the working day, the city has established a policy of not issuing any new licenses for commercial parking garages in the core of the central business districts. An unusual zoning clause for U.S. cities forbids the incorporation of parking spaces, beyond a few, in any new nonresidential buildings in Manhattan below 110th Street and downtown Brooklyn. On the other hand, government agencies at the federal, state, and municipal levels try to assure free parking for their employees.

Deliveries of supplies and removal of products by truck (*loading*) is a special problem. All new commercial, manufacturing, and storage buildings (as well as hospitals, prisons, and funeral parlors) are now required to provide adequate off-street docks. The number depends on the type of building, its size, and the characteristics of the district around it. All this, however, does not help to accommodate the service demands of older establishments. Loading trucks usually have to double park, and during parts of the day they form solid lines along major commercial arteries, limiting street carrying capacity, encroaching on sidewalks, and blocking movement. Solutions, such as cooperative ventures and jointly used loading spaces, have not worked because drivers refuse to leave their vehicles out of sight for fear of pilferage and owners of commercial establishments are unwilling to depend on any but their own vans and trucks to support their activities.

For new commercial and community facility buildings not in the central business districts the provision of off-street parking is usually required, depending on the type (in terms of traffic-generating characteristics) and size of activities supported, the type and density of the district in which they are located, and the availability of public transport services. Thus, a store located in a suburban district would have to create a large parking facility, and one in a dense area would not be allowed to provide any parking at all.

The parking requirements for residential uses reflect the same philosophy of setting norms in response to the characteristics of an area. Therefore, a single-family residence in a low-density district with no subway access has to be provided with at least one off-street parking space. As the density increases, however, the norms are changed such that in some districts only 40 percent of the dwelling units must have a parking space. Many New Yorkers, however, particularly those living in high-density areas with high garage fees, keep their cars in remote garages for weekend use only. In some instances owners of apartment buildings with the required parking spaces have not been able to rent them and therefore have received licenses to open their garages to commercial use.

Parking in residential districts of New York City has been governed since 1950 by alternate-side-of-the-street rules, which prohibit parking during several hours on one or two weekdays on one side of the street so that street sweepers can move along the curb. Since double parking during those hours is usually tolerated on the other side, New Yorkers have to know exactly when to move their

car back and forth and not get blocked in if they need the vehicle during the double park hours. Some years ago paying for an occasional parking ticket was considered an acceptable price for living in New York City, but by the twenty-first century the charge has reached a painful $65 to $115. In some neighborhoods the total length of curbs is sufficient for all the cars owned by the local residents, but this is rarely the case in zones with apartment buildings. A new problem has emerged in some districts with originally one-family homes on tight lots. If these buildings become occupied by households with several cars, people use the front and back yards for parking, thereby violating zoning ordinances and changing the appearance of the neighborhood.

Parking garages and lots are scattered throughout the boroughs. In Manhattan alone there are about 100,000 off-street parking spaces in some 1600 facilities. These may be public and purely commercial (open to anybody for a charge, licensed by the Department of Consumer Affairs), partially supported by local merchants (validated sales slips), open to customers of specific establishments (usually without charge), municipal (owned and operated by the Department of Transportation), owned and operated by institutions and firms for their own employees and visitors, and exclusive accessory facilities for residences.

Sigurd Grava

Park Row. Street in lower Manhattan, location of City Hall and the Municipal Building, running diagonally between Broadway and Chatham Square. During the nineteenth century it was called Newspaper Row because most of the city's dailies were published there, taking advantage of City Hall's proximity. Trolley and elevated train routes crossing the Brooklyn Bridge used a large terminal on Park Row that was demolished in 1944. In the early twenty-first century Police Department headquarters and Pace University were both on Park Row.

Andrew Sparberg

parks. New York City has the largest urban parks system in the United States, occupying some 28,000 acres (11,331 hectares) exclusive of state and federal lands and comprising more than 1700 parks and playgrounds, as well as recreation centers, golf courses, ballfields, zoological and botanical gardens, monuments, historic houses, beaches, forests, meadows, and wetlands. These are administered by the New York City Department of Parks and Recreation. The city's few early parks included Bowling Green (1733, the city's oldest park), Battery Park, and City Hall Park. The first street plan, the 1811 Commissioner's Plan, provided for a "grid" with no public parks. It did leave open several spaces, designated as squares, and some of these—such as Tompkins Square, Union Square, Madison Square, and Mount Morris (now Marcus Garvey Park)—later became parks. In Brooklyn, an independent city for most of the nineteenth century, the first major park was Fort Greene Park (1847); the effort to acquire this hilly site well-known for its role during the American Revolution had been championed by Walt Whitman, then the editor of the *Brooklyn Daily Eagle.* Nineteenth-century cemeteries were often parklike, and Green-Wood Cemetery opened in 1838 and became a popular site for strolling and picnics; the following year 11 park sites were proposed in Brooklyn by a three-member commission.

By the mid-nineteenth century, as the city's population spread northward, demand increased for more open, green spaces, resulting in the creation of Central Park (opened 1859). Acquisition by the state of the 843 acres (340 hectares) of swampy land with rocky outcroppings started in 1853. The park was designed by Frederick Law Olmsted and Calvert Vaux and was based on the English pastoral style. Olmsted and Vaux also designed Riverside Park in Manhattan and Prospect Park in Brooklyn (often considered their masterpiece) and planned a system of parkways, or landscaped routes, intended to link parks within a system: Eastern Parkway (1868–74) and Ocean Parkway (1869–76) in Brooklyn were early examples. In mid-century Madison Square Park and Reservoir Square (later Bryant Park) were added in Manhattan.

The Department of Public Parks was formed in 1870 to oversee these new green spaces in Manhattan. Brooklyn had its own department, which also administered Forest Park in Queens and other lands. Lower Westchester (later the Bronx) was largely undeveloped and became the focus of parks advocates in the 1880s. As population surged, citizen groups lobbied for more park space to provide "lungs" for the city. In 1881 the New York Park Association argued that open spaces not only improved the quality of life, but also raised the value of adjacent property. Their efforts resulted in two major additions of parks spaces. The 1887 Small Parks Act led to the creation of parks in severely overcrowded areas, including Mulberry Bend (now Columbus Park) and DeWitt Clinton Park. In 1888 a New Park Commission set up by the state legislature led to the adoption of St. Mary's, Claremont, Crotona, Bronx, Van Cortlandt, and Pelham Bay Parks, totaling an additional 3495 acres (1414 hectares) of new Bronx parks; the cost, assessed on the city at large, was $9.5 million. This resulted in the quintupling of the parkland in the city. Other new parks in New York City during the late nineteenth century included Brooklyn Forest Park (Forest Park, Queens), Lincoln Terrace, Bensonhurst Beach Park, Canarsie Beach Park, and Dyker Beach Park. At the same time the parks department created the Prospect Park–Coney Island Bicycle Pathway on Ocean Avenue (1894) and the Van Cortlandt Park Golf Course (1895), the first municipal course in the United States.

Following the 1898 consolidation of the boroughs, Manhattan had approximately 1300 park acres (526 hectares), Brooklyn and Queens had 1574 acres (637 hectares), the Bronx 4058 acres (1642 hectares), and Staten Island 3 acres (1.2 hectares). In addition to the continuous addition of small parks, recreation facilities expanded considerably during the twentieth century. A kindergarten and gymnasium were opened in Hamilton Fish Park, and the first children's farm garden (which introduced children to country living) was established in DeWitt Clinton Park in 1902.

Robert F. Wagner Park, 2009

In October 1903 Seward Park on the Lower East Side became the first municipal park in the country to be equipped with a permanent playground; the Bureau of Recreation in the parks department began in 1911, and by 1915, 70 PLAYGROUNDS existed.

During the second and third decades of the twentieth century interborough athletic championships drew as many as 10,000 spectators to city parks, which also became the sites of outdoor concerts, historical pageants, and film showings. The Park Association of New York City, a privately sponsored advocacy group, began in 1926; it later evolved into the Parks Council (incorporated in 1970). Efforts continued to add park space during the 1920s, particularly in the growing areas of the outer boroughs; new parks in Queens included Cunningham Park (350 acres [142 hectares]) and Alley Pond Park (654 acres [265 hectares]), and in Staten Island, Clove Lakes (195 acres [79 hectares]), Wolfe's Pond (317 acres [128 hectares]), and La Tourette (550 acres [223 hectares]) Parks.

Robert Moses became parks commissioner in 1934 and consolidated the separate borough departments. He formed a large professional staff and with federal relief work funds employed tens of thousands of laborers. Over the ensuing decade he oversaw the building and opening of hundreds of new playgrounds and 11 large outdoor pools, the improvement of miles of beachfront, and the rising of Flushing Meadows Park (now FLUSHING MEADOWS–CORONA PARK) on what had once been industrial ash heaps. Outlying areas such as Jamaica Bay and Marine Park were rescued from development and kept in a largely natural state. Construction slowed during World War II, but in the 1950s new indoor recreation centers in Brownsville, Bedford–Stuyvesant, and Mott Haven addressed the need for year-round places of play in poor, underserved neighborhoods. By the time Moses retired from his position in 1960 the parks system had nearly tripled in size.

Many experiments were introduced in the late 1960s as land grew more scarce. Under Park Commissioner August Heckscher, ten vest pocket parks opened in 1967 in vacant city lots of one-quarter acre or less. The Thomas Pell Wildlife Refuge in Pelham Bay Park, the second such refuge in the city, was created in 1967; and new types of equipment were tried in "adventure" playgrounds. Central Park and the other large parks hosted concerts and other events. Growing concern for the environment and a desire to preserve forests and wetlands led to the securing of the Greenbelt in Staten Island and Udalls Cove in Queens. The decline in port traffic inspired proposals to build waterfront parks, while a greater concern for existing parks gave rise to private groups such as the Central Park Conservancy. In the 1980s citizen advocacy groups came into being to help support parks. In the early 1990s three urban parks opened with the sponsorship of the state and public authorities: Riverbank State Park (May 1993), occupying 28 acres (11.3 hectares) atop a waste treatment plant in Harlem; Octagon Park (October 1992), a sports complex and community garden of fifteen acres at the northern end of Roosevelt Island; and Hudson River Park (June 1992), an 8-acre (3.2-hectare) park in lower Manhattan with a fine view of New York Harbor.

Hudson River Park, 2009

At the start of the twenty-first century, New York City had more than 1700 parks, playgrounds, and recreation facilities across the five boroughs. The largest parks are Pelham Bay Park, Bronx (2765 acres/1119 hectares); Greenbelt, Staten Island (1778 acres/720 hectares); Flushing Meadows–Corona Park, Queens (1255 acres/508 hectares); Van Cortlandt Park, Bronx (1446 acres/585 hectares); Central Park, Manhattan (844 acres/342 hectares); Marine Park, Brooklyn (798 acres/323 hectares); Bronx Park, Bronx (718 acres/291 hectares); Alley Pond Park, Queens (655 acres/265 hectares); Franklin D. Roosevelt Boardwalk, South and Midland Beaches, Staten Island (638 acres/258 hectares); and Forest Park, Queens (544 acres/220 hectares). The parks system also supports 34 outdoor pools, 19 outdoor mini-pools, and 12 indoor pools. These evolved from the public baths created at the end of the nineteenth century, which were used mostly for bathing but also swimming; by 1911 Manhattan had 12 bathhouses. In 2010 city parks supported six zoos; 14 miles of public beaches; 14 floating baths; ice skating facilities; lawn bowling, boules, and bocce (the most popular, located in 39 parks); running marathons; and numerous recreational activities ranging from chess to exercise.

Lisa Keller, Jonathan Kuhn

Parks, Sam(uel J.) (*b* County Down, Ireland, 1864; *d* Ossining, N.Y., 4 May 1904). Labor leader. He moved to Chicago in 1892 and to New York City in 1896, where he learned the housesmith's trade. Known for his enormous size and strength, he helped to win for the Housemiths and Bridgemen's Union an increase in the daily wage advance from $2.50 to $4.50 as he worked his way through the building trades. Later he was the president of the union and of the New York City Board of Building Trades and became a well-known racketeer, often sending workers out on strike to help a contractor destroy its competitors. He remained popular among union members because of his success at enforcing union rules, maintaining job security, and helping ironworkers to win wage advances and increases; through his efforts daily wages rose from $1.50 to $5. Parks was indicted for blackmail in 1903 and sentenced to two and a half years in prison, where he died.

Kerry Candaele

Park Slope. Neighborhood in northeastern Brooklyn (2000 pop. *ca* 62,200), bounded to the north by Fourth and Flatbush avenues, to the east by Flatbush Avenue and Prospect Park West, to the south by Prospect Park West and 15th Street, and to the west by Fourth Avenue. It was developed after Prospect Park was completed and street railways were extended to the area in the 1870s. Mansions and four-story row houses were built north of Ninth Street near Grand Army Plaza for professionals and entrepreneurs, many of whom used new streetcar lines that extended over the Brooklyn Bridge (1883) to travel to work in downtown Brooklyn and Manhattan. From about this time Prospect Park West from the plaza to First Street was known as the "gold coast." Modest row houses and apartment buildings were built west of Seventh Avenue and south of Ninth Street to house workers in local factories like that of Ansonia Clock at 12th Street and Seventh Avenue, which was the largest clock factory in the world. Development slowed about the time of World War I, when real estate firms took interest in open land south of Prospect Park that had become accessible by subway and automobile. The lower, less elegant working-class sections of Park Slope were largely Irish. The neighborhood became less fashionable after World War II with the increase of suburban settlement on Long Island. Working-class families moved into the residences in the northern

Brownstones on Carroll Street in Park Slope, 1991

sections, many of which were used as rooming houses.

In the 1960s Eighth Avenue between the plaza and First Street became known as "doctor's row," and in the following years row houses were bought cheaply and restored. A landmark district (the largest in Brooklyn) was formed in 1974 in an area containing about 1600 historic buildings and bounded by Flatbush Avenue, Prospect Park West, 14th Street, and Eighth Avenue. The Ansonia Clock factory was converted into a housing cooperative in 1982. The 14th Regiment Armory on Eighth Avenue became a women's shelter; its exterior was landmarked in 1998.

The commercial districts lie along Seventh Avenue and on Fifth Avenue, especially south of Ninth Street. Many noteworthy buildings are in the landmark district near Grand Army Plaza, including the Montauk Club (designed after the Ca' d'Oro in Venice) and Romanesque Revival and neoclassical row houses (many built before 1916) along side streets. The area attracted a small number of new immigrants in the 1980s, principally from the Dominican Republic and Jamaica. In the late twentieth century the population consisted of young professionals near Prospect Park, attracted by the proximity of the neighborhood to Manhattan and the low cost of housing; Latin Americans west of Seventh Avenue; and many Irish Americans in an enclave south of Ninth Street. By 2008 Park Slope had become the poster neighborhood for the revival and gentrification of Brooklyn as young families flocked to the neighborhood for its proximity to Prospect Park and its beautiful, increasingly expensive housing.

John J. Gallagher

Park Theatre. Theater on Park Row facing City Hall Park, designed by Joseph François Mangin and built in 1798. It became one of the city's most important entertainment venues, where English stock companies produced farces, musical plays, and melodramas and helped introduce the "star system" in the entertainment business. From 1825 the theater's custodian Edward Simpson staged operas and classical music performances, including the local premiere in 1839 of Beethoven's *Fidelio* and the debut in 1843 of the Norwegian violinist Ole Bull. The theater was destroyed by fire on 16 December 1848 and rebuilt as a row of retail shops.

See also Theater, §2.

Marc Ferris

Park Versailles. Disused name for a part of the eastern Bronx bounded to the north by East Tremont Avenue, to the east by White Plains Road, to the south by Westchester Avenue, and to the west by Croes Avenue. The area was once occupied by the Archer–Mapes farm, which was auctioned off in the 1860s, and was named by developers who believed that its wide, tree-lined avenues recalled the grounds of Versailles. In the early twenty-first century this neighborhood is often considered part of Parkchester.

John McNamara, *History in Asphalt: The Origin of Bronx Street and Place Names* (New York: Bronx County Historical Society, 1984)

Gary D. Hermalyn

Parkville. Neighborhood in central Brooklyn, bounded to the north by Ditmas Avenue, to the east by Coney Island Avenue, to the south by Avenue H and Walsh Court, and to the west by McDonald Avenue; it is considered part of Flatbush. Known as Greenfield until 1870, the United Freeman's Association laid out the neighborhood on land purchased in 1851 and 1852 from the Tredwell and Ditmas families. With Windsor Terrace it lay on both sides of what is now Ocean Parkway. After streets were plotted in 1853, the area became a comfortable, middle-class suburb of Brooklyn, largely Jewish and Italian. In the 1980s many immigrants from China moved to the neighborhood and its environs, as did smaller numbers of newcomers from the former Soviet Union, Italy, Israel, and Poland. In 2000 the population exceeded 45,000.

Ellen Marie Snyder-Grenier

parkways. Limited-access highways that are common in the New York metropolitan area and uncommon elsewhere in the United States, bordered and often divided by ribbons of land that are carefully landscaped with trees, grass, and other plantings. They are generally closed to trucks and commercial traffic and free of advertising billboards. The term was originally applied to the roads built for pedestrians and carriages in public parks at the end of the nineteenth century. The first modern parkway built for automobiles was the Bronx River Parkway (proposed in 1906, opened in 1923). By mid-century an innovative network of landscaped parkways spread throughout the New York City area, providing easy access within the city and to the farthest reaches of Westchester and Long Island. Many of these roads were built under the supervision of Robert Moses. Besides the Bronx River Parkway, other well-known examples in New York City are the Henry Hudson Parkway (1936), the Grand Central Parkway (1936), and the Belt Parkway (1940).

Owen D. Gutfreund

Parrish, (Frederick) Maxfield (*b* Philadelphia, 25 July 1870; *d* Plainfield, N.H., 30 March 1966). Painter and illustrator. Educated abroad and at Haverford College and the Pennsylvania Academy, he achieved his first commercial success with a cover for *Harper's Weekly* and was soon engaged by the magazines *Collier's, Scribner's,* and *Ladies' Home Journal;* he later illustrated such books as Edith Wharton's *Italian Villas* and Francis Turner Palgrave's *Golden Treasury* (1911). During the winter of 1918–19 he painted at 49 East 63rd Street. He became known for advertisements for tires, light bulbs, and Jell-O desserts and for a mural 28 feet (8.5 meters) long at the Hotel Knickerbocker, *Old King Cole*, depicting the legendary king of the nursery tale surrounded by his court; this was moved to the St. Regis Hotel in 1933 and became a favorite of New Yorkers for decades. An exhibition of his work was held at the Gallery of Modern Art in 1964. Parrish received the gold medal of the Architectural League.

parrots, wild. Bands of wild parrots have inhabited Brooklyn since the late 1960s. Of the species *Myiopsitta monachus,* also known as monk parakeets or Quaker parrots, they are thought to have escaped from John F. Kennedy Airport in the late 1960s en route from Argentina; other theories suggest that the birds escaped from pet stores or were released from the Brooklyn Botanic Gardens. The parrots were first sighted in the early 1970s and since then have lived in colonies at Brooklyn College and Green-Wood Cemetery; some parrots call Coney Island, Bay Ridge, and other Brooklyn neighborhoods home, and a few have ventured outside the borough to Pelham Bay Park in the Bronx. The birds were initially classified as an invasive species, and federal eradication teams were sent in 1973 to wipe them out, although one band living at Rikers Island mysteriously escaped its hunters. In 2006 Brooklyn parrot advocate Steve Baldwin created the Brooklyn Parrot Society, a nonprofit organization to educate the public about the birds. The parrots, which eat plants, berries, and pizza, continue to build their 400-pound (181-kilogram) nests atop the light poles of the Brooklyn College athletic field and the front gate of Green-Wood Cemetery.

Kate Lauber

Parsons [née Clews]**, Elsie (Worthington)** (*b* New York City, 27 Nov 1874; *d* New York City, 19 Dec 1941). Sociologist, anthropologist, and folklorist. Born to a wealthy and socially prominent family, she graduated from Barnard College in 1896 and earned a doctorate in sociology from Columbia University in 1899. Under the influence of Franz Boas she began to concentrate on anthropology about 1915, becoming known for her studies of the Indian tribes of the southwestern United States. She helped to found the New School for Social Research and the magazine the *New Republic* and was active in the salon of Mabel Dodge and other artistic and intellectual circles. Parsons was also a noted feminist, pacifist, and social critic. Her published writings include *The Family: An Ethnographical and Historical Outline with Descriptive Notes* (1906), *Mitla, Town of the Souls, and Other Zapoteco-Speaking Pueblos at Oaxaca, Mexico* (1936), and *Pueblo Indian Religion* (1939).

Parsons, William Barclay (*b* New York City, 15 April 1859; *d* New York City, 9 May 1932). Civil engineer. He graduated from Columbia University (AB 1879, civil engineering degree 1882). As the chief engineer for the Rapid Transit Commission of New York (1894–1905) he supervised the planning and construction of the city's first subway line, the Interborough Rapid Transit. A trustee of Columbia (from 1897) and later the chairman of the board of the Columbia Medical Hospital, he took an active role in establishing the university's campus in Morningside Heights at the turn of the century and in the building of Presbyterian Hospital. He was also a surveyor for the Chinese railway system (1898–99), the chief engineer for the Cape Cod Canal (1905–14), a consulting engineer for the Panama Canal (1905), and chairman of the Chicago Transit Commission. Parsons's practice was a forerunner of the firm of consulting engineers Parsons–Brinkerhoff. His published writings include *Track* (1885), *Turnouts* (1885), and *Robert Fulton and the Submarine* (1923). A vestryman at Trinity Church, he lived for many years at 35 East 50th Street.

Parsons School of Design. See Parsons The New School for Design.

Parsons The New School for Design. Private art school at Fifth Avenue and 13th Street in Manhattan, opened in 1896 as the Chase School of Art by the painter and art teacher William Merritt Chase. The school was known as the New York School for Fine and Applied Art when it was led from 1905 to 1930 by Frank Alvah Parsons (1866–1930), who shifted the emphasis away from painting and sculpture and toward design and the applied arts and introduced a unique curriculum that included courses in interior decoration, costume design, teacher training, and advertising design. By 1922 the school had established a full-time program in Paris that was the first program for study abroad supported by an American art institution. It was renamed Parsons School of Design in 1940. As of 2007 about 4000 students were enrolled at the school, which offers undergraduate and graduate degrees in design, the visual arts, and the fine arts. The work of students and of artists and designers from the United States and abroad is shown at the Parsons Exhibition Center, one of the largest public galleries in lower Manhattan. Parsons became an affiliate of the New School for Social Research in 1970 and was renamed Parsons The New School for Design in 2005.

Linda Elsroad

partisan press. An openly partisan form of journalism developed during the nineteenth century as political parties began to subsidize and control newspapers across the country and particularly in New York City. The *Evening Post,* a Federalist newspaper, was launched in the city in 1801 by Alexander Hamilton to counteract Republican opposition. John D. Burk, anti-Federalist editor of the *Time Piece,* feared prosecution for his political outspokenness under the Alien and Sedition Acts and went underground for two years. Both newspapers blurred the distinction between news and opinion and commonly printed party slogans on their mastheads. During the 1830s the *Evening Post* shifted its allegiance from the Federalists to the Democrats and lent critical political support to Andrew Jackson. Partisan journalism took its extreme form in short-lived campaign newspapers that existed solely to promote candidates, among them the Whig newspaper the *Log Cabin.* To counteract the domination of Democratic newspapers in New York City the Whigs founded the *New York Tribune* (1841), which by the 1870s turned Republican and engaged its opponent, the Democratic *World,* in heated partisan headline warfare. Journalists who displayed loyalty toward a party were often rewarded with lucrative state printing contracts and appointments to political office. The economic ties between the press and political parties weakened as newspapers increasingly relied on advertising for revenues, a trend that began in New York City in the middle of the nineteenth century. Although partisan journalism continued, editors such as Horace Greeley of the *New York Tribune* seized control of the political content of their newspapers from the parties. During the 1930s the labor press in New York City began promoting objective journalism, which it maintained would enable citizens to make independent political judgments. During the 1840s the use of wire services in New York City made news more homogeneous than before and partisan distortions more obvious. The *New York Times* led efforts to professionalize journalism in the 1870s by making objective, independent reporting its highest goal. It led a crusade against the Tweed Ring during 1870–71 and later against political parties themselves. Partisanship in journalism was further disclaimed by editors such as E. L. Godkin, who led a movement for liberal reform in the late nineteenth century. By the 1880s New York City emerged as a center of independent journalism, as large daily newspapers embraced objectivity and symbolically replaced partisan mastheads with ones extolling factuality.

Becky M. Nicolaides

Partisan Review. Quarterly magazine launched by the John Reed Club in 1935. It was reshaped in 1937 as an independent radical publication by Philip Rahv and William Phillips. The magazine challenged communist

domination of leftist thought, quickly becoming the most important forum for anti-Stalinism and the most influential publication of its kind in the nation. In May–June 1954 it sponsored an influential symposium, "Our Country and Our Culture," that included such participants as Norman Mailer, Reinhold Niebuhr, David Riesman, and Lionel Trilling. Its influence declined after 1960. Phillips remained the principal editor until just before his death in 2002; the magazine ceased publication the following year.

Partnership for New York City (i). Association for the development of New York City's economy. Formed on 5 April 1768 as the New York Chamber of Commerce by 20 merchants at Fraunces Tavern, it was granted a royal charter on 13 March 1770 by George III. It was the first business association in the city to be unaffiliated with any government body. From its earliest days the chamber mediated business disputes and supported public works and legislation that promoted business. Meetings were held at the Royal Exchange, the Merchants' Coffee House, the Tontine Coffee House, and the Merchants' Exchange; the first president was the Loyalist former mayor John Cruger. The chamber was an administrative base for the Loyalists until their defeat, and it subsequently lost power at the end of the war. It was reorganized on 13 April 1784 as the Chamber of Commerce of the State of New York. On 3 January 1786 it issued the first proposal for the Erie Canal.

Membership increased through the mid-nineteenth century, and the chamber was deeply engaged in the affairs of the city after the Civil War. It funded the Committee of Seventy, investigated the political corruption of the Tweed Ring, proposed the consolidation of New York City, and supported the establishment of a rapid transit system. It encouraged the development of the Catskill Aqueduct in 1912 and in 1916 proposed the formation of the Port of New York Authority. In November 1902 the chamber constructed its first building, a four-story structure of Vermont marble at 65 Liberty Street; after World War II, permanent staff members replaced volunteers.

In 1973 the chamber merged with the Commerce and Industry Association (formerly the Merchants' Association) and became the New York Chamber of Commerce and Industry. In 1979 David Rockefeller founded the New York Partnership; in 2002 the partnership and the chamber combined to form the Partnership for New York City, expanding the chamber's mission from business advocacy to a broader economic vision of the city. In 2010 the partnership was headquartered at One Battery Park Plaza; the chamber's archival records (1768–1973) are held at the Columbia University Rare Book and Manuscript Library.

Donald R. Stabile

Partnership for New York City (ii). Coalition of leaders in business, nonprofit organizations, and education formed in 1979 by David Rockefeller as the New York City Partnership to work with government agencies on economic development, education, and housing. It introduced a summer employment program for low-income youth and developed housing for middle-income families through the New York City Housing Partnership, formed in 1982. The organization has studied obstacles to development in the five boroughs, especially those posed by the environmental review process and those that discourage technologically advanced industries. In 2002 the New York City Partnership merged with the New York City Chamber of Commerce to form the Partnership for New York City.

Rosalie Genevro

Pastor, Tony [Antonio] (*b* New York City, 28 May 1837; *d* Queens, 26 Aug 1908). Theater manager and variety performer. He began singing at age six and started his stage career in 1846 at P. T. Barnum's American Museum. Pastor performed as a clown, minstrel, and comic singer before opening Tony Pastor's Opera House in 1865 at 201 Bowery. He opened Tony Pastor's New Fourteenth Street Theatre in 1881, where he promoted tamer vaudeville shows to appeal to women and families instead of the traditional male audiences. Pastor's innovations were widely imitated and he became called the "father of vaudeville" for his role in making it popular among mainstream audiences.

See also Vaudeville.

Ben Silk

Paterson, David A(lexander) (*b* Brooklyn, 20 May 1954). New York State governor. The son of politician Basil Patterson, he graduated from Columbia University in 1977 and Hofstra Law School in 1983. During 1983–85 he worked as an assistant district attorney in Queens County, in the Manhattan Borough President's Office, and in the administration of Mayor David Dinkins. In 1985 he was appointed to the New York State Assembly to serve out the remainder of a deceased senator's term and was later elected to the position, filling the seat once occupied by his father. In 2002 he became the minority leader of the state senate and was known as a consensus builder. In 2007 Patterson, who is legally blind, became the first African American lieutenant governor of New York under Governor Eliot Spitzer. Upon Spitzer's abrupt resignation from office in March 2008, Patterson succeeded as governor. He has long supported controversial issues such as stem cell research, voting rights to noncitizens, and the legal recognition of same-sex marriage.

Sherrill Wilson

PATH [Port Authority Trans-Hudson Corporation] **and PATH Station.** Fourteen-mile interstate rapid transit system that connects Manhattan with Hoboken, Jersey City, and Newark, New Jersey. Originally constructed between 1874 and 1909, under a progression of ownerships that overcame formidable engineering obstacles, it opened as the Hudson and Manhattan Railroad, more popularly known as the Hudson Tubes or H & M. Its two pairs of trans-Hudson tunnels were recognized as a pioneering engineering achievement. PATH uses subway-type third

PATH station, 2009

rail electric trains; its two Manhattan branches are a midtown route terminating at 33rd Street and Sixth Avenue (opened in 1908, including four additional stations between 23rd and Christopher streets) and a downtown route terminating at Hudson Terminal, the World Trade Center site (opened in 1909). The Holland and Lincoln tunnels, opened in 1927 and 1937, respectively, siphoned customers from the H & M, which experienced many years of financial difficulties culminating in its 1954 bankruptcy. In 1962 the Port Authority of New York and New Jersey bought the H & M, took over its operations, spent millions of dollars to repair and replace old infrastructure, purchased a new car fleet, and renamed the system PATH.

As part of the bistate compact that allowed the Port Authority to create PATH, it also built the World Trade Center complex in lower Manhattan atop the Hudson Terminal station. A brand new PATH station under the trade center complex opened in 1971. The terrorist attacks of 11 September 2001 destroyed the station and flooded the tunnels halfway to Exchange Place in Jersey City. Thanks to quick action by PATH employees, train service was immediately stopped at the onset of the attacks and all passengers in the station or en route to Manhattan were taken to New Jersey, so no PATH customers or employees were trapped on trains when the towers collapsed. For the next 26 months no service operated to the World Trade Center site; on 23 November 2003 a temporary station was opened. A permanent station will ultimately replace the 2003 facility when the entire site is rebuilt.

After celebrating its 100th anniversary in February 2008, PATH continues to be a vital transit link between Manhattan's business core and nearby New Jersey communities. Many PATH patrons transfer to commuter trains and buses at three major New Jersey hubs (Newark, Journal Square, and Hoboken). Approximately 227,000 weekday fares are collected; annual passenger trips in 2006 totaled nearly 67 million; the fare was $1.50 in 2007 and rose to $1.75 in March 2008, with discounted rates for regular riders. A new 340-car fleet is currently under construction and will replace all current (1965–1986) rolling stock.

Andrew Sparberg

Pathmark. Chain of supermarkets operated by the Great Atlantic and Pacific Tea Company and one of the 10 largest grocery chains in the United States. It was formed in 1968 under the direction of Milton Perlmutter by several members of the Wakefern Cooperative, which operated supermarkets in New York City and its environs under the name Shop Rite. The firm encouraged the operators of its stores to heed local preferences and also followed a policy of community involvement. In 1977 it entered into an agreement with the Bedford Stuyvesant Restoration Corporation to build a supermarket in one of the most severely depressed parts of Brooklyn. Pathmark opened a supermarket at Pike Slip in Manhattan in the mid-1980s after persuading local merchants that the store would help the local economy rather than drive competitors out of business. As of 2010 there were four Pathmark supermarkets in Manhattan, five in Brooklyn, three in the Bronx, two in Queens, and one in Staten Island.

Chad Ludington

Patrolmen's Benevolent Association of the City of New York [PBA]. Labor organization formed as a protective society in 1894 to assure proper burials for police officers who died during an influenza epidemic. In 1911 it won its first important legislative victory when it secured passage of a "three platoon" law, which replaced the system of two 12-hour work shifts with three eight-hour shifts; the law was amended in 1969 in order to allow for greater managerial flexibility in duty assignments. From 1914 to 1935 the president of the PBA was Joseph P. Moran; his retirement was followed by a period of instability that lasted until John E. Carton was elected president in 1947 by defeating Raymond Donovan, who advocated that the PBA break with tradition by declaring itself a union. In 1951 Donovan led a small faction of officers who joined the United Patrolmen's Association, an affiliate of the Transit Workers Union; their insurgency ended when the police commissioner, George P. Monaghan, threatened to take disciplinary action. Carton remained president until 1958 and won large pay increases for his men. His successor, John J. Cassese, soon revived the controversy over the formal status of the organization: he threatened to form an affiliation with the International Brotherhood of Teamsters, owing to the city's refusal in 1958 to have the PBA collect membership dues through payroll deductions, a source of operating income that most other municipal unions had been granted. In 1963 Mayor Robert F. Wagner extended this right to the PBA and recognized it as the exclusive collective bargaining unit for police officers. The years 1966 to 1973 were tumultuous, when the PBA became embroiled in a controversy over the creation of a civilian review board and firefighters and sanitation workers demanded pay parity with police officers. After Cassese retired in 1969 the PBA experienced another period of instability until Philip R. Caruso's election as president in 1980, which lasted until 1995. Since 2001 the union has been active in the passage of legislation that would provide benefits for deaths or injuries to officers that resulted from the terrorist attacks on the World Trade Center of 11 September 2001.

patronage. See Civil service.

pattern making. The first unsized clothing patterns appeared in fashion magazines in the early 1850s; sized patterns were introduced in 1864 and made it possible for amateur seamstresses and women working at home to produce fashionable clothes tailored to the wearer. During the second half of the nineteenth century the focus of the pattern business shifted to New York City when the three largest companies moved there (E. Butterick and Company, Madame Demorest, and McCall), as did several smaller ones. Patterns were a practical and economical alternative to drafting systems and dressmakers and became popular throughout the United States and Europe, especially among women who lived far from cities; Butterick's patterns sold for 10 to 75 cents each in 1867; Demorest's skirt and bodice patterns were as little as 30 cents each in 1877. At its height in the 1870s Demorest purchased 5000 reams of tissue paper and two million envelopes at a time and reportedly sold 50,000 copies of its most popular styles. Butterick sold between four and six million patterns annually. The pattern business helped to make New York City the fashion capital of the United States and to set national standards of style and taste by reinterpreting Parisian vogues for American consumers. Pattern manufacturers sometimes published fashion magazines: *Mme. Demorest's What to Wear, Demorest's Monthly Magazine,* and *The Quarterly Mirror of Fashion* by Demorest; *The Ladies' Quarterly Report of Fashions, The Metropolitan,* and *The Delineator* by Butterick; and *The Queen* and *The Bazar Dressmaker* by McCall. These reached a combined readership of nearly 400,000 by the 1880s. In the early twentieth century women's ready-made apparel replaced pattern making as the primary fashion enterprise in New York City, although home sewing remains a popular hobby. A few of the large pattern manufacturers are still in existence. McCall acquired Butterick and Vogue Patterns in 2001, and the company continues to provide high-quality patterns to home sewing enthusiasts. McCall Pattern Company maintains headquarters at 120 Broadway.

Wendy Gamber

Patterson, Alicia (*b* Chicago, 15 Oct 1906; *d* New York City, 2 July 1963). Newspaper editor and publisher. She learned the newspaper business from her father, Joseph Medill Patterson, founder of the *Daily News.* In a financial partnership with her husband, Harry Guggenheim, in 1940 she launched *Newsday,* a tabloid newspaper that she made into a powerful force on Long Island by means of local reporting, aggressive efforts to increase regular readership through home delivery, and coverage that treated the island as a unified political and economic region. In her later years she opposed the isolationist views of her father, who responded by reneging on plans to give her control of the *Daily News.*

Robert F. Keeler, *Newsday: A Candid History of the Respectable Tabloid* (New York: William Morrow, 1990)

Madeline Rogers

Patterson, Joseph Medill (*b* Chicago, 6 Jan 1879; *d* New York City, 26 May 1946). Newspaper publisher and father of Alicia Patterson, founder and editor of *Newsday*. A grandson of Joseph Medill, founder of the *Chicago Tribune,* and son of Robert Wilson Patterson, its editor in chief, he went to work as a reporter for the *Tribune* after graduating from Yale. Patterson was elected to the state legislature of Illinois in 1903, managed Eugene V. Debs's presidential campaign in 1908, wrote two novels, and had three of his plays produced on Broadway before returning to the *Tribune* as a coeditor in 1912. From 1914 he worked as a war correspondent in Mexico, Belgium, Germany, and China. In 1919 he launched the *Illustrated Daily News,* published in New York City while he remained in Chicago. Renamed the *Daily News,* the newspaper became the first successful American tabloid and by 1924 was the most popular newspaper in the United States, reaching 750,000 readers daily. In 1925 he moved to New York City to manage the newspaper full time. Circulation exceeded one million by 1926 and two million by 1940. As an editor Patterson was famous for paying his trusted employees high salaries and staying in touch with everyday New Yorkers, frequenting nightclubs in Coney Island, Times Square, and the Bowery. He served as a close adviser to President Franklin D. Roosevelt and defended Roosevelt's candidacy for a third term in 1940, winning him a Pulitzer Prize. The relationship between the two men deteriorated when Patterson espoused isolationism during World War II. He ran the *Daily News* until his death.

Patz, Etan (Kalil) (*b* Manhattan, 9 Oct 1972, *d* unknown). Six-year-old boy who disappeared on 25 May 1979 while walking from Prince Street in SoHo to the West Broadway school bus stop. His disappearance galvanized awareness of and gave rise to new legislation and new methods for tracking down missing children, most famously the milk cartons of the 1980s, which showed names and photos of lost children above law enforcement contact information. In 1983 President Ronald Reagan declared the day of Etan's disappearance, May 25, as National Missing Children's Day. The Patz family continued to live in the city after Etan's disappearance. His body was never discovered. He was declared legally dead in 2001, and in 2004 a Manhattan judge ruled that José Ramos, a convicted pedophile acquainted with a former babysitter for the Patz family, was responsible for Etan's death.

Kenneth T. Jackson

Paulding, James Kirke (*b* Great Nine Partners, Putnam County, N.Y., 22 Aug 1778; *d* New York City, 6 April 1860). Writer and naval officer, brother of William Paulding, Jr. He grew up in Tarrytown, New York, where he became a friend of Washington Irving; together they published the whimsical journal *Salmagundi* during 1807–8. Paulding soon wrote *The Diverting History of John Bull and Brother Jonathan* and poetry that he defended in *The United States and England* (1815). He was later appointed secretary of the navy commissioners (1815–23), naval agent for New York State (1824–38), and secretary of the navy (1838–41). His works include a life of George Washington, studies of the South, dozens of tales, and novels about New York City such as *The Dutchman's Fireside* and *The Old Continental.* He is buried in Green-Wood Cemetery in Brooklyn.

Larry J. Reynolds, *James Kirke Paulding* (Boston: Twayne, 1984)

James E. Mooney

Paulding, William, Jr. (*b* Tarrytown, N.Y., 7 March 1770; *d* Tarrytown, 11 Feb 1854). Congressman and mayor, brother of James Kirke Paulding. He practiced law in New York City for several years before his election to the U.S. House of Representatives as a Democrat from the twelfth district (1811–13). During the War of 1812 he was a brigadier general in the state militia. A delegate to the state constitutional convention of 1821, he was the state's adjutant general before his election as mayor in 1824; he remained in office until 1825, when he was replaced by Philip Hone, but won reelection and held office again from 1826 to 1829.

James E. Mooney

paving. The first recorded paving of a street in New Amsterdam took place in 1658, when at the request of nearby residents cobblestones were laid along what later became Stone Street between Whitehall and Broad streets. In May 1684 the Common Council ordered that principal streets be paved, the expense to be borne by the owners of adjacent property. Legislation passed on 20 May 1708 mandated stricter enforcement of paving regulations and noted that earlier measures had gone unheeded. In 1748 the streets of New York City were said by visitors to be spacious and well paved, but they were reported to be filthy and often impassable on 6 April 1787 when the state legislature granted the power to pave the streets to the

Paving blocks on 28th Street between Broadway and Sixth Avenue, 2 October 1930

Common Council. Legislation passed by the council in April 1789 imposed severe penalties for the breach of paving regulations. From the 1830s experiments were undertaken with different paving materials, including macadam, woodblocks, and cut stone block. Rectangular, granite paving stones called Belgian blocks and rectangular blocks made of trap stone became widespread in 1852, replacing the common round cobblestones. In 1876 there were 299 miles (481 kilometers) of paved streets in New York City, of which Belgian and trap blocks accounted for 146 miles (235 kilometers), cobblestones for 86 miles (138 kilometers), and other materials including concrete, wood, macadam, and gravel for 67 miles (108 kilometers). Asphalt pavement was introduced in the city in 1884 and represented a marked improvement over stone block, which was bumpy and noisy; it was officially adopted on 6 January 1890 for streets not extensively used for business purposes and remained in use more than a century later to pave the more than 6300 miles (10,100 kilometers) of streets and highways in the five boroughs.

Pavlova, Anna (Pavlovna) (*b* St. Petersburg, 12 Feb 1881; *d* The Hague, 23 Jan 1931). Dancer. She was trained at the Imperial School of Ballet in St. Petersburg. In 1909 her performance with Sergei Diaghilev's Ballets Russes was seen by Otto H. Kahn, director of the Metropolitan Opera, who signed her and her partner Mikhail Mordkin to a one-month contract; the two opened on 28 February 1910 in *Coppélia* to great success. Although Pavlova occasionally returned to Russia before World War I, she spent much of her career in New York City.

pawnshops. The first pawnshop in New York City was opened in 1822 at 25 Chatham Street by an Englishman named William Simpson. The many secondhand shops operated by usurers at the time also lent money on personal property, but unlike pawnshops they required customers to sign conditional bills of sale. Typically customers exchanged items such as jewelry or clothing for money and agreed to repay the amount borrowed plus interest to redeem their property, which those who could not pay would forfeit. Pawnbrokers appraised merchandise and gave their customers pawn tickets, which were either used to redeem pledges or sold to hock-ticket peddlers (pawnshops were also known as hockshops). In 1838 Simpson paid $5 for coats, $1 for watches, and 50 cents for pants. A typical business day in 1841 brought in 153 items valued at $655.71, and in 1842 his vault held jewelry on which $34,504.31 was lent. Other pawnshops soon opened and in time enjoyed a virtual monopoly of the lending field, in part by remaining open 24 hours a day. They ran the risk that the property they accepted would later be found to have been stolen, and they were sometimes embroiled in disputes over the ownership of valuables in businesses that were jointly owned. From 1891 to 1916 Simpson made $100,000 to $200,000 a year.

In the late 1980s pawnshops experienced a resurgence, as members of the middle class and the affluent turned to them during a period of layoffs, bankruptcies, foreclosures, tight credit, high medical bills, and costly divorce settlements. Nationwide the number of pawnshops increased by more than half from 1986 to 1991. At the same time there was a trend toward publicly owned operators of pawnshops, such as Cash American Investments and Ezcorp. Edward Lewis Wallant's novel *The Pawnbroker* (1961), which was made into a popular film, is set in New York City.

Mary Ann Romano

Payton, Philip A. (Jr.) (*b* Westfield, Mass., 1876; *d* Allenhurst, N.J., 29 Aug 1917). Businessman. A graduate of Livingston College (1898), he moved in 1899 to New York City, where as the president of the Afro-American Realty Company (incorporated 1904) he was the first real estate agent to rent apartments in Harlem to blacks. His success inspired other blacks to become real estate agents, including John E. Nail and Henry C. Parker. Afro-American Realty declared bankruptcy in 1908, after which Payton bought and managed buildings from an office at 67 West 134th Street.

Alana Erickson Coble

peace movements. Organized opposition to war began in New York City during the colonial period when Dutch Mennonites, Quakers, and Moravians from central Europe refused to take up arms or pay taxes specifically intended for war. On 14 August 1815 the Christian pacifist and wealthy merchant David Low Dodge formed the New York Peace Society, one of the first organizations in the world to hold the abolition of war as its single goal. The society condemned all warfare as opposed to the example of Jesus and insisted that all its members be affiliated with an evangelical church. A kindred organization, the American Peace Society (1828), had its headquarters for a time in New York City. The peace movement declined at the onset of the Civil War, as most of its adherents had an equally strong commitment to the crusade against slavery.

When the peace movement was revived in the late nineteenth century, its earlier religious basis was replaced by a secular internationalism. The emergence of New York City as a center of international finance and trade made many local businesspeople become more concerned with foreign affairs, and the New York Peace Society was revived; under Andrew Carnegie's leadership it soon became the largest branch of the American Peace Society. The society campaigned for the international arbitration treaties negotiated during the presidency of William Howard Taft and organized the highly successful National Arbitration and Peace Congress held in New York City on the eve of the conference at The Hague in 1907. The peace movement before World War I was mostly sustained by elites who sought to avoid a war among the great powers: they equated peace with the preservation of a stable international order and were generally accepting of the existing imperial system.

The outbreak of war produced an extraordinary transformation of the pacifist movement, as women emerged in leadership roles. On 29 August 1914 1500 women in mourning dress marched in silence down Fifth Avenue behind a large white banner depicting a dove holding an olive branch. A coalition of women's groups in 1915 formed the Woman's Peace Party under the leadership of Jane Addams and Carrie Chapman Catt; the group was founded in Washington, D.C., but had a very active branch in New York City. Many members were suffragists, and most believed that the nurturing role of women led them naturally to oppose violence and war. Ignoring the wrath of critics, they organized a conference at The Hague that brought together women from the warring nations. Leaders of the conference met with heads of state in an unsuccessful effort to mediate the conflict. In later years participants in the conference formed the Women's International League for Peace and Freedom, which had an active, sometimes faction-ridden chapter in New York City that remains active into the twenty-first century. Another activist organization, the American Union against Militarism (1916), grew out of a meeting of reformers at the Henry Street Settlement. Led by Lillian Wald and Paul Kellogg, editor of the magazine the *Survey,* the group argued that war would prevent the implementation of domestic reforms and sought to mobilize public pressure on President Woodrow Wilson to mediate among warring nations to end the conflict. A group of well-known internationalists led by Taft and A. Lawrence Lowell, the president of Harvard University, formed the League to Enforce Peace in 1915 during a series of meetings at the Century Club in New York City. The league urged that after the war nations should settle their disputes through an international tribunal, failing which it favored collective retaliation against offenders. The carnage in Europe lent weight to this message, and the league became the catalyst for the formation of a postwar league of nations.

U.S. entry into the war dealt a series of blows to organizations that had opposed it; many suffragists in the pacifist movement aided the war effort as a means of winning public support and gaining the vote, and the city's trade unions were faced with the choice between making gains by cooperating with the war effort and being persecuted for opposing it. After the war, internationalists in 1919 organized the League of Free Nations Association (which became the Foreign Policy Association in 1921); its program favored planned reconstruction, liberalized trade, and social democracy. Although some pacifists continued to press for U.S. membership in the League of Nations after the Senate blocked it, many others were discouraged by the punitive Treaty of Versailles and by postwar xenophobia.

During the 1920s and 1930s the Women's Peace Union, based primarily in New York City and led by Elinor Byrns, campaigned for a constitutional amendment that would limit U.S. participation in future wars. The Fellowship of Reconciliation, formed in 1915 in suburban Garden City, New York, advocated absolute pacifism; its leaders, including A. J. Muste and John Haynes Holmes, successfully appealed to many Protestant members of the clergy who had come to regret their enthusiasm for the war. Pacifist groups had substantial appeal during the 1930s until Hitler's stunning conquest of France and the Battle of Britain in 1940, and above all the Japanese attack on Pearl Harbor. Pacifists were now a tiny, embattled minority, their efforts reduced to protecting the rights of conscientious objectors.

With the end of World War II and the beginning of the atomic age many internationalists believed that U.S. membership in the United Nations was insufficient to achieve world peace. The United World Federalists, formed in 1947 at a convention in Asheville, North Carolina, by the end of the following year claimed 659 chapters and 40,000 members, many of whom were in New York City. The group advocated a world government with the authority to create an international police force, and it grew rapidly when it enlisted a number of scientists fearful of an atomic arms race. In 1957 Norman Cousins, editor of the *Saturday Review,* brought together at the Overseas Press Club in New York City a coalition of pacifists, liberals, and scientists disturbed by the dangers of radiation from atmospheric nuclear testing; the psychologist Erich Fromm named the group the Committee for a Sane Nuclear Policy (SANE). Peace activism was unpopular during the cold war. Critics demanded that SANE purge its ranks of communists, and when Cousins acquiesced some leaders like Linus Pauling resigned and several chapters in New York City refused to investigate their own members. SANE survived the purge but was weakened in the process.

President Lyndon B. Johnson's escalation of the Vietnam War led to protests from peace organizations, and opposition broadened when the demands imposed by the war led to the sacrifice of domestic programs. Residents of New York City organized candlelight vigils, public readings, "teach-ins" on college campuses, petition campaigns, and marches on Washington, D.C. Columbia University was the scene of a violent confrontation between students and police in 1968. Leading antiwar organizations active in the city included Women Strike for Peace, the Fifth Avenue Peace Parade Committee, Vietnam Veterans against the War, and Clergy and Laymen Concerned about Vietnam. President Richard M. Nixon's continuation of the war led to mass protests known as moratoriums in October and November 1969. The protests diminished only when Nixon began to withdraw forces from Vietnam and discontinued the military draft.

A widespread reluctance among Americans to become embroiled in military conflicts after the Vietnam War took some of the urgency from the peace movement, which in the 1980s focused its efforts on slowing the buildup in nuclear arms by the United States and the Soviet Union. One of the stronger organizations in New York City was Physicians for Social Responsibility, formed in 1982 in Boston. On 12 June 1982 peace advocates from every region of the country gathered in New York City for the United Nations Special Session on Disarmament, and nearly one million people marched from the United Nations to Central Park to call for a nuclear freeze.

During the crisis in the Persian Gulf in 1990 New York City was the focus of considerable dissent against President George H. W. Bush's decision to deploy troops. The calls for sanctions rather than war mirrored the debate taking place in the U.S. Congress. The reluctance among New Yorkers to support military conflict displayed its full form during the war in Iraq beginning in 2003; massive rallies and protests, some of the largest in recent history, took place in New York City, particularly after it was discovered that Iraq had no weapons of mass destruction and therefore the main reason the United States had entered into the war was based on false information. Despite lawsuits, protests, and starkly decreased numbers of supporters of the war, peace efforts had little effect on President George W. Bush's policy in Iraq.

Michael A. Lutzker

Peale, Norman Vincent (*b* Bowersville, Ohio, 31 May 1898; *d* Pawling, N.Y., 24 Dec 1993). Preacher, writer, and religious counselor. The son of a Methodist physician who became a minister, he lived in several small towns in Ohio during his childhood and attended Ohio Wesleyan University (BA 1920) and Boston University (MA, STM 1924); he was ordained a Methodist minister in 1922. After leading parishes in Rhode Island, Brooklyn, and Syracuse, New York, he became the pastor of Marble Collegiate Church on Fifth Avenue in 1932, where he developed "positive thinking," a program that blended popular psychology and Christian idiom into a practical philosophy that found many adherents, especially among professionals in Manhattan. Peale proposed that a willful and practiced change in attitude can bring about prosperity, inner peace, and health, views that he articulated in his book *The Power of Positive Thinking* (1952). As a member of various local organizations he opposed the New Deal in the 1930s, communism in the 1950s, and the presidential candidacy of John F. Kennedy in 1960. Despite such controversies he concentrated on spreading his message: he launched a radio program (which became nationally syndicated) and the monthly magazine *Guideposts* and also had a newspaper column, wrote more than 20 books, and gave many speeches. He was president of the Protestant Council of the City of New York from 1965 to 1969. Toward the end of his life Peale had the largest outpatient psychiatric clinic in the country and remained one of the country's best-known religious figures. In 1984 he received the Presidential Medal of Freedom.

James D. Bratt

Pecora, Ferdinand (*b* Nicosia, Italy, 6 Jan 1882; *d* New York City, 7 Dec 1971). Judge. He moved to New York City with his family in 1887 and later earned a degree from New York Law School. After working in the district attorney's office for 12 years he was appointed counsel to the committee on banking of the U.S. Senate in 1933–34; his investigations uncovered questionable practices on Wall Street and led to the passage of the securities acts of 1933 and 1934. He was the first director of the Securities and Exchange Commission, resigning to become a justice of the Supreme Court of New York. In 1950 he sought election as mayor. He was also counsel to the law firm of Schwartz and Frolich and a director of Freedom House. Pecora's writings include *Wall Street under Oath* (1939).

See also Civil Service Unions.

James E. Mooney

Peerce, Jan [Perelmuth, Jacob Pincus] (*b* New York City, 3 June 1904; *d* New York City,

15 Dec 1984). Tenor. After attending DeWitt Clinton High School and Columbia University, Peerce made his operatic debut in 1939 and first sang at the Metropolitan Opera in 1941 as Alfredo in *La Traviata.* His career encompassed 324 performances in 11 operas, including *La Bohème, Carmen,* and *Rigoletto.* A favorite of the conductor Arturo Toscanini, Peerce was known for his refinement and rich tone. He appeared in several movies and gave concerts into the 1970s. He was related by marriage to the tenor RICHARD TUCKER.

David J. Weiner

Pei, I(eoh) M(ing) (*b* Canton, China, 26 April 1917). Architect. After graduating from the Massachusetts Institute of Technology he began practicing architecture in New York City in 1939. In 1955 he formed I. M. Pei and Associates (now Pei Cobb Freed and Partners), one of the best-known architectural firms in the city. His projects in the city include the Jacob K. Javits Convention Center, the National Airlines Terminal at John F. Kennedy International Airport, New York University Plaza, and Kips Bay Plaza. His offices are at 600 Madison Avenue.

Elliot S. Meadows

Pelham Bay. Neighborhood in the northeastern Bronx, south of Pelham Parkway and east of Pelham Bay Park. It took shape about 1920 around a recently completed terminal station of Interborough Rapid Transit. The housing stock consists of brick apartment buildings dating from the 1920s and the years after World War II, along with some one-family houses. The population is mostly Italian and Irish. Westchester Avenue is the principal commercial thoroughfare. One well-known resident of Pelham Bay was George Meany, first president of the American Federation of Labor and Congress of Industrial Organizations (AFL–CIO); another was the author Cynthia Ozick.

Lloyd Ultan

Pelham Bay Park. Public park in the northeastern Bronx, bounded to the north by Westchester County, to the east by City Island and Long Island Sound, to the south by Watt Avenue and Bruckner Boulevard, and to the west by the Hutchinson River Parkway. Including Orchard Beach it comprises 2764 acres (1120 hectares), making it three times the size of Central Park in Manhattan and among parks in New York City second in area only to the Gateway National Recreation Area. The land was the site in 1776 of the Battle of Bell's Point, in which Colonel John Glover and his militia held off the Hessian army of Sir William Howe, allowing General George Washington and his army to escape to White Plains. It was acquired by the state legislature at the urging of the New York Park Association in 1888, when the surrounding area was largely undeveloped. Within the park are the Bartow–Pell Mansion (1836–42), the only surviving estate from among more than two dozen that once overlooked Pelham Bay; the Pelham Bay Golf Course (1914); and the Split Rock golf course (1936), which is named for a nearby boulder and Indian trail and has a clubhouse reminiscent of a mansion on a southern plantation. Orchard Beach, a large public bathing facility on Long Island Sound that opened in the mid-1930s by dredging of the nearby waters, links the mainland to Hunter's Island, now a wooded nature sanctuary. The inlet formerly connected to the sound became a lagoon where the trials for the U.S. Olympic rowing team were held in 1964. Pelham Bay Park has more than 9 miles (14 kilometers) of shoreline, two public golf courses, ballfields, bridle paths, tennis courts, nature preserves, and a firing range of the New York Police Department at Rodman's Neck; two important highways and the main line of Amtrak run through it.

PEN [Poets, Playwrights, Editors and Novelists]. International literary and human rights organization formed in 1921 by the English writer Catherine Amy Dawson as a dining club in London and later including 144 centers in 101 countries. Its activities in the United States are centered in New York City at the PEN American headquarters at 588 Broadway. The group often meets at the Salmagundi Club at 47 Fifth Avenue and produces the PEN World Voices Literary Festival each spring at such venues as the New York Public Library and the 92nd Street Y.

Anthony Gronowicz

Penfield, Edward (*b* Brooklyn, 2 June 1866; *d* Beacon, N.Y., 8 Feb 1925). Painter and illustrator. He studied at the Art Students League before working as the art editor of *Harper's New Monthly Magazine* in 1890, where he became famous for his placard illustrations. In his murals and posters he used designs based on Japanese principles of simplicity. He resigned in 1901 to devote himself to his own work, which included illustrating John Kendrick Bangs's book *Dreamers* (1899) and the books *Holland Sketches* (1907) and *Spanish Sketches* (1911). Penfield lived at 163 West 23rd Street and then in suburban Pelham Manor.

James E. Mooney

Penn Central Transportation Co. v. City of New York. Case decided in 1978 (438 U.S. 104) by the U.S. Supreme Court that upheld the application of the Landmarks Preservation Law of New York City to a proposed development involving Grand Central Terminal. The law prevented Penn Central, which owned the building, from constructing a 55-story office tower over the terminal and stripping off part of its facade. The court held that the restriction on the development, which did not interfere with the use of the terminal and permitted the owner to transfer the air rights over the terminal to other parcels of land in the vicinity, was "substantially related to the promotion of the general welfare" and did not constitute a "taking" of property without just compensation.

Richard Briffault

Pennington, J(ames) W(illiam) C(harles) (*b* Maryland, 1807; *d* Jacksonville, Fla., 20/22 Oct 1870). Minister and writer.

After escaping from slavery in Maryland about 1828 he was educated by Quakers, worked as a blacksmith, and was a pastor on Long Island, in Connecticut, and then at the First (Shiloh) Presbyterian Church on Prince Street in New York City (1847–55). A strong supporter of John Brown, he was among the most radical black ministers in antebellum New York City. He received the doctorate of divinity from the University of Heidelberg in 1851 and later wrote an important narrative of his years as a slave and a history of blacks in colonial America. In 1855 he helped to form the New York Legal Rights Association, which sued the city to secure the right for blacks to use public transit facilities.

Graham Hodges

Pennsylvania Hotel. See New York's Hotel Pennsylvania.

Pennsylvania Railroad. Railroad company, originally chartered in 1846 by the Commonwealth of Pennsylvania to build a rail line in that state. Through mergers and acquisitions the Pennsylvania Railroad (PRR) became the principal rail route between New York City and Philadelphia, Baltimore, and Washington, D.C. In 1871 PRR acquired control of railroads between Philadelphia and Jersey City, its original New York access, where barges and ferries transported freight and passengers to Manhattan and Brooklyn. In 1900 PRR purchased the Long Island Rail Road (LIRR), which facilitated construction of its New York Tunnel Extension Project, encompassing two tunnels between New Jersey and Manhattan, Pennsylvania Station, four tunnels under the East River, Sunnyside Yards in Long Island City, and use of electric power in this area. This massive civil engineering feat allowed PRR and LIRR trains direct access to Manhattan; it also grew to encompass the joint PRR/New Haven Railroad Hell Gate Bridge project (1917) between Queens and the Bronx, permitting direct rail service between Washington, D.C., and Boston.

Electric train power expanded between 1933 and 1938 to include the entire PRR New York/Philadelphia/Washington, D.C., route, solidifying PRR's dominance in this market. In 1966 PRR sold LIRR to New York State. Growing competition from air and highway travel caused PRR and the New York Central Railroad to merge in 1968 and form the Penn Central Railroad, which in turn declared bankruptcy in 1970; its long-distance passenger routes became part of the National Railroad Passenger Corporation (Amtrak) in 1971. In 1976 the U.S. government created the Consolidated Rail Corporation (Conrail) by merging Penn Central with five other northeastern railroads. Conrail operated former PRR commuter services between New York City and New Jersey until 1983; since then New Jersey Transit Corporation has controlled that service. Conrail's freight operation, in turn, was split in 1997 between the CSX and Norfolk Southern railroads.

George H. Burgess and Miles C. Kennedy, *Centennial History of the Pennsylvania Railroad Company* (Philadelphia: Pennsylvania Railroad Company, 1949); Carl W. Condit, *The Port of New York: A History of the Rail Terminal System from the Beginnings to Pennsylvania Station* (Chicago: University of Chicago Press, 1980)

Robert A. Olmsted, Andrew Sparberg

Pennsylvania Station [Penn Station].
Name used by a station of the Pennsylvania Railroad and later by a station of the National Railroad Passenger Corporation (Amtrak). The first of the two was designed by the firm of McKim, Mead and White and covered two blocks bounded by 31st and 33rd streets and Seventh and Eighth avenues. The Pennsylvania Railroad long wished to build a station in New York City to compete with Grand Central Terminal of the New York Central Railroad but could not build a bridge or tunnel across the Hudson River from its terminal in Hoboken, New Jersey. In the 1890s the use of electric tracks and advances in civil engineering permitted a tunnel to be dug to Manhattan. By 1895 Alexander Cassatt, president of the railroad, made plans for a station that would be the first in the United States to accommodate large-scale use of electric traction. McKim, Mead and White designed a monumental gateway to the city modeled after the Baths of Caracalla in ancient Rome and consistent with principles of the "city beautiful" movement: they provided for a rational distribution of space and traffic, took into account the civic function of the building, and incorporated references to classical precedents. Construction began in 1902 and was hastened by legislation in 1908 banning steam locomotion on passenger trains.

At its completion in 1911 the station facilitated the orderly movement of both commuters using the Long Island Rail Road and passengers traveling to New England and southern cities along the East Coast. Access streets running through the building enabled passengers and baggage to be let off and picked up with minimal disruption of city traffic. The tracks were laid below grade about 18 feet (6 meters) under a concourse for the Long Island Rail Road. Above this was the austere, monumental waiting room of the Pennsylvania Railroad, adjacent to a concourse of glass and wrought iron. Flights of stairs connected the various levels. A row of colossal Tuscan columns extended across the eastern frontage, behind which a shopping arcade led to the waiting room. The railroad decided in 1962 to replace the station with a new one, and despite heated objections from preservationists, Pennsylvania Station was demolished in 1965. This, together with threats to properties in Greenwich Village, resulted in the city forming the Landmarks Preservation Commission in 1965 and helped to spur a national interest in preserving historic buildings. Photographs of Pennsylvania Station survive in the work of Berenice Abbott and many others.

The second Pennsylvania Station was completed in 1968 in the same location as part of a complex that also houses Madison Square Garden and offices. The railroad functions are confined to the cramped basement levels. From 1992 through 2007 several schemes to redevelop the station were proposed. A proposal of October 2007 called for demolishing the existing Madison Square Garden and station and building in its place a new station with retail space; turning the post office into an adjunct station, post office, and new sports

Facade of Pennsylvania Station on Seventh Avenue, 1915

Interior of Pennsylvania Station, 1911

arena; and constructing new office towers on adjacent properties. Pennsylvania Station is the busiest train station in North America. Its 21 tracks handle more than 7.5 million passengers a year, sometimes at the rate of 1000 patrons every 90 seconds.

Mary Beth Betts

penny arcades. Enclosed areas in amusement parks and other bustling places filled with machines offering entertainment bought by dropping a coin (usually a penny) into a slot. They were well known at Coney Island as early as the 1880s. Some machines played a tune while model locomotives and steamboats ran in place; others depicted such sights as "Munich's Beer Drinking Festival," "The Island of Pango-Pango," "Mountain Climbing in Switzerland," and "Life among the Head Hunters in Borneo." Other machines allowed customers to measure the strength of their grip, the size of their chest, or the force of their punch; they could also view pictures of the golfer Bobby Jones demonstrating good form and scenes from fights between such well-known boxers as Jack Dempsey and Gene Tunney. For a dime the "photomat" produced framed portraits. The "love teller" rated a customer's capacity as a lover on a scale from hot to cold, and in other machines risqué scenes were shown under such titles as "Artists and Models," "Red Hot Momma," "Jazz Baby," "They Forgot to Lower the Curtain," "The Girls and the Burglar," "Cleo, Queen of the Harem," "The Chemise Girl," "The Queen of Sin," and "Bare in the Bear Skin." Machines also told fortunes and provided horoscopes. To the dismay of some, penny arcades and burlesque theaters moved to the formerly elegant area around Times Square during the Depression. The arcades survived in slightly altered form into the 1960s until they finally disappeared with the advent of more sophisticated electronic machines.

James O. Drummond

penny papers. Term used to describe the mass circulation daily newspapers that revolutionized American journalism during the 1830s; New York City played a dominant role in their development. The penny papers were intended to have broader popular appeal than the conventional political and mercantile daily newspapers that sold expensive annual subscriptions and catered to an elite readership. Horace Greeley's experimental newspaper the *Morning Post,* launched in January 1833 and sold at two cents a copy, was unsuccessful; but the *Sun,* begun in September of that year by Benjamin Day and priced at one cent, achieved an unparalleled circulation of 20,000 by 1835. Day's innovations included an avowedly nonpolitical editorial stance, a heavy emphasis on local crime and sports, and the use of NEWSBOYS to sell the *Sun* in the city's streets. The *Sun* inspired numerous imitators, the most successful of which were the *Transcript* (1834–39) and the *New York Herald* of James Gordon Bennett, Sr. Rising circulation led these newspapers to experiment with new forms of printing technology, such as steam power and presses with several cylinders. The most politically radical of the penny papers was George Henry Evans's *Man* (1834–35). Although often sympathetic to the city's working class, the *Sun,* the *Transcript,* and the *New York Herald* were racist and sometimes nativist. Their sensationalistic exploitation of murder trials led to boycotts and denunciations of the "gutter press," and their editorial attacks prompted numerous libel suits. At the same time they competed to obtain the latest and most accurate national and international news by means of horse expresses, trains, and newsboats. The *New York Tribune* (1841) and the *New York Times* (1851) inaugurated an era of more restrained penny papers. Most of these newspapers eventually raised their daily price to two or three cents. The penny papers invigorated competitive news gathering in New York City, freed the press from the necessity of political partisanship, and created a new mass readership that included workers and artisans. Many of their innovations prefigured the methods of yellow journalism and the tabloids.

Steven H. Jaffe

Penthouse. Men's magazine launched in 1965 by Bob Guccione, a native of Brooklyn. It was originally introduced in England, and Guccione opened an office in New York City in 1969. The magazine's combination of nude photography and investigative journalism attracted a devoted following. Facing competition from Web sites during the 1990s, the magazine's circulation declined by nearly 50 percent, leading to bankruptcy and financial restructuring. New owners increased readership with greater emphasis on mainstream popular culture and greater Internet presence. It has offices at 2 Penn Plaza.

Robert Sanger Steel

People's Institute. Institute formed in New York City in 1897 by Charles Sprague Smith, a professor at Columbia University. It played a role in efforts by the state legislature to

improve the conditions of workers. Soon it focused on leisure as an important element of social progress and the elimination of crime. With the Women's Municipal League it investigated the spread of "cheap amusements" in the city, leading to the formation of the National Board of Review of Motion Pictures in 1908. It sponsored the Cooper Union Forum and the People's Symphony concerts, designated "play streets," offered discounted theater tickets, and set up community centers in public schools. The People's Institute closed in 1934.

Peter G. Buckley

people's token. Counterfeit of the bull's-eye subway token that circulated during 1986–95. Alan Campbell had made brass slugs since 1970, and he joined forces with Kim Gibbs, who owned a bicycle messenger business. Campbell produced the slugs in Paterson, New Jersey, and dropped them off at self-storage sites in Brooklyn; Gibbs's messenger business doubled as a distribution network known as the Ministry. The tokens were sold at prices ranging from 20 to 55 cents; a legitimate token was then $1.15. In 1991 the Ministry was selling 10,000 tokens a week. Campbell and Gibbs were arrested in June 1991. Campbell was convicted of two felonies and served 19 months; Gibbs was convicted of four felonies and served nearly six years. Despite the arrests, the people's token operation was continued by others; the fakes were still seen in circulation through 1995 when another design change ended their career.

See also Tokens.

John M. Kleeberg

People's Weekly World. Newspaper of the American Communist Party and historically the most influential newspaper of the American left. Known during its heyday as the *Daily Worker,* it was launched in Chicago in 1924 and moved to New York City in 1927. The newspaper wielded its greatest influence during the 1930s, when it had a circulation of more than 100,000 and defended the "Scottsboro boys." After the war many members of its staff were harassed and jailed by federal authorities. Absorbed in 1958 by the *Worker,* it resumed publication in 1968 as the *Daily World,* became the *People's Daily World* in 1986, and took its current name in 1990.

Anthony Gronowicz

Peppermint Lounge. Popular nightclub and celebrity haunt at 128 West 45th Street (1961–65), allegedly controlled by Matthew Ianniello, head of the Genovese crime family. The house band, Joey Dee and the Starliters, had a number-one hit in 1961 with the song "Peppermint Twist," and the club became closely associated with the Twist dance craze.

Caleb Smith

Pepsico. Conglomerate of snack-food and soft-drink makers and restaurateurs formed by the merger of the Pepsi-Cola Company and Frito-Lay in 1965. A forerunner was the Pepsi-Cola Company, which formulated the soft drink Pepsi-Cola in 1893. Under the direction of Alfred Steele and his wife, Joan Crawford, corporate headquarters were moved in 1948 from Long Island City in Queens to Manhattan. In 1998 the company merged with Tropicana. Another merger followed three years later when Pepsico acquired the Quaker Oats Company. As of 2008 the firm had annual sales of more than $35 billion and more than 185,000 employees. Pepsico has its headquarters in suburban Purchase, New York.

James O. Drummond

Perelman, S(idney) J(oseph) (*b* New York City, 1 Feb 1904; *d* New York City, 17 Oct 1979). Essayist and playwright. He grew up in Providence, Rhode Island, and after graduating from Brown University worked as a cartoonist for the weekly magazine *Judge* in New York City before devoting himself to writing. A master of language and wordplay, he contributed comic essays to the *New Yorker* from the 1930s to the 1970s, and with his wife, Laura West, he wrote the play *All Good Americans* (1933). He also wrote the musical *One Touch of Venus* (1943) and the play *The Beauty Part* (1962), as well as screenplays for the Marx Brothers' *Monkey Business* (1931) and *Horse Feathers* (1932); he won an Academy Award for his screenplay of *Around the World in Eighty Days* (1956). His published writings also include *Westward Ha!* (1948) and *Baby It's Cold Inside* (1970), in which he introduced the Irish poet Shameless McGonigle. Perelman lived at 134 West 11th Street from 1955 until 1966 and at the Gramercy Park Hotel (52 Gramercy Park North) from 1972.

Walter Friedman

performance art. Art form developed in the 1970s that combined elements from diverse media such as music, dance, sculpture, film, and videotape. It challenged the conception of art as a commodity and often blurred the boundary between performer and audience. A performance art event could be as short as several minutes (often dozens of short pieces were presented in an evening) or as long as several days. The roots of performance art may be traced to such art movements of the early twentieth century as constructivism, Futurism, Dada, and surrealism and more immediately to conceptual art, happenings, and the Fluxus movement, in which Dick Higgins, Alison Knowles, and Nam June Paik were leading figures in New York City from the 1950s to the 1970s. Performance art events took place in private, public, official, and unofficial spaces: the artist Jean Dupuy presided over many events at his loft at 405 East 13th Street and later at 537 Broadway; performers from many nations appeared in festivals and performance events at the Judson Memorial Baptist Church on Washington Square; the composer Charlie Morrow once led a band of players blowing conch shells through the Port Authority Bus Terminal; and one summer afternoon the "sanitation artist" Mierle Laderman Ukeles staged a "wedding" of two barges at a refuse transfer station on the Hudson River. Dancers such as Yvonne Rainer, Trisha Brown, Simone Forti, and Steve Paxton became known for a style of movement that drew on everyday gestures, and Vito Acconci staged "self-dramatizations": these included "Following Piece," in which he followed a person on the street chosen at random, and "Conversions," in which he burned off his chest hairs and hid his penis so that he could experience the sense of not being a man.

By the mid-1970s a second generation of performance artists appeared at small performance spaces and clubs in SoHo and Tribeca such as the Kitchen on Broome Street, Artist's Space, Franklin Furnace, the Mudd Club, TR 3, and Roulette. Feminist ideas influenced the performance art of Martha Wilson, Linda Montano, and Adrian Piper, who experimented with disguises and perceptions of women's appearance, and Vanalyne Green and Joan Jonas, who combined live and videotaped performances to examine the intersection of the personal and the political. A number of performance artists began their careers in obscurity in New York City and later became nationally known, among them Wilson, Piper, Laurie Anderson, and Michael Smith. Considered the most important historian and writer on the performance arts movement, RoseLee Goldberg founded PERFORMA, a nonprofit organization dedicated to the advancement of performance art, in 2004. The following year New York City hosted the first in what would become a biennial series, PERFORMA 2005. The festival lasted three weeks and included live performances, exhibitions, installations, film screenings, and symposia that were hosted throughout the city at prominent cultural venues. PERFORMA 07 also met critical success, as did PERFORMA 09, which featured more than 150 performances from artists around the world. One performance art group, the Upright Citizens Brigade Theatre, specialized in improvisational comedy. Housed at West 26th street, it spawned numerous projects, including Improv Everywhere. Founded in 2001 this group mobilized

members on the Internet to engage in large-scale, preplanned pranks. The most notorious was the annual No Pants! Subway Rides, an activity involving subway riders casually "depantsing" en masse during a rush hour subway commute. In 2009, 1200 New Yorkers participated, and several were arrested for disorderly conduct. New York City has also witnessed a resurgence in burlesque, an exotic dance that couples vaudeville entertainment and strip teasing that was prominent in the late nineteenth and early twentieth centuries. Prominent New York City performers included Julie Atlas Muz, Tigger!, the World Famous *BOB*, Dirty Martini, and newcomer Suspicious Package. Burlesque performances generally took place in East Village and Williamsburg venues such as Fez, RiFiFi, and Galapagos Art Space.

An important performance art venue was PS 122, a converted former schoolhouse in the East Village that hosted experimental art after 1980, particularly performance art that blurred the line between dance, theater, music, and performance. Other examples of theater-based performance art included Under the Radar, an annual festival hosting experimental theater from around the world, and Elevator Repair Service, a New York City–based experimental theater group. The major political performance art to emerge early in the twenty-first century was spearheaded by Reverend Billy (Bill Talen), a flamboyant faux preacher denouncing real estate overdevelopment in the city, including what he called the "Disneyfication" of Times Square. Reverend Billy founded the Church of Life after Shopping to denounce consumerism and materialism, and he ran for New York City mayor on the Green Party ticket in 2009. Although performance art flourished in its traditional bases, such as the West Village and East Village in Manhattan and Williamsburg in Brooklyn, there were many venues throughout the city.

Janos Marton, Kathleen Hulser

Performance Group. Theater troupe. It was started by director Richard Schechner in 1967 and originally based in The Performing Garage in the SoHo district at 33 Wooster Street. Drawing on the principles of the French Theatre of the Absurd, the Fluxus movement, and the happenings that in the preceding decade had explored new and innovative forms of theatrical expression, the Performance Group emphasized the organic creation of work that was both intellectually and socially challenging. Focusing on renegotiating the relationship between the audience and the performers through unconventional use of space and on the use of many forms of media in performance (the group's work was often referred to as "intermedia"), Schechner and his associates sought to break down the barriers between different artistic disciplines and combine them into a single theatrical experience. Productions ranged from presentation of new work to radical deconstructions of classical texts and were largely directed by Schechner, though others such as Joan MacIntosh, Elizabeth LeCompte, and Spalding Gray also directed and wrote for the group, often working off of cast improvisations to create their material. Among the works presented by the group were Schechner's *Dionysus in 69* (an adaptation of Euripides' *The Bacchae*) and Bertolt Brecht's *Mother Courage and Her Children* (1975). The group later dissolved, with many of its members going on to form the Wooster Group.

Patrick Barrett

Perkins, Frances (*b* Boston, 10 April 1880; *d* New York City, 14 May 1965). Reformer and public official. Brought up in Worcester, Massachusetts, and educated at Mount Holyoke College, she worked for the New York City Consumers League from 1910 and in 1912 prevailed on the state legislature to pass an important bill limiting the work week for women and children to 54 hours. Under the league's director Florence Kelley she investigated sanitary conditions in the city's bakeries and fire hazards in factories. After the Triangle Shirtwaist fire in 1911 she was an expert witness and later an inspector for the Factory Investigating Commission of the state legislature, which included Robert F. Wagner and Alfred E. Smith. In 1918 her concern over inadequate care for poor pregnant women and infants led her to help form the Maternity Center Association in New York City, for which she worked as an unpaid executive secretary. She became the first woman to hold high state office in New York in 1919 when Smith, now governor, appointed her to the Industrial Board (forerunner of the Department of Labor), citing her command of facts and figures. As Governor Franklin D. Roosevelt's industrial commissioner from 1928, her priorities included occupational health and safety, enforcement of workers' compensation, and an end to child labor. After Roosevelt became president in 1933 he named her secretary of labor, then the highest public office ever held by a woman in the nation. Perkins served until 1945, and as the head of the Committee on Economic Security she was a leading force behind the drafting of the Social Security Act. In Washington, D.C., the main building of the U.S. Department of Labor is named for her.

Marjory Potts

Perkins, (William) Maxwell (Everts) (*b* New York City, 20 Sept 1884; *d* Stamford, Conn., 17 June 1947). Editor. He attended Harvard University and in 1910 joined the advertising department at Charles Scribner's Sons in New York City, where he became an editor in 1914 and worked for the remainder of his career. After persuading the firm in 1919 to publish F. Scott Fitzgerald's *This Side of Paradise* he became the editor for such writers as Erskine Caldwell, Ernest Hemingway, James Jones, Ring Lardner, Marjorie Kinnan Rawlings, and Alan Paton. He is perhaps best known as the editor for Thomas Wolfe, whose manuscripts for *Look Homeward, Angel* (1929) and *Of Time and the River* (1935) he subjected to aggressive editing. Perkins's dedication to his authors and his insightful criticism set a standard for modern editors. From 1932 to 1938 Perkins lived at 246 East 49th Street in Manhattan.

Marc H. Aronson

Perlea, Ionel (*b* Ograda, Romania, 13 Dec 1900; *d* New York City, 29 July 1970). Conductor. He completed his studies in music in Germany and before World War II directed the Bucharest Opera. He moved to the United States in 1949 and soon made his American debut conducting *Tristan and Isolde* at the Metropolitan Opera in New York City. In 1952 he joined the faculty of the Manhattan School of Music where he taught until the end of his life. After a heart attack and a stroke paralyzed his right hand, he continued conducting using his left hand. Perlea made more than 50 recordings of orchestral works for Vox and RCA.

permits. See Public order.

Peruvians. The recorded settlement of Peruvian immigrants in New York City began in the early 1970s; there were about 40,000 in the city by the late 1980s, when many others arrived, fleeing terrorism and economic crisis in Peru. According to the Peruvian consulate about 100,000 Peruvians were living in the metropolitan area by the early 1990s. More than half of those lived in Queens, especially Sunnyside and Elmhurst. More than 27,000 more immigrants arrived in 2000. Many are professionals, especially physicians, and others work service industries, in manufacturing, and as domestic servants. Several weekly and monthly newspapers cater to Peruvians, among them *Nueva Imagen, Imagen del Sur,* and the *Prensa Peruana.* The feast of El Señor de los Milagros is celebrated with a street fair on West 53rd

Street in Manhattan during the last week of October.

Graciela M. Castex

Peter Cooper Village. Housing development in Manhattan (2000 pop. *ca* 5000), adjacent to Stuyvesant Town and bounded to the north by 23rd Street, to the east by Franklin D. Roosevelt Drive, to the south by 20th Street, and to the west by First Avenue. Planned in 1943 as part of a project to redevelop the Gashouse District, it was built by the Metropolitan Life Insurance Company to serve a middle-class constituency and was one of four such complexes they built; the others are Stuyvesant Town, Parkchester, and Riverton, and in total they provided 25,000 apartments. After more than 500 existing buildings in the area were demolished in the autumn of 1945, construction began on 21 apartment buildings ranging in height from 12 to 15 stories and containing 2495 apartments, many with a view of the East River. The development was landscaped with lawns, paths, and play areas adorned with trees and shrubs and offered 15 recreational facilities. The apartments were spacious, and rents were higher than Stuyvesant Town, attracting more prosperous tenants. The first tenants moved in on 1 August 1947, and by 1 June 1949 all the apartments had been leased. In 2008 Peter Cooper Village remained desirable because of its location, apartment size, and affordability. In October 2006 Metropolitan Life sold Stuyvesant Town and Peter Cooper Village to the real estate firm Tishman Speyer Properties for $5.4 billion, a record-high price for such a transaction. In 2010 the firm defaulted on its payments and creditors took over the property.

James O. Drummond

Peter Luger Steak House. Restaurant at 178 Broadway in Williamsburg, opened in 1887 as Charles Luger's Cafe, Billiards, and Bowling Alley. It is known for its white oak tables, wood-paneled walls, ornate pressed-tin ceilings, and what Alfred Hitchcock once called "the best steak in the world." For at least its first 120 years, it also had a reputation for not advertising and not accepting credit cards.

Kenneth T. Jackson

Peter Luger Steak House, 2009

Pete's Tavern, 2009

Pete's Tavern. Oldest continually operating drinking establishment in New York City, opened in 1864 on the corner of 18th Street and Irving Place, near Gramercy Park. The tavern once offered nightly lodging and stables for horses in addition to food and drink. It was a favorite meeting place of politicians connected with Tammany Hall, which was situated a few blocks south. At the turn of the century O. Henry lived in a nearby boarding house and spent many hours at the tavern, where he wrote *The Gift of the Magi* (1905). During Prohibition (1920–33) the front of the tavern was converted into a sham florist shop while in the back rooms, entered through a dummy refrigerator door, a speakeasy catered to local politicians. Pete's Tavern has been used in many television commercials and films, including parts of Milos Forman's *Ragtime* (1981).

Chad Ludington

Petit, Philippe (*b* Nemours, France, 13 August 1949). High-wire artist known for his 1974 walk across the twin towers in the World Trade Center. With a cable strung a quarter-mile above the street, 24-year-old Petit crossed seven times in 45 minutes before he surrendered to waiting police. Petit had been planning the crossing even before the towers were built. He said he had hatched the idea in 1968, when he was saw an article about the plans for the towers. Petit's adventure was made into a documentary film, *Man on Wire* (2008), which won an Oscar in 2009 in that category.

Meryl Cates

petroleum. The petroleum industry in New York City dates to 1859, when John D. Rockefeller, a partner in a small refinery, opened a sales office in the city after oil was discovered near Titusville, Pennsylvania. His brother William joined the firm and in 1867 moved to the city to handle domestic sales, develop foreign markets, and aggressively buy up shares in oil concerns. The firm eventually became the banker for the Standard Oil Alliance, which disbanded in 1882 to form several companies, including the Standard Oil Company of New York (Socony). William Rockefeller was named president of Socony and soon merged with the firm of Charles Pratt. By 1899 Socony was the most important company in the Standard Oil network. In later years the growth of the oil industry in New York City was hindered by adverse state laws governing joint stock companies and partnerships. Despite these obstacles the city's oil businesses flourished. Many oil corporations availed themselves of more lenient corporate laws in New Jersey and Delaware while transacting most of their business in New York City. Among these were two of the giants in the industry, Mobil Oil and the Exxon Corporation, descendents of Socony, although both these firms moved away in 1990, later merging to form ExxonMobil. Oil refineries operated in the city from the 1860s, and in the early twenty-first century several remained on Newtown Creek, where ExxonMobil was involved with one of the largest underground oil spills in history.

Bennett H. Wall

Petrosino, Joseph (*b* Padula [now in Italy], 30 April 1860; *d* Palermo, Sicily, 12 March 1909). Detective. He immigrated to the

United States in 1873, settling in New York City, and became a police officer on 19 October 1883 and a detective on 20 July 1895. In December 1908 he was appointed to lead a secret service charged with eliminating the criminal organization known as the Black Hand. His work disproved the widespread notion that there was an international criminal syndicate based in Sicily that had a branch in the city. Petrosino was murdered while checking criminal records in Palermo during a deportation inquiry. The case remained unsolved; the most likely suspect, Don Vito Cascio Ferro, died in 1943. A small plaza just north of the old police headquarters at 240 Centre Street is dedicated to Petrosino's memory.

Mary Elizabeth Brown

Pfaff's Cellar. Basement restaurant and beer hall opened in 1856 by German restaurateur Charley Pfaff at 647 Broadway, then within the entertainment district. It became the meeting place of a famous roundtable led by Henry Clapp, editor and founder of the countercultural newspaper the *Saturday Press.* The members (as many as 30) called themselves bohemians, perhaps the first in the United States, and included actresses Ada Clare and Adah Isaacs Menken, journalist Horace Greeley, novelist William Dean Howells, political cartoonist Thomas Nast, and poet Walt Whitman. Pfaff's closed after the Civil War with northward expansion of the city. The building is extant and renovated.

Val Ginter

Pfizer. Firm of pharmaceutical manufacturers formed in Brooklyn in 1849 by Charles Pfizer and Charles Erhart, chemists trained in Germany. During the nineteenth century its main factory was at Bartlett Street and Harrison Avenue in Williamsburg, then a mostly German area; its administrative office was at 81 Maiden Lane in Manhattan. The firm was known for the fine quality of its chemicals, especially its santonin, tartaric acid, and citric acid, which it sold in bulk to pharmaceutical wholesalers. It was incorporated in 1900 but remained essentially a family business until 1942. During World War I the firm developed a method of producing citric acid with sugar (later molasses) rather than imported limes, and in the 1930s and 1940s its research led to the production of vitamins. During World War II the firm was part of a consortium led by the government to produce penicillin, which was scarce. The president of the company, John L. Smith, risked government sanctions by supplying penicillin to the physician Leo Lowe at Brooklyn Jewish Hospital. After the war the major products of the firm were vitamins and antibiotics (including Terramycin) rather than iodides, mercurials, and citric acid. The marketing of pharmaceuticals abroad began in 1946. Under its president John McKeen the firm during the 1950s and 1960s acquired manufacturers of petroleum, paints, rubber, composite metals, plastics, cosmetics, toiletries, and baby care products. International headquarters opened in 1961 on Second Avenue and 42nd Street. During the 1970s and 1980s John Powers and Ed Pratt oversaw the sale of divisions unrelated to the production of pharmaceutical, agricultural, consumer, and chemical products. The firm made 46 percent of its sales abroad in 1989, by which time it was the only pharmaceutical firm that continued to manufacture its products in New York City. Pfizer maintained an active relationship with New York City during the late twentieth century; it created affordable housing at the company's original facility in Williamsburg, and in 1989 donated and renovated an adjacent building to be used for the Beginning with Children Charter School. In return for maintaining and expanding its operations in New York City, in 2003 the administration of Mayor Michael Bloomberg granted Pfizer $46 million in tax cuts, but four years later Pfizer announced that it would close its Williamsburg facility, eliminating 600 jobs. In January 2008 Pfizer began to solicit proposals from private developers for the redevelopment of the Williamsburg site, with an emphasis on affordable housing and job creation. In response, Assemblyman Vito Lopez began calling for the city to acquire the site by eminent domain. The site's future in the early twenty-first century remained uncertain. Pfizer itself accrued $48.6 billion in revenues in 2007, with $7.5 billion spent on research and development.

David J. S. King

pharmaceuticals. The first pharmaceutical firm in New York City was formed in 1781 by Effingham Lawrence and survived well into the twentieth century as Schieffelin and Company. Five druggists were listed in the city directory of 1786: Lawrence and the firm of Besley and Goodwin on Pearl (Queen) Street, and Francis Wainwright, Timothy Hurse, and Oliver Hull in Hanover Square. By the early nineteenth century druggists stocked not only chemicals used to prepare medicines but such goods as glassware, oils, and paints. The most important of these early firms included Lawrence and Keese, J. A. and W. B. Post, Thomas S. Clark, John and William Penfold, John M. Bradhurst, R. and S. Murray, Silas Carle, and John C. Morrison. Medicines were produced in small laboratories attached to druggists' shops, and some firms eventually specialized in making common preparations on a large scale. Most pharmacies derived their preparations from plants and found a market for herbal remedies such as jalap, ipecac, sarsaparilla, and balsam. Firms kept pace with their European counterparts, introducing European drugs in the city soon after they were developed. In 1825, only five years after Pierre Joseph Pelletier and Joseph B. Caventou published their methods for isolating quinine from cinchona bark to treat malaria, John Currie set up a factory to produce quinine sulfate in New York City. Quinine extracted from cinchona bark remained an important product until synthetic antimalarial drugs were developed in the 1940s.

In the mid-nineteenth century the city became the national center of the pharmaceutical industry. Patent medicines such as William Brandeth's Life-Extension pills were manufactured and advertised there. The New York College of Pharmacy opened in 1829, and the firm of Olcott and McKesson (later McKesson and Robbins) was formed in 1833 to produce gelatin-coated pills. From 1846 a naval hospital in Brooklyn operated a laboratory to assure the purity of its medicines; production there increased between 1852 and 1856 during the tenure of E. R. Squibb, who formed a company in Brooklyn to continue his work after the naval laboratory ceased to be funded. In 1849 the firm of Pfizer and Company was formed in Brooklyn by Charles Pfizer and Charles F. Erhart, chemists trained in Germany. A shop for laboratory supplies was opened in 1851 at Third Avenue and 18th Street by Bernard G. Amend, once an assistant to the influential German chemist Justus Liebig; it was expanded by Amend and Carl Eimer in 1856 into one of the first prescription laboratories in the area. In 1885 Charles Robbins formed the New York Quinine and Chemical Works, which became a leading manufacturer of quinine. Foreign companies were attracted to the city by its port; among them was E. Merck, a German firm that established an agency in the city in 1890. The large local market prompted the William R. Warner Company and many other American firms to open sales offices, and the city became the largest center for distribution in the country.

During World War I American firms were spurred to develop synthetic substitutes for raw materials that had become difficult to import, such as limes for the manufacture of citric acid. After German companies (which had dominated the industry) and their patents ceased to be protected by law, the American branch of the Bayer Company was acquired by Sterling Products, incorporated in the city in 1901. American firms grew rapidly after the war and established active research laboratories. In the early twenty-first century several firms headquartered in the city, including Pfizer (which acquired Warner–Lambert in 2000) and Bristol–Myers Squibb (formed by a 1989 merger) remained national leaders, although commercial manufacturing,

research, and development gradually moved elsewhere. The city continued to be a center for pharmaceuticals administration, marketing, and finance, and educational institutions such as Rockefeller University and Columbia University remained top biological research and development centers.

Phelps Stokes Fund. Foundation organized in 1911 with a bequest from Caroline Phelps Stokes (1854–1909) to improve low-income housing in New York City and expand educational opportunities for American Indians, black Americans, Africans, and poor whites; it is one of the oldest foundations in the city. Members of the Phelps Stokes family served on the board of directors and played a major role in shaping the agenda of the fund, especially I. N. Phelps Stokes (member of the board from 1911 to 1938) and his brother Anson Phelps Stokes, Jr. (member from 1911 to 1946). Some of the first initiatives were studies of educational policy, aid to southern black colleges, and competitions for better housing design in New York City. The fund also subsidized James Ford's research for *Slums and Housing* (1936). After World War II it concentrated on social policy, seeking to better race relations and to encourage racially integrated housing in New York City. During the 1970s and 1980s it shifted its focus to broadening educational opportunities for American Indians and black South Africans. As of 2008 it ran the Smart Teachers as Role Models (STAR) program, which with the cooperation of the University of Michigan aims to diversify the population of future teachers.

Deborah S. Gardner

philanthropy. Philanthropy during the colonial period generally supplemented government funding and emphasized religion; notable gifts, often from Britain, to Trinity Church, King's College (later Columbia University), and New York Hospital were designed to advance the Church of England in America and met with criticism from New Yorkers who adhered to other religious traditions. Although the American Revolution created conditions that encouraged an expansion of private philanthropy, most early social welfare institutions received more government than philanthropic funds. These included the Humane Society (1787), which helped debtors and the poor; the African Free School (1787); New York Hospital (from 1791) and its Bloomingdale Asylum for the Insane (1821); the Free School Society (1805); the New York Orphan Society (1807); and the Society for the Prevention of Pauperism (1818). New York governments also subsidized colleges, and after 1815 the city provided space to learned societies and museums. Jacksonians, however, condemned such public subsidies as wasteful indulgence of dilettantes and evicted the societies in 1831, just as they cut municipal subsidies to nonprofit charities and sought to shift responsibility for social welfare from the city to private organizations, including workers' mutual benefit organizations.

Protestant revivals after 1816 made New York City the national center of a "benevolent empire" of new philanthropies such as the American Bible Society (1816), the American Tract Society (1825), and the New York Sunday School Union. Arthur and Lewis Tappan and other evangelicals financed abolitionists and many western colleges. Within the city, evangelicals (often women) created the Association for Improving the Condition of the Poor (1843) and the Five Points House of Industry (1854) as well as several Protestant schools and homes for orphans, widows, unwed mothers, the handicapped, and the unemployed. Nonevangelicals objected that these were sectarian, so Catholics (especially orders of nuns) and Jews accordingly created their own institutions (orphanages, schools, hospitals, and community centers), which evangelicals criticized in their turn. In 1875 the state sought to resolve religious conflicts by legislating that orphans go to institutions "of the same religious faith as the parents." Episcopalians generously supported many institutions within the mainstream; Quakers developed notable institutions for blacks and others excluded from the mainstream. From the 1870s William E. Dodge joined with other Protestant philanthropists in the national anti-"obscenity" and anti–birth control campaigns of Anthony Comstock's New York Society for the Suppression of Vice; Margaret Sanger and advocates of birth control eventually responded with the country's first family planning clinic in 1916.

Large fortunes enabled individual philanthropists to take striking initiatives. Robert Richard Randall's 1801 bequest enabled religious leaders to open Sailors' Snug Harbor, a home for elderly and disabled sailors on Staten Island. John Jacob Astor's 1849 will provided $400,000 for a library; Peter Cooper endowed the Cooper Union for the Advancement of Science and Art (1859) with wealth from his glue business. Individual gifts also created the Lenox Library (1870); the Pratt Institute (1886); limited-rent houses (1878–90) (predecessors of those funded by Alfred T. White of Brooklyn); Carnegie Hall (1891), which combined a gift with income-earning provision of service; and Rockefeller University (1901). From the 1880s several philanthropists made possible the expansion of Columbia University.

From the 1860s Democrats and Republicans alike restored the city's earlier pattern of government subsidies. The Central Park Commission provided city-owned land and subsidies to such private cultural institutions as the Metropolitan Museum of Art and the American Museum of Natural History; similar aid went later to the New York Zoological Society, the New York Botanical Garden, the Brooklyn Museum, and the Brooklyn Botanical Garden. Under William M. "Boss" Tweed's "welfare program" of the late 1860s, private welfare organizations received subsidies from the city.

Women played key roles in nineteenth-century philanthropy and led the two most important efforts to reorganize it at the century's end. The State Charities Aid Association, under Louisa Lee Schuyler, monitored both government agencies and private charities. In 1899 it argued that appropriations to private charities discouraged them from gaining private support and deprived public hospitals of needed funds. The Charity Organization Society of the City of New York (1882), founded by Josephine Shaw Lowell, coordinated Protestant charities (and to some extent Jewish and Catholic ones) through the annual *Charities Directory* and a clearinghouse for aid applications at the central United Charities Building (donated by John S. Kennedy). Its New York School of Social Work worked closely with the Russell Sage Foundation. Parallel and separate Jewish organizations included the United Hebrew Charities, which had its own building not far from the United Charities Building. The Catholic Charities of the Archdiocese of New York (1920) and a similar organization in the Diocese of Brooklyn appeared at the same time. Organization along religious lines, especially those providing services for children and families, characterized New York City philanthropy, as did the presence of strong mutual benefit organizations ranging from the Workmen's Circle, which served Yiddish-speaking residents, to black churches.

Throughout much of the nineteenth century the law and the courts of New York State discouraged endowments, forcing nonprofit organizations to rely on annual contributions. "Charity balls" grew so prominent by the 1880s that they were less important in fund raising than in establishing membership in "society." New legislation passed after the disputed probate of the estate of Samuel J. Tilden made it easier to create endowments and for the first time legalized general-purpose foundations. During the first half of the twentieth century the several Rockefeller and Carnegie foundations led others in making New York City the national center for foundation activity and connecting philanthropic work in medicine, science, higher education, and the arts in the United States with that in the rest of the world.

Some philanthropic efforts aimed at specific religious communities: Beth Israel Hospital and Yeshiva University were identified with Jews from eastern Europe; Catholics built Fordham and St. John's universities and an

extensive system of parochial schools; and each religious community developed its own seminaries. Yet on the whole large-scale philanthropy did not become organized along ethnic lines, even as black, Latin American, and Asian New Yorkers became increasingly prominent. Some Catholics and Jews, like many Protestants, shifted their focus from religion to the more secular fields of education, medicine, science, and the arts. The highly publicized philanthropy of J. P. Morgan, Henry Clay Frick, and others benefited art museums; the Museum of Modern Art, the Solomon R. Guggenheim Museum, and the Whitney Museum of American Art celebrated art that appealed to their donors; Rockefeller family philanthropy created the Cloisters and the Asia Society and contributed to Lincoln Center; and banker Robert Lehman put a personal stamp on the Metropolitan Museum of Art by donating thousands of works of art to its collection. Another group of major donors supported the renewal of old institutions, notably Elmer Holmes Bobst and Laurence Tisch (New York University) and Lila Acheson Wallace and Brooke Astor (the New York Public Library).

After World War II New York City's position as the country's philanthropic center grew stronger when the library of the Russell Sage Foundation evolved into the Foundation Center in 1947, the Ford Foundation (in 1953) and others moved to the city, and big business developed corporate foundations. At the same time national policy reinforced the city's strong traditions of government and private philanthropy. Antipoverty programs begun in the 1960s (including Harlem Youth Opportunities Limited, Mobilization for Youth, and the Bedford Stuyvesant Restoration Corporation) received support from the Ford Foundation and private donors. By the 1960s social service organizations became more dependent on federal than on municipal or private funds. In the 1980s and later, "Friends" groups, supported by both philanthropy and business, formed for many city parks, but 31 of the city's museums and performing arts organizations continued to rely somewhat on municipal subsidies.

Together, government and private philanthropy created in New York City the nation's largest nonprofit sector of privately managed educational, cultural, medical, and social service organizations. By the early twenty-first century the 9000 largest New York City nonprofits spent a total of $43 billion and provided one job in every seven, more than 525,000, and were growing quickly. They continued to receive a third or more of their income from current philanthropy and endowments and to benefit from the work of thousands of volunteers. The metropolitan region accounted for 17 percent of the nation's nonprofit activity, twice its share of population. New York philanthropy continued to be diverse and decentralized, although the rise of wealthy philanthropists on the West Coast to some extent balanced New York's position by the early twenty-first century.

David C. Hammack

Philip Morris. Firm of tobacco and food processors. Initially a British firm, it opened its first branch in the United States on Broad Street in New York City in 1902 and became a publicly traded U.S. company in 1919. After moving several times during the next few years it set up headquarters in 1929 at Fifth Avenue near 21st Street. The firm and its products soon became widely known through a number of clever advertising themes, including the "call for Philip Morris" by Johnny the bellhop (first given in the lobby of the Hotel New Yorker in 1933) and the "Marlboro man" (begun in 1955 and lasting into the 1990s). Marlboro became the most popular brand of cigarette in the world, and during the 1960s the firm expanded, buying several tobacco companies in Britain and the United States. By the 1970s the company entered other industries, including brewing and soft-drink and paper manufacturing. The firm erected a 26-story building at Park Avenue and 41st Street for its headquarters in 1980. During the next decade it made several leveraged buyouts that permitted it to acquire such firms as General Foods and Kraft. To combat antismoking legislation it made a determined and highly controversial defense of the "right to smoke." Throughout the last decade of the twentieth century Philip Morris faced various lawsuits brought by current and former smokers. Because of the pressure of a federal investigation the company admitted in 1999 that smoking increases the risk of cancer and other serious illnesses. It later launched a corporate responsibility initiative that assists smokers wanting to quit and encourages parents to talk to their children about the dangers of smoking. In 2003 Philip Morris changed its name to the Altria Group in an effort to distance itself from tobacco litigation. In 2008 the Altria Group moved its headquarters to Virginia.

James Bradley

Philipse, Frederick [Flypsen, Vredrych] (*b* Bolswaert [now Bolsward], Netherlands, 1626; *d* New York City, 6 Nov 1702). Political and mercantile leader. He settled in New Amsterdam in the 1640s as a carpenter, or master builder, rose rapidly within the community, and by 1658 began purchasing land in Manhattan. His marriage about late 1662 to Margaret Hardenbroeck De Vries, a wealthy widow from a family engaged in international shipping, increased his wealth, his fleet, and his contacts, and he became a prosperous merchant with a residence on De Brower Straat (Stone Street). When the English came to power, he swore allegiance to the Crown and anglicized the spelling of his name. His loyalty and wealth brought appointment to many local offices, including a seat on the governor's council from 1675 to 1699. During Leisler's Rebellion he withdrew from politics. His overseas activities included the importation of slaves and trade with pirates from Madagascar. With the profits he expanded his land holdings in Manhattan along with property to the north, and he obtained a patent for the Manor of Philipsburgh that recognized his control over lands from the northern tip of Manhattan to the Croton River. He adopted his first wife's daughter, Maria, renamed Eva, who later married Jacobus Van Cortlandt, the brother of his second wife, Catherine (1652–1730). He gave the couple a farm on land that now makes up a large part of Van Cortlandt Park.

Phipps Houses. Nonprofit foundation formed about 1905 by the philanthropist Henry Phipps to build model tenements. Its first undertaking was a tenement designed by Grosvenor Atterbury on East 31st Street in Manhattan. In 1911 it built a similar complex between West 63rd and 64th streets in Manhattan (Whitfield and King, architects); the interior design influenced plans for other low-income apartments. In 1928 the foundation built the Phipps Garden Apartments in Sunnyside Gardens, a complex of four- to six-story buildings surrounding a courtyard, designed by Isador Rosenfeld. Phipps Houses was one of few associations of its kind to survive the Depression and changing real estate markets after World War II. In 1973 it built the Lambert Houses, a six-story apartment complex in the Bronx with a shopping plaza and parking garage, designed by the firm of Davis, Brody and situated on Boston Road between Bronx Park South and East Tremont Avenue. Phipps Houses continue to sponsor and develop housing for low- and moderate-income families in the early twenty-first century.

Eric Wm. Allison

Phoenix House Foundation. Nonprofit agency formed in New York City in 1967 that treats teenagers and adults for drug and alcohol abuse. It was one of the first agencies to give treatment designed to address the underlying causes of addiction and to use only medical

supervision and psychological, vocational, and educational counseling. The foundation offers drug education and after-school drug intervention programs in schools as well as special programs for working adults, prisoners, and the homeless. In the early twenty-first century it had more than 30 residential and outpatient programs in the New York City area and treated about 2500 people a day. Its main office is at 164 West 74th Street in Manhattan.

Gilbert Tauber

Phoenixville. Name applied to BULLS HEAD when it was rebuilt after a fire at a seventeenth-century tavern.

photographic agencies. Firms supplying photographs to publishers and individuals appeared in New York City soon after photography was introduced. From the 1850s customers at the portrait gallery of MATHEW B. BRADY on Broadway were able to purchase photographs of well-known individuals that they selected from albums; Brady was unable to keep up with demand and had his most popular photographs printed by the firm of E. and H. T. Anthony. Edward Anthony (1818–88) and his brother Henry (1814–84) later distributed Brady's photographs, including many from his series documenting the Civil War. After 1888 the Anthonys' firm merged with the Scovill Manufacturing Company, a maker of photographic supplies, to form Ansco. Many commercial photographers earned a steady income documenting the architecture of the city. Some of the most prominent firms that provided architectural photographs were those of Underwood and Underwood, Joseph and Percy Byron, George P. Hall and Sons, Wurts Brothers, Gottscho–Schleisner, and F. S. Lincoln. Thomas Airviews, formed in 1936, was for more than five decades the best-known firm engaged in aerial photography: a collection of its prints and negatives at the New-York Historical Society includes some documenting the construction of Stuyvesant Town, Rockefeller Center, and the World Trade Center.

The popularity of photographic essays in magazines such as *Life* and *Look* led to the formation of several photographic agencies, including MAGNUM PHOTOS and Black Star. Magnum, formed in 1947 by the freelance photographers Robert Capa, Henri Cartier–Bresson, George Rodger, David (Chim) Seymour, and William Vandivert, became instrumental in protecting photographers' rights. Members retained control over the use of their photographs and ownership of their negatives; the high quality of their work attracted publishers. Stock photographic agencies were formed during the 1930s to supply photographs to publications. The BETTMANN ARCHIVE (1935) grew by purchasing collections from photographers and from newspapers that had ceased publication. In 1954 Helen Gee opened the Limelight Gallery/Cafe, the first gallery in the city devoted to photography, which became a popular meeting place for photographers before closing in 1961. The success of this space along with the Witkin Gallery (1969), run by Lee D. Witkin, led to the opening of other galleries. At the beginning of the twenty-first century more than 50 photographic agencies operated in New York City. Though they varied in size and focus, most agencies continued to concentrate on PHOTOJOURNALISM while relying on providing photographs for annual reports and other projects with large budgets. Stock photographic agencies continued to be an important source of historic photographs.

Dale L. Neighbors

photography. Always a world leader in photography, New York City was the site of experiments in late 1839 in daguerreotyping, a process for making a unique but reversed image on a plate coated with silver. Some of the first daguerreotypes of city scenes were made by Samuel F. B. Morse. John W. Draper (1811–82), a professor of chemistry at the University of the City of New York (now New York University), also claimed to be successful with the process (no examples by either survive). A negative-positive process on paper devised in 1839 attracted little interest in the city but was used by the French photographer Victor Prévost (active 1820–81) to photograph architecture in the city. In the following decades making daguerreotype portraits, sometimes by students of Morse, became a flourishing business. Concentrated along Broadway between Fulton and Canal streets, salons were opened by highly regarded portraitists, among them MATHEW B. BRADY and in the 1860s Jeremiah Gurney and the brothers Henry and Charles Meade. Eventually more than 70 firms offered a range of facilities and prices, and in 1856 the *Cosmopolitan Art Journal* reported that even "the humblest cottage" had "some beautiful image of friend and relative." During the 1840s ancillary businesses in the city made and distributed equipment and chemicals, besides photographs. The city also became a center for publishing photographs and works on photography: the first portfolio of portraits of national figures (1847), based on photographs by John Plumbe, Jr. (1809–57); *The History and Practice of the Art of Photography* (1849), by Henry Hunt Snelling (1817–97); the *Daguerreian Journal* (1850; later *Humphrey's Journal*); Brady's *Gallery of Illustrious Americans* (1851); and the *Photographic Art Journal* (1851), edited by Snelling.

About 1851 a process was introduced by which albumen paper prints were made from a negative of collodion and silver salts on glass. This supplanted the earlier processes and remained the most commonly used one in the city until the late 1880s. Portraitists in New York City were the first in the nation to use the new technology for commercial purposes. They responded to sharp competition and periods of economic depression between 1860 and 1890 by offering a choice of processes and a range of sizes and formats: ambrotypes, tintypes, cartes-de-visite, and cabinet- and imperial-sized portraits. Some photographers, including Brady and Napoleon Sarony, sold small and large prints of well-known people (President Abraham Lincoln maintained that a carte-de-visite portrait made during his visit to the city on 27 February 1860 by Brady helped him to win the presidential election). Sarony and one of his competitors, Jose Mora (active in the 1880s), paid well-known figures in the theater for the right to make and sell their portraits. After the Civil War periodicals published in the city relied increasingly on photographs, first as models for drawn illustrations and later in direct reproduction. The first lithographic transcription of a photograph for a newspaper appeared in the *Daily Graphic* in 1873. The halftone process plate was introduced in the late 1880s, and publishers soon became interested in recording with camera images what the *Illustrated American* called "contemporaneous history." Such images were eventually the most widely used kind of illustration, especially valued in the growing field of advertising. The development of new technology for printing coincided with the advent of social documentation in the slums of New York City. Among the first books to contain reproductions from halftone process plates was Jacob A. Riis's *How the Other Half Lives* (1890).

Scenes of the city were often photographed, especially views of midtown Manhattan, the Bowery and Broadway, and the waterfront along the East River. Photographs of the city were frequently used by real estate developers and illustrators and were also sold for use in stereoscopes. Well-known landscape photographers included Edward T. Anthony (1818–88) and John S. Johnston (active in the 1870s). After simplified equipment and procedures were introduced in the late 1880s views of the city were photographed by amateurs, who organized such groups as the Society of Amateur Photographers (later the Camera Club of New York) to promote pictorialism, or the practice of photography as an art form. Among those who photographed buildings and street life in the late nineteenth century were Alice Austen, Robert Bracklow (1849–1920), and ALFRED STIEGLITZ; they favored picturesque scenes reproduced in a "straight" style, with relatively little manual or chemical manipulation. As pictorialism evolved under Stieglitz's auspices within the group known as the Photo-Secession, some artistic photographers did use soft focus and hand retouching in their city views. Alvin Langdon Coburn (1882–1956) and Karl Struss (1886–1980) were members of

the Photo-Secession who sought to symbolize rather than depict the unique vitality of the city. Commercial photographs of the city continued to be produced by firms such as that of the Byron family (Joseph, 1844–1923, and Percy, 1878–1959), which supplied private patrons and publishers with photographs of many aspects of urban life, including the homes of the wealthy. Just before the turn of the twentieth century commercial portraiture suffered from a depressed economy and from the popularity of snapshots. It was revitalized by Gertrude Käsebier and Zaida Ben-Yusuf (active between 1896 and 1915), whose studios on Fifth Avenue catered to the wealthy and set an elegant style imitated into the 1920s by Arnold Genthe (1868–1942) and others. Documentary photographs by Lewis Hine and by Jessie Tarbox Beals were made in the early twentieth century to promote the social policies of the Progressive era.

After 1912 the pictorialist movement gave way to a modernist aesthetic that relied on abstraction and geometric form to portray the city as a vital center. Some of the best-known examples of the clean, precise modernist style occur in the early work of Charles Sheeler and Paul Strand (1890–1976), who photographed streets and buildings in the years surrounding 1920; together they made the first short art film about the city, *New York the Magnificent* (1921; later known as *Manhatta*). During the 1920s notable works by amateur photographers included portraits by Doris Ulmann (1882–1934) of Sinclair Lewis and other literary figures and by Carl Van Vechten of prominent black New Yorkers. Celebrity portraiture was later taken over by photographers working for magazines like *Vogue* and *Vanity Fair* and became linked with fashion photography. The sleekness of photographs by Edward Steichen and the surreal mystique of those by George Platt Lynes (1907–55) inspired such later photographers as Richard Avedon (1923–2004), Arnold Newman (*b* 1918), and Irving Penn (*b* 1917) to develop unique styles in their work with celebrities. Hine was one of few in the 1920s who considered working people suitable subjects for art photography. Neighborhood life was documented by such portraitists as James Van Der Zee (1886–1983), who photographed blacks in business and the professions in Harlem.

The establishment in Manhattan of major news bureaus, advertising agencies, and fashion and entertainment firms between 1925 and 1950 led to a greater role for photography in publishing. The color process Kodachrome was invented in 1935 by the musicians and amateur chemists Leopold Godowsky and Leopold Mannes, and after World War II color processes expanded and became increasingly popular. Photographic Agencies were formed, and Black Star, Underwood and Underwood, and Magnum Photos expanded the business and supplied specialized products.

Interest in social documentation revived during the 1930s. Late in the decade photographers abandoned pictorialist conventions to record the street life of working-class neighborhoods in projects under the aegis of the Photo League and the Works Progress Administration. Hine, Berenice Abbott (1898–1991), and Margaret Bourke–White (1904–71) were commissioned in the 1930s to photograph new skyscrapers, notably the Empire State, RCA, and Chrysler buildings; Abbott used her photographs to examine architectural connections and transformations in *Changing New York* (1939), for which text was provided by the art historian Elizabeth McCausland. In some of his last photographs of buildings in midtown Manhattan, Stieglitz expressed his deepest feelings about the city. At this time Walker Evans began photographing urban street scenes and street signs. Picture books about the city by such photographers as Alexander Alland (1902–89) and Andreas Feininger (*b* 1906) were also popular.

The launching of the magazines *Fortune, Life,* and *Look* in the late 1920s and 1930s helped to make New York City the center of photojournalism, which attracted among others Bourke–White, Feininger, and W. Eugene Smith (1918–78). The demand for photographs was great, and several photographers escaping upheaval in Europe found work in New York City–based publications as photojournalists, including Alfred Eisenstaedt, Philippe Halsman (1906–79), and André Kertész (1894–1985). City life also attracted unaffiliated photographers who supported their projects with exhibitions, publications, teaching, and grants. Helen Levitt (*b* 1918), Lisette Model (1906–83), and Walter Rosenblum (1919–2006) photographed street life almost exclusively; Diane Arbus (1923–71) and Bruce Davidson (*b* 1933) explored both public and more intimate happenings. A department of photography was set up in 1939 at the Museum of Modern Art, and photographs became widely considered worthy of collection and exhibition by other museums, galleries, dealers, and auction houses, some of which specialized in photographs. Encouraged by the respect accorded to photography, many photographers experimented with color, multiple exposure, and unusual scale; artists began to combine photographs with paint and other graphic media. Courses in photography and the history of photography were introduced into the curricula of major universities and art schools in the city, and publishers offered a greater number of books on photography. Centers for teaching, publication, and exhibition were established, among them the International Center for Photography, and the Aperture Foundation moved to the city in 1980. As new electronic imaging techniques were developed in the mid-1990s older methods of producing images by silver-based techniques were supplanted by digital methods. Black and white images became less common, as both amateur snapshot and professional photographers turned to color, which began to enliven newspaper reportage. In the early twenty-first century, with more than 100 galleries devoted to showing photographs, New York City continued to attract photographers and to be a center for producing, publishing, and distributing photographic art.

photojournalism. The use of photographs to convey news became important in New York City during the 1860s. *Frank Leslie's Illustrated News* and *Harper's Weekly* regularly illustrated articles with wood engravings adapted from daguerreotype portraits and other photographs. Photomechanical methods, in which photographic images are used directly in the preparation of ink printing plates, were employed as early as 1873 by experimental processes in the *Daily Graphic,* but photographs were not widely used in newspapers until a patent was granted in 1878 for the halftone process, which reduced continuous tones into patterns of dots and produced images of a quality similar to that of original photographs. By the turn of the twentieth century photojournalism was well established. Among early professionals were several women, including Jessie Tarbox Beals, the first female press photographer, who opened a studio in the city in 1905 and contributed often to the *New York Herald* and the *New York Tribune,* and Francis Benjamin Johnston (1864–1952), who was well known for her work before World War I and worked on many freelance assignments, including a documentation of the building of the New Theatre in 1909.

Photojournalism changed after small, handheld cameras with fast lenses were introduced in the 1920s, permitting photographers to take candid photographs and to cover news events as they happened. The new style of photojournalism led to the success of picture magazines, most of which had headquarters in the city and began publication during the 1930s and 1940s. One of the first was *Fortune* (1929), which engaged as its first staff photographer Margaret Bourke–White (1904–71), a former pupil at the Clarence White School of Photography who was admired for her simple, bold compositions. She executed many photographic essays on industrial and social subjects and was one of the first four staff photographers for *Life,* which used her photograph of Fort Peck Dam as the cover illustration for its first issue (23 November 1936). At its peak

Life had more than 40 staff photographers, including Alfred Eisenstaedt, Andreas Feininger (*b* 1906), and W. Eugene Smith (1918–78). Other magazines influential in the development of photojournalism were *Look, Focus,* and *Holiday.* The format of picture magazines led to the development of fashion photography and photography for advertising. In 1932 Anton Bruehl (1900–83) made some of the first color photographs for editorial work and advertisements under contract with Condé Nast. The work of Richard Avedon, Louise Dahl–Wolfe, and Paul Outerbridge was reproduced in *Vogue* and *Harper's Bazaar.*

By the middle of the twentieth century some of the most distinctive photojournalism in the city was the work of Weegee, whose gritty images were featured in the *Daily News.* By using a police radio he often reached crime scenes before the police and became renowned for his stark images of murders, fires, and the chaos of urban life. In 1945 he published *Naked City,* a collection of photographs of crime. Picture magazines declined during the 1960s after television began to provide immediate coverage of news. *Look* ceased publication in 1971, and *Life* in 1972. In the mid-1990s interest in photojournalism revived owing to the demand for images more vivid than those of television, and often photojournalists concentrated on issues of social reform. Photographic Agencies became important to photojournalism for directing photojournalists to parts of the world discussed in the news and matching photographers with buyers for their images. Magnum Photos (formed in the city in 1947) and other leading agencies helped to shape the future of photojournalism.

In the early twenty-first century, the increasing consumption of online news over print journalism, as well as the advent of inexpensive digital technology, transformed photojournalism, including in New York City. Amateur photojournalists, or "citizen photojournalists," abounded: for instance, on 11 September 2001 people watching the terrorist attacks on the World Trade Center took photographs with digital cameras and cell phones that were published in print and online and shown in television news broadcasts.

Dale L. Neighbors

Photo League. Group formed by photographers in 1936 to document working-class life in New York City and to photograph social and political events from a radical ideological perspective. Eventually it attracted photographers with a more diverse political perspective, including Berenice Abbott, Dorothea Lange, Beaumont Newhall, Nancy Newhall, W. Eugene Smith, Paul Strand, and Edward Weston, who considered the Photo League a lively alternative to the conservatism of the Camera Club of New York and the Pictorial Society of America. It sponsored projects concerned with city life; it also had a gallery and publication. In a school directed by Sid Grossman amateurs learned about basic problems in documentation by involving themselves in executing structured projects such as "Men at Work," supervised by Lewis Hine, and the Harlem Document, supervised by Aaron Siskind; pupils included Morris Engel, Arthur Leipzig, Walter Rosenblum, and Dan Weiner. The avant-garde photographers John Heartfield and Barbara Morgan and the photojournalist Weegee were among those whose work was exhibited at the gallery. The publication *Photo Notes* informed members of activities and published criticism by Elizabeth McCausland, the Newhalls, and Strand, among others. At its peak in 1948 the Photo League found itself listed as a "subversive" organization and in 1952 was forced to close.

Naomi Rosenblum

phrenology. Pseudoscience that purports to analyze character by studying the shape of the skull. It was introduced to New York City in 1835 by the brothers Lorenzo and Orson Squire Fowler, who opened an office, museum, lecture hall, and examination room at 135 Nassau Street, a brick building called

American Phrenological Journal, *May 1847*

Clinton Hall. In the same year Orson Fowler published the book *Phrenology Proved, Illustrated and Applied,* which sold tens of thousands of copies and went through 62 editions during the next two decades. The business of "practical phrenology" proved lucrative, and the two brothers called on their sister Charlotte to join them. She helped Lorenzo on the lecture circuit and with head-reading while Orson dashed off more books, among them *Matrimony; or, Phrenology and Physiology Applied to the Selection of Congenial Companions for Life, including Directions to the Married for Living Together Affectionately and Happily* (1843). The Fowlers' enterprise attracted widespread interest (one of their customers was Walt Whitman, whom they described as having "friendship and sympathy," as well as "indolence and a tendency to the pleasures of voluptuousness"), and they moved to larger quarters at 308 Broadway. Others were more skeptical: as early as 1838 David Meredith Reese denounced phrenology in his book *Humbugs of New-York*. Lorenzo's wife, Lydia, joined the business in 1844, and during the same year the Fowler brothers formed a partnership with Samuel Roberts Wells, who married Charlotte, and with him set up the publishing house of Fowler and Wells. All five gave lectures and wrote books. In 1855 Orson and Lorenzo Fowler sold their interests in the publishing house to the Wellses. Fowler and Wells's Phrenological Museum moved to successively larger quarters at 389, 737, 753, and 775 Broadway; the Lorenzo Fowlers and the Wellses eventually shared an elegant residence at 233 East Broadway. In 1860 Lorenzo and Lydia Fowler moved to London. On Lydia's death in 1879 their daughter Jessie helped her father in phrenological undertakings. Fowler and Wells continued to publish phrenological tracts into the first decade of the twentieth century. Jessie Fowler, a resident of New York City from 1896, wrote a number of books on phrenology, and as late as 1928 was listed as a phrenologist in local directories. She died at her home at 843 West 179th Street, the last of the phrenological Fowlers.

Phyfe [Fife]**, Duncan** (*b* Scotland, 1768; *d* New York City, 16 Aug 1854). Cabinetmaker. He moved from Albany, New York, to New York City by 1792, when he joined the General Society of Mechanics and Tradesmen. He was first listed in city directories in 1793 and by 1795 moved his shop to 35 Partition (now Fulton) Street. He employed many apprentices and journeymen, who struck when he reduced wages during the panic of 1819. He marketed his work in the city and in ports of the South and the West Indies. Between 1817 and 1822 he had customers in Savannah, Georgia, and briefly stationed an agent there to take orders and sell furniture. Phyfe was well-known in his day for his elegant designs; his name now identifies American neoclassical furniture generally. In *Wealth and Biography of the Wealthy Citizens of New York City* (1845) his estate was valued at $300,000 and his firm was described as the largest and most fashionable in the country. He retired from the trade in 1847.

physical disabilities. Before the mid-nineteenth century there were few services in New York City to assist the physically disabled. The number of handicapped people in the city became particularly evident during the winter of 1842, when city inspector John Griscom submitted to the Common Council a long and critical report of the city's sanitary conditions, and clinics for the disabled were set up at local medical colleges. In the 1850s James Knight, a physician who made home visits for the Association for the Improvement of the Condition of the Poor (AICP), reported that a large number of crippled people could not leave their homes. In response the AICP formed the New York Society for the Relief of the Ruptured and Crippled (1862), which opened an asylum for 25 crippled children and supplied trusses and bandages for the disabled in a small building at 97 Second Avenue. The society eventually moved to new quarters at Lexington Avenue and 42nd Street, where it established an asylum and hospital that housed 200 children. The financial support provided by the city and by private sources such as the Hospital Sunday Fund allowed the society to offer most of its services free of charge. The society later evolved into the Hospital for Special Surgery.

In 1868 the New York Orthopedic Dispensary opened at 126 East 59th Street to provide free mechanical and surgical treatment of diseases and deformities of the spine and joints, infantile paralysis, bow-legs, club-feet, and other physical handicaps. In 1875 the dispensary opened a hospital with 50 beds that offered most of its services to children aged four to 14 suffering from curable handicaps; Theodore Roosevelt was the organization's treasurer for several years in the 1870s. During this same period the city's Charity Hospital on Blackwell's Island set up a paralytic hospital to provide chronic care for those afflicted by paralysis or epilepsy. The Hospital for Deformities and Joint Diseases opened in 1905 at Madison Avenue and 123rd Street (it now operates as the Hospital for Joint Diseases Orthopaedic Institute at 301 East 17th Street). Among the many residential programs established for crippled children about the turn of the twentieth century were the House of St. Giles the Cripple at 417 Clinton Street in Brooklyn (by Episcopalians in 1891), the House of the Annunciation for Crippled and Incurable Children on the Upper West Side (by the Sisters of the Annunciation of the Blessed Virgin Mary in 1893), the Darrach Home for Crippled Children (1903), and the

New York Home for Destitute Crippled Children (1904). The Association for the Aid of Crippled Children (1899) at Stuyvesant Square provided home nursing and transportation assistance and helped handicapped children, especially the blind, to obtain care elsewhere.

By the late 1890s there was a growing emphasis on helping physically handicapped children become self-sufficient. The Children's Aid Society organized the Guild for Crippled Children of the Poor of New York City (1896) at 224 West 63rd Street; renamed Classes for Crippled Children, this organization had a kindergarten and offered vocational training for older children. Vocational training was also provided by the William H. Davis Free Industrial School for Crippled Children at 471 West 57th Street, the Crippled Children's East Side Free School at 157 Henry Street (1902, later known as the New York Service for the Orthopedically Handicapped), and the Brearley League Industrial School for Cripples at 350 East 88th Street (1908, later known as the Rhinelander School). In 1903 the city's health department began routine screening of schoolchildren for orthopedic and visual problems. The city's first public school classes for crippled children opened in 1905, and in the following year Henry Goldman, head of the East Side Free School, persuaded the Board of Education to establish a special public school for children with physical disabilities.

Services for handicapped adults were much slower to develop than those available for children: a state commission revealed that only 12 percent of the 414,000 workers injured in industrial accidents from 1906 to 1908 received compensation. Reform legislation established local industrial commissions to adjudicate compensation cases impartially, but in the 1930s an exposé of these agencies in New York City and Chicago by the legal scholar Walter Dodd revealed exploitation of the immigrants who filed most of the claims and a marked tendency to favor the interests of insurance companies rather than those of the injured workers. Righting these wrongs became a new priority of reformers.

Medical advances helped to reduce the number of seriously handicapped children, but even as late as 1912 nearly one-third of schoolchildren in New York City had physical disabilities. Special classes for children with cardiac problems were begun in 1917 (discontinued in 1941 by recommendation of a mayoral commission). State support became available to assist the city's school programs in the same year, when New York became one of only two states in the country to pass laws aiding handicapped children not confined to institutions. In 1925 the New York Academy of Medicine reported that the efforts of private agencies such as the Association to Aid Crippled Children were reaching only about one-sixth of the estimated 18,000 disabled children in the city, a gap in services that was confirmed in 1938 by the Commission for the Study of Crippled Children appointed by Mayor Fiorello H. La Guardia. At the recommendation of the new commission the mayor formed the Division of Physically Handicapped Children in the health department, which was made responsible for maintaining a central registry of physically handicapped children in the city set up by the commission. As death rates from infectious diseases diminished, public health officials gave greater attention to broader issues of health and welfare in the city. This change of emphasis was highlighted in 1945 when the responsibility for administering state aid to the handicapped was moved from the city's Domestic Relations Court to its health department.

Although New York State provided more financial assistance than most other states for disabled adults, it did not significantly improve its vocational training programs for the disabled until after World War I, when the needs of wounded veterans sparked public interest and generated federal grants for state training programs. This support led to the formation of the city's Rehabilitation Center for the Disabled in 1924 and of the Rehabilitation Bureau in the state education department, both of which received vocational rehabilitation funds granted under the Social Security Act of 1935. The training programs developed during these years focused on workers who could be restored to ordinary functioning. Several important steps were taken in the 1950s to improve health care for disabled children. The Division for Physically Handicapped Children in the health department was given the status of a bureau in 1951, and city and state funds were set aside to cover medical and rehabilitation costs for children with severe orthopedic problems, congenital heart disease, cleft palates, harelips, and conditions requiring plastic surgery; state funds supported the opening in 1953 of a cleft-palate rehabilitation center at Mount Sinai Hospital. Classes were offered in the public schools for brain-injured children, amputees, and children with cerebral palsy, and programs for the handicapped were extended into high school. The development of Medicare and Medicaid in 1965 expanded the health care available to disabled adults. Additional benefits were provided by amendments to the Vocational Rehabilitation Act (1965), which provided the federal support to cover 90 percent of the cost of programs that trained the physically handicapped.

A new emphasis was placed on social equality for the disabled during the civil rights movement of the 1960s. The claim by advocacy groups in New York City that the disabled had a right to full participation in the life of the city met with growing acceptance from the federal government and the public. The Housing Act of 1972 extended subsidies to make new housing accessible to the handicapped; the Vocational Rehabilitation Act of 1973 increased funding for vocational programs and in Section 504 mandated an end to all discriminatory exclusion of the disabled from community services. How and where to apply Section 504 became a matter of bitter controversy in the city. The disclosure that fewer than one-third of the city's 3600 buses had wheelchair lifts led to a lawsuit by advocacy groups in 1982, as a result of which lifts were installed on 80 percent of the city's buses by 1991. The Americans with Disabilities Act (ADA), passed by Congress in 1990, required that all new mass transit vehicles be accessible to the disabled, and in the following year the city installed elevators or ramps in 10 of its 54 major subway stations (it was required to do the same in the remaining stations by 1995, a project that remains incomplete in the early twenty-first century). The Education for Handicapped Children Act of 1978 (Public Law 94-142) affirmed the equal right of all disabled children to publicly funded education. By 1991 special education classes were offered in nearly every public elementary school in New York City, and the city was moving toward expanding its preschool programs for the disabled.

In the twenty-first century the Mayor's Office for People with Disabilities has made these and many other programs come to fruition, including further housing, building codes that allow accessibility, employment opportunities, and tax breaks for those with disabilities. The department partners with private organizations to meet these goals. Another program in compliance with the ADA's paratransit requirements is Access-A-Ride, a bus service established in 1990 that costs no more than a ride on the subway. Those with disabilities can call a hotline to arrange individual trips or daily trips. A care assistant may accompany the rider at no charge. MetroCards are available at a reduced fare for the disabled, and more subway stations throughout the city have installed elevators. In 2008 the mayor's office hosted Disability Mentoring Day, a day dedicated to putting more physically disabled people into the workforce. Through the Access New York initiative, the mayor's office also compiled information about transportation and city services for the disabled. Many of these programs extend to the elderly population of the city as well.

The New York City Department of Parks and Recreation has also tried to accommodate ADA requirements for park users. City parks partnered with U.S. Paralympics for programming initiatives, offering wheelchair tennis, football, basketball, softball, and soccer. In addition some parks offered free aquatics programs and accessible camping activities. In 2007 the parks department made beaches more accessible for the disabled and elderly by laying mats on the sand for wheelchair use. Other innovations made a public

pool accessible in Flushing Meadows–Corona Park. In addition, the Owen Dolen Center in Westchester Square in the Bronx was a facility especially designed for children with disabilities; it provided field trips and day camps. The city's ADA compliance has enabled many families to more easily care for elderly relatives or those with physical disabilities.

physics. Creative genius in the physical sciences in the eighteenth- and nineteenth-century United States was isolated rather than sustained, as exemplified by the work of Benjamin Franklin, Benjamin Thompson ("Count Rumford"), Joseph Henry, Josiah Willard Gibbs, and A. A. Michelson. There was nothing yet comparable with either the established tradition of Europe or its recent growth and scientific professionalization. The situation was such that at a meeting in New York City in 1880 of the American Association for the Advancement of Science, Henry Rowland, the first American professor of physics (at Johns Hopkins University), described American science as "a thing of the future and not of the present or the past." But soon the scene quickly began to change, and many of the changes radiated from New York City and its environs.

The rapid transformation of physics was fueled by a series of sensational discoveries in the burgeoning field of electrical science and applied electricity (x-rays in 1895, radioactivity in 1896, the electron in 1897, quantum phenomena from 1900), by the inexorable transformation of the United States from an agricultural to a manufacturing society, and by the steady growth of population in the metropolitan area, adding to its wealth and reinforcing its ambitions. Early work in industrial physics was conducted in the city by Thomas Edison, Alexander Graham Bell, Nikola Tesla, and others. Columbia University contributed ideas, students, and teachers to academia and industry: the American Physical Society was founded at the university in 1899 and held many of its meetings there for several decades; George Pegram of Columbia in 1927 became the treasurer of the society; the university for many years housed the editorial offices of the *Physical Review,* the leading professional journal; and in 1905 the university awarded its first PhD in physics to R. A. Millikan, later much celebrated. At Columbia Michael Pupin, although himself essentially an engineer, vigorously defended basic scientific research. In 1927 Columbia opened new physics laboratories named in honor of Pupin after his death in 1934. Many of the accomplishments of the 1930s and after in the new laboratories were overseen by Pegram and inspired by I. I. Rabi. One landmark was the discovery by Harold C. Urey in 1932 of heavy hydrogen. This was closely followed by developments in the field of molecular-beam physics by Rabi and his colleagues, who brought the field to a new level of precision and sophistication. Their work earned the Nobel Prize in 1944.

World War II diverted scientific energies. The Pupin laboratories became the site in 1940 of the Manhattan Project, in which Pegram, Urey, and Enrico Fermi played leading roles. After the war the new molecular-beam techniques were applied to the investigation of the refined properties of atoms, molecules, nuclei, and electrons (by Polykarp Kusch and Willis Lamb) and to new precision methods of measuring time (by Norman Ramsay). And the study of the subtleties of electromagnetic interactions launched the era of masers and lasers. During this same period new and increasingly powerful techniques were used to explore the new field of "elementary particle" physics and especially to examine the basic symmetries of these particles and their interactions. Physicists at Columbia, notably T. D. Lee, Chien-shiung Wu, Melvin Schwartz, Leon Lederman, and Jack Steinberger, figured prominently in this work. By this time physics had become part of a huge international enterprise. Columbia maintained some close links with the giants of industrial physics, especially Bell Telephone Laboratories (now greatly expanded in New Jersey) and International Business Machines (through its on-campus research institute, the Watson Laboratory).

By the late twentieth century several trends had combined to diminish the former significance of New York City as a center of physics: the growth and globalization of physical research; the more elaborate and extensive involvement of the physical sciences in industry and government; and social, economic, and demographic changes in the metropolitan region. The gargantuan machines used for "elementary particle" research had outgrown the confines of a university campus or city, perhaps even of a single country. Much of the nuclear science and technology that emerged from the Manhattan Project had become environmentally inappropriate to an urban setting. The headquarters of the American Physical Society and later of the Institute of Physics left New York City for enlarged premises strategically closer to Washington, D.C. In the twenty-first century New York City remains an integral part of scientific studies and research in the state and the United States as a whole. Nobel Prizes for physics were awarded to New Yorkers Arno Penzias (1978), Leon Lederman (1988), and Robert Hofstadter (1961).

Samuel Devons, Danielle Molinski

Pierpont Morgan Library. Original name of the Morgan Library and Museum.

Pierre Hotel. Hotel at Fifth Avenue and 61st Street in Manhattan. Opened in October 1930, it joined a group of luxury hotels near the southeastern corner of Central Park, including the Sherry–Netherland, the Plaza, and the Savoy–Plaza (now demolished). The architects, Schultze and Weaver, designed a conservative 44-story tower to replace the château-like mansion of Commodore Elbridge T. Gerry. The design facilitated the creation of more than 700 rooms, most of which were leased annually by the hotel's wealthy clientele. Named for the hotel's first manager, Charles Pierre Casalasco, financing was provided by a group of investors including Walter Chrysler and Edward F. Hutton. Despite the hotel's upscale reputation, the Pierre fell into bankruptcy during the Great Depression only to be pulled out in 1938 when J. Paul Getty bought the building for $2.5 million and converted many of the original 712 rooms into cooperative apartments. Through the changes the hotel continued to foster loyalty among such bold-faced names as Audrey Hepburn, Cary Grant, Elizabeth Taylor, and President Richard Nixon. By 1960 most of the suites had been sold as cooperatives, and in 1981 the hotel came under the control of Four Seasons. On 2 January 1972, the Pierre was the site of what at the time was the largest and most successful hotel robbery in history. Four men, most associated with the Lucchese crime family, successfully pried open lock boxes maintained for guests in an open vault. The four perpetrators, working in the early morning darkness, handcuffed 19 hostages for as much as two and a half hours before escaping with millions of dollars in valuables. In 2005 the cooperative board that controlled the Pierre signed a 30-year management contract with Taj Hotels. From 2007 to 2009, the Pierre underwent an extensive $100 million renovation of its hotel lobby and its remaining 200 rooms.

Carol Willis, Kenneth T. Jackson

Pierrepont, Henry E(velyn) (*b* Brooklyn, 8 Aug 1808; *d* Brooklyn, 28 March 1888). City planner and businessman, second son of Hezekiah B. Pierrepont. In addition to managing his family's properties he worked to establish ferry connections across and up the East River and was a founder and later a

trustee of Green-Wood Cemetery in Brooklyn. He is regarded as one of the first city planners in the United States: active in planning the expansion of Brooklyn and known as its "first citizen," he also studied many European cities firsthand. His elder brother, William Constable Pierrepont, dedicated himself to managing the family properties in upstate New York.

John J. Gallagher

Pierrepont [Pierpont]**, Hezekiah B(eers)** (*b* New Haven, Conn., 1768; *d* Brooklyn, 1838). Merchant, early suburban developer, father of Henry E. Pierrepont. Born to a family long established in New England, he settled in Brooklyn in 1802 and restored the spelling of his surname to its original French form. He amassed a small fortune as a merchant adventurer and was once captured by French privateers in the China Sea. Through his marriage to Anna Maria Constable, the daughter of a prominent merchant in Manhattan, he inherited considerable properties in upstate New York. In Brooklyn Ferry (now Brooklyn Heights) he bought 60 acres (24 hectares) of the Benson farm and built a mansion on the heights above the East River. He was a prominent investor in Robert Fulton's steam ferry connecting Brooklyn to Manhattan, as well as in the local development that ensued. Pierrepont was the first important suburban real estate developer in U.S. history and was advertising and selling lots in Brooklyn Heights to prominent business leaders from Manhattan by 1823. Among the proposals that he made but did not see realized was one for a promenade along Brooklyn Heights.

pigeons. See Rock Pigeon.

Pigtowns. Name applied during the nineteenth and early twentieth centuries to two neighborhoods in Flatbush, one near Bedford Avenue and Montgomery Street and the other about half a mile (1 kilometer) to the east near Lincoln Terrace Park. The neighborhoods were far from urban development and had many wooden shacks, pigpens, and chicken coops. In 1908 Charles Ebbets, owner of the Brooklyn Dodgers, began buying lots in anticipation that the Interborough Rapid Transit company would extend its subway along Eastern Parkway and by 1913 completed Ebbets Field. After the subway was extended into East Flatbush in 1914, both Pigtowns disappeared.

Stephen Weinstein

Piñero, Miguel [Gomez, Antonio, Jr.] (*b* Puerto Rico, 19 Dec 1946; *d* New York City, 17 June 1988). Playwright. He moved with his family from Puerto Rico to the Lower East Side in 1950. His arrest and imprisonment for burglary in 1964 began a 10-year series of convictions for petty crimes related to his drug addiction. He was eventually sent to the Otisville State Training School for Boys and earned his high school equivalency diploma while an inmate at Manhattan State Hospital. In 1971 he took part in Clay Stevenson's acting workshop at Ossining Correctional Facility and began writing plays. Prison life became the basis of his best-known work, *Short Eyes* (1974), which was presented Off-Broadway and made into a motion picture; brutally realistic portrayals of life in prison and on the city streets characterize 12 other plays, including *Eulogy for a Small-Time Thief* (1977), two screenplays, and two books of poetry. Piñero helped to form the Nuyoricans, a group of Puerto Rican poets based in the city. In 1974 he won an Obie Award, the New York Drama Critics' Circle Award, and the Drama Desk Award.

James Pelton

Pintard, John (*b* New York City, 18 May 1759; *d* New York City, 21 June 1844). Businessman. After graduating from Princeton College in 1776 he entered business, focusing his efforts in the China and East India trade; by 1792 he was one of the most successful merchants in New York City. He later declared bankruptcy, however, and was imprisoned for debt before finding work as an auctioneer of books and editor of the *Daily Advertiser*; he was eventually engaged as the secretary of the city's first fire insurance company. As clerk of the corporation and inspector for the city he developed a system for keeping vital statistics. Under the auspices of the Tammany Society, in which he was a sagamore and grand sachem, he organized a historical museum; he also helped to organize the New-York Historical Society in 1804 and the General Theological Seminary, served for many years as the secretary of the American Bible Society, and was influential in strengthening the New York Chamber of Commerce. An alderman and a member of the state legislature, Pintard promoted the Erie Canal and organized the city's first savings bank, of which he was president.

James E. Mooney

Miniature of John Pintard by John Ramage, 1787

Piscator, Erwin (*b* Ulm, Germany, 17 Dec 1893; *d* Starnberg, West Germany, 30 March 1966). Theatrical producer and director. He owned his own theater in Germany, and in 1936 his collaboration on the stage adaptation of Theodore Dreiser's *An American Tragedy* ran on Broadway for 19 performances. Three years later he immigrated to the United States with his wife. In 1940 he became the director of the New School's Dramatic Workshop. His students included Marlon Brando, Tony Curtis, and Tennessee Williams. He returned to Germany in 1951 and until his death remained a major exemplar of expressionist staging and contemporary, epic style theater. His wife, Maria Ley-Piscator, died in New York City in 1999.

Jessica Montesano

pizza. New York City's first pizzeria was opened in 1905 as an outgrowth of Gennaro Lombardi's grocery store in the heart of Little Italy at 53½ Spring Street. Fired in a coal-burning oven, the five-cent pizzas conformed to the style of their Neapolitan ancestors, with only a few adaptations, borne of necessity. Because Lombardi could not find the buffalo mozzarella cheese or the San Marzano tomatoes used in his native Naples, he used local tomatoes and mozzarella made from cow's milk. The poverty of his clientele, almost exclusively Italian immigrants, was the source of another New York innovation: the slice. Whereas pizzas in Italy were sold whole, some of Lombardi's customers could not afford to spend a nickel, and so they were given triangular slices of the pie corresponding to their payments of one or two cents. Some of the most famous New York pizza dynasties have roots at Lombardi's, which closed in 1984 only to be reopened by the founder's grandson one block away 10 years later. Antonio Totonno Pero, founder in 1924 of Totonno's in Coney Island, learned the trade as one of Lombardi's first pizzaiolos. John Sasso left the same job at Lombardi's to open John's on Bleecker Street in 1929. Patsy Lancieri, whose name now decorates four New York pizzerias and whose nephew founded Grimaldi's, another New York pizza institution, also worked briefly at Lombardi's. Until World

Grimaldi's Pizzeria, 2009

War II the few pizzerias in New York City catered primarily to the city's Italian American communities. But during the decade after the war American soldiers who had been stationed in Italy popularized this "ethnic" food, spurring a nationwide pizza boom. In 2010 more than 400 pizzerias were listed in New York City, along with innumerable Italian restaurants that served pizza as a secondary matter.

Nationally, New York City is known for a pizza style that resembles an oversized version of Neapolitan pizza: thin, flexible slices—often folded in half while eaten—that are light on cheese and other toppings. Pizzerias around the country sell slices under the banner of "authentic New York pizza." A theory that attributed the flavor of New York's pizza crusts to the mineral content of the city's tap water gave rise to the urban legend that purist purveyors in other cities imported their water from New York City. In recent years pizza aficionados have decried the decline of New York–style pizza in the city and the ascendance of a thicker, cheesier variety, proffered most notably by a chain of unaffiliated pizzerias sharing the name Ray's. Another departure from classic New York style is the world's most expensive pizza, served at Nino's Bellissima with a price tag of $1000, and featuring crème fraîche, lobster, and four varieties of caviar.

planetarium. See Hayden Planetarium.

Planned Parenthood Federation of America, Inc. Nonprofit organization devoted to reproductive health care, the oldest and largest of its kind in the United States. Among its forerunners was the country's first birth control clinic, opened in Brooklyn in 1916 by Margaret Sanger. After her arrest and indictment for distributing contraceptive devices, the organization continued in various forms until 1939 when the Birth Control Clinical Research Bureau of America merged with the American Birth Control League to form the Birth Control Federation of America. Headquarters were established in the city and the current name was adopted in 1942. Planned Parenthood has its offices at 810 Seventh Avenue; in the early twenty-first century its 97 affiliates operated 880 centers nationwide.

Chad Ludington

Platt, Thomas C(ollier) (*b* Oswego, N.Y., 15 July 1833; *d* New York City, 6 March 1910). Political leader. He was well-known in business and politics when he moved to New York City in 1880. Soon elected to the U.S. Senate, he led the New York State delegation to the Republican National Convention in 1888. Through political maneuvering he unsuccessfully sought an appointment as secretary of the treasury. As a leading figure in city politics he gained power in state government and became the leader of the Republican Party in New York State. After Platt's reelection to the Senate in 1904 his influence declined and he left politics. He lived at 2 Rector Street in lower Manhattan.

James E. Mooney

Players. Club incorporated in 1888 for men active in the theater, music, literature, and the arts. One of its founders, the actor Edwin Booth, purchased a building for the club on Gramercy Park South. Erected in 1845 in the Gothic Revival style as one of the first brownstones in New York City, the building was remodeled by Stanford White to resemble an Italian Renaissance palace, leaving the proper residents of the neighborhood aghast. Inside the building are comfortable quarters and a working library of theater history that is based on the collection of Booth, much augmented. Quotations from Shakespeare adorn the walls of every room.

James E. Mooney

playgrounds. The movement to build playgrounds in New York City began in the 1880s, as street play became dangerous with the city's increasing traffic. The first playgrounds were sponsored by settlement houses and consisted of backyard spaces with sandboxes and other simple equipment. In 1891 Charles Stover formed the New York Society for Parks and Playgrounds, which demonstrated play equipment and pressured the city to build playgrounds. More support was given in 1897 by the Small Park Advisory Committee, led by journalist Jacob A. Riis. In 1898 Stover and Lillian Wald, the Henry Street Settlement director, formed the Outdoor Recreation League, which built nine privately sponsored playgrounds taken over by the Parks Department in 1902. They supplied slides and seesaws, the mainstays of playgrounds. In the following year the first permanent playground built by the city opened in Seward Park at Essex Street and East Broadway on the Lower East Side. Others were also located in slum districts, such as Seward and DeWitt Clinton Parks.

Parks commissioner Stover formed the Bureau of Recreation in 1911 to accommodate the growing role of athletics in park design and operation. About the same time the city opened playgrounds atop active commercial waterfront piers. Between 1910 and 1920 thousands of children took part in interborough sports tournaments at playgrounds that drew large crowds of spectators. The first playgrounds in Central Park were built in the

Playground at 10 West 28th Street, ca *1890*

1920s. During the tenure of Robert Moses as the parks commissioner (1934–60) the number of playgrounds in the city rose from 119 to 777. Many were built by federal relief workers during the 1930s; the standard designs of mass-produced sandboxes, wading pools, swings, and benches gave them a uniform look throughout the five boroughs. Employees of the city known as "parkies" led children's activities and conducted preschool classes. In 1938 the Parks Department worked with the Board of Education to develop additional playgrounds on sites adjacent to schools.

From the 1960s designers experimented with new equipment and materials. The city's first "adventure playground," designed to foster free-form, unprogrammed play in children, opened in 1967 on the west side of Central Park; like its European forerunners, it was built after a planning stage during which the opinions of children were solicited. Temporary playgrounds were set up on vacant lots. The Playground for All Children at Flushing Meadows–Corona Park (1984) was the first playground in the nation designed specifically for physically disabled children; another was added at Asser Levy Recreation Center in 1993. Efforts increased to involve communities in the design, construction, and maintenance of playgrounds. In addition to the many outdoor playgrounds, others are indoors, including one at the Pelham Fritz Recreation Center in Marcus Garvey Park. In 2009, according to the Parks Department there were 188 parks in the Bronx, 290 in Brooklyn, 259 in Queens, 208 in Manhattan, and 56 in Staten Island.

A Playground for All Children: City of New York (Washington, D.C.: U.S. Department of Housing and Urban Development, 1976–78); New York City Department of Parks and Recreation, http://www.nycgovparks.org

Jonathan Kuhn, Lisa Keller

Playwrights Horizons. Off-Broadway theater. Founded in 1971 by Robert Moss at the Clark Center for the Performing Arts at the Westside Young Men's Christian Association, it moved to 416 West 42nd Street in 1974 in a space that formerly housed a burlesque (razed and rebuilt; reopened in 2003), after a brief stay in a nearby pornography theater. Dedicated to the production of works by new American writers, composers, and lyricists, Playwrights Horizons was instrumental in the revitalization of West 42nd Street during the late 1970s as one of the first theaters to open on what is now known as Theater Row. The theater also operates, in conjunction with New York University's Tisch School of the Arts, the Playwrights Horizons Theater School at 440 Lafayette Street in Manhattan. Artists whose work has been presented at the theater include Kenneth Lonergan, Christopher Durang, A. R. Gurney, and Pulitzer Prize winners Doug Wright (*I Am My Own Wife*), Stephen Sondheim and James Lapine (*Sunday in the Park with George*), Alfred Uhry (*Driving Miss Daisy*), and Wendy Wasserstein (*The Heidi Chronicles*).

Patrick Barrett

Plaza Hotel. Hotel at 59th Street and Fifth Avenue, overlooking Grand Army Plaza. The site was once occupied by a shallow pond that the wealthy used for ice skating. In 1890 the first Plaza Hotel opened on the site, but it was unprofitable. The George A. Fuller Company bought the building in 1902, and demolished it in 1905. Henry J. Hardenbergh then designed a new 19-story hotel with 800 rooms and several grand entertaining areas. It opened on 1 October 1907 when the first guest, Alfred Gwynne Vanderbilt, was greeted by a grand welcoming committee. Single rooms initially cost $2.50 a night. The new Plaza became the best-known hotel in the city, featuring the Oak Room Bar and Palm Court restaurants. Among its famous guests were the Duke and Duchess of Windsor, F. Scott Fitzgerald, Frank Lloyd Wright (who lived there while he was working on the Guggenheim Museum), and the Beatles, who stayed there during their first trip to the United States in 1964. Truman Capote hosted the famous Black and White Ball in the Plaza's Grand Ballroom in 1966. In the Eloise books by Kay Thompson, the main character, a six-year-old girl, lives in a room on the "tippy-top floor" of the hotel. The Plaza has also been the setting for scenes in several movies including *North by Northwest* (1959), *Plaza Suite* (1971), *Barefoot in the Park* (1967), *The Way We Were* (1973), and *Funny Girl* (1968). In 2005 the new owners, El-Ad Properties, closed the Plaza for a two-year-long renovation that included turning many of the rooms into

Plaza Hotel

private residences. The hotel reopened on 1 March 2008.

Anne Epstein

Pleasant Plains. Neighborhood in southern Staten Island, northeast of Tottenville. Throughout the nineteenth century many oystermen lived there. The area was named after the Staten Island Railroad built a station in the 1860s at a bend in the Amboy Road; the business and entertainment district took shape nearby. Many of its one-family houses remain from the late nineteenth century, when John C. Drumgoole formed Mount Loretto, a home for destitute orphaned boys from Manhattan that covered 600 acres (240 hectares). Part of the property became the Cemetery of the Resurrection in 1988. Pleasant Plains retains a bit of its rural character. Well-known residents have included the harpist Maud Morgan and the opera manager Max Maretzek.

Marjorie Johnson

P. Lorillard and Company. Firm of tobacco products manufacturers. It began as a snuff factory opened in 1760 by Pierre Lorillard (1742–*ca* 1778) in a rented house on Chatham Street in Manhattan. After Lorillard was killed by British troops seeking refuge in the house, his sons Peter and George took over the firm in 1792; they maintained the building in Manhattan as their headquarters and moved the factory to a wooden grist mill in Westchester County along the Bronx River (now in the Bronx), where they experimented with using water power in production. The mill produced more tobacco than any other facility in the country by the end of the eighteenth century and was later replaced with a larger granite building, which was sold in 1870. The firm left the city in 1891 and became part of a trust formed by the American Tobacco Company; when the trust was declared illegal in 1911 by the U.S. Supreme Court, Lorillard again became independent. The mill was acquired by the New York Botanical Garden in 1937 and converted into a restaurant. In 1959 the firm's headquarters were moved to Manhattan. Lorillard was bought by the Loews Corporation in 1969.

James Bradley

Plum(b) Beach. Former neighborhood in southeastern Brooklyn, connected to Sheepshead Bay by a neck of land extending east from the foot of Emmons Avenue. Named for the beach plums growing in the area, the site was known variously as Plum Island and Plumb Island until it was joined to the mainland with dredgings from the construction of the Belt Parkway. In the late 1890s it was bought by the federal government as a site for a military fortification, but this project was abandoned and the land was then leased with the stipulation that it be used as a summer resort. It became a bungalow colony that in 1934 still had no electricity, gas, or telephone service. In the 1950s the U.S. Department of Agriculture opened a laboratory there to study animal diseases. No longer inhabited, the area lies within the Gateway National Recreation Area and is partly owned by the city.

Ellen Marie Snyder-Grenier

Plunders Neck. Former neighborhood in southeastern Brooklyn, lying within New Lots and bordered to the north by East New York and the Queens County line, to the east by Spring Creek, to the south by Jamaica Bay, and to the west by Betts Creek (Fountain Avenue). The area was the site of farming and fishing, and during the late nineteenth century about 50 families lived in wooden houses isolated from the rest of Kings County. A small hotel stood at Forbell's Landing adjacent to Mill Pond. The land later became the site of the Louis H. Pink housing project and the Pitkin Avenue subway yards.

Stephen Weinstein

Plunkitt, George Washington (*b* New York City, 1842; *d* New York City, 19 Nov 1924). Political leader. Known as "the sage of Tammany Hall," he held office as an alderman and state senator; for many years he was a Democratic district leader on the West Side and a sachem of the Tammany Society, of which he became Father of the Council. Plunkitt is remembered for his frank statements about "honest graft" and why reform movements are doomed in New York City. Many of his views are recorded in William Riordan's book *Plunkitt of Tammany Hall* (1905). Plunkitt lived at 323 West 51st Street.

Frank Vos

Plymouth Church of the Pilgrims. Congregational church organized on 13 June 1847 by a group of merchants, most of them abolitionists from New England. It opened in a building at the corner of Orange and Hicks streets in Brooklyn Heights, with Henry Ward Beecher as its minister. After being destroyed by fire on 13 January 1849 the building was replaced in 1850 by a much larger one, which had ample standing room and a large semicircle of pews around a platform that served as a pulpit. The number of full members rose from 21 in 1847 to 1460 in 1859, when the congregation on Sundays reached nearly 3000 (many Congregational churches had fewer than 100 communicants at the time). The congregation took keen interest in temperance and abolition and opened the church as a station on the Underground Railroad to offer asylum to runaway slaves. During the Kansas–Nebraska crisis of the mid-1850s it dispatched rifles to the antislavery settlers; the rifles quickly became known as "Beecher's bibles" and the church as the "church of the holy rifles." Most members supported Beecher when accusations of adultery were brought against him in the 1870s, and when he died in 1887 50,000 mourners passed through the church. The church continued to thrive under his successor, Lyman Abbott. A parish house enclosing a garden court was added in 1914. After merging with the Congregational Church of the Pilgrims in 1934 the church was renamed Plymouth Church of the Pilgrims; it remained in its building on Orange Street, where in Hillis Hall the Tiffany windows from the former Congregational Church of the Pilgrims (113 Remsen Street) were installed. In 2010 Plymouth Church continued to serve the community with regular worship services.

PM. Daily newspaper launched in New York City in 1940 and shaped by the idealism of its editor and publisher, Ralph Ingersoll, who had worked for the publishers of *Time* as an editor of *Fortune* and a founder of *Life.* It had a magazine format, carried no advertising, and became known for its crusading journalism. Among the newspaper's innovations were its coverage of the labor movement and its features of interest to consumers. Its prominent writers and photographers included Ben Hecht, Ernest Hemingway, Max Lerner, I. F. Stone, James A. Wechsler, Margaret Bourke–White, and Weegee. Despite these strengths the newspaper was not profitable, owing largely to Ingersoll's inability to manage the company. When it began accepting advertising in 1946 at the insistence of the investor Marshall Field III, Ingersoll resigned in protest. The newspaper became the *Star* in 1948 and ceased publication later that year.

Madeline Rogers

pneumatic subway [Beach Pneumatic Transit]. New York City's first passenger subway, built in 1870. At the American Institute Fair in 1867, Alfred Ely Beach, the editor of *Scientific American,* showcased the air-powered tubes that would later serve as the prototype for his subway. Though these tubes were first used in England for both package dispatch services and passenger railroads, Beach was the only person to successfully adapt the system as a subterranean railroad in the United States. In 1870 Beach completed the 312-foot (95-meter) tunnel from Warren Street to Murray Street under Broadway in 58 days; his urban novelty operated with one train and one station until 1873. While serving no functional purpose, the railroad operated to convince the public and possible investors of its potential; a fountain and grand piano were placed in the waiting area to impress passengers. It is nonetheless unlikely that pneumatic power could have been adapted to suit the needs of New York City on the scale of the modern subway. In 1912 the tunnel was destroyed during the construction of the new subway line under Broadway by the Brooklyn Rapid Transit Company.

Michael C. Repka

Podhoretz, Norman (*b* Brooklyn, 16 Jan 1930). Editor and writer. A son of immigrants, he earned a BA in English from Columbia University and later studied for two years at Cambridge University. In New York City he joined the staff of *Commentary,* a monthly magazine edited by Elliot Cohen. In 1956 he married Midge Decter, Cohen's secretary and later an editor and political analyst. In 1960 Podhoretz became the magazine's editor; in 1995 he became the editor-at-large. For a short time he was allied with the New Left, publishing critical essays on the cold war, the Vietnam War, and American life. His memoir *Making It* was published in 1968. He moved to the right during the mid-1960s; by the early 1970s he abandoned literary interests for political ones and became a leading spokesman for neoconservatism.

Alexander Bloom

Poe, Edgar Allan (*b* Boston, 19 Jan 1809; *d* Baltimore, 7 Oct 1849). Short-story writer, poet, and critic. Orphaned in 1811, he grew up in Virginia and England. His early career was marked by frequent changes of residence and a conspicuous lack of success as a writer. He lived in New York City during 1837–38 and spent the summers of 1843 and 1844 in a farmhouse on West 84th Street, just west of Broadway. He again took up permanent residence in the city in 1844. While living at 85 Amity Street (now West Third Street) he wrote the poem "The Raven," which he published anonymously in February 1845 in the *American Review* to critical success. During the same year he became the editor of the *Broadway Journal,* a weekly publication through which he sought to challenge the city's best-known literary journals, especially the *Knickerbocker Magazine,* leading him into several damaging controversies. His charge that Henry Wadsworth Longfellow's poetry was plagiarized contributed to the demise of the journal in December. In 1846 he moved to Fordham Cottage at 2640 Grand Concourse near East Kingsbridge Road; the building is now known as Poe Cottage. Critical intrigue continued to influence his work. For the popular magazine *Godey's Lady's Book* he wrote the series "The Literati of New York," which resulted in a libel suit against him by Thomas Dunn English, one of his subjects. *Godey's* dropped the series but published his short story "The Cask of Amontillado," a veiled parody of his literary troubles. After the death of his wife Poe left the city in 1849.

Jeff Finlay

Poe Cottage. Last home of Edgar Allan Poe (from 1846 to 1849), built about 1812 on the Grand Concourse and East Kingsbridge Road in the Bronx. Poe moved to the site in the hope that its setting would prove salutary to his wife, who was gravely ill, and because of its access to Manhattan by the New York and Harlem River Railroad. While living in the cottage Poe wrote such well-known poems as "Annabel Lee," "Ulalume," "The Bells," and "Eureka." Poe's wife died of tuberculosis at the cottage in 1847. In 1913 it was moved to Poe Park across the street to avoid demolition, and in 1917 it opened as a historic house museum. Now a national and city landmark, it is administered by the Bronx County Historical Society.

Gary D. Hermalyn

poetry slam. Competition in which poets perform their work for an audience. In their current form, poetry slams began in Chicago in the mid-1980s; the first poetry slam in New York City took place at the Nuyorican Poets Cafe in 1988. Initially hosted by poet Bob Holman, these events have been a feature of the cafe's programming ever since, and poetry slams have remained popular in the city. In 2008 weekly slams were sponsored by the Nuyorican, the LouderARTS Project, and NYC–Urbana at the Bowery Poetry Club, a venue founded by Holman in 2002. Youth programs have been established. Teams from New York City regularly participate in the annual National Poetry Slam. At "open" slams all audience members may have the opportunity to participate. At invitational slams the poets competing have been selected in advance. Judges—audience members who have been selected by the host—rate each three-minute performance on a scale of one to 10. Slams frequently last multiple rounds, with the lowest-scoring poets gradually being eliminated. The styles participants use may vary from hip-hop music to traditional poetry recitation, and subject matter is also diverse. Quality of performance, as well as content, is a factor in scoring. Criticism of poetry slams has focused on the uneven quality of the poetry performed; however, advocates point to the value of the strong connection formed between poet and audience.

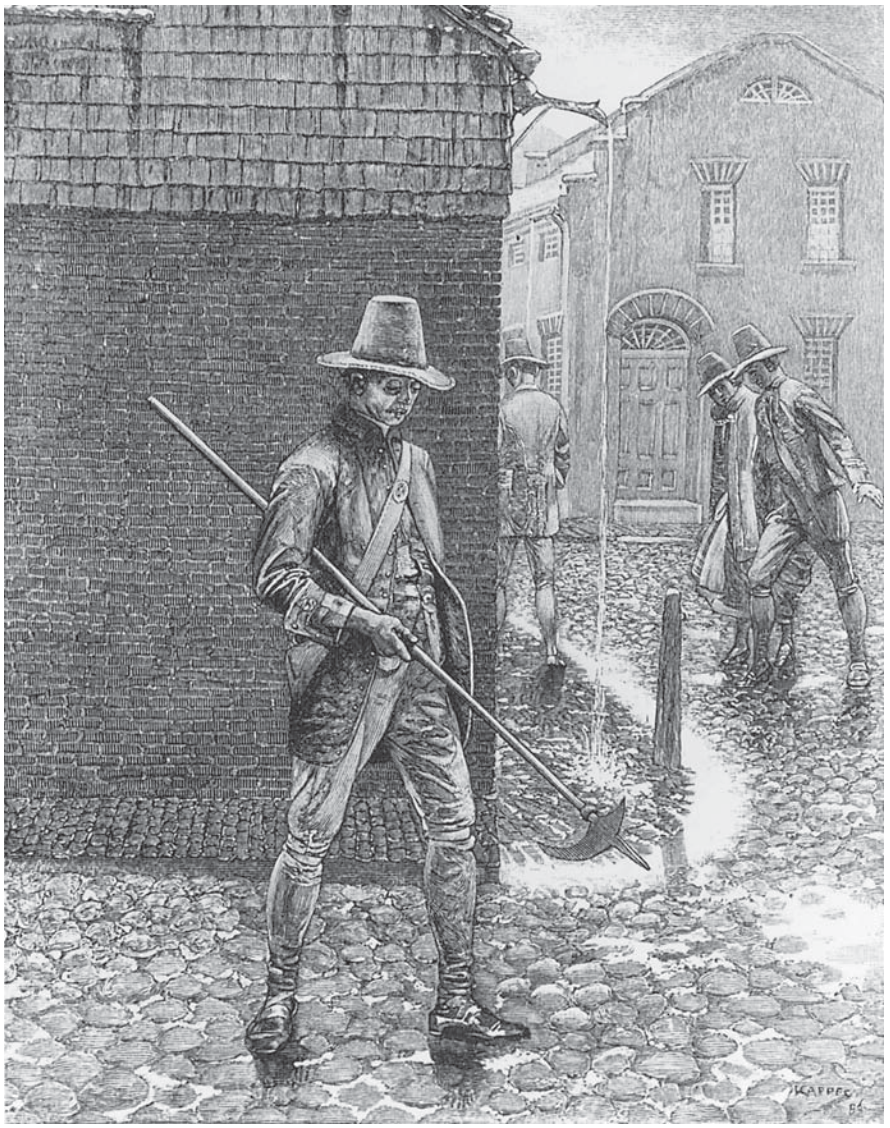
Poets House. Founded in 1985 by the late poet Stanley Kunitz and arts administrator Elizabeth Kray, this 45,000-volume poetry library is located on the second floor of 72 Spring Street. Its collection of books, journals, chapbooks, audiotapes, videos, and electronic media is free and open to the public. It has a sunny reading room, and a children's room is decorated with colorful paper cranes. Each year Poets House holds more than 50 panel discussions, lectures, seminars, and workshops, both onsite and in city libraries. The annual Poets House Showcase is an exhibit of all the poetry books published nationwide that year. In the late 2000s Poets House planned to double its space and expand its services by moving to a new building in Battery Park City where it will be exempt from rent through 2069.

Katarzyna Nikhamina

Poets' Walk. Informal name for the sculpture-lined southern end of the Central Park Mall near 69th Street. Also known as Literary Walk, the promenade is distinguished by quadruple rows of American elms that flank the 40-foot-wide (12-meter-wide) walkway, creating a canopy. In 1873 park commissioners designated the mall for the installation of sculptures in order to preserve the naturalistic feel that Frederick Law Olmstead and Calvert Vaux had created in the rest of the park. As a result, the walkway became lined with sculptures of the literary figures William Shakespeare, Robert Burns, Fitz-Greene Halleck, and Sir Walter Scott. Nonliterary sculptures in the vicinity include those of Ludwig van Beethoven and Christopher Columbus. The path inspires photographers in all seasons and has been featured in numerous films shot in New York City.

Talia Falk



Poles. The Polish presence in New York City dates to the early seventeenth century, when a number of merchants, soldiers, and teachers from Poland settled in New Amsterdam. Among them were Alexander Curtius, founder of the first school in Manhattan; Daniel Litscho, a leading supporter of Peter Stuyvesant on the council of burgomasters and schepens; Olbracht Zaborowski, a landowner who held title to much of New Jersey; and Marcin Krygier, who was elected burgomaster at least three times. In 1834 two Austrian warships arrived in New York Harbor carrying 234 Polish exiles from the failed uprising of November 1830. Some settled in the city, where they worked to free Poland from foreign domination. Gaspard Tochman founded the Polish–Slavonian Literary Association (1846), and several others published literary and historical works. More groups of Polish immigrants settled in New York City after the unsuccessful Polish revolts of 1846 and 1848 and the January Revolt of 1863. Many of the immigrants were highly educated, eventually entered the professions, and often took part in reform movements such as that against slavery. During the Civil War Colonel Wladimir Krzyzanowski raised the 58th New York Infantry, known as the Polish Legion, and Major Alexander Raszewski led a Polish unit, Company C, of the 31st New York Infantry.

Most of the Poles settling in New York City between 1870 and 1920 were rural laborers seeking economic opportunity who were originally from parts of Poland occupied by Austria and Russia. Called the *za chlebem* ("for bread") immigrants, they generally found employment in construction and manufacturing, especially textiles. Once established they proved to be enthusiastic supporters of the labor movement, many becoming leaders in union locals. The first neighborhood of the za chlebem took form on the Lower East Side, where St. Stanislaus Bishop and Martyr Church was erected in 1872. Gradually these immigrants expanded into the southern and northeastern Bronx, Fort Greene, South Brooklyn, Elmhurst, and in 1890 Greenpoint, where they established St. Stanislaus Kostka Church in 1896. The Catholic Church proved important in the daily lives of Polish immigrants, providing a social focus as well as a religious one. Two parishes of the Polish National Catholic Church were eventually formed in the city: Holy Cross Parish in South Brooklyn and the Church of the Resurrection in Greenpoint. The Polish population of New York City was swelled by refugees from Nazi atrocities during World War II, displaced persons after the war, refugees from communist persecution during the cold war, and the rise of the labor movement Solidarity. These new immigrants tended to be educated and highly skilled, and many settled in traditional Polish neighborhoods. In the 1970s, when the Polish population of the city was at its height, about 292,000 residents were of Polish birth and about 500,000 others were of Polish heritage. Among those of Polish birth 38 percent lived in Brooklyn, 33 percent in Queens, 14 percent in Manhattan, 11 percent in the Bronx, and 4 percent in Staten Island. The largest Polish neighborhood was Greenpoint, where Manhattan Avenue was lined with Polish bookstores, butcher shops, restaurants, and travel agencies. One of the most influential Polish-language newspapers, *Nowy Dziennik,* was launched in the city in 1971. The number of Polish-born residents in New York City fell in the quarter century after 1985, partly because of tighter immigration enforcement, partly because of the aging of the population, and partly because of Poland's admission to the European Union in 2004, which spurred a return migration. According to the Department of City Planning, the Polish-born population in the five boroughs in 2006 was 60,153.

In the early twenty-first century Polish fraternal, cultural, and educational organizations in New York City included the Kosciuszko Foundation, the Polish Institute of Arts and Sciences of America, the Polish National Alliance of Brooklyn, the Roman Dmowski Institute, and the Joseph Pilsudski Institute of America for Research in the Modern History of Poland. There were also 24 Roman Catholic parishes recognized as Polish, eight major Polish veterans' organizations, 10 Polish political organizations, nine professional associations, six artistic and theatrical societies, and 12 periodicals. The most important Polish social and cultural celebration of the year is the annual Pulaski Day Parade in October.

James S. Pula

police. For the first 200 years of its existence New York City maintained public order much like that of other colonial cities. In New Amsterdam a *schout fiscal* (sheriff attorney) administered the rules established by the Dutch West India Company, and a burgher guard looked out for Indians at times of expected raids. When fears of Indians became widespread, Governor Peter Stuyvesant initiated a paid nighttime foot patrol consisting of a captain and eight men armed with rattles. The patrol was intended to alert residents of impending raids; to control rowdy sailors, drunkards, and prostitutes; and to watch for fires. Under British control in the late seventeenth century New York City was subject to military rule. A notable exception to the pattern was a night watch, 45 strong, that patrolled from 1684 to 1689 and briefly made the city perhaps the best-protected in the colonies, a distinction of which the city was soon deprived by political unrest and war. From the end of the seventeenth century until well into the nineteenth New Yorkers falteringly sought to navigate between competing approaches to policing. Under the charter promulgated by John Montgomerie in 1731 all citizens living south of the Collect Pond could be called on for night-watch duty. A constable in each ward took eight men with him every night to serve watch (although women were eligible, there is no record of any having served). The reluctance of local residents to be pressed into service, even for a night, abruptly ended the citizens' watch in 1734, when it was replaced by a paid force of three to a dozen men standing guard over a city of 10,000.

2008	37,838

Note: There was no official police department before 1844.

From the 1740s residents believed their city to be besieged by crime and disorder and were unsure of the remedy. The "Negro plot" in 1741 frightened the city into organizing a temporary militia, which was immediately succeeded by another paid force, this time of 36 men, a dozen of whom were on duty on any given night. Within a year the paid force was replaced by another citizens' watch; like its predecessors this proved both inadequate to the task and burdensome to the citizenry, particularly the poor, who could ill afford the time needed to serve or the money to secure a substitute. As a result impoverished residents found themselves guarding their more affluent neighbors, an arrangement that continued when the state government in 1747 set up a force with characteristics of both a militia and a citizens' watch, prompting the city to organize yet another paid police force in 1762. In 1774 there was a force with the equivalent of 20 full-time positions: 16 regular watchmen served nightly for £32 a year, and eight served on alternate nights for £16 a year. The force looked out for fires but was scarcely able to control the city's burgeoning, boisterous populace. When the British army occupied New York City in 1776, it assumed primary responsibility for policing, but many residents maintained a voluntary watch throughout the war. A formal constabulary system and night watch were reintroduced after the British evacuated in 1783. To provide incentives for enforcing the law, the state legislature soon established a fee schedule by which constables were paid according to each task: fees were set for serving a warrant, issuing fines, making arrests, detaining prisoners, serving summonses, and performing similar duties.

In 1800, 16 constables patrolled the city by day along with about 40 marshals appointed by the mayor. Together they were responsible for suppressing riots, maintaining order in the streets, acting as court officers, and arresting offenders. Much of the work of law enforcement in the early nineteenth century was done by one man, Jacob Hays, who governed the small constabulary force for nearly 50 years after Mayor Edward Livingston appointed him high constable in 1802. At night a ragtag force of 72 men served in the watch in 1800 under two captains and two deputies and was entrusted with lighting the street lamps, subduing wrongdoers, looking out for fires, and guarding the Potter's Field from grave-robbing medical students. Paid too little to support themselves on watch work alone, the watchmen labored during the day as mechanics, teamsters, stevedores and the like, then often dozed their way through guard

*Before 1901, the city had concurrent commissioners.

duty. Like the constables and marshals the watchmen wore no uniform apart from leather helmets, for which they became known as leatherheads.

During the first half-century after independence New Yorkers tolerated their meek and modest police system and accepted a remarkable degree of unchallenged lawlessness in the streets, largely because their fears of a standing army made them wary of delegating greater coercive power to local government. But by 1830 many came to see their fractured police force as incompetent and ineffective. As immigrants, tenements, and factories became more numerous, tensions relating to class, race, and ethnicity heightened and crime increased accordingly. There were frequent riots, robberies around the wharves and businesses of the first ward, violence and vice in the slums of the Five Points, and prostitution and gambling throughout the city, all signaling the breakdown of communal order. At the same time the constables and night watch were increasingly criticized for paying less attention to public safety than to the fees they could earn and the political favors they owed to the politicians who had appointed them. Inspired by the example set in London, officials in the early 1840s resolved to make New York City the first American city to adopt a full-time, professional police force that could prevent crime as well as respond to it. A measure to reorganize the force introduced by Mayor Robert H. Morris and signed into law in 1845 by Mayor William F. Havemeyer established a "Day and Night Police" of as many as 800 men, identified by a star-shaped badge that gave the new force the nickname "star police."

Reformers were still fearful that the power vested in a strong, independent police department could be abused, and they sought to make the police strictly accountable to the public by subjecting them to the control of elected officials. In solving one problem they nevertheless created others. By commingling control of the police and partisan politics they made the mayor's authority to appoint police officers dependent on the recommendations of aldermen; patrol districts coincided with ward boundaries, local politicians used the police for their own venal purposes, party officials controlled the appointment of magistrates to the police courts, and aldermen enjoyed the right to have criminal charges dismissed. Because the fee schedule was replaced by a system of fixed salaries, the most lucrative part of police work became the taking of bribes from those engaged in gambling, prostitution, and other illicit businesses. The same reformers who were eager to organize a police force were reluctant to pay for it, and the force remained small in relation to the city's population, numbering only 1200 in 1855 (when the city's population exceeded 600,000). Furthermore, the absence of a modern system of social services forced the police to shoulder many duties having little relation to crime fighting: police directed traffic, found shelter for the homeless, searched for lost children, settled domestic disputes, and escorted drunkards home or to the precinct house. In 1850 the police were outfitted with uniforms.

The police in 1853 were placed under the control of a board of commissioners composed of the mayor, the recorder, and the city judge. In the same year some formal training began, and officers were armed with nightsticks. It was hoped that the new board would wrest control over law enforcement from the corrupt council, but soon Mayor Fernando Wood demonstrated his capacity to use the police for his own purposes. In 1857 a state legislature dominated by Republicans decided to take power away from the city's Democrats and into its own hands when it established the Metropolitan Police District. Composed of New York, Kings, Westchester, and Richmond Counties, the new district was governed by a board of five gubernatorial appointees and the mayors of New York City and Brooklyn. Wood, a Democrat, resisted the establishment of a state force within the city and vowed to maintain a municipal counterpart. The two forces coexisted for several months until the Metropolitans in June sought to arrest the recalcitrant mayor for inciting a riot, and a bloody battle ensued on Broadway. The confrontation ended when the state militia intervened, and the crisis was resolved a month later when the New York State Court of Appeals upheld the constitutionality of the state force. In the same year officers were authorized to carry a service revolver. The seats on the board reserved for the mayors of New York City and Brooklyn were eliminated in 1860, and the total number of members was reduced to three (all appointed by the governor), thus guaranteeing that Republicans would have unlimited access to the patronage afforded by the police department. The Metropolitan Police District was abolished in 1870 by the state legislature, now controlled by the Democrats, and the governance of the department was returned to a local board composed of Democrats loyal to Tammany Hall and a few Republican allies, giving impetus to a reform movement already under way. All precinct detectives in 1883 were placed under the jurisdiction of the Central Detective Bureau at the request of its commanding officer Thomas Byrnes, ostensibly to fight corruption, and in the following year the police came under the jurisdiction of civil service regulations already applicable to other municipal agencies. Service revolvers were officially issued to officers in 1887. After a long campaign by the Women's Temperance Union, New York City in 1891 became one of the last large American cities to employ police matrons.

The police department was a symbol of corruption in the late nineteenth century and for much of the twentieth, owing largely to the close connections between policing and politics. An investigative commission led by State Senator Clarence Lexow in 1894–95 disclosed involvement by the police in vice operations and found officers responsible for rigging elections and for physical brutality. In 1930 an investigation led by Samuel Seabury uncovered widespread corruption, as

well as the harassment of innocent women by police vice squads. Periodic scandals inspired attempts to reform the police force and make it more professional, but these proved slow and difficult to bring about.

One effort to instill professionalism was the formation of specialized, technically trained units with specific functions. In response to a spate of anarchist terrorism, a bomb squad was created in 1903. Traffic control was adopted as an official activity in 1908. Radio motor patrol cars (RMPs) were introduced in 1923, and the Emergency Services Division was created in 1930. Two-way communication between patrol cars and precincts began in 1937; a fully automated communications system known as the Special Police Inquiry Network (SPRINT) became operational in 1969. In 1959 the department organized the Tactical Patrol Force (TPF), a specially trained corps of physically imposing, college-educated police officers intended to deal with gang violence. By the mid-1960s the TPF became an important instrument for the suppression of civil unrest. The force, later disbanded, was admired by some for its proficiency and resented by others, especially among racial minorities, as an army of occupation. Skepticism toward the department among minority groups stemmed from its long history as an all-white organization: it did not appoint its first black officer, Samuel Battle, until 1911, and its first black precinct commander, Lloyd Sealy, until 1964.

Efforts at reform took on a new urgency during the 1960s with the onset of the civil rights movement, racial unrest, and charges of police brutality. Demands that the police be sensitive to the concerns of racial and ethnic minorities became widespread. In 1966 the Patrolman's Benevolent Association became embroiled in a heated political battle over a referendum to form a civilian review board. By the end of the decade two national commissions had stressed the need for urban police departments to recruit more officers from racial minority groups. A commission led by Whitman Knapp in 1972 confirmed allegations that the leadership of the police department had tolerated systemic corruption and that many officers routinely collected payoffs from owners of small businesses. In 1972 the Civil Rights Act was amended to bring state and local governments under federal guidelines for employment, and between 1974 and 1983 the Guardians, an association of black officers, filed four successful lawsuits against the city because of racial bias in entry-level and promotional examinations. The city's first black police commissioners were named in the following years: Benjamin Ward in 1984 and Lee P. Brown in 1990. In 1985 Mayor Edward I. Koch appointed a committee led by John E. Zuccotti to investigate management and personnel practices in the department. The committee found that the major obstacle to achieving a racially balanced police force was an overreliance on written civil service examinations for selection and promotion. It also found that systematic corruption in the department had been essentially eliminated. Other problems facing the department included charges by female officers of sex discrimination and renewed concerns about police brutality. In response to the large number of officers shot in the line of duty, bullet-proof vests were introduced in the early 1980s and made compulsory in 1991.

A surge in violent crime that began in the 1970s and culminated in increased drug-related shootings in the 1990s earned New York City a reputation as a dangerous place. Brown and Mayor David N. Dinkins responded by reintroducing foot patrols in

many neighborhoods and developing a plan called "Safe Streets, Safe City," which called for the addition of many hundreds of police officers between 1991 and 1996. The new emphasis on community policing was consistent with a national trend, but it also increased the risk of corruption. In a direct contradiction of the recommendations made by the Knapp Commission, it placed more officers on foot patrol and closer to the people at a time when the drug trade put an unprecedented volume of tainted money on the street. When drug-related corruption in several precincts was uncovered in 1992, Mayor Dinkins appointed an investigatory panel led by Judge Milton Mollen of the New York State Supreme Court. Although the panel did not find the widespread, systemic corruption of the sort unearthed by the Knapp Commission 20 years earlier, it warned that the department had failed to uproot corruption and had tolerated a culture that fostered misconduct and concealed lawlessness.

Police boat, 2009

When former federal prosecutor Rudolph W. Giuliani became mayor in 1994, he pledged to make crime reduction his number one priority. His first police commissioner, William J. Bratton, instituted the "broken windows" approach to policing, which treated quality-of-life issues as precursors to more serious crimes. Bratton also established COMPSTAT (Computer Generated Comparative Statistics), a management reporting system that held precinct commanders personally responsible for crimes committed in their jurisdictions. In 1995 the Housing Authority Police Department and Transit Authority Police Department, which once operated as separate units, were merged into the New York Police Department. In 1998 the Division of School Safety, an unarmed security force within the school system, was also put under the jurisdiction of the department.

Beginning in 1993 New York City experienced significant drops in crime that continued into the administration of Mayor Michael R. Bloomberg, and his police commissioner Raymond W. Kelly, who had also served under Mayor Dinkins. From 1997 to 2006 index crime (the eight crimes used by the Federal Bureau of Investigation [FBI] to compile its annual crime index: willful homicide, forcible rape, robbery, burglary, aggravated assault, larceny over $50, motor vehicle theft, and arson) dropped 42.4 percent, and as of 2006 New York City had the lowest index crime rate among the nation's 25 largest cities. The terrorist attack on the World Trade Center in 2001 had a serious effect on the Police Department, which lost 23 officers and left many others with physical and psychological injuries. In 2002 the department established deputy commissioners for intelligence and counterterrorism, the latter heading a counterterrorism unit that coordinates efforts with the Joint Terrorism Task Force of the FBI. In 2006 a new Office of Emergency Management headquarters was opened to coordinate the response of police, fire, and medical units to emergency situations.

Police memorial, 2009

In 2005 the New York City Police Academy had its first graduating class in which a majority of its officers were nonwhite (45.2 percent non-Latino white, 18.3 percent black, 28.2 percent Latino, and 8 percent Asian). In 2006 there were 35,645 sworn officers in the department: 55.8 percent white, 24 percent Latino, 16.2 percent black, 4 percent other, and 17.3 percent female; the department also included 17,683 civilian personnel. As of 2006 Police Academy cadets received an annual salary of $25,100 plus benefits, which would increase in six months to $32,700. While competitive on a national level, the salary lagged behind salaries earned by police officers in adjoining suburban counties, making it difficult for the department to recruit personnel.

The basic unit of command from which officers are deployed for patrol duty is the precinct, of which there are 76, organized within eight borough commands. There are four civil service ranks in the department that are granted on the basis of a written examination: police officer, sergeant, lieutenant, and captain. A member of the force is awarded a gold shield of the detective rank for meritorious service at the discretion of the police commissioner. All promotions to executive

ranks above captain are also at the discretion of the commissioner: these ranks include deputy inspector, inspector, deputy chief, assistant chief, and chief. In 2006 Mayor Bloomberg announced long-awaited plans to move the Police Academy from its Gramercy Park location on East 20th Street, where it had been since 1964, to a new 33-acre (13-hectare) facility in College Point, Queens. Ground was broken for the new facility in December 2009.

Police Athletic League [PAL]. Nonprofit organization run by volunteer police officers and dedicated to the educational, cultural, and recreational enrichment of disadvantaged children in New York City, formed in 1914 as the Junior Police by Captain John Sweeney of the New York Police Department. It became well known for its programs in athletics, notably boxing, and later added employment training, courses in remedial reading, drug-abuse counseling, creative writing contests, day-care centers, after-school clubs, and educational summer day camps. By the early twenty-first century a $40 million capital campaign had funded new PAL community centers in Harlem, the South Bronx, and South Jamaica. More than 70,000 youths a year take part in activities sponsored by the league.

Stephen Weinstein

polio (poliomyelitis). Viral infection that attacks nerves and can cause paralysis, brain damage, and death. Although cases of polio were commonly observed and treated by physicians in New York City during the eighteenth and nineteenth centuries, the first recorded epidemic of polio in the city did not occur until 1907. In 1910 the New York City Board of Health classified polio as a communicable disease requiring immediate reporting and isolation of the patient. The city suffered its worst polio epidemic during the summer of 1916. Before its end in late October the epidemic claimed 8991 victims, with 2449 deaths. About 95 percent of all the polio cases in the city that summer were children younger than 10. By declaring that the city was in a "state of great and imminent peril," Mayor John Purroy Mitchel justified closing theaters and parks, postponing the opening of the city's public schools, forcibly removing victims from their homes, and other harsh measures. Less severe epidemics of polio occurred in New York City during the summers of 1931, 1935, and 1936, with sporadic outbreaks during the 1940s and 1950s. Although polio was already waning before the advent of the Salk and later the Sabin polio vaccines, their implementation between 1955 and 1965 led to its end as a major killer of children.

Howard Markel

Polish Institute of Arts and Sciences of America. Research institution formed in 1942 by Polish scholars exiled by the Nazi invasion of their homeland. It severed ties with the communist government of Poland, and only reassociated with Poland in 1989. The institute sponsors an annual scholarly meeting, maintains a library and archives for research on Polish history and culture, publishes books, supports lectures and art exhibitions, and has published, since 1956, the internationally recognized journal *Polish Review.* In the early twenty-first century it had roughly 1500 members including the former national security adviser Zbigniew Brzezinski, the poet Czeslaw Milosz, and the ambassador John Gronouski. Its offices were at 208 East 30th Street in Manhattan.

James S. Pula

Polish Legion. Popular name for the 58th New York Volunteer Infantry, recruited in 1861 from among Polish, German, and other immigrants in New York City and organized by Colonel Wladimir Krzyzanowski. It fought during the Civil War at Cross Keys, Groveton, Second Bull Run, Chancellorsville, Gettysburg, Lookout Mountain, and Wauhatchie.

James S. Pula

Polish National Alliance of Brooklyn. Fraternal organization formed in 1905 to provide immigration services and cultural activities for Poles. From the outset it offered insurance, provided scholarships for college students, and promoted Polish heritage. In the late twentieth century it was the largest Polish fraternal organization in New York City, with members throughout New England and the eastern states. Its headquarters are at 155 Noble Street in Brooklyn.

James S. Pula

political clubs. The first political clubs in New York City were caucuses formed during the American Revolution to support the Livingstons (patriots) and the De Lanceys (Loyalists). After the first formal party system took shape in the early 1790s clubs supported the Democratic Republicans (led by Thomas Jefferson) and the Federalists (led by Alexander Hamilton). The Democratic Republicans dominated the city's civic activities, and their influence increased after the War of 1812. Their success was due to the ward system, which enabled a quasi-democratic political system to develop. Political clubs ranged in size from those covering one ward (such as the Young Hickory Association in the eighth ward) to citywide organizations like the Democratic Empire Club; the more powerful ones conducted meetings in their own halls or saloons. By the 1840s even the Catholic Church had its own political club, Carroll Hall, run by Bishop John Hughes. Other clubs in the city included the Empire Club, led by Captain Isaiah Rynders, and Mike Walsh's Spartan Club, which drew its membership from newly arrived, exploited Irish immigrants.

Political clubs grew in importance during the nineteenth century, reaching a peak when the Democratic Party became institutionalized and the city in the early 1840s underwent unprecedented population growth. In 1849 the refusal of the Spartan Club to support the mayoral candidate of Tammany Hall led to the victory of Fernando Wood, a Whig sponsored by Mozart Hall. A resumption of growth after the Civil War resulted in more centralized and less democratic politics, in part a reaction to the scandals of the Tweed Ring, and political clubs diminished in importance. In the late nineteenth century political clubs remained active in Brooklyn; in addition to those allied to the Democratic and Republican Parties, Brooklyn had clubs organized around specific issues such as Prohibition (the Anti-Saloon Republican League, 1888) and women's rights (the Equal Rights Club, 1890). During the first half of the twentieth century some socialist and communist clubs were formed.

After World War II the influence of political clubs declined precipitously. Their number fell from 2819 in 1933 to just 268 in 1972, with the largest number in Queens. Much of the clubs' residual power, especially within the Democratic Party, accrued because organized crime had filled a patronage vacuum left by the federal government, which saw its role formally eliminated when the Hatch Act (1940) forbade federal employees to contribute money to political organizations. Frank Costello (1891–1973) became the covert head of Tammany Hall, and organized-crime figures were dominant in Democratic clubs in Brooklyn and Manhattan.

Although the number of political clubs had decreased to about 100 by the 1990s, their

influence lingered: Mayor Ed Koch began his political career with the Village Independent Democrats; Mayor David Dinkins was supported by the George Washington Carver Democratic Club of Harlem; and U.S. Representative Charles B. Rangel maintained power through the Martin Luther King Democratic Club of Harlem. In the early twenty-first century many political clubs drew their support from new immigrants and ethnic groups such as Dominicans in Washington Heights, who were active participants in the Northern Manhattan Democrats for Change and the Concerned Democratic Coalition of Northern Manhattan. The Thomas Jefferson Democratic Club in Canarsie, home to former Brooklyn Democratic chief Meade H. Espisto, was transformed by new Caribbean and Latino members. Clubs also remained powerful in the judicial selection process. Other significant political clubs included the North End Democratic Club in the Bronx, home to former borough president Fernando Ferrer, state assemblyman Jose Rivera, and borough president Adolfo Carrion, Jr.; the Community Free Democrats in Manhattan, home to U.S. Representative Jerrold L. Nadler; and the Robert F. Kennedy Democratic Club and Guy R. Brewer Democratic Club in Queens.

politics. See Government and Politics.

Pollock, (Paul) Jackson (*b* Cody, Wyo., 28 Jan 1912; *d* East Hampton, N.Y., 11 Aug 1956). Painter. After following two of his brothers to New York City in 1930 he studied at the Art Students League with Thomas Hart Benton, whose figurative painting influenced his early style. In 1935 he worked on the Federal Art Project of the Works Progress Administration, and in the following year he joined an experimental workshop run by David Alfaro Siqueiros. Shortly after leaving the Federal Art Project Pollock met his future patron, Peggy Guggenheim, who had recently opened her gallery Art of This Century at 30 West 56th Street. In 1943 the Museum of Modern Art purchased his painting *The She-Wolf.* He married the artist Lee Krasner in 1945, with whom he moved to Springs, Long Island; there he set up a studio in a barn, where he developed a technique of pouring paint directly on the canvas that became typical of his mature works and proved highly influential. He died in an automobile accident. Although controversial during his life, Pollock achieved great recognition after his death as a key figure in the American abstract expressionist movement. His residences in New York City included 46 Carmine Street (1932–33), his brother's apartment at 46 East Eighth Street (1935–45), and a carriage house at 9 MacDougal Alley (1949 and 1950).

pollution. Contamination of New York City's water, air, and land is one the most complex problems facing the city, where the effects of pollution are magnified by the density of population.

The purity of drinking water was an early environmental concern. Although clear ponds, streams, and freshwater wells provided an adequate supply for American Indians and Dutch and English colonists, by the mid-eighteenth century surface waters and some public and private wells were becoming fouled by seepage from cesspools and street runoff. A shortage of potable water in 1832 contributed to a cholera epidemic that killed 3513 city residents. Most of the populace still depended on well water when New York City voters approved plans in 1835 to dam the Croton River in Westchester County and construct an aqueduct to transport clean water to the city (completed 1842). During the twentieth century the city markedly expanded its upstate supply of pristine water, building six large reservoirs in the Catskill and Delaware watersheds from 1907 to 1964. Over the following decades these supplies provided the city with high-quality water that exceeded state and federal standards. But by the late twentieth century rapid residential and commercial development and sewage discharges, especially in the suburbanized Croton watershed, contributed to some declines in the quality of reservoir water and occasional discoloration of Croton tap water, which federal and state officials directed to be filtered to safeguard its quality. Construction began in 2004 on a 300-million-gallons-per-day (1.14-billion-liters-per-day) underground filtration plant at Van Cortlandt Park in the Bronx. Additionally, to protect the city's water supply at its source, government officials began in the early 1990s to accelerate pollution-prevention efforts throughout the upstate watershed region. By 2008 the city had acquired or preserved nearly 90,000 acres (36,400 hectares) of ecologically important lands, mostly in the unfiltered Catskill and Delaware watersheds, and had funded upgrades to more than 100 sewage treatment plants located in all three watersheds. Nevertheless, intense rainstorms, large-scale development projects near the reservoirs, and the possibility of natural gas drilling on watershed lands remained long-term threats to the drinking water supply.

The rivers and bays of New York City have been polluted, mostly by sewage and to a lesser extent by toxins and garbage, since the industrialization and population growth of the late nineteenth century. The city's first, primitive sewer was constructed along Broad Street in lower Manhattan in the late seventeenth century, but a comprehensive network of underground sewers was not laid until the mid-nineteenth century. Although in the following decades rudimentary devices were installed at outflow pipes to filter solid biological wastes, virtually all the city's raw sewage was dumped directly into local waterways until the early twentieth century, by which time it had largely destroyed a prosperous shellfish industry and was endangering the health of bathers. In 1935 the city opened its first modern sewage treatment plant on the shores of Coney Island. By the time the North River plant in West Harlem began operating in 1986, 14 sewage plants were treating nearly all the raw waste generated in the city during dry weather, or approximately 1.7 billion gallons (6.4 billion liters) a day. Despite such progress, in the early twenty-first century 27 billion gallons (102 billion liters) of combined raw sewage waste and polluted rainwater were still being flushed directly into the city's waterways every year: because of the city's nineteenth-century unified sewer system, in which wastewater and storm runoff are collected in common pipes, treatment facilities are overloaded during even moderate rainfall. Although unhealthy bacteria levels continued to contaminate shellfish beds and limit swimming along sections of the waterfront, overall pollution related to sewage began a steady decline in the 1970s and continued into the twenty-first century. Sewage sludge, the end product of sewage treatment, was for many years dumped 12 nautical miles (22.2 kilometers) offshore and later 106 miles (170.6 kilometers) offshore. Because of its harm to the marine ecology, ocean dumping of sewage sludge was prohibited by federal law as of 1992. In the early twenty-first century the city's roughly 1200 tons (1090 metric tons) per day of sewage sludge has first been "dewatered" at city treatment plants and ultimately used as fertilizer or for other land applications around the country. The waters surrounding New York City have also been subject to toxic pollution. From the late 1940s to the mid-1970s two manufacturing plants operated by General Electric north of Albany, New York, sent more than 500,000 pounds (227,000 kilograms) of polychlorinated biphenyls (PCBs) directly into the Hudson River. These toxic PCBs were detected in more than 20 species of fish taken from the river, of which more than half a dozen were

declared off-limits to commercial fishing in New York State. After World War II and continuing for several decades, hundreds of businesses drained chemical wastes into the city's sewers: every day thousands of pounds of heavy metals such as zinc, copper, lead, chromium, and nickel entered sewage plants, which funneled much of the chemical loadings into surrounding waters; however, these discharges have declined sharply in the twenty-first century. Another problem of continuing concern has been ubiquitous urban runoff, such as automotive fluids. These pollutants, as well as occasional oil spills in the Arthur Kill along Staten Island, were still adding to the toxic flow dumped into New York Harbor in the first decade of the twenty-first century.

Garbage is another source of water pollution. In the 1850s the city began loading trash on barges to be jettisoned offshore, a practice that was halted in 1934 by order of the U.S. Supreme Court after garbage repeatedly washed onto the New Jersey coast. For decades the city relied on landfills as the primary means of trash disposal, ultimately destroying tens of thousands of acres of saltwater wetlands. Ecologically sensitive marshes in all five boroughs vanished, and pollution seepage from uncontrolled dumps contributed to the contamination of waterways. The number of landfills in the city peaked at 89 in 1934, after which they began closing as they reached capacity and their damaging effects were recognized. In 2001 the city's last landfill, the 2200-acre (890-hectare) Fresh Kills Landfill on Staten Island, stopped receiving trash. In addition to polluting water, the city's trash landfills left a legacy of contaminated land throughout all five boroughs. Indeed, five former city landfills are included on New York State's 2008 listing of hazardous waste sites; four are still classified as posing a "significant threat to the public health or environment." Counting properties contaminated by pollution from all sources, there were 42 hazardous waste sites in New York City, according to the state's 2008 listing. City officials also identified as many as 7600 acres (3075 hectares) of less polluted dump sites, vacant lots, and abandoned commercial properties scattered across the boroughs. A sweeping 2003 state law sought to encourage the cleanup and redevelopment of such sites. In 2008 the city generated about 24,000 tons (21,800 metric tons) of residential, institutional, and commercial trash a day; another roughly 27,000 tons (24,500 metric tons) per day of construction rubble and dirt was also generated. As of 2008 close to one-fifth of the city's residential and institutional waste was being recycled (see Recycling) under a curbside collection program begun in 1989. The remainder of such city-collected waste was being exported, at increasing cost, to out-of-state landfills and regional incinerators.

The air in New York City after the American Revolution was often foul: pungent odors were emitted by overflowing outhouses, open sewers, manure and refuse in the streets, as well as fat, bones, and other wastes discarded by butchers, fishmongers, and tradespeople. The unpleasant smells caused by the rending of tallow and other aspects of soap making were one reason why the city in 1796 restricted the manufacture of soap and candles to the suburbs. Until the mid-nineteenth century garbage was often left for pigs and other scavengers in streets and alleys, dumped in low-lying lands, or discarded at the water's edge. The nation's first refuse incinerator was built on Governors Island in 1885, and the use of incinerators increased after the U.S. Supreme Court banned ocean dumping of garbage. By the early twentieth century the burning of coal to power utility plants and to heat residences often filled the city's skies with plumes of dark smoke. A boom in automobile travel after World War II compounded the problem. In November 1953 a temperature inversion trapped sulfur dioxides, particulates, and other contaminants over the city, resulting in the deaths of perhaps 200 people and the hospitalization of many more. During the 1960s more than 17,000 incinerators in apartment buildings and 11 municipal garbage-burning plants added soot and toxins to the atmosphere. A mayoral task force warned in 1966 that in proportion to its area New York City was pumping more poisons into its air than any other major city in the country. The city then took important steps to reduce such pollution. The City Council lowered the sulfur content allowed in coal and heating oil in 1966 and 1971, yielding significant reductions in sulfur dioxide and soot. Lead in gasoline was reduced by the U.S. Environmental Protection Agency starting in 1973, and as a result airborne lead concentrations in the metropolitan region had fallen by 95 percent by the mid-1990s. The City Council prohibited new incinerators in apartment buildings as of 1970; those that remained were phased out by 1993. And by the mid-1990s, federally required pollution controls on automobiles and annual automobile emissions inspections had helped to lower official carbon monoxide readings from the harmful levels of the preceding decades. In 1988 and 1995 the council restricted tobacco smoking, a primary source of indoor pollution, in nearly all enclosed public spaces in the city, leading to the city's 2002 Smoke-Free Air Act, which made virtually all workplaces smoke free. Air quality in the city has markedly improved since the 1960s but continued in the early twenty-first century to violate national standards for particulates and ozone smog. Among the major contributors to the problem were diesel-powered vehicles and construction equipment, as well as a growth in regional motor vehicle travel. A "congestion pricing" plan to reduce traffic in Manhattan and to raise funds for public transportation was widely discussed in 2007 but was not approved by the state legislature.

Noise pollution became a problem in New York City with the introduction of elevated railways in the 1870s and worsened with increased traffic, especially after World War II. Some improvements resulted when the city adopted one of the nation's first noise-control codes in 1972. The code was revised in 2005, by which time the city was issuing 2000 to 3000 summonses a year for noise violations. However, excessive noise from construction activities, loud air conditioners, honking horns, barking dogs, roaring subways, piercing sirens, and jet takeoffs from area airports remained an annoyance in many neighborhoods, sometimes interfering with hearing and sleep.

As pollution problems attracted greater public attention during the 1960s and 1970s, tens of thousands of New York City residents joined environmental groups; Mayor John V. Lindsay in 1968 formed what later became the Department of Environmental Protection. On 22 April 1970 more than 100,000 New Yorkers joined with Americans across the country to celebrate the first Earth Day; they gathered in Union Square to learn about environmental issues or strolled down Fifth Avenue, which was closed to traffic between 14th and 59th streets. During the 1970s and 1980s there was a growing recognition that some of the more troubling environmental problems (such as lead poisoning from paints and the siting of garbage transfer stations) were having a disproportionate effect on the poor and minorities. This led to the formation of grassroots organizations dedicated to securing "environmental justice."

During the first decade of the twenty-first century scientists and public officials warned that global warming from the burning of fossil fuels could lead in future decades to increased inland and coastal flooding and stresses to the city's water supply and sewage infrastructure. In part to advance local solutions to the emerging climate crisis, Mayor Michael Bloomberg in 2007 unveiled PlaNYC 2030, a 127-point initiative to sustainably enhance the city's urban environment and refurbish its infrastructure, and created a new Office of Long-Term Planning and Sustainability. The City Council also took action to cut carbon dioxide emissions, including the passage of laws that require new government buildings to meet standards for Green Buildings and call for a 30 percent reduction in such emissions from all government operations by 2017. Ironically, New York

City residents generate less air pollution, use less energy, and consume less water per capita than do their rural and suburban counterparts largely because of the city's compact living patterns and high public transit usage. And in the early twenty-first century New York City's immediate pollution dangers were less acute than those in many other cities of comparable size. But long-term assaults on its water, air, and land continued.

Polo Grounds. Name of several sporting facilities in New York City. The first opened in 1876 between 110th and 112th streets between Fifth and Sixth avenues in Manhattan for polo and became the home of the baseball Giants and Metropolitans in 1883. It was abandoned when streets were cut through in 1889. The name was revived in 1891 when the Giants took over Brotherhood Park, then a year old, overlooking the Harlem River at 157th Street. Destroyed by fire on 13 April 1911, it was replaced the same year by a structure of concrete and steel seating 38,000 (eventually 55,987) and notable for its unusual dimensions (279 feet [85 meters] to left field; 483 feet [147.2 meters] to center field; and 258 feet [78.6 meters] to right field). This facility was the home of the baseball Giants (to 1957), the football Giants (1925–55), and the New York Mets (1962–63) before being demolished in 1964 to make way for a public housing project.

Steven A. Riess

Polytechnic Preparatory Country Day School. Private coeducational secondary school opened in 1854 on 25 acres (10 hectares) in Bay Ridge, Brooklyn. It was one of the first private schools in the United States to adopt the model of the country day school: a full day's program of academics, arts, athletics, and college preparation, and shared responsibility with the family in providing guidance to students.

Richard Schwartz

Polytechnic University. Private educational institution opened in 1854 as the Brooklyn Collegiate and Polytechnic Institute, a college preparatory school for boys at the edge of Brooklyn Heights. The school was led in its first decade by John H. Raymond, later the first president of Vassar College. It gradually focused on scientific and technical education under its second president, David H. Cochran, and as the industrial economy of Brooklyn expanded during the 1880s, it implemented a four-year scientific curriculum emphasizing engineering. In 1890 the name was changed by state charter to the Polytechnic Institute of Brooklyn. Graduates of the school readily found employment in the growing metropolitan area, especially after Brooklyn became a part of New York City in 1898. At the same time inadequate physical resources kept the school crowded into downtown Brooklyn. During the early decades of the twentieth century the school had a distinguished scientific and technical faculty that included an extraordinary group of Viennese refugees from fascism, under whose leadership the doctorate was first offered in several fields during the 1930s and important research was carried on during the 1940s. Advances were made in the field of polymers by the chemist Herman F. Mark. Developments in microwave research by the electrical engineer Ernst Weber were crucial to the development of U.S. radar during World War II. The school's achievements during these years helped its reputation extend as far as India, Taiwan, and Iran.

Women were admitted as students in the 1940s. During the administration of its fifth president, Harry Rodgers, the school acquired nearby facilities that had been vacated in the late 1950s by the American Safety Razor Company. Baccalaureate degrees in the humanities and social sciences were added in the late 1960s. Financial problems during the following years limited the school's ability to attract students and retain faculty, even after a merger in 1973 with the engineering school of New York University strengthened the faculty and increased the amount of state aid. In 2008 the trustees accepted a merger with New York University.

The Harlem River Speedway (center) and the Polo Grounds (right), 1914

Pomander Walk. Private row of facing two-story cottages in a Tudor style from 94th to 95th streets between Broadway and West End Avenue, built in 1921 by the developer Thomas Healy. Healy acquired the land and engaged the firm of King and Campbell to design a development based on the quaint English village depicted in Louis N. Parker's popular play *Pomander Walk* (opened in New York City in 1911). Along Broadway Healy built one of the first indoor skating rinks in Manhattan and the restaurant Sunken Gardens. Pomander Walk stands out from its surroundings for its style and ambience: it is ornamented with colorful trim (including shutters of aqua, blue, red, and green), old-fashioned lampposts, a small wooden sentry box, and hedges and flower boxes lining the walk. Its residents have included such actors as Dorothy and Lillian Gish, Mary Martin, Humphrey Bogart, and Rosalind Russell. Pomander Walk

Pomander Walk, 2009

was designated a New York City landmark in 1982 and included on the National Register of Historic Places in 1983.

Amanda Aaron

Pomonok. Neighborhood in central Queens centered at Kissena Boulevard and Jewel Avenue, bounded on the north by the Long Island Expressway; originally part of the Town of Flushing. The name derives from an Indian word applied to an area of eastern Long Island and probably means "land of tribute" or "land where there is traveling by water." In early deeds it is spelled Pommanocc (1639), Paumanacke (1659), and Pommanock (1665). The Pomonok Country Club opened around 1920 and hosted the Professional Golfers Association tournament in 1939. In 1949 the members voted to sell the land to Local 3 of the International Brotherhood of Electrical Workers, which built Electchester, a cooperative apartment development with 2500 units in 38 buildings, and the New York City Housing Authority, which built the Pomonok Houses, a 35-building complex with 2070 units completed in 1952; the Queens Borough Public Library opened a branch in the Pomonok Houses in 1951. Queens College opened on the site of the Parental School (1908) on Kissena Boulevard in 1937.

Pondiac Democratic Club. Political club formed in the Bronx in 1921 by Albert Cohn at the behest of Edward J. Flynn, the Democratic leader of Bronx County (1922–53). It was intended to erode the political base of the rival Democratic district leader Patrick Kane, who unsuccessfully challenged Flynn for the office of sheriff of the Bronx in 1921. The club met on the second floor of 809 Westchester Avenue and was originally called the Pontiac Club after an American Indian chief of the Ottawa tribe (the name was misspelled when the club was registered). At first the 200 dues-paying members of the club were predominantly Jewish and Irish. The club gained influence because of its ability to guarantee an extraordinarily high turnout among voters and was the first Democratic club to draw members from the growing Latin American community in the Bronx. In 1953 its member Felipe Torres became the first Latin American elected to the state assembly, and in 1967 its leader Eugene Rodriquez, also an assemblyman, became the first one elected to the state senate. Rodriquez's conviction of attempted extortion in 1967 led to the collapse of the club, and it disbanded when his rival Louis Gigante was elected a Democratic district leader in 1972 with the backing of a neighboring club. Other members of the Pondiac Club included James J. Lyons, Stanley Friedman, Clara Gompers, Ed Gilhooley, Robert Garcia, Salvador Almeida, and David Ross.

Neal C. Garelik

Poole, Butcher Bill [William] (*b* New Jersey, July 1821; *d* New York City, 8 March 1855). Nativist. A butcher, a notoriously ferocious street fighter, and a gang leader, he was involved in gambling and liquor sales but was best known for his association with various anti-immigrant groups, including the Bowery Boys. He was also a "shoulder hitter" (strong-arm man) for nativist political causes. His dispute with the Irish-born heavyweight boxer John Morrissey led to his fatal shooting by Lewis Baker, a Welshman; his last words were reportedly "Good-bye boys, I die a true American." Nativist newspapers exploited the incident by glorifying Poole and portraying him as the innocent victim of an Irish conspiracy. As many as 250,000 people attended his funeral, and the trial that followed his death led to increased tension between Irish immigrants and native-born Americans. In the 2002 film *Gangs of New York* a character based on Poole was portrayed by Daniel Day-Lewis, who was nominated for an Academy Award for the performance.

Elliott J. Gorn

Poole, Ernest (*b* Chicago, 23 Jan 1880; *d* Franconia, N.H., 10 Jan 1950). Journalist and novelist. He graduated from Princeton University in 1902. A reformer, his magazine reporting in *McClure's* led to changes in child labor laws and tenement reform as well as helped to fuel an antituberculosis campaign. His first novel, *The Voice of the Street* (1906), a story of New York tenement life, also had a social message. Poole wrote *The Harbor* (1915) against the backdrop of the changing Brooklyn docks during the transition of marine transport from sail to steam power. His novels portrayed labor unions in a sympathetic light. As a correspondent for the *Saturday Evening Post* during World War I he reported on Europe, and in 1917 he traveled to Russia and reported on the effects of the Russian Revolution on the population. In 1918 he won the Pulitzer Prize for *His Family,* a novel detailing the rise in social mobility after the war. Throughout the 1920s and 1930s Poole's work was published in *Harper's Magazine*. He famously chronicled the urban squalor of "The Lung Block," a section of New York City's Lower East Side notorious for its high incidence of tuberculosis; decades later his reporting led to the demolishing of the infamous tenements and the construction of Knickerbocker Village. His autobiography *The Bridge* was published in 1940.

Nathan Morgante

pooper-scooper law [Canine Waste Law]. Law passed in 1978, with a major push by activist group Children before Dogs, that requires dog owners to remove their dog's waste from the sidewalk. Since the 1930s "Curb Your Dog" signs have been visible in

the city. New York City's Departments of Health, Sanitation, and Parks and Recreation can issue tickets for any violations of the law. By the early twenty-first century the sidewalks of the city were almost entirely clear of animal waste, a dramatic improvement over the decades before World War II.

poorhouses. See Almshouses.

Pope, Generoso (*b* near Naples, 1 April 1891; *d* New York City, 28 April 1950). Businessman and community leader. He moved to New York City in 1906 and first worked as a waterboy for the Colonial Sand and Gravel Company, a tunnel excavation company that he owned by 1920; he had enterprises in real estate, banking, and communications. He bought the leading Italian American daily newspaper *Il Progresso Italo-Americano* in 1928 and the weekly newspaper *Il Corriere d'America* in 1929. A supporter of Mussolini, he received medals from the Italian fascists in 1926, 1928, and 1930; in 1931 leftists tried to assassinate him with a letter bomb. In 1936 he voiced his support for neutrality, thus aiding the fascists in the Second Italo-Ethiopian War. He was a powerful figure in Tammany Hall politics, and his friendship with Mayor James J. Walker prompted his investigation by the Seabury Commission (he was eventually cleared). Initially opposed to Fiorello H. La Guardia's mayoral candidacy, he later supported it; in later years he returned to endorsing Democratic candidates. He repudiated fascism in an editorial in *Il Progresso* in 1941. During the late 1940s he organized Italian relief efforts and established a college scholarship fund for graduates of the city's Catholic schools. In 1949 he bought the radio station WINS. Pope left the bulk of his estate to charity.

Mary Elizabeth Brown

Poppenhusen, Conrad (*b* Hamburg, 1 April 1818; *d* College Point [now in Queens], 12 Dec 1883). Businessman. The son of a prosperous textile trader, he moved to New York City in 1843 to run the offices of the whalebone merchant H. C. Meyer and in 1844 became a partner in the firm of Meyer and Poppenhusen. At its plant in Brooklyn the firm processed whalebone into buttons, corset stays, combs, spoons, medical products, and various other articles, and in 1852 it secured a license for the manufacture and sale of hard rubber (developed by Charles Goodyear). With the assistance of a new partner, Frederick Koenig, the plant was converted to the manufacture of hard-rubber household goods, but it soon proved too small for the rapidly expanding business; in 1854 the firm was reestablished in Queens as the India Rubber Comb Company, later the Enterprise Works. The new location easily accommodated the factory workers, and in the following years Poppenhusen built streets, houses, businesses, and schools (including the Poppenhusen Institute, 1868, which remains open as of 2007). In 1870 the community became the village of College Point, incorporating the neighborhoods of Flammersburg and Strattonport. Poppenhusen built the Flushing and North Side Railroad and entrusted it to his sons, but their inexperience in management and fierce competition led to ruin. Although he tried to remedy the damage, in 1877 he was forced to declare bankruptcy; in his final years he made a limited financial recovery.

Vincent Seyfried

popular entertainment. Parades, festivals, and informal recreations in streets and taverns were some of the popular entertainments available in New York City during the colonial period. Most participants were men. The growth of the city in the first half of the nineteenth century encouraged some entrepreneurs to open theaters, and soon melodramatic plays and minstrel shows were introduced. Both genres relied on a range of ethnic, racial, and regional stereotypes (the worst of which were reserved for blacks), and by the early 1830s they were well established. To accommodate the wide audience that the performances attracted, theaters were divided into an upper tier, or gallery, for rowdies and prostitutes and a mezzanine for families. By the middle of the century there were many theaters and different kinds of entertainment for each social class: the Bowery became the entertainment district for immigrants and the working class and Broadway for the middle and upper classes. During the 1880s entrepreneurs hoping to appeal to all segments of the population developed vaudeville theater, in which old-fashioned variety shows were presented in new settings; there was enough propriety and enough raciness to suit most tastes and offend few, and drunkenness was not tolerated. Manhattan soon became a national center for vaudeville, which along with amusement parks, cafés, dance halls, and nickelodeons helped to subvert Victorian ideas of propriety and sexuality by permitting working women to mingle unsupervised with men. After the introduction of sound motion pictures in the late 1920s vaudeville theater declined and could not survive the Depression. By the 1930s motion pictures became the most popular form of entertainment. Virtually every commercial district had its own movie house, usually a renovated vaudeville theater or an enormous new motion picture "palace" with extravagant decor. Many New Yorkers went to the movies weekly. After World War II popular culture in the city changed immensely. Racial and ethnic minorities demanded an end to offensive stereotypes in theatrical productions and broadcasts. After television was introduced, popular forms of entertainment were usually broadcast rather than performed in public for audiences. Fear of crime and racial conflict also decreased the public nature of popular entertainment. Still, New York City remained a center for live performance. Rap music was developed on the streets and spread worldwide. Movie theaters showed first-run films from Hollywood and classic and foreign films, and public celebrations for the Fourth of July and other occasions were well attended. The decline of crime during the 1990s brought a greater sense of ease to going out. The popularity of nightclubs and comedy clubs grew, and bars offered televised sports, billiards, and other diversions. Rising property values, however, brought down some old clubs, such as CBGB on the Bowery. In the early twenty-first century the immigrant presence in the city fostered new venues for entertainment. International forms of music, particularly Latin music, grew more prominent in the city's nightlife.

Robert W. Snyder, *The Voice of the City: Vaudeville and Popular Culture in New York* (Chicago: Ivan R. Dee, Publisher, 2000)

Robert W. Snyder

popular fiction. In the mid-nineteenth century about half the popular fiction books written on urban subjects were set in New York City, which was presented with all its promises and threats as the archetypal American city. During this period of widespread moral evangelism from about 1820 to 1870, the city was seen by some as harboring all the temptations of sin: greed on Wall Street, licentiousness on the Bowery, and artifice on Broadway. It was the ultimate proving ground for personal character, a challenge to the innocent and a lure to the weak. Many early authors of popular fiction contrasted images of the smoke-shrouded city with sentimental notions of the idyllic countryside and used this contrast to promote the supposed rural virtues of simplicity, chastity, honesty, industry, and frugality. Frequently a country-born protagonist approached the city with a mixture of awe and dread: in Cornelius Mathews's *Moneypenny* (1849) the title character regarded the city "with fear and trembling, as though it were some beast of prey crouching on the river-bank in the dark." Another common device was to relate a tale of heroism from the perspective of an innocent, virtuous child, as in *The Newsboy* (1854) and other works by Elizabeth Oakes Smith, or of a sober, religious wife, as in the works of Ann Sophia Stephens and Maria Susanna Cummins, in which the heroine provides shelter from the

immorality of the streets. A harsher genre of popular fiction known as "rogue fiction" featured the outlaw or cowboy as its protagonist.

Across the United States readers of popular fiction became familiar with such stock details of New York City as the Five Points, the Tombs, gambling houses, concert saloons, dancehalls, oyster cellars, prostitutes, newsboys, and firefighters, and the prevalent style in popular fiction shifted from sentimentalism to realism. The standards of the period were set in such best sellers as *Letters from New-York* (1843) by Lydia Maria Child and *The Mysteries and Miseries of New York* (1848) by Ned Buntline (a pseudonym of Edward Zane Carroll Judson), which combined elements of fiction, journalism, realism, and sensationalism. George G. Foster employed a symbolism of sunlight and shadows to denounce the filth and misery of the city in the novel *Celio; or, New York Above-ground and Under-ground* (1850), and the city was portrayed as "part Paradise, part Pandemonium" in works such as John D. Vose's *Seven Nights in Gotham* (1852), a luridly detailed chronicle of the nightlife and sexual adventures of the wealthy and sophisticated. The less decadent lives of the working class were explored in novels that romanticized the hardy workman and his virtuous wife. Although many writers deplored the exploitation of the working class and sympathized with the downtrodden, they did not champion radical social reform. Working-class readers were assured that they would eventually be rewarded and that the idle rich would be punished. In works like *Celio* and George Lippard's *New York: Its Upper Ten and Lower Million* (1853) the salvation of the working-class hero comes from above, perhaps in the form of an inherited fortune, rather than from such active remedies as politics, strikes, riots, or crime.

One of the most sensational portrayals of the suffering of the poor in the shadow of splendor was Solon Robinson's *Hot Corn: Life Scenes in New York Illustrated* (1854), which sold 50,000 copies in six months. William Wirt Howe wrote in his popular novel *The Pasha Papers* (1859) that the city had "more trade, more wealth, more houses, more dirt, more misery, more political corruption than any other great city in the country," that it was "a place of very great importance particularly self-importance." By 1865 the publishing house of Beadle and Adams had produced four million copies of "dime novels." Writers of popular fiction in the 1860s and 1870s began to share the concerns of civic reformers and denounced incompetent civil servants, corrupt police officers, and self-serving politicians. Howe's *The Pasha Papers* and Henry L. Williams's *Gay Life in New York; or, Fast Men and War Widows* (1866) blasted Tammany Hall and wistfully recalled a supposed golden era of enlightened rule. In the last third of the nineteenth century popular fiction contributed to the emerging image of New York City as a place of civilization and progress. The urban mysteries that had entranced and bewildered earlier generations of readers were now explained in fictional works that doubled as success manuals. Foremost among these were the novels of Horatio Alger, which were so popular that after his death his name was attached to the works of other writers. In *Ragged Dick; or, Street Life in New York* (1867) and about 120 subsequent novels, Alger provided a mostly rural audience with detailed descriptions of the city and practical information on employment, transportation, and lodging. He reassured his readers that anyone could get along in the city with enough "street smarts," charm, aggressiveness, and good fortune.

After the Civil War improvements in law enforcement in the city led to a more favorable view of fictional police officers and detectives, who were no longer seen as unsavory types consorting with criminals and meddling in marital affairs and labor disputes. The detective story, a genre developed earlier in the century by Edgar Allan Poe, became an important form of popular fiction in the late 1880s. Individual wit and will triumphed in a dangerous and deceitful world in such stories as Harlan Halsey's *Lady Kate, the Dashing Female Detective* (1886), in which a female protagonist in New York City alternates between explicitly male and female roles and flirts with the objects of her professional and romantic attention. The celebrated head of the detective bureau of the city police, Thomas Byrnes (1880–92), was instrumental to boosting the reputation of real and fictional detectives through his collaboration with Julian Hawthorne (son of Nathaniel Hawthorne) on five novels loosely based on his own casework and published in 1887–88. Over time the detective genre evolved to reflect changing attitudes toward law and order in the city, and detectives were variously incarnated in stock roles such as spy, scientist, vigilante, and police officer, all adept at disguising themselves and infiltrating milieus ranging from fashionable society to the underworld. In Norman Munro's *Black Tom, the Negro Detective; or, Solving a Thompson Street Mystery* (1893) the hero is "a mysterious individual who came and went into and out of the negro quarters of the city" who unravels the mystery of a white woman found dead in the black part of town, only to be revealed himself as a white detective in disguise.

Government regulation and a changed marketplace brought a rapid end to the dime novel in the 1890s and led to the development of the pulp magazine. One of few fictional detectives to enjoy popularity in both the old and new types of publication was Nick Carter, a hardy, all-American Protestant youth from New York City who appeared in more than 1000 stories from the 1890s to the 1920s. The character was created in "The Old Detective's Pupil; or, the Mysterious Crime of Madison Square," published in the *New York Weekly* in September 1886, and remained a constant for 17 years under the byline of Frederick Marmaduke Van Rensselaer Dey. Carter was pictured in various disguises, including those of a farmer, an Irish political boss, a Chinese boy, and a woman. During a time of imperialism, nativism, and moralism, he embodied traditional middle-class values, eschewing alcohol, tobacco, and profanity: Dey boasted that he "never wrote a Nick Carter story that he wouldn't read to a Bible class." After the turn of the twentieth century the widely held opinion that science was a remedy for urban ills helped to transform the detective from a disguise artist into a scientist. Arthur B. Reeve began a successful series of novels with *The Silent Bullet* (1912), about a professor of "criminal science" at Columbia University who solves crimes with such advanced techniques as "soul analysis." The detective as a force for Progressivism was exemplified by Average Jones, created by the prominent muckraking journalist Samuel Hopkins Adams. After inheriting a fortune on the condition that he live in New York City for 10 years, Jones became an "Ad-Visor," using his powers of detection to ferret out fraud in newspaper advertising; much as earlier detectives had protected New Yorkers from the hidden menaces of the industrial metropolis, Jones protected them from quack doctors, greedy trusts, and corrupt politicians.

As the city grew more complex the craft of the fictional detective grew more esoteric: having at first consisted of knowledge of the street and disguises and then of scientific techniques, it now further evolved into an ability to solve crimes through pure analytical reasoning. The detective as a gentleman of leisure who lent his intellectual powers to solving bizarre and sophisticated crimes was exemplified in Willard Huntington Wright's *The Benson Murder Case* (1926), the first novel featuring his highly popular detective Philo Vance, the scion of an aristocratic New York City family who recalled such characters from British detective fiction as Agatha Christie's Hercule Poirot and Dorothy Sayers's Lord Peter Wimsey. Vance solved crimes nonchalantly with the aid of psychology, criminal anthropology, and a sound knowledge of art; his popularity continued through several sequels until Wright's death in 1933. Frederic Dannay and Manfred B. Lee wrote a long series of novels beginning with *The Roman Hat Mystery* (1929) in which both the pseudonymous author and the detective were Ellery Queen, who lived with his father on West 87th Street and regarded the

city with scientific detachment through rimless pince-nez. Rex Stout introduced Nero Wolfe in *Fer-de-lance* (1934), and by 1975 there were more than 60 sequels. Unsoiled by the street life of the city, Wolfe was an obese, cerebral detective who remained ensconced in his apartment on West 35th Street while his energetic assistant Archie Goodwin did the legwork. In an increasingly confounding and hazardous world of crime, Wolfe's renowned brownstone was a fortress from which reason ruled. The detective became an antihero in the work of Dashiell Hammett, who made New York City the setting for parts of *The Glass Key* (1931) and for his last novel, *The Thin Man* (1934), which inspired a series of motion pictures. Its central character is a retired detective named Nick Charles, who while on vacation amid the decadent leisure class of New York City is thrust into the investigation of a murder. Clearly more enthusiastic about drinking and cavorting than about pursuing the case, Charles nevertheless solves it while doing hardly any investigative work of his own. Several other fictional detectives became popular during the 1930s and 1940s: Hildegarde Withers, a spinster schoolteacher and police buff introduced in Stuart Palmer's *The Penguin Pool Murder* (1931) who later appeared in a series of books and films; Bill Crane, a private detective created by John Latimer in *Murder in the Madhouse* (1935); and Scott Jordan, a lawyer and classical music aficionado in New York City created by Harold Q. Masur in *Bury Me Deep* (1947).

At the same time as Vance and Wolfe relied on their deductive powers, the brawling, "hard-boiled" private investigator of pulp fiction pulled the genre of detective fiction in the opposite direction. The most extreme example of the detective as a vengeful urban vigilante is Mike Hammer in more than 20 novels by Mickey Spillane beginning with *I, the Jury* (1947); the character helped to make Spillane the best-selling mystery writer in the world. The ingredients of these stories are deserted, rainy New York City streets; a few luxury penthouses; and an endless maze of tenements, bars, and alleyways, as well as a distrust of lawful authority and a rejection of liberal idealism. The leading postwar writer of the "police story" was Ed McBain (pseudonym of Evan Hunter), who in *Cop Hater* (1956) and later novels drew a similarly bleak portrait of the city. The citizens of "Isola," McBain's version of New York City, are vulnerable "cave-dwellers" who cower in their apartments while the city crumbles around them. Unlike Spillane, whose despair over the individual's loss of power led him to create an armed and dangerous outlaw in Hammer, McBain abandoned individual heroics altogether in favor of the collective authority of the police. His fictional 87th Precinct replaced the lone detective, and teamwork and the power of law replaced individual will.

During the 1950s the detective story began to depict Harlem. Chester Himes created the police detectives Grave Digger Jones and Coffin Ed Johnson and broached the subject of racism. In *Blind Man with a Pistol* (1969) and *The Real Cool Killers* (1985) the possibilities for heroism are tightly circumscribed by the drugs, prostitution, filth, and despondence of Harlem, but Jones and Johnson are nevertheless able to fight crime by relying on the law and their partnership. Ernest Tidyman introduced the first fictional black private detective in *Shaft* (1971), the original cover of which announced: "Shaft has no prejudices . . . He'll kill anyone black or white." Against a backdrop of racial unrest, Shaft and a team of black revolutionaries confront a band of kidnappers seeking to take over the heroin trade in Harlem. Like many other detective stories *Shaft* is infused with sardonic humor: at one point the main character ignites a riot by running through the streets crying "The niggers are coming!" Other detectives specialized in the sort of crime found only in the international capital of finance: under the pseudonym Emma Lathen, Mary J. Latis and Martha Hennisart wrote a series of books including *Banking in Death* (1961) in which the expertise of John Putnam Thatcher, an executive at a bank on Wall Street, allows him to uncover elaborate financial chicanery. Arthur Maling wrote several novels, including *Ripoff* (1976), in which the hero is Brock Potter, a partner in the fictional brokerage house of Price, Potter, and Petacque.

In the early twenty-first century many works of popular fiction focused on women in the city: *The Nanny Diaries* (2002), by former nannies Emma McLaughlin and Nicola Kraus, portrays an Upper East Side mother from the perspective of her overworked nanny; *The Devil Wears Prada* (2003) is a fictionalized account of author Lauren Weisberger's job as an assistant to Anna Wintour at *Vogue*; and "Sex and the City" columnist Candace Bushnell's *Lipstick Jungle* (2005) follows the lives of four powerful New York City women. Urban fiction by black authors, also known as hip-hop or street lit, also flourished, sold by sidewalk book vendors as well as mainstream and independent publishers. Authors included activist Sister Souljah, author of *The Coldest Winter Ever* (1999), about Winter Santiaga, the teenage daughter of a Brooklyn drug dealer; and Omar Tyree, whose novel *The Last Street Novel* (2007) chronicled the adventures of a crime writer in Harlem.

Jeff Sklansky

Popular Library. Firm of book publishers, formed in 1942 by Ned Price and specializing in paperbound editions. In the mid-1950s it created a stir in the book trade by purporting to have the "fastest selling pocket-size book line in the nation." The firm sold as many as 85 million books a year by publishing the work of such varied authors as Fulton Sheen and Polly Adler. It later became a profitable imprint of Fawcett and the Columbia Broadcasting System (CBS) before being acquired by Warner Communications in 1982.

James E. Mooney

population. According to the first known colonial census, the area comprising what is now New York City probably had about 10,000 inhabitants in 1698, including 4937 in New York County (Manhattan, settled mostly at the southern tip), 2017 in Kings County (Brooklyn), 727 in Richmond County (Staten Island), and a few others in Queens County (which extended into what is now Nassau County) and the part of southern Westchester County that later became the Bronx. Although the area in the seventeenth century was populated mostly by Dutch and English, many other ethnicities were represented. The city's status as a commercial center and the Dutch reputation for tolerance attracted myriad ethno-religious groups that were seeking refuge from oppression or looking for economic opportunities; these included French-speaking Walloons; Calvinists; Quakers; Puritans; Lutherans; Mennonites; Huguenots; and Jews with diverse origins, such as Brazil, Spain, and Portugal. A substantial flow of African slaves also characterized early settlement in the colony. In fact, by the late 1700s blacks likely comprised close to one-fifth of the city's population. The first federal decennial census, conducted in 1790, showed the city with a population of 33,131 (an additional 16,000 lived in the outlying settlements and farms that later became part of the city). The next-largest cities were Philadelphia (28,522), Boston (18,320), Charleston (16,359), and Baltimore (13,503).

New York City's population was transformed starting in the 1830s with the onset of immigration from northern and western Europe, primarily from Ireland and Germany. These flows marked the onset of mass immigration that would last 100 years, culminating in New York City's permanent status as the nation's largest city. The city increased from 203,000 people in 1830 to 814,000 by 1860, largely on the heels of Irish emigration spurred by the Potato Famine of the 1840s. In 1860 close to one-half of the city's population was foreign-born, with the largest contingent from Ireland. Even in the face of westward migration and the Civil War, immigration continued to propel the city's population upward during the 1860s and 1870s. The city, which now included a portion

of present-day Bronx County, officially exceeded a population of one million in 1880. Although immigration continued unabated, the origin countries began to change during the 1880s, with immigration from northern and western Europe giving way to flows from southern and eastern Europe, most notably from Italy, Russia, and Poland. The five boroughs were consolidated into New York City in 1898, with a population of 3.4 million people. It was by far the largest city in the country, well above Chicago (1.7 million), Philadelphia (1.3 million), St. Louis (575,000), and Boston (561,000).

The physical city started to expand after the first subway line was opened in 1904 and subsequent large-scale housing development outside Manhattan began. During the first decade of the twentieth century alone, the city added 1.3 million residents, reaching 4.8 million in 1910, with 41 percent of the population foreign-born. The year 1910 also saw Manhattan reach a peak of 2.3 million residents, but it no longer accounted for a majority of the city's population, as the subways increased settlement in the other boroughs. Still, population was highly concentrated in lower Manhattan, with densities in tenement neighborhoods sometimes exceeding 600 people per acre (compared with today's densities of less than half that number for most Manhattan high-rise neighborhoods). With continued growth, New York City's 6.9 million residents in 1930 were at the hub of a metropolis of more than 12.6 million. Fear regarding the ability of new immigrants to assimilate spurred the passage of restrictionist immigration legislation during the 1920s. Various country quotas were established at the national level with the goal of limiting immigration from southern and eastern Europe. When combined with the effects of the Great Depression, these quotas led to sharp declines in immigration to New York City; however, it continued to grow because of a surge in domestic migration from the southern states and from the island of Puerto Rico, propelling the population to 7.9 million in 1950.

The Immigration and Nationality Act of 1965 led to a resurgence of immigration in many cities, including New York City, which saw an increase in immigrants from Latin America, Asia, and the Caribbean. This increase came amidst large-scale suburbanization and a loss of central-city manufacturing employment, a common experience in most cities of the Northeast and Midwest during the decades after World War II. In New York City, net migration turned negative, meaning that the city became a net exporter of people. This trend was most pronounced during the 1970s, with the city registering a loss through net domestic migration of nearly two million people. However, this large population loss was followed by population growth during the 1980s and 1990s that was fueled by continued immigration and the fertility of new immigrant populations. By 2000 New York City's population reached a new peak, crossing the eight million mark for the first time. The share of foreign-born population rose from just 18 percent in 1970 to 36 percent in 2000. The population dynamic that took root in the 1960s continues today: net export of population to other states, offset by immigration and positive natural increase (more births than deaths). New York City's population stood at 8.25 million in 2006, with the foreign-born population numbering 3.04 million or 37 percent of all people. The city's population continues to be defined by immigrants, with challenges that rival those of a century ago. For instance, some 1.8 million city residents, about one-quarter of the population aged five years and older, are not proficient in English.

Around the time of incorporation, New York City's population was young, with close

Compiled by Frank Nestor

to one-third of residents younger than 15. Overcrowded conditions were fairly common in most parts of the city, a function of large families living in tenement buildings. Over the past 50 years, the household and living arrangements of city residents have shifted. Starting in the 1960s, the number of single-parent families has risen because of myriad social, economic, and cultural factors, including the increased number of women participating in the labor force, delayed marriage and childbearing, and increases in divorce. More than one-third of all children live in single-parent households. The number of nonfamily households (mostly consisting of one person living alone) has also risen, primarily in Manhattan. At the same time, households in parts of New York City have grown more complex as a result of larger, extended immigrant families. Overall, approximately 20 percent of city residents live in poverty, a rate that has been relatively unchanged for more than three decades.

The city has continued to grow in racial and ethnic diversity. One hundred years ago, European ethnic groups dominated, but by the middle of the twentieth century large increases in black and Puerto Rican migration to the city began to change its racial and ethnic composition. By 1960 more than 600,000 Puerto Ricans lived in the city, and by 1970 the overall number of Hispanics exceeded 1.25 million. These increases were accompanied by the outmigration of European whites, who last comprised a majority of the city's population in 1980 and whose outward movement has transformed the city from a largely white European city to one with no dominant racial group. In 2006 the city was 35 percent white non-Hispanic, 24 percent black non-Hispanic, 28 percent Hispanic, and 14 percent Asian non-Hispanic, numbers that fail to do justice to the substantial mix of ethnic subgroups within each of these categories.

New York City's 2006 population of 8.25 million still makes it by far the largest city in the United States, easily exceeding the population of Los Angeles (3.83 million) and Chicago (2.84 million). Four of five New York City boroughs would qualify as top 10 U.S. cities as ranked by population.

Joseph J. Salvo, Arun Peter Lobo

Population Council. Nonprofit organization formed in 1951 by John D. Rockefeller III to study and control population. Initially its goal was to expedite population policies in the third world, but it eventually sought also to control fertility in the United States in the interest of preserving advances in education, culture, and development. The first benefactors were Rockefeller (who gave $1,893,000), chairman for the first 25 years; the Ford Foundation ($600,000); the Rockefeller Brothers Fund ($120,000 a year for three years); and several large corporations. By 1985 the council had received $63 million from the Ford Foundation and $50 million from various funds controlled by Rockefeller. Special projects were financed by the U.S. Agency for International Development and the National Institutes of Health. In 2007 the council had a staff of more than 500, projects in more than 60 countries, and a budget of $71.6 million supported by contributions from foundations, governments, individuals, and international organizations. The council directs social programs (including many related to health), conducts research on issues pertinent to developing countries, seeks to improve contraceptive technology, and provides advice and technical assistance to governments, international agencies, and private organizations; it also issues publications and sponsors conferences, seminars, and workshops. Its main areas of focus center on the human immunodeficiency virus (HIV) and AIDS; poverty, gender, and youth; and reproductive health. The Population Council is credited with having defined the importance of population growth and made the study of population a scientific endeavor.

pornography. New York City became a central market for erotic materials as early as the 1840s, when the first examples of published pornography were probably imported from England and France. In 1846 William Haynes, a surgeon in New York City, published John Cleland's *Fanny Hill: Memoirs of a Woman of Pleasure,* the first known pornographic work produced in the United States. He reinvested the profits to publish racy novels, which by the 1860s were so widely available that they attracted the notice of Anthony Comstock, later the city's leading figure in a lengthy campaign against vice. Pornographic items were sold by some push-cart vendors and stationery stores, and at the end of the nineteenth century even reputable vendors sold postcards with graphic images, drawings with suggestive captions, and photographs of scantily clad women. Occasionally between 1900 and 1920 brazen individuals hawked sexually explicit cards openly on market streets, usually attracting crowds of young men and risking arrest. In some neighborhoods saloon owners and shopkeepers used pornographic paintings, photographs, and figurines to attract customers. Several bars in lower Manhattan and Brooklyn offered slot machines that showed 12 to 15 provocative pictures for a nickel or a dime. Such neighborhoods as Greenwich Village and the East Village were known for tolerating expressions of sexuality that were persecuted elsewhere. During the 1920s and 1930s an underground homosexual culture developed in Times Square. Known as the "Crossroads," the neighborhood attracted both homosexual and heterosexual patrons to entertainments that became increasingly explicit.

The port also served as the illegal point of entry for such literary works as Boccaccio's *The Decameron* and James Joyce's *Ulysses.* Restrictions on printing erotica were loosened after the U.S. Supreme Court allowed the importation of *Ulysses* in 1933, and New York City became the first market for such works as William Faulkner's *Sanctuary* and James Farrell's Studs Lonigan trilogy. Virtually all sexual images and explicit works were deemed obscene until a series of rulings by the U.S. Supreme Court beginning in 1957 narrowed the definition to allow the open sale of pornographic materials. The editor Ralph Ginzburg tested obscenity laws in 1963 by launching *Eros,* a quarterly hardbound magazine devoted to sexuality; for 10 years he unsuccessfully fought a three-year prison sentence while a growing number of businesses, particularly on 42nd Street, offered a vast array of far more explicit magazines, books, movies, "peep shows," and live performances. In a

landmark decision, *Memoirs v. Massachusetts* (1966), the Supreme Court ruled that materials needed to be "utterly without redeeming social value" to be found obscene, and observers soon noted that pornography was the fastest-growing segment of the economy on the West Side. Publishers churned out more and varied erotica, including magazines ranging from *Screw,* edited by Al Goldstein, to *Lesbian Lust.*

By 1969 the city's pornography trade became a prominent issue in local politics. The evangelist Billy Graham condemned Times Square as an "open sewer running through the heart of the city" and called on the three mayoral candidates to oppose pornography in their election campaigns. Mayor John V. Lindsay did make pornography a priority, establishing a task force to combat it and enforcing new laws against unlicensed peep shows and the display of sexually oriented magazines. In 1973 a vigorous campaign against obscenity yielded 529 arrests and a conviction rate of 85 percent. Municipal and federal authorities began to look at pornography as an aspect of organized crime, as three crime families were linked to adult bookstores and movie theaters. The resulting crackdown was challenged by some on the grounds of free speech. Goldstein tested the limits of sexual speech by depicting a wide range of sexual acts and lampooning national leaders in *Screw*; he and the publisher were fined on more than one occasion. The magazine maintained a circulation of well over 100,000 and was identified as the leading publication of its kind in an early 1980s survey. Feminists refocused opposition to pornography by arguing that it oppressed women: Women against Pornography, formed in 1979, gave tours of 42nd Street. They found allies in the U.S. Attorney General's Commission on Pornography (1984–86), whose Meese Report condemned a range of materials including sadomasochistic and homosexual literature.

In the following years the pornography trade in the city, as both an economic activity and a political issue, faded somewhat. Efforts to redevelop 42nd Street restricted the number of storefronts and theaters devoted to pornography, and the introduction of adult telephone services and video recordings diminished the industry's association with the city. Concentrations of adult video stores in Chelsea and Flushing drew protests and calls for new zoning laws; at the same time, campaigns against sexual expression were contested by feminists opposed to censorship and by AIDS activists.

In the twenty-first century access to pornography has become easier with Internet sites and chat rooms, and cable television brings X-rated programs into living rooms at modest charges. Sex stores serving both high- and low-end customers are common throughout the city and cater to the "adult entertainment" industry. A number of groups have lobbied to prevent stores from selling pornography near schools and areas where children congregate. Police crackdowns on places selling pornography have elicited complaints from free speech advocates and gay rights groups who say that they have been targeted unfairly. In 2002 the city's first Museum of Sex opened at 233 Fifth Avenue, with a permanent collection of 15,000 objects. New York City became the location of the television show *Sex and the City*, broadcast on HBO from 1998 to 2004 and focusing on the social, and sexual, lives of single women in the city.

Port Authority Bus Terminal. Huge bus depot on the west side of Eighth Avenue between 40th and 42nd streets, designed, financed, and erected during 1947–50 by the Port of New York Authority at a cost of $24 million and opened to the public on 15 December 1950. All commuter and interstate bus companies moved into the new terminal except for the Greyhound Corporation, which did so in 1963. The facility was enlarged in 1963 at a cost of $30 million and again during 1979–80 at a cost of $226 million, mostly to accommodate heavier bus traffic to the New Jersey suburbs across the Hudson River. It is the largest bus terminal in the United States and one of the world's busiest mass transit facilities, accommodating more than 200,000 passengers and 7000 buses on a typical weekday. The 1979–80 expansion included 52 new bus-loading platforms and an indoor mall with 70 shops. In the 1990s, as the nearby Times Square area underwent a significant revitalization, the bus terminal management expanded efforts to provide first-class security and services to terminal customers. In late 2007 plans were announced to construct a large office atop the terminal. Construction was expected to begin in 2010 and take four years to complete.

Andrew Sparberg

Port Authority of New York and New Jersey. Government agency created in 1921 by the states of New York and New Jersey as the Port of New York Authority and charged with improving transportation and terminal facilities in the port and the surrounding bi-state region. Given no taxing power, it was authorized to issue bonds and charge fees for use of its facilities. Appointments to the board of commissioners were divided equally between the state governors and set for fixed, overlapping terms; in 1927 the governors were granted veto power over commissioners' actions. When the agency sought to improve rail-freight transportation in the 1920s, its proposals were blocked by the railroads, which argued that the proposed unified network would weaken their ability to compete for business and that the capital costs to be borne by those carriers under the plan (for new tunnels under the Hudson River and New York Bay) would exceed any benefits they would reap. Local pressures and a campaign by engineer O. H. Ammann led the authority to construct vehicular bridges between New Jersey and Staten Island and the George Washington Bridge; they were completed between 1928 and 1931, ahead of schedule and within budget, giving the agency a reputation for efficiency and political independence. The Port Authority was then awarded control over the Holland Tunnel (opened in 1927) in 1930–31 and began work on the Lincoln Tunnel.

As toll revenue declined during the Depression, the agency drifted, but beginning in the 1940s it became a major regional power under the leadership of executive director Austin J. Tobin, who gathered political support that permitted the Port Authority to take over La Guardia and Idlewild (now John F. Kennedy) airports in New York City as well as Newark Airport in 1947, build the Port Authority Bus Terminal (1947–50), and expand the Lincoln Tunnel. With Robert Moses it devised plans in 1954–55 that led to the construction of the Verrazano–Narrows Bridge, the Throgs Neck Bridge, and the lower deck of the George Washington Bridge. In 1947 the authority took over the marine terminal at Newark, but New York City rejected the agency's offer to take control of and modernize the city's piers. During the 1950s the authority built a major container port at Newark/Elizabeth.

While Tobin was executive director, the Port Authority was often criticized for neglecting the region's rail facilities. In 1961, with most railroads in bankruptcy, Tobin reluctantly agreed to take over the Hudson and Manhattan Railroad, and the railroad (now the Port Authority Trans-Hudson Corporation, or PATH) remains a crucial commuter line despite a large deficit. Tobin's plans to build the World Trade Center were approved in the 1960s, and it was finished in the 1970s. Beset by conflicts over rail-commuter and other issues, he retired in 1972. On 1 July 1972 the authority took its current name.

After several years adrift, in 1977 the agency named Peter C. Goldmark, Jr., executive director. It then developed an industrial park in South Bronx and built a satellite communications center, Teleport, on Staten Island. It also expanded the bus terminal in Manhattan and proposed other projects that encountered criticism, partly because they were outside the agency's transportation mandate. Goldmark's successor, Stephen Berger (1985–90), concentrated on refurbishing aging facilities. Under Stanley Brezenoff (1990–95) and his successors, the authority faced recurrent demands to improve transportation facilities, and monorails from Newark and John F. Kennedy

airports to Manhattan were completed. In recent years the agency has experienced continuing growth in passengers and income; its gross operating revenues reached $3 billion in 2006. That year the Port Authority began a 10-year capital plan that includes building a new commuter tunnel under the Hudson River, modernizing the three airports and adding Stewart Airport as a fourth major jetport, and reconstructing the World Trade Center site.

Porter, Cole (Albert) (*b* Peru, Ind., 9 June 1891; *d* Santa Monica, Calif., 15 Oct 1964). Composer. The son of prosperous parents, he attended Yale University (BA 1913), where he wrote the "Yale Bull Dog Song" and "Bingo Eli Yale." Later he studied music at Harvard University and with Vincent d'Indy in France. His family opposed his decision to pursue a career as a songwriter until he was freed from financial worry by his marriage to Linda Lee Thomas (?1883–1954), a woman from a wealthy family. His first production on Broadway was *See America First* (1916). He became well known for Broadway musicals and film scores that included many memorable songs, such as "What Is This Thing Called Love?" (1930), "You Do Something to Me" (1929), "Love for Sale" (1930), "Night and Day" (1932), "Anything Goes" (1934), "Begin the Beguine" (1935), "I've Got You under My Skin" (1936), and "In the Still of the Night" (1937). Several of his songs were inspired by New York City, including "Washington Square" (1920), "Happy Heaven of Harlem" (1929), "I Happen to Like New York" (1930), "Take Me Back to Manhattan" (1930), and "Down in the Depths on the 90th Floor" (1936). He maintained an elegant residence at the Waldorf Towers at 100 East 50th Street. Three of his finest works for the theater are *Kiss Me Kate* (1948, book by Bella and Samuel Spewack), *Can-Can* (1953, book by Abe Burrows), and *Silk Stockings* (1955, book by Burrows, George S. Kaufman, and Leueen MacGrath). Porter wrote his own lyrics, which are characterized by elegant turns of phrase, urbane wit, emotional restraint, and sexual innuendo.

Porter, Edwin S(tanton) (*b* Connellsville, Penn., 21 April 1870; *d* New York City, 30 April 1941). Filmmaker. He moved to New York City in the mid-1890s and began building motion picture equipment and working as a film exhibitor; he showed outdoor advertising films at Herald Square and more sophisticated programs at the Eden Musée on 23rd Street. In 1901 he became a camera operator and studio manager for the Edison Manufacturing Company, for which he produced a range of comedies and dramas, including *The Great Train Robbery* (1903), *East Side Urchins Bathing in a Fountain* (1903), and *Dream of Rarebit Fiend* (1906). He later designed Edison's much larger studio in the Bronx, which went into operation in 1907. After leaving Edison in 1909 he formed the Rex Motion Picture Manufacturing Company at 573 11th Avenue, which soon became part of Carl Laemmle's Universal Film Manufacturing Company. In 1912 he sold his stake in Universal and formed the Famous Players Film Company with Adolph Zukor; from their studio at 213 West 26th Street he directed James Hackett in the first film version of *The Prisoner of Zenda* (1913) and Mary Pickford in *Caprice* (1913). He sold his one-quarter interest in the company to Zukor for $800,000 in 1915 and began manufacturing the simplex projector, which became the foremost motion picture projector of the time. Porter eased into retirement, became a recluse during the 1930s, and died at the Taft Hotel in 1941.

Porter, William Sydney. See O. HENRY.

Porter, William T(rotter) (*b* Newbury, Vt., 24 Dec 1809; *d* New York City, 19 July 1858). Editor and publisher. He began his career working for two small newspapers in New England before moving to New York City, where in 1831 he founded the *Spirit of the Times.* In 1839 he purchased the *American Turf Register* and *Sporting Magazine.* A pioneer of sporting journalism in the United States, Porter was also an enthusiastic sportsman, a founder of the New York Cricket Club, and an avid supporter of horse racing, field sports, and recreational athletics.

Port Ivory. Industrial area in the northwestern corner of Staten Island, named after the former factory complex operated by Procter and Gamble on the site. It opened in 1907 to manufacture Ivory and other brand-name soap bars, flakes, and granules, as well as other household products intended for the northeastern United States, including shortening (Crisco), and from about 1930 to about 1980 synthetic detergents and cleansers, cooking oils, baking goods (Duncan Hines), and orange juice (Citrus Hill). At its height in the 1920s the complex occupied 129 acres (52 hectares) and employed 1500 workers. Because of mounting costs Procter and Gamble closed Port Ivory in 1991. The site was purchased by the Port Authority of New York and New Jersey in 2001 for expansion of the adjoining Howland Hook Marine Terminal (reactivated in 1996). In 2008 the Port Authority was completing construction of a new 39-acre (16-hectare) intermodal container transfer rail facility on the site, to link with the reactivated freight rail line over the Arthur Kill lift bridge that reopened in April 2007, as well as leasing some of the property for warehousing.

Charles L. Sachs

Port Mobil. Section of southwestern Staten Island on the shore of the Arthur Kill just north of Charleston. It is named for a plant of the Mobil Oil Terminal Company built in 1936 on 200 acres (81 hectares) of marshland. There is an oil storage and distribution center with a steel bulkhead 2000 feet (600 meters) long for loading and unloading oceangoing tankers, and a pipeline under the Arthur Kill that delivers petroleum from Linden, New Jersey. The nearest main road is Arthur Kill Road; there are few houses.

Marjorie Johnson

Port Morris. Neighborhood in the extreme southeastern corner of the Bronx, bounded to the north by the Bruckner Expressway, to the east and south by the East River, and to the west by the Bronx Kill. The land was once part of Morrisania and was developed as a seaport by Gouverneur Morris II. The first factories opened in the 1850s, and the area was annexed to New York City in 1874. Morris's home in the southern end was demolished and replaced by the yards of the New York, New Haven and Hartford Railroad, which were built in 1906. In the mid-1990s the port was used mostly for unloading oil and coal for storage nearby, and manufacturing remained a dominant enterprise in the neighborhood. In 1997 the area was rezoned for residential use, and in the early twenty-first century the area began to attract artists and young professionals.

Gary D. Hermalyn

Port of New York. Upper New York Bay was quickly developed as a port by colonists because it was large and close to the open sea, with deep channels, deep water next to the

Plan of the City of New York in North America, surveyed in 1766–67 by Bernard Ratzer

Berenice Abbott, Watuppa *(1936)*

shore in many places, sufficient anchorage, shelter from the prevailing winds, and little ice in winter; it was also easy to defend because its entrances were narrow and there were enough of them to make blockade difficult. Its location at the mouth of the Hudson River made the port a terminus of trade routes extending into Canada north from Lake Champlain and northwest from the Mohawk River and Lake Ontario. From the seventeenth century furs and other goods traded with the Iroquois were sent to the port from a Dutch outpost upstate at Fort Orange (later Albany). The first wharf at the lower end of Manhattan, built in 1648 by Governor Peter Stuyvesant, was situated on the western bank of the East River in an area sheltered from the prevailing westerly winds and from ice that strayed from the Hudson, and it remained the center of the port throughout the colonial period. Flour produced by German farms west of the Hudson and in the valleys of the Mohawk River and Schoharie Creek was shipped through the port to the West Indies, where it was traded for sugar that was sold in Europe to buy manufactured goods later sold in the city. During the early eighteenth century the city's shipbuilding district was north of the port, near what is now South Street Seaport. Trade and agriculture along the Hudson were secured after the British captured Canada from the French in the Seven Years' War (1756–63).

The port was the third- or fourth-largest in the colonies about the time of the American Revolution and grew rapidly afterward. American firms were no longer restricted to trading only with the colonies and European trade partners of Britain, and they soon sent vessels all over the world. The first to leave the port for China was the *Empress of China,* which set sail in February 1784. Weakened by its alliance with Britain, the Iroquois Confederation ceased to control upstate New York, and settlement along the waterways there increased rapidly. Travel westward improved during the 1790s, when locks were built around the falls and rapids of the Mohawk and wagon roads were extended from the Hudson to Buffalo, New York. By the early nineteenth century shipbuilding facilities moved north to Corlear's Hook. There in 1807 the shipyard of Charles Brown(e) launched the *North River Steamboat*, which was designed by Robert Fulton and became the first successful steam-powered vessel in the world; in August it began operating between the city and Albany, and Fulton was granted a monopoly on the operation of steam-powered vessels in New York State and to points in adjoining states. He designed ferries for use on routes from New York to Jersey City, New Jersey, and to Brooklyn, and in 1813 he launched the *Fulton,* a steamboat intended to run on Long Island Sound between the city and southern New England. It ran on the Hudson during the War of 1812 and with the steamship *Connecticut* was later used on the route between the city and New Haven, Connecticut.

The growth of the port accelerated after the war. The world's first steam-powered warship, designed by Fulton, was under construction in New York City by 1815. A steam towing service for becalmed sailing ships was introduced in 1818 by the *Nautilus,* a ferry to Staten Island that towed ships into Upper New York Bay. During the same year the first packet service began between the city and Europe: a fleet of four ships was assembled by the Black Ball Line, allowing it to schedule regular sailings in each direction between New York City and Liverpool (previous sailings were unpredictable because they were undertaken whenever the loading of cargo was completed). Although it was more expensive than others the service was soon in demand, and a number of new firms provided service to Liverpool, London, and ports in continental Europe, where grain and cotton were delivered, emigrants embarked, and manufactured goods bound for the city were loaded. Regular steam service was initiated in 1819 between the city and Charleston, South Carolina, by the *Robert Fulton,* a sidewheel steamer fitted with sails; the service was abandoned after five years. The first transatlantic crossing by a ship with steam capability was made in 1819 by the *Savannah,* a packet ship built in the city; the ship's engine was used little and regular service was not established, largely because the amount of fuel required for steam power left insufficient space for cargo. The steamboat route from the city to New England was extended to Providence, Rhode Island, in 1822. The development of steamboat travel was hindered by Fulton's monopoly, which was declared unconstitutional by the U.S. Supreme Court in *Gibbons v. Ogden* (1824).

The port expanded at an unprecedented rate after the Erie Canal was completed from Albany to Buffalo in 1825. Goods could be shipped from Buffalo to the city in eight days rather than 20, and the cost was reduced from $100 to $15 per ton ($90 to $13.50 per metric ton); the most important commodity was grain from the Western Reserve of Ohio. A second canal was built from the Hudson River to Lake Champlain, and several other states built canals that also served the Port of New York: the Delaware and Hudson Canal was built with money from investors in New York City to carry coal to the port from northeastern Pennsylvania, as was the Morris Canal, which ran across northern New Jersey; the Delaware and Raritan Canal connected the Delaware and Raritan Rivers in New Jersey, permitting cargo to be shipped into Lower New York Bay. Most boats used on the canals were pulled by horses or mules and required steam tugs to tow them to the port. The first vessel designed as a towboat was the *Rufus King,* a sidewheel steamboat built in the city in 1825. Larger sidewheelers were later developed to tow canal boats to the port in rafts of 40 or more moored together. Steam travel was introduced on most waterways and there was keen competition among shippers, particularly on the Hudson.

By the mid-nineteenth century the port handled more goods and passengers than all

the other ports in the country combined and was one of the most important in the world. Transatlantic steamship service began in 1838, when vessels of two rival British companies arrived at the port within hours of each other. For a brief period in the early 1850s the steamers of the New York City–based Collins Line were the fastest and most luxurious vessels on the North Atlantic. In 1847 the Fall River Line was introduced to provide overnight steamboat service from lower Manhattan to Fall River, Massachusetts, where passengers boarded an express train to Boston; this became the most successful ferry company operating in the sound. Sailing ships continued to dominate long trade routes, and in 1845 one of the world's first clipper ships, the *Rainbow,* was launched from the city to engage in trade in China. Many clippers were built after gold was discovered in California, but construction ceased during a depression in shipping in 1857. A railroad line that later became the New York Central Railroad was completed in 1851 from Albany to New York City. Shipbuilding facilities opened on East 14th Street and in Williamsburg and Greenpoint, and before the Civil War the city was the leading center of wooden shipbuilding in the nation. Atlantic Basin and Erie Basin, the first large-scale cargo terminals, were built in Red Hook during the 1850s and 1860s.

Industrial activity increased during and after the Civil War. Wooden shipbuilding declined, and the centers of iron and steel shipbuilding gradually moved elsewhere, although a few shipbuilders remained in the city as late as the 1970s. The harbor was altered to accommodate ever larger steamships; dangerous reefs were blasted out of Hell Gate in 1876 and 1885, and work on the Harlem River Ship Canal was conducted between 1826 and 1938. By the early 1870s the shoreline of Brooklyn from the navy yard to Red Hook was lined with multistory brick warehouses. Three companies garnered most of the shipping on the Hudson: overnight steamboats were operated between the city and Albany by the Peoples' Line and between the city and Troy, New York, by the Citizens' Line, and day steamboats were operated by the Hudson River Day Line between New York and Albany. By the 1880s, 11 major railroads built terminals in the city. Those of the New York Central and the New Haven railroads were in Manhattan, and that of the Long Island Railroad in Brooklyn at the foot of Atlantic Avenue and later in Long Island City; the Baltimore and Ohio railroad had a freight terminal in Staten Island; and the other lines had terminals on the shore of the harbor in New Jersey. Until tunnels were built under the Hudson after the turn of the twentieth century, railroads in New Jersey operated thousands of ferries and lighterage vessels that ran from freight and passenger terminals in New Jersey (many built on landfill) to terminals in Manhattan and Brooklyn. Entire trains were moved on the East River from Jersey City to the Bronx, and strings of freight cars were carried on barges called car floats and moved by tugboats. Cargo also traveled in open scows, covered barges, hold barges, derrick lighters, and steam lighters and was transferred to ships by crane barges and floating elevators.

The Port of New York became the busiest port in the world around 1912 and remained so for more than 50 years. Steamboat companies on the Hudson and the sound operated some of the largest and most elegant sidewheel steamboats ever built. Many had a length of about 300 feet (91 meters) (the *Commonwealth,* built in 1908 and operated by the Fall River Line, was 456 feet [139 meters] long), and they were furnished and decorated so splendidly that they became known as floating palaces. To accommodate such large vessels piers were built on the Hudson in Manhattan, along the shore of Brooklyn beneath Brooklyn Heights, and in Jersey City and Hoboken, New Jersey, many of them covered with sheds to protect cargo from the weather and theft. The Ambrose Channel, completed in 1912 to provide a deeper and more direct entrance to the port, was later used by enormous passenger liners. Sailing ships continued to use berths off the East River in Manhattan into the early twentieth century. The year 1921 marked the formation of the Port of New York Authority (later renamed the Port Authority of New York and New Jersey), which was intended to improve terminals in the port and related transportation facilities. The port operated to full capacity during World War II, handling half the troops and one-third of the supplies sent overseas. The handling of goods and passengers remained largely unchanged into the 1950s, and the port gradually lost business to truck transport after the George Washington Bridge, the Lincoln and Holland tunnels, and various roads were built in the 1930s. The Fall River Line ceased operations in 1937 and overnight services on the Hudson were discontinued in 1939; the Hudson River Day Line retired its last sidewheel steamer, the *Alexander Hamilton,* in 1971.

The world's first ship adapted to carry standardized steel freight containers sailed from Port Newark in New Jersey for Houston, Texas, in 1956. Containerization was introduced to speed the handling of freight and reduce ships' stays in port from weeks to days, allowing ships to make more voyages and carry more cargo. It also was adaptable to road, rail, and air transportation, and contain-

Compiled by Frank Nestor

ers protected goods from damage and pilferage. In the twenty-first century ships more than 900 feet (274 meters) in length with a container capacity in the thousands call at the Port of New York. Special terminals were built in Brooklyn, Staten Island, and New Jersey for the transfer of containers using large mobile cranes. This efficient handling system greatly reduced the number of workers employed in the port. By 2008 the port's active container handling facilities were American Stevedoring in Red Hook, Brooklyn; Howland Hook Terminal on the west shore of Staten Island; Global Terminal on the west side of the Upper Bay in south Jersey City; Universal Maritime in Port Newark; and the Maher Terminal in Port Elizabeth, New Jersey. The latter, covering an area of more 600 acres (243 hectares), is the largest container terminal in the country.

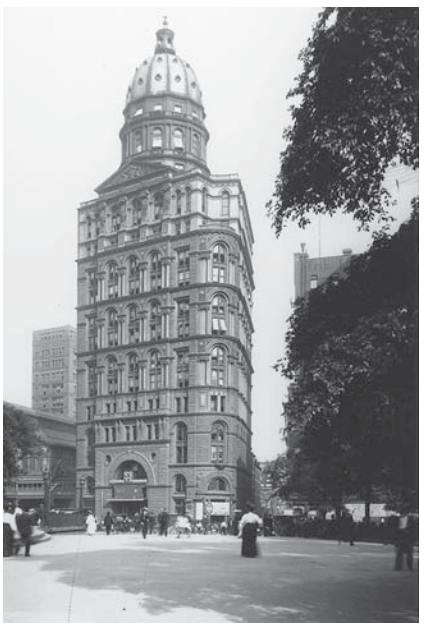
The change in cargo handling methods rendered hundreds of covered piers and warehouses along the shores of Manhattan, Brooklyn, Staten Island, and Hoboken, New Jersey obsolete. Most were eventually demolished and replaced by office and residential developments or public spaces, including South Street Seaport and Battery Park City in lower Manhattan, Hudson River Park on the West Side of Manhattan, and Brooklyn Bridge Park on the Brooklyn shoreline between the Manhattan Bridge and Atlantic Avenue. The large piers built between West 48th and West 52nd streets in Manhattan for ships like the *Normandie* were rebuilt in the 1970s to create a modern passenger ship terminal. With the continued popularity of cruise ships, additional terminals for these vessels have been created on the west side of the Upper Bay at the former Military Ocean Terminal in Bayonne, New Jersey, and on the south Brooklyn waterfront opposite Governors Island. Most federal facilities in the port have also been closed and offered to local communities for development. The New York Naval Shipyard in Brooklyn is now managed by the Brooklyn Navy Yard Development Corporation, which has leased out most of the space for a wide variety of businesses. The navy yard dry docks continue to be used for ship repairs and alterations. The piers at the former Brooklyn Army Terminal at 59th Street in South Brooklyn have been removed, and the large Cass Gilbert–designed concrete warehouses have been refurbished and leased out as office space. Governors Island, last occupied by the Coast Guard, is being redeveloped as new park land. The old Lighthouse Service Depot in St. George, Staten Island, has been partially converted to a repair facility for Staten Island ferries. The remaining historic buildings were to house the National Lighthouse Museum, although in 2008 the project was on hold because of lack of funding. The immigrant processing station on Ellis Island was opened in 1990 as a museum of immigration. As the central harbor ceased to be used by commercial traffic, it increasingly attracted sailboats, motor boating, and excursion vessels in the twenty-first century. High-speed ferries carry passengers between Manhattan and points as far away as Sandy Hook (New Jersey), Jamaica Bay, and the north shore of Long Island. Commercial traffic continued to flow through the Narrows, most of it approaching or leaving the container terminals, oil depots, and refineries of New Jersey; and tugs are constantly passing through the harbor moving barges loaded with fuel, cement, and crushed stone.

A Maritime History of New York (Garden City, N.Y.: Doubleday, Doran, 1941)

Norman J. Brouwer

Port Richmond. Neighborhood in northwestern Staten Island, lying south of the Kill van Kull. The area was known in 1700 as the Burial Place, after a cemetery of the Dutch Reformed church near the shore on Richmond Avenue. It was a transfer point for freight and passengers traveling by boat between New York City and New Brunswick, New Jersey, and a ferry landing known variously as Ryer's Landing, Mersereau's Landing, and Decker's Landing was built as a terminus for a route to Bergen Point (now in Bayonne), New Jersey; ferries ran continually until shortly after the Bayonne Bridge was built in 1931. The area also became the site of an important stop on a coach route between the city and Philadelphia. A public park was built in 1836. Irish and Germans settled in the neighborhood in the mid-nineteenth century. Some small industries were established, including the only whaling company on the island in 1838. Its whale-oil processing plant was destroyed by fire in 1842 and replaced by a factory of the Jewett White Lead and Linseed Oil Company, which operated into the twentieth century. Lumber and coal yards moved near the waterfront during the nineteenth century. A large cloth-dyeing plant was built inland in 1851 by the Barrett Nephews Company, an offshoot of the New York Printing and Dyeing Company in West New Brighton that flourished until the early twentieth century (a shopping mall now stands on the site).

The neighborhood was incorporated as Port Richmond in 1866 and in 1883 was described as a model village. During the 1880s the Staten Island Railroad built a northern line with a station at Richmond Avenue, the main shopping area. By the 1890s there was an African American church in the neighborhood. Port Richmond Square eventually became a transfer point for streetcars and later for bus lines, encouraging the growth of a prosperous commercial center and a large population. Italians, Poles, Norwegians, and Swedes moved into the neighborhood early in the twentieth century. Several buildings soon lined three sides of the park: Public School 20 (now a city landmark), a public library provided by Andrew Carnegie in 1902, and three churches. A synagogue was built in 1907. Faber Park and Pool opened in 1932; sporting events were held during the 1940s and 1950s at privately owned Weinglass Stadium.



The housing consists of modest one-family houses on small lots, especially in the downtown. Larger Victorian houses line Herberton Avenue, and attractive one-family houses built in the 1920s are just north of Forest Avenue (Port Richmond Center). Two lumberyards and 10 churches are features of the area.

Marjorie Johnson

Post [née Price]**, Emily** (*b* Baltimore, 27 Oct 1872; *d* New York City, 25 Sept 1960). Writer. She grew up in New York City, where she attended Miss Graham's Finishing School for Young Ladies and from the age of 12 lived at 12 West 10th Street. After her marriage ended in divorce, she devoted herself to writing. By 1921 she was commissioned to write a book on etiquette; more than 666,000 copies were sold, and she later wrote columns for *McCall's* and 150 newspapers and had a weekly radio program on which she answered questions about etiquette. One of her most famous quotes was "manners are a sensitive awareness of the feelings of others. If you have that awareness you have good manners, no matter what fork you use." By 1946 she opened the Emily Post Institute. She lived at 39 East 79th Street from about 1925 until the end of her life.

James E. Mooney

Post, George B(rowne) (*b* New York City, 15 Dec 1837; *d* Bernardsville, N.J., 28 Nov 1913). Architect. He graduated from New York

The World Building, designed by George B. Post, at Park Row and Frankfort Street, ca *1900 (demolished)*

University in 1858 and was engaged as the consulting architect in charge of elevators and ironwork for the Equitable Building (1868–70, demolished), considered the first skyscraper in New York City; he later designed the Western Union building (1872–75, demolished) and used metal-framed interior walls in his New York Produce Exchange (1881–84, demolished) that anticipated the skeleton framing later adopted for skyscraper construction. Post is also known for such works as the Williamsburgh Savings Bank in Brooklyn (1869–75), the World (Pulitzer) Building (1889–90, demolished), the New York Stock Exchange (1901–4), and the campus of City College (1897–1907).

Sarah Bradford Landau

post offices. Postal service was first offered in New Amsterdam in 1660. The rotunda on Chambers Street housed the city's only post office until 1835 when a branch opened near Wall Street. In 1845 the main post office moved to the former Middle Dutch Church on Nassau Street and the branch office to Chatham Square. Post offices were first erected by the federal government during the mid-nineteenth century, and after the Civil War the Office of the Supervising Architect of the Treasury designed and built a number of large post offices, many of them also containing courthouses. In 1875 the main post office on Nassau Street was replaced by an enormous facility in City Hall Park designed in the Second Empire style by Alfred Mullet (demolished). In 1885, during Mifflin Bell's tenure as supervising architect, work began on the Brooklyn Post Office and Courthouse, built in the Romanesque Revival style (restored 2004; this remains the city's oldest post office in use). The Tarnsey Act of 1893 authorized the federal government to award commissions to private architects, and before its repeal in 1912 two of the city's largest post offices were erected: Grand Central Station (1909), designed by Warren and Wetmore, architects of the adjoining railroad terminal; and the General Post Office (1913), designed in a Classical Revival style by McKim, Mead and White (William Kendall, partner in charge) to complement Pennsylvania Station. During the late 1920s and early 1930s Congress authorized the construction of a large number of branch offices, including those in Long Island City (1929) and Staten Island (1932).

Post office construction expanded rapidly during the Depression. Between 1932 and 1941, 29 post offices were erected in the city with New Deal funds, four designed by Louis Simon, the supervising architect of the Treasury, and the rest by local architects employed by work relief programs. The number of commissions for federal buildings increased so rapidly that Simon's office became unable to handle them, and in 1930 Congress again permitted commissions to be awarded to private architects. Dwight James Baum designed the Flushing post office (1934); Cross and Cross designed the Jamaica post office (1934) and collaborated with Pennington, Lewis and Mills on Church Street Station, both a post office and an office building (1938). By 1934 funds for so many new post offices had been allocated that the government undertook a novel plan to acquire designs: important commissions were given to a group of unemployed architects who were moved temporarily to Washington, D.C.; architects from New York City, including Thomas Harlan Ellett, William Dewey Foster, Eric Kebbon, Alan Balch Mills, Carroll Pratt, and Lorimer Rich, were responsible for at least 20 buildings.

Old Post Office (designed by Alfred Mullett; demolished), ca *1910*

Most of the new post offices were designed in the Colonial Revival style popular in Federal architecture. Rich designed branches in Flatbush (1936) and West Farms (1936) to resemble farmhouses from the eighteenth and early nineteenth centuries; Kebbon designed Lenox Hill (1935) and Planetarium (1936) stations to resemble townhouses and was also responsible for the branch in Far Rockaway (1936), an adaptation of Monticello. A few post offices in the city were designed in the austere Modern Classical style that became popular for public buildings during the 1930s,

Branch U.S. Post Office Station "S" in the Bronx, ca *1880*

including Madison Square Station (1937, Rich) and the main post office in the Bronx (1937, Ellett), and a few were examples of modernism, notably Forest Hills Station (1938, Rich). The Treasury also commissioned works of art for 10 of the new buildings, including the painting *First Amendment* (Woodhaven Station) and the fresco cycle *Americans at Work* (Bronx post office), both by Ben Shahn; two murals with scenes of the city by Louis Lozowick (General Post Office); and eight murals with urban street scenes by Kindred McLeary (Madison Square Station). Fewer post offices were built after the relief projects were discontinued in 1941, and in later years the U.S. Postal Service erected few notable buildings, preferring instead to lease space in existing buildings. Most of the city's older post offices are still in use, having undergone modest modernization projects during the late twentieth century. By 2008 the future of the General Post Office was in flux, with plans to convert it into a train station and into the site for a new Madison Square Garden.

Andrew S. Dolkart

Potter, Edward T(uckerman) (*b* Schenectady, N.Y., 25 Sept 1831; *d* New York City, 21 Dec 1904). Architect, brother of Henry Codman Potter and half-brother of William A. Potter. He was known for designing churches and college buildings, many in the High Victorian Gothic style. In New York City his buildings include the Church of the Heavenly Rest (1868–71, demolished), St. Paul's Memorial Church and rectory in Staten Island (1866–70), and the original Brown Brothers Building (1864–65, demolished), a marble palazzo on Wall Street.

Sarah Bradford Landau, *Edward T. and William A. Potter* (New York: Garland, 1979)

Sarah Bradford Landau

Potter, Henry Codman (*b* Schenectady, N.Y., 25 May 1834; *d* Cooperstown, N.Y., 21 July 1908). Bishop, brother of Edward T. Potter and half-brother of William A. Potter. He graduated from Virginia Theological Seminary in 1857. He was the rector of small parishes in Pennsylvania and New York State before becoming successively the assistant rector of Trinity Church in Boston (1866); the rector of Grace Church in New York City (1868), the largest and wealthiest Episcopal parish in the nation; an assistant bishop (1883); and the bishop of the Diocese of New York (1888), a position he held to the end of his life. During his career in the city he became known for his conviction that urban churches must concern themselves not only with wealthy, educated parishioners but also with the working class, prisoners, the poor, and the uneducated. Although his church was supported by the wealthy, he became identified with the cause of labor and joined forces with religious and civic leaders who were trying to improve the conditions of the poor. Among the organizations for social betterment that he supported or helped to form were the Church Association for the Advancement of the Interests of Labor, the Seamen's Church Institute, and the Actors' Church Alliance; he was also an important figure in the settlement and institutional church movements and came to be known by some as the "people's bishop" and "citizen bishop." Potter tended toward the Low Church and was theologically liberal, but through his tolerance, skill, diplomacy, and strong personality he was able to secure the cooperation of diverse elements in the diocese. He eagerly pursued the construction of the Cathedral of St. John the Divine, hoping that a great metropolitan cathedral would join with other educational, religious, cultural, and philanthropic institutions to make the city a leader in moral ideas, letters, sciences, and the arts; he secured a site, raised the initial funds, and in 1892 laid the cornerstone. Some consider his episcopate to be the height of the Episcopal Church in the city. He published *Brilliants: Selected from the Writings of Henry Codman Potter* in 1893.

Jane Allen

Potter, William A(ppleton) (*b* Schenectady, N.Y., 10 Dec 1842; *d* Rome, 19 Feb 1909). Architect, half-brother of Henry Codman Potter and Edward T. Potter. He was known for designing church and college buildings, including the Holy Trinity Church complex (1887–89; now St. Martin's Church) on Lenox Avenue and 122nd Street, the campus of Teachers College (1892–97), and the Universalist Church of the Divine Paternity and parish house (1897–98; now Universalist Church of New York City) at Central Park West and 76th Street.

potter's fields. Burial places for indigents. New York City's first known potter's field was at Washington Square; it was replaced successively by one at Madison Square and another at Bryant Park. A small field was shared during the nineteenth century by Jamaica, Flushing, Newtown, Hempstead, North Hempstead, and Oyster Bay (it is now a schoolyard in Queens Village). HART ISLAND in the Bronx became the city's potter's field in 1869 and has

Jacob A. Riis, The Potter's Field; The Common Trench *(*ca *1890). Convicts lower wooden coffins into a common grave on Hart Island.*

remained the world's largest burial place for the poor ever since.

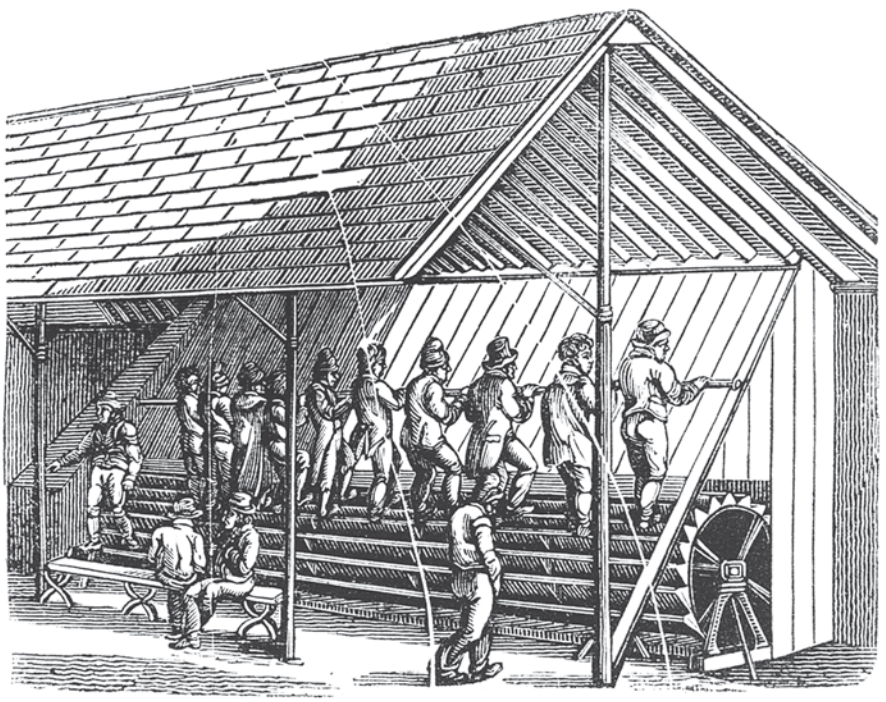
Edward F. Bergman

Pottier and Stymus. Firm of furniture manufacturers and decorators, formed in 1859 as the partnership of the upholsterer William Pierre Stymus and Auguste Pottier (1823–96), a wood sculptor trained in France who settled in New York City in 1850. By 1871 it operated an integrated factory on Lexington Avenue between 41st and 42nd streets to handle large contracts for complete interiors in diverse styles. In 1876 it showed neo-Grec and Henry II wares at the Centennial Exhibition in Philadelphia, including two black walnut chairs (circa 1875, now at the Metropolitan Museum of Art). Its customers included President Ulysses S. Grant and the financier Henry Morrison Flagler. After a fire in 1888 Pottier left the firm, which reorganized, rebuilt its factory, and remained in operation until 1918–19.

Deborah Dependahl Waters

Pouch Terminal. Former Staten Island marine terminal and cargo warehouse along the island's eastern shoreline in Clifton (between St. George Ferry Terminal and the Verrazano Bridge). Constructed in 1917 by Alonzo Pouch, a descendant of the family that founded the American Dock Company (in nearby Tompkinsville, Staten Island) in 1872, Pouch Terminal consisted of three piers and adjacent warehouses. From 1977 to 1983 two of the piers were used for storing part of Staten Island's bus fleet. Part of the old warehouse buildings were renovated and became office space; in the twenty-first century the piers no longer exist.

Andrew Sparberg



poverty. In the early seventeenth century the Dutch Reformed Church established a poor-relief system to alleviate poverty in New Amsterdam. Under this system, church officials apprenticed orphans, provided medical services, and built a small almshouse for the aged poor. Laws enacted by the colony in 1661 required that each community collect donations to maintain a poor fund, a system replaced in 1683 by British colonial poor-law legislation that shifted responsibility for caring for the poor to counties. The wardens of the Anglican Church who administered the new system listed only 35 permanent paupers in 1700, a number that increased to about 100 during the 1730s. City relief at that time cost an average of £500 a year and commonly took the form of food, firewood, shoes, clothing, medical care, funeral expenses, and small cash payments for those who met the residency requirements.

Poverty became more serious in New York City during the eighteenth century. Rising immigration brought indentured servants and other dependent people to the city, while colonial wars and economic depressions periodically created hardships. In 1734 the Common Council authorized construction of a large municipal almshouse that by 1772 sheltered 425 paupers. Large numbers of "outdoor" poor were also supported, making the poor-relief effort one of the city's largest annual expenditures. Economic dependence intensified during the Revolution, as private charity emerged to supplement public action. Founded by civic leaders in 1787, the Humane Society initially aided imprisoned debtors but expanded activities after 1800 to include medical care for the poor, child labor reform, and support of a soup house.

During the first half of the nineteenth century, rising immigration and periodic epidemics significantly increased New York City's welfare burden. Severe winters caused annual emergencies in the city as construction workers and other outdoor laborers became unemployed and appealed to relief officials for food and fuel. A three-story poorhouse completed in 1797 was replaced in 1816 by a much larger structure called the Bellevue Establishment, which by the 1820s housed about 1700 people. Hundreds of other dependents were confined in a public hospital, an orphanage, an insane asylum, and a juvenile reformatory. Throughout this period public welfare accounted for about one-fourth of the city's annual budget, more than any other item. By 1825 several dozen specialized societies had formed, including religious and medical philanthropies, societies to provide for widows and orphans, and mutual benefit associations.

The growing belief that poverty was the result of individual moral failure was reflected in these groups' efforts to reform paupers. Adherents of a vigorous urban missionary movement of Bible and tract societies, Sunday schools, and temperance crusades dedicated themselves to providing moral education for the poor. Groups such as the New York Society for the Prevention of Pauperism, established in 1817, discouraged material assistance by emphasizing the social dangers of dependence. New attitudes toward social welfare led to the enactment of state legislation in 1824 that abolished "outdoor" relief and required institutionalization of the truly needy. Work was viewed as a means of combating public dependence and cutting municipal welfare costs, and the Common Council after 1830 required even the most feeble paupers in the almshouse to perform some kind of work. Changing public attitudes toward benevolence also underlay the formation of the New York Association for Improving the Condition of the Poor, founded by religious leaders in 1843. Under the direction of Robert M. Hartley, it introduced the district visitor system to provide moral and spiritual advice and to distinguish between the worthy and unworthy poor. The moralistic approach to poverty also guided the Children's Aid Society (1853), which by 1890 placed some 90,000 homeless and delinquent children in rural homes in the Midwest, away from the presumed temptations of the big city.

Poverty intensified during the 1870s and 1880s. Economic depressions brought massive unemployment. Labor's demand for municipally sponsored work relief failed. During the winter of 1893–94 police stations in the city provided temporary shelter for more than 20,000 homeless people. A Catholic periodical estimated that 40,000 children lived as vagrants in New York City during the late

"Stepping mill" for grinding grain, operated by convicts, 1823

James Henry Cafferty, The Sidewalks of New York *(1859; also known as* The Encounter*)*

nineteenth century, a deplorable condition captured by Jacob A. Riis's photographs of street children in the city in the 1890s. Robert Hunter argued in *Poverty* (1904), a classic study of the urban poor, that economic forces such as low wages kept most working-class families on the edge of subsistence. By 1907 New York City had four Almshouses that sheltered almost 5000 people, as well as a number of specialized institutions that provided care for the blind or physically handicapped or housed juvenile delinquents. Moralistic views about poverty nevertheless continued to shape welfare programs. Those temporarily unemployed were often unable to find public assistance; the city suspended outdoor relief during a depression in 1874 (as did Brooklyn in 1878); and the new charter that took effect on consolidation in 1898 prohibited home relief.

Private philanthropy was transformed when the Charity Organization Society introduced "scientific charity" to the city during the late nineteenth century. Initiated in Buffalo, New York, in 1877, the charity organization movement sought to systematize private relief by investigating each applicant's case and weeding out the unworthy. Its "friendly visitors" provided counseling for poor families because they viewed poverty as a moral rather than an economic problem. The local director, Josephine Shaw Lowell, became a national spokeswoman for reform. Officials of the organization formed the nucleus of the National Conference on Charities and Correction in 1874 (renamed the National Conference of Social Work in 1917). Toward the end of the century the settlement house movement, begun in London in 1884, increasingly saw poverty as the product of structural problems in the urban economy. The movement found support in New York City among members of churches involved in the Social Gospel movement such as Stanton Coit, who opened the Neighborhood Guild in 1886. Other Settlement Houses soon followed, including the College Settlement (1889), East Side House (1891), the Henry Street Settlement (1893), the Lenox Hill Settlement (1894), the Union Settlement (1895), and Greenwich House (1902). In addition to promoting child labor reform, tenement house legislation, and the building of parks and playgrounds, the settlement houses worked to improve education and public health. Tensions between the Charity Organization Society and the settlement houses grew during the 1920s when the state legislature enacted a "mother's pension" law providing cash assistance for dependent mothers. The Charity Organization Society denounced the law, which it viewed as an infringement on private philanthropy.

During the Depression of the 1930s the notion grew that relief was not a charity but a right, and that caring for the poor was not the responsibility of the state. In his book *The American Poorfarm and Its Inmates* (1926) Harry C. Evans shocked New Yorkers with his descriptions of children living among the insane in poorhouses. The state legislature ordered an inquiry in response to the report and to a study which showed 50 to 75 percent of the almshouse population to be chronically ill. By 1929 the legislature passed the New York State Public Welfare Act, which restored home relief for the poor. Similarly, the 1930 Old Age Security Act made New York the first state to provide benefits for the elderly. Between 1930 and 1933 the number of unemployed workers in New York City tripled. With a population of almost seven million in 1930, the city faced especially severe problems with welfare, unemployment, and housing. A shantytown called Hoover Valley was built on the Great Lawn of Central Park. Groucho Marx quipped that he knew things were bad when he saw pigeons in the park feeding people.

Mayor James J. Walker in 1930 formed a committee to raise cash for the needy. In 1931 the Board of Aldermen appropriated $80 million for work relief programs on roads and parks, but by summer the money was exhausted; to avoid bankruptcy the city appealed to the state, which was sympathetic because a number of its officials were reformers who had spent much of their life in the city. Shortly after Governor Franklin D. Roosevelt asked the state legislature for emergency action in 1931, the Temporary Emergency Relief Administration was formed and New York became the first state to provide unemployment relief. But state funds too were exhausted in 1932, leaving 88,000 approved applicants waiting for work relief, so Congressman Fiorello H. La Guardia and Senator Robert F. Wagner

secured a relief appropriation of $2 billion from the U.S. Congress. The city obtained additional sums of federal money for public works after the election of La Guardia as mayor and Roosevelt as president, and eventually New York became known as the unofficial capital of the New Deal. The Works Progress Administration in 1935, Aid to Families with Dependent Children, and the Social Security Act temporarily revived the social welfare system in New York City.

In the 1940s and 1950s poverty steadily decreased in New York City despite demographic and manufacturing changes that weakened the economy. Large numbers of southern African Americans moved to the city because of the promise of better economic conditions, but many were disappointed by the scarcity of unskilled work. While total employment in the city increased, the manufacturing sector began to decline after 1954. As part of his war on poverty, President Lyndon B. Johnson expanded welfare benefits with programs such as Head Start. Mayor John V. Lindsay raised welfare benefits to the highest level in the nation and relaxed requirements for eligibility, in part to ease racial tension. The number of people receiving public assistance in New York City increased from 328,000 in 1960 to 1.1 million in 1972. Public resentment grew as reports showed that the welfare system created a disincentive to work and encouraged women to give birth out of wedlock.

In 1978 the administration of Mayor Edward I. Koch began cutting the welfare rolls and limiting payments to recipients. These measures contributed to widespread homelessness, as did the continued erosion of manufacturing employment. Tax concessions granted to developers by Koch, an incentive to encourage new commercial and residential development and to improve the city's tax base after the fiscal crisis, led to the destruction of as many as 100,000 single-room occupancy units (SROs) that had served as cheap housing for the mentally ill and the elderly. During the 1980s the federal government also reduced its housing programs, and families were increasingly forced to double up in cramped apartments. The Coalition for the Homeless and the Legal Aid Society successfully sued the city to establish a legal right to housing for the poor and forced the city to open and maintain shelters for the homeless. Soup kitchens opened in hundreds of churches for the first time since the Depression; abandoned psychiatric institutions were reclaimed to house the mentally ill; and orphanages, called "congregate care facilities," were built to house homeless and abandoned children.

Under the administration of President Ronald Reagan the federal government restricted welfare, disability payments, school hot-lunch programs, and food stamps. David N. Dinkins was elected mayor in 1989 after pledging to improve the lot of the poor, but his promise to finish a massive public housing program begun by Koch was forestalled by another fiscal crisis. Public sentiment toward the poor, initially sympathetic when the homeless first became visible in the early 1980s, turned as beggars seemed more threatening and demanding. There was little opposition when Dinkins closed several public shelters and removed encampments of homeless people from Tompkins Square Park and Columbus Circle. In the 1990s New York City sought to reduce welfare rolls by cutting relief programs and medical care for the poor. By the twenty-first century the number of people on welfare had not diminished substantially, despite efforts to cut down on applicants for welfare by applying new work rules and time limits, reforms started in the late 1990s to stem the increasing number of applicants. From 1975 through 2005 the poverty rate in New York City ranged from 15 to 26 percent, placing the city ninth in the rankings of poverty rates in U.S. cities.

Clara J. Hemphill, Raymond A. Mohl

Powell, Adam Clayton, Jr. (*b* New Haven, Conn., 29 Nov 1908; *d* Miami, Fla., 4 April 1972). Congressman, minister, and civil rights leader, son of Adam Clayton Powell, Sr. He

Adam Clayton Powell, Jr., with Haile Salassie

grew up in New York City and attended Colgate University. His complexion was light, and at college he allegedly tried for a time to pass as white. He graduated in 1930, became an assistant pastor at the Abyssinian Baptist Church in New York City (where his father was the pastor), and received a master's degree in religious education from Columbia's Teachers College in 1932 and a doctor of divinity degree from Shaw University in 1938. After leading a night school, an employment bureau, and a soup kitchen at his church he took over the pastorate in 1938. He helped to organize the Equal Employment Coordinating Committee and led boycotts of companies in Harlem and elsewhere that refused to employ black workers. An adroit politician, he secured backing for his movement from opposing groups of communists and black nationalists. In 1941 he became the first black member of the City Council, and after a congressional district with a black majority was drawn in Harlem, he was elected to represent it in 1945. During more than two decades in Congress he unsuccessfully introduced many amendments intended to ensure nondiscrimination in federally funded programs. In 1960 he became the first black chairman of a major committee, that on education and labor; he used this position to further the domestic programs of President Lyndon Johnson's Great Society by helping to design and pass legislation in support of education, housing, and civil rights.

Powell alienated many of his white colleagues, who considered his brash, assertive style arrogant and disapproved of his reputation as a libertine, which was furthered by his marriage to the entertainer Hazel Scott. He retained his post as the pastor of the Abyssinian Baptist Church, and his weekly trips to New York City and frequent vacations on the Caribbean island of Bimini left him little time for legislative and committee work. His amendments sometimes killed progressive legislation by costing it the votes of southerners and conservatives. In 1960 he was sued for slander by a woman in Harlem whom he had accused of collecting racketeering payoffs for the police; he ignored the suit and claimed congressional immunity. Convicted in 1966 of contempt of court for refusing to answer a subpoena, he responded by remaining outside of New York City except on Sundays, when legal papers could not be served. In the following year Congress voted to deny him his seat on the grounds that he had misused campaign funds. Asserting that he was the victim of a "Northern-style lynching," he sought reelection to his seat in the special election that followed, won by a huge margin, but declined to take his seat. In 1968 he won the seat again in a regular election, but Congress denied him seniority and committee assignments. The U.S. Supreme Court ruled in 1969 that Powell's exclusion in 1967 had been unconstitutional. In the following year Powell was defeated in the Democratic primary by Charles B. Rangel, and he retired to Bimini. After his death, Seventh Avenue in Harlem was renamed Adam Clayton Powell Jr. Boulevard in his honor.

Greg Robinson

Powell, Adam Clayton, Sr. (*b* Franklin County, Va., 5 May 1865; *d* New York City, 12 June 1953). Minister, father of Adam Clayton Powell, Jr. He graduated from Wayland Seminary in 1892 and briefly assumed the pastorate at Ebenezer Baptist Church in Philadelphia in 1893. That same year he was named a minister by the Immanuel Baptist Church in New Haven, Connecticut, and in 1895–96 he attended Yale Divinity School as a special student. He moved in 1908 to the Abyssinian Baptist Church in New York City, then on West 40th Street. A dynamic, powerful figure, he tried repeatedly to persuade the congregation to move to the developing black neighborhood of Harlem. For this purpose he raised a large sum of money, and in 1920 the congregation bought land on West 138th Street; construction of the new church was completed in June 1923 at a cost of some $350,000. He also built an old-age home on St. Nicholas Avenue, which was named in his honor. During the 1930s Abyssinian Baptist Church became the largest Baptist church in the United States, and he became widely known and much sought after as a speaker. A political moderate, he was influential in the Republican Party. After retiring as a pastor in 1938 in favor of his son he wrote several books, including an autobiography, *Against the Tide* (1938); *Riots and Ruins* (1945), a discussion of race riots; and *Upon This Rock* (1949), a history of the Abyssinian Church.

Greg Robinson

Powell, Bud [Earl] (*b* New York City, 27 Sept 1924; *d* New York City, 1 Aug 1966). Pianist. After leaving high school to work as a pianist in Coney Island, Greenwich Village, and Harlem, Powell lived on St. Nicholas Avenue between 140th and 141st streets and soon was taking part in jam sessions at Minton's Playhouse (West 118th Street). He toured and recorded in the big band of the trumpeter Cootie Williams (1942–44) and then worked with swing and bop musicians on 52nd Street. Continuing psychological troubles were worsened by a head injury in 1945, and he spent extended periods in mental institutions. Nonetheless, he played regularly into the 1950s and became the foremost piano soloist in bop owing to an unparalleled ability to transfer to the keyboard the improvisational style of the alto saxophonist Charlie Parker. Powell lived in Paris from 1959 to 1964 and then spent the rest of his life in New York City.

Marc Ferris, Barry Kernfeld

Powell, Charles Underhill (*b* Glen Head, Long Island, 16 Jul 1876; *d* Flushing, Queens, 26 Mar 1956). Urban planner and civil engineer. A descendant of two notable Queens families, he was chief engineer for the Queens Topographical Bureau from 1915 to 1942 and took the lead role in transforming the city's largest borough from a loose collection of 60 rural villages with a population of 250,000 into a unified, metropolitan suburb of 1.3 million. His office planned 75,000 acres (30,351 hectares) of property and 2500 miles (4023 kilometers) of streets and parkways and laid out 1100 acres (445 hectares) of public parks and the beaches of the Rockaways. He imposed a new street grid of west-to-east–running avenues and north-to-south–running streets, changing almost all street names to numbers (32 thoroughfares named for George Washington were reduced to only four). Each house was given a hyphenated three-number address that identifies the nearest cross thoroughfare, the house's number, and the thoroughfare the house is on. As he reconfigured Queens, Powell became an active historian, writing and lecturing about the histories of its streets, Flushing's community of Friends (of which he was a member), and other aspects of the area's past. When his road-building project uncovered old burial grounds, he surveyed them, transcribed headstone inscriptions, and wrote a book that is still used by genealogists and New York historians.

Seyfried, *The Story of Woodhaven and Ozone Park* (1985; repr. Woodhaven, N.Y.: Woodhaven Cultural and Historical Society, 1994)

John Rousmaniere

Powell, Colin L(uther) (*b* New York City, 5 April 1937). Statesman and military leader. The son of Jamaican immigrants, he grew up on Kelly Street in the South Bronx and in 1954 graduated from Morris High School. In 1958 he earned a BS from City College of New York and enlisted in the army at the rank of second lieutenant. He fought two tours of duty in Vietnam, where he won many medals, including the Purple Heart. He later commanded the elite 101st Airborne Division. A White House Fellow in the early 1970s, he worked in the Pentagon by the late 1970s and quickly became the highest-ranking African American member of the military. He was named national security adviser in 1987 by President

Ronald Reagan; in 1989 he became a four-star general and the first African American chairman of the Joint Chiefs of Staff for Presidents Reagan, George H. W. Bush, and Bill Clinton. Powell was instrumental in leading U.S. forces in the Gulf War in 1991. He retired from the army in 1993. In January 2001 he was selected as the first African American secretary of state under George W. Bush. His autobiography, *My American Journey,* was published in 1995.

James Bradley, Meghan Lalonde

Powell, Samuel S. (*b* New York City, 16 Feb 1815; *d* 6 Feb 1879). Mayor of Brooklyn. Born to a family from Long Island, he moved to Brooklyn at age 13 and enjoyed a successful career in business; he was a director of insurance companies, of a utility, and of a bank. He was elected mayor as a Democrat and served from 1857 to 1861 and from 1872 to 1873; the total length of his tenure, six years and four months, was one of the longest of any mayor of Brooklyn.

Ellen Fletcher

Power Memorial Academy. Catholic high school for boys, opened in 1931 and run by the Congregation of Christian Brothers. It was named for James Power, the pastor of All Saints Church in Harlem, who introduced the order to the United States in 1906. Originally at 15–19 West 124th Street, the school moved in 1938 to a former hospital building 10 stories tall at Amsterdam Avenue and West 61st Street. The school was known for its consistently strong athletic teams until it ceased operations in 1984. One of its best-known alumni was the basketball player Lew Alcindor (class of 1965), who later took the name Kareem Abdul-Jabbar.

Gilbert Tauber

Powers, Bertram A. (*b* Cambridge, Mass., 8 March 1922; *d* Washington, D.C., 23 Dec 2006). Labor leader. After getting his start as a printer in Fitchburg, Massachusetts, he moved to New York City in 1946 and joined Local 6 of the International Typographical Union. As president of the printer's union from 1961 until 1990, Powers was a no-nonsense bargainer who led one of America's longest and most debilitating work stoppages, a 114-day strike in 1962 and 1963 that was blamed for the collapse of four large daily newspapers during the next five years. Eventually, Powers negotiated settlements that guaranteed his members jobs for life in return for allowing for the automation of the industry. Although Powers was reviled by much of the public and was even rebuked by President John F. Kennedy, he was popular with the 20,000 members of his union and was almost comparable in power and influence with George F. Meany and Jimmy Hoffa.

Kenneth T. Jackson

Prall's Island. Uninhabited island in the Arthur Kill off the western shore of Staten Island. Originally known as Dongan's Island after New York Governor Thomas Dongan (1634–1715), Prall's Island is believed to be named after either a prominent farming family or the man who purchased the island; the current name took hold in the late nineteenth century. Once a major farming center of the cash crop salt hay, it currently serves as a bird sanctuary. The New York City Department of Parks and Recreation was assigned the island in 1984, and since then the Audubon Society has documented 400 pairs of nesting birds on the 80.3-acre (32.5-hectare) island.

Jessica Montesano

Pratt, Charles (*b* Watertown, Mass., 2 Oct 1830; *d* New York City, 4 May 1891). Businessman and philanthropist. As a young man he worked as a salesman in a number of mercantile establishments in Watertown and New York City, to which he moved in 1851. He formed a partnership with Henry Huttleston Rogers, and the two entered the oil business in 1867 as the firm of Charles Pratt and Company. Their refinery at Green Point, in what is now Brooklyn, produced 1500 barrels a day and quickly established its product, Pratt's Astral Oil, as among the best on the market. In 1874 John D. Rockefeller bought the company, not only because of the good reputation of its product but to obtain the talents of the two owners, who proved to be outstanding executives with Standard Oil. Pratt's concern with engineering training often took him to western European nations to study their secondary technical training systems. After several years of such study he founded the Pratt Institute, which opened on 12 October 1887 and of which he served as president until his death. He also founded the Pratt Institute Free Public Library at a time when no such institution existed in Brooklyn or Manhattan, and in 1888 he organized the Thrift, one of the first savings and loan institutions. As a leader of Standard Oil, Pratt promoted increased efficiency and product marketing throughout the corporation, and he was known for his attention to detail.

Paul H. Giddens, *The Birth of the Oil Industry* (New York: Macmillan, 1938); Ralph W. Hidy and Muriel E. Hidy, *History of Standard Oil Company (New Jersey)*, vol. 1, *Pioneering in Big Business, 1882–1911* (New York: McGraw–Hill, 1955)

Bennett H. Wall

Pratt Institute. Private art and design college in Brooklyn, opened in 1887 by the oil baron Charles Pratt to provide training in practical subjects. Raised in modest circumstances, Pratt wrote in his journal at age 17 that he was determined "to improve my mind in every way possible." After becoming a trustee of John D. Rockefeller's Standard Oil trust and accumulating considerable wealth, he turned to philanthropic pursuits. Concluding that useful education was not available at either public or private schools, Pratt decided to establish a school for "rich and poor alike" that would "embrace all branches of education," one that "combines headwork with handwork." The institute began with 12 students and one drawing class and soon had several thousand students; it offered courses in mechanical and applied arts, domestic arts and sciences, library training, and kindergarten training. From the outset it was coeducational and admitted students of all backgrounds. The institute pioneered particularly in recognizing the critical need for teacher training. Many of its programs were among the first of their kind in the United States; it had the first public library in Brooklyn and the first manual training high school (similar to today's vocational schools) in New York City. Institute-related activities included a neighborhood association, workers' housing, and a savings bank, as well as involvement in the new kindergarten movement. Charles Pratt wrote in 1888 that he wanted the institute "to be a model, and to do the experimental work of this kind of education for the people of this country." His work helped inspire the founding of such schools as Drexel University, Carnegie Mellon University, the California Institute of Technology, and the California Institute of the Arts. Its innovative programs continued in the areas of advertising and interior, fashion, industrial, and graphic design. In the twenty-first century Pratt Institute's community involvement has continued with such initiatives as the Pratt Center, which has been an effective advocacy organization since 1963. It has more than 4500 students and grants associate, undergraduate, and graduate degrees at its schools of art and design, architecture, information and library science, liberal arts and sciences, and continuing education and professional studies. In addition to its 25-acre (10-hectare) Brooklyn campus, the institute has a facility on West 14th Street in Manhattan and operates a joint program with Munson–Williams–Procter Art Institute in Utica, New York.

Margaret Latimer

Prep for Prep. Pioneering teaching program for placing minority students in highly competitive independent New York City schools. Founded in 1978 by public school teacher Gary Simons, it identifies promising fifth and seventh graders, offering them a rigorous preparatory curriculum, character development, and ongoing counseling. Prep classes meet Saturdays, a weekday afternoon, and all week during summers.

Peter L. Donhauser

"preppy murder." Notorious crime that occurred on the morning of 26 August 1986 when Jennifer Dawn Levin, the 18-year-old daughter of a wealthy family, was strangled to death during a sexual encounter in Central Park near the Metropolitan Museum of Art. The assailant was Robert E. Chambers, a 19-year-old man she had met several hours earlier at Dorian's Red Hand, a bar on East 84th Street. The case attracted widespread notice because of the youth and privileged background of both Chambers and Levin. Chambers pleaded guilty to manslaughter and served 15 years in prison for two counts of second-degree murder. In 2003 he was released but has since been indicted for various other charges, including drug sale and use.

Melissa M. Merritt

Presbyterian Hospital. Charitable hospital incorporated in 1868 opened in 1872 by James Lenox (1800–80) and other philanthropists. Situated between 70th and 71st streets and Madison and Fourth (Park) avenues on land donated by Lenox, it opened with 32 ward beds and private rooms. Expansion began with an outpatient dispensary (1888); two ward buildings, increasing capacity to 200 beds (1892); a school of nursing (1892); a surgical pavilion (1893); social services (1904); and a surgical pathology lab (1912). Presbyterian's wartime service included a 40-bed military ward during the Spanish–American War and overseas base hospital units for World Wars I and II. By 1908 the medical board recommended a new hospital be constructed; in 1910 Edward S. Harkness (1874–1940), a board member, proposed an affiliation with the College of Physicians and Surgeons of Columbia University. Other affiliations followed: a new state psychiatric institute and hospital (1924), Sloane Hospital for Women, the Vanderbilt Clinic, Babies Hospital, and the Neurological Institute (1925). Columbia–Presbyterian Medical Center opened in 1928 and Presbyterian moved to a 694-bed facility that included Harkness Pavilion (150 private rooms) and the Squier Urological Clinic located in Washington Heights between 165th and 168th streets and between Broadway and Fort Washington Avenue on land donated by the Harkness family. In 1997 New York Hospital and Presbyterian Hospital merged to form New York–Presbyterian Hospital System, which includes the two medical centers and their networks of affiliated hospitals throughout the tri-state region, forming one of the most comprehensive and prestigious university hospitals in the world.

Presbyterians. Organized Presbyterianism in New York City began with the founding in Queens of First Presbyterian Church, Newtown (1652), and of First Presbyterian Church, Jamaica (1662). During the early eighteenth century the Anglican colonial governors Benjamin Fletcher and Lord Cornbury sought to suppress Presbyterians, who were classed as "dissenters," by forcing Newtown and other Presbyterian congregations to accept Anglican ministers. When services were led in a private home on 20 January 1707 by Francis Makemie, the father of American Presbyterianism and moderator of the first American presbytery (at Philadelphia in 1706), Cornbury arrested him for preaching without a license. Jailed for three months before trial, Makemie defended himself under the English Toleration Act (1689) and was acquitted, although forced to pay all costs of the trial, the unpopularity of which contributed to Cornbury's removal (1708). The First Presbyterian Church, Manhattan, formed in 1716, began holding services at its site on Wall Street in 1719; a Presbyterian church in Staten Island was formed in 1717 (destroyed during the American Revolution and rebuilt in 1856).

Presbyterian lay leaders were active in the political, economic, and intellectual life of the city during the Revolutionary period. Leaders in the war such as William and Philip Livingston, William Smith, Jr., John Morin Scott, and Alexander McDougall were members of First Presbyterian in Manhattan, which became known as the "church of the patriots." The revolutionary activities of John Rodgers, pastor of First Presbyterian from 1765 to 1811, caused him to flee the city during the British occupation. Rodgers was later a vice chancellor of the New York Board of Regents (1784), president of the Society for the Relief of Distressed Debtors (1787), and moderator of the first Presbyterian General Assembly (1789). He and others in the General Assembly took steps to educate the clergy and laity during the late eighteenth century. To make a "priesthood of all believers" the church leadership opened the James Robertson School (1788), the first school for blacks (1787), the first Sunday schools in Manhattan (1793, run by a black woman at Scotch Presbyterian Church) and in Brooklyn (1824), the Free School Society (1805), the New York Sunday School Union (1816), and the first free school for infants (1827, at the Canal Street Presbyterian Church).

In 1836 Samuel Miller's report to the General Assembly on slavery and the church contributed to a denominational schism. On one side was the New School, which dominated Union Theological Seminary; it opposed slavery, was receptive to revivalism, advocated a union with Congregationalism under a plan put forth in 1801, and supported such ecumenical organizations as the American Board of Commissioners for Foreign Missions, the American Tract Society, and the American Sabbath School Union. The Old School disapproved of revivalism, supported missionary work and the expansion of frontier churches, and was not openly opposed to slavery; it was centered at Princeton Theological Seminary, and a number of congregations in New York City were aligned with it, among them Brick Presbyterian Church, Fifth Avenue Presbyterian Church, and First Presbyterian Church, Manhattan. New School churches such as Spring Street Presbyterian Church (Manhattan), Laight Street Presbyterian Church (Manhattan), and First Presbyterian Church, Brooklyn, were threatened by mob violence because of their opposition to slavery. Unity within the Old School was maintained until 1861, when a resolution in support of the Union by Gardner Spring, the pastor of Brick Presbyterian, split the Old School General Assembly and created the Southern Presbyterian Church. In 1869 the faction that supported the Union

Madison Avenue Presbyterian Church (designed by James E. Ware), ca *1904*

sought reconciliation with the New School during a joint communion service of the General Assemblies led by Spring at the Brick and Covenant churches.

The period after the Civil War saw renewed Presbyterian leadership in social, missionary, and political causes. Among the institutions formed were Presbyterian Hospital (1868, now Columbia–Presbyterian Medical Center), by James Lenox, elder of First Presbyterian Church, Manhattan; the Presbyterian Home for Aged Women (1866), forerunner of the James Lenox House (49 East 73rd Street), by the Lenox family; and the Riverdale Neighborhood House (1872), by the Dodge family. In 1884 Horace Underwood was commissioned as the first Presbyterian missionary to Korea by the Lafayette Avenue Presbyterian Church, and in the 1890s Charles H. Parkhurst of the Madison Square Presbyterian Church became a champion of municipal reform. The Presbyterian national headquarters opened at 156 Fifth Avenue in Manhattan on 1 May 1895. The Social Gospel movement, enunciated by Henry Sloane Coffin and others, took root in the Labor Temple, led by Charles Stelzle and formally organized as the American International Church in 1915. Presbyterians were also embroiled in two major controversies over theology when Charles A. Briggs of Union Theological Seminary (1893) and Harry Emerson Fosdick, pastor at First Presbyterian Church, Manhattan (1923), were brought to trial before the General Assembly. The church saw remarkable growth during these years despite increasing divisions: the Church Extension Committee of the Presbytery and the Presbyterian Progress Foundation provided buildings for Featherbed Lane Presbyterian Church (1919), Eastchester Presbyterian Church (1930) in the Bronx, Fort George Presbyterian Church (1918), and Rendall Memorial Presbyterian Church (1927) and transferred declining congregations to congregations in other neighborhoods. The activity of William Adams of the national Board of Home Missions drew many other Presbyterian agencies to the city in the mid-1950s.

More than 30 moderators of the General Assembly have been residents of New York City, including Rodgers (1789), Miller (1806), Coffin (1943), Edler Hawkins (1964, the first black moderator), Thelma Adair (1976, the first black female moderator), and Robert Davidson (1981). Among those who have contributed to the rich musical heritage of the church are Clarence Dickinson of Brick Church, founder of the American Guild of Organists and editor of the *Presbyterian Hymnal* published in 1933, and John Weaver, organist at Madison Avenue Presbyterian Church and a major contributor to the *Hymnal* published in 1990. In 1983 the Presbyterian Church (U.S.) reunited with the United Presbyterian Church (United States of America) to end the division that began during the Civil War, and the reunited Presbyterian Church (United States of America) moved the denominational headquarters to Louisville, Kentucky. During this period the church reaffirmed its commitment to including members of minority groups in its congregations.

Even during this period of reconciliation, however, the church was dividing over the recognition of homosexual clergy members. In 1978, after the General Assembly prohibited the ordination of openly homosexual people, the West Park Presbyterian Church, located on Manhattan's Upper West Side, declared itself a conscientious objector to the policy, welcoming gays into its congregation. In 1992 the More Light Churches Network was founded to organize gay-welcoming Presbyterian churches, merging in 1998 with former Presbyterians for Gay and Lesbian Concerns to form More Light Presbyterians. New York City churches have played a prominent role in the More Light movement; in the twenty-first century 13 of them were signatories.

presidents. Many American presidents have had associations with New York City. The first Executive Mansion, at 3 Cherry Street in Manhattan, was the home of President George Washington from April 1789 to February 1790. Vice President John Adams lived in the Mortier House (also known as Richmond Hill) at what is now Charlton Street in Greenwich Village. When he became president himself he moved to the Vincent–Halsey House in Eastchester (now in the Bronx) for two months in 1797 to avoid a yellow fever epidemic in Philadelphia. As Washington's secretary of state, Thomas Jefferson lived briefly at 57 Maiden Lane in 1790. James Monroe retired to his son-in-law Samuel Gouverneur's home, a small, Dutch-roofed house at Lafayette and Prince streets where he remained for the rest of his life. While campaigning for the presidency in 1860 Abraham Lincoln delivered one of the most important speeches of his career at the Great Hall of Cooper Union; after his assassination his funeral cortège passed through the city, and his body lay in state at City Hall. From 1881 to 1885 Ulysses S. Grant lived in a brownstone at East 66th Street where he wrote his memoirs and made several disastrous investments; he is the only president buried in the city (see Grant's Tomb). Chester A. Arthur built his career in Manhattan, where he first worked as a civil rights lawyer and eventually oversaw the New York Customs House; after his term in the White House he lived out his life in the city. Between his two presidential terms Grover Cleveland lived on Madison Avenue and 68th Street and worked for a prominent law firm on Wall Street. Born on East 20th Street near Gramercy Park, Theodore Roosevelt spent his childhood in Manhattan and was active in city politics as a state assemblyman, police commissioner, and mayoral candidate. After Calvin Coolidge was president he became a director of the New York Life Insurance Company and often stayed in a reserved suite in the Vanderbilt Hotel. Similarly, Herbert Hoover lived in a suite in the Waldorf Towers on East 50th Street from 1934 until his death. Franklin D. Roosevelt lived in the city between 1905 and 1933. As president of Columbia University, Dwight D. Eisenhower lived at 60 Morningside Drive from 1948 until he became a presidential candidate in 1952. John F. Kennedy lived in the Bronx as a boy, from 1926 to 1929. During his brief retirement from politics Richard M. Nixon moved to the city in 1963 to join the law firm of Mudge, Rose, Guthrie and Alexander, and he lived in the city again from 1980 to 1981. George H. W. Bush lived in the Waldorf Towers from 1970 to 1972 while he was the U.S. ambassador to the United Nations. After the White House, Bill Clinton moved to suburban Chappaqua, New York, and set up an office in Harlem. President Barack Obama graduated from Columbia University (BA 1983) after living for two years on the Upper West Side.

Press Club. See New York Press Club.

Prial, Frank J. (*b* 11 Aug 1875; *d* Brooklyn, 24 Feb 1948). Labor leader. A deputy city comptroller from 1918 to 1933, he formed and led the Civil Service Forum and also published and edited the *Chief,* a civil service newspaper. He was the most influential spokesman for city workers in the years before municipal unionism. He opposed collective bargaining, preferring instead to achieve his goals through personal connections. A well-known figure in the Democratic Party, he ran

unsuccessfully in several elections. Prial's influence diminished after Fiorello H. La Guardia became mayor and as civil service unions grew in the late 1930s.

Joshua B. Freeman

Price, Bruce (*b* Cumberland, Md., 12 Dec 1845; *d* Paris, 29 May 1903). Architect. He studied architecture with the firm of Niernsee and Neilson in Baltimore, where he began his career before moving to New York City in 1877. His major contribution in the city was his exploration of the design of "tower" skyscrapers, set forth in a series of projects that treated the building as a tripartite column. These included the Sun Building (1890, unexecuted), the American Surety Building at 100 Broadway (1894–96), the St. James Building at 1133 Broadway (1896), the International Bank Building at Broadway and Cedar (1899, demolished), and the Bank of the Metropolis at Union Square West (1902–3). Price's skill in designing urban residences is displayed in the King Model Houses, built in Harlem in two rows on West 138th and 139th streets (1891, with Clarence S. Luce) and now known as Strivers' Row.

Lamia Doumato, *Bruce Price, 1845–1903* (Monticello, Ill.: Vance, 1984)

Marjorie Pearson

Price, (Mary) Leontyne (*b* Laurel, Miss., 10 Feb 1927). Singer. The daughter of a sawmill worker and a midwife, she graduated from Central State College in Wilberforce, Ohio, and embarked on a career as a classical soprano. She studied for four years at the Juilliard School of Music in New York City, where she was coached by Florence Page Kimball, and sang the part of Alice in Verdi's *Falstaff.* Her debut in the city in Virgil Thomson's *Four Saints in Three Acts* (April 1952) attracted the attention of Ira Gershwin; he chose her to sing the role of Bess in his revival of his brother's opera *Porgy and Bess,* which played in the city from 1952 to 1954 before touring the rest of the country and western Europe. Known for her soaring phrasing and subtle inflections, she was chosen for the title role in a production of Puccini's *Tosca* broadcast on television in 1955. Although some American opera houses were hesitant to engage her because she was black, in Europe she was welcomed and cast in the lead role of Verdi's *Aïda,* to which her vocal sheen, stamina, and phrasing were well suited. She later earned acclaim singing the role in Vienna (1959), at Covent Garden (1959), and at La Scala (1960). In January 1961 she was given a 45-minute ovation after her debut at the Metropolitan Opera as Leonora in Verdi's *Il Trovatore* opposite the tenor Franco Corelli. During the following decades she spent most of her career at the Metropolitan Opera and lived in New York City. She sang leading roles in operas by Mozart, Puccini, Massenet, and Tchaikovsky but was most admired for her performances of Verdi's music. She made successful recordings as Aïda, Tosca, Carmen, and Verdi's Leonoras. She retired in 1997, taught at Juilliard, and wrote a children's version of *Aïda*. She has won the Presidential Medal of Freedom, 19 Grammy awards, the National Medal of Arts, and the Kennedy Center Honors. She lives in Greenwich Village.

Leontyne Price in Verdi's La forza del destino

S. D. R. Cashman

PricewaterhouseCoopers. Accounting firm, begun as a British entity that opened a branch office in New York City in 1890 to investigate and audit American companies for British investors. The firm, originally called Price Waterhouse, became an independent American partnership by the turn of the twentieth century and began working for several of the nation's largest corporations, including U.S. Steel in 1902. During the 1920s the firm evolved into a distinctly American entity. By the following decade it had become the most highly respected accounting firm in the United States because of its many successful clients and the reputation of its senior partner, George O. May, the foremost accounting theorist of his time. In 1997 Price Waterhouse merged with Coopers and Lybrand to create the biggest accounting firm in the world, taking its current name in 1998. In 2008 PricewaterhouseCoopers was one of the four biggest accounting firms; its revenues for the 2007–8 fiscal year were $28.2 billion, and it employed more than 150,000 people in more than 150 countries, maintaining its global headquarters at 300 Madison Avenue.

David Grayson Allen and Kathleen McDermott, *Accounting for Success: A History of Price Waterhouse in America, 1890–1990* (Boston: Harvard Business School Press, 1990)

Kathleen McDermott

Primerica Corporation. Name used from 1987 by the financial services firm that had originated as the packing company American Can. The firm used the name until 1993, when it became the Travelers.

Janet Frankston

Prince, Hal [Harold Smith] (*b* New York City, 30 Jan 1928). Broadway producer and director. After attending the University of Pennsylvania (AB 1948) he first worked as an assistant under producer and director George Abbott. In 1950 he was drafted into the army and served in Germany. At age 26 he emerged as a producer on the original production of *The Pajama Game* (1954), which won the Tony Award for Best New Musical in 1955. He collaborated with Frederick Brisson and Robert E. Griffith on this production as well as Tony Award–winning productions of *Damn Yankees* (1955) and *West Side Story* (1957). He also produced works by Jerry Bock and Sheldon Harnick (*Fiorello!,* 1959, with Griffith; and *Fiddler on the Roof,* 1964) and became a frequent collaborator of Stephen Sondheim (*A Funny Thing Happened on the Way to the Forum,* 1962; *Company,* 1970; *Sweeney Todd,* 1979). In the late 1970s Prince found inspiration in the young talent of Andrew Lloyd Webber, with whom he worked on *Evita* (1979) and *The Phantom of the Opera* (1987), among others of Webber's works. As of 2007 Prince had won 21 Tony Awards, including one for Lifetime Achievement in the Theater, which he received in 2006. In 2007 he produced *LoveMusik,* and he remained an active director in 2010.

Prince's Bay. Neighborhood in southwestern Staten Island, bounded to the north by Amboy Road and to the south by Raritan Bay. The area is possibly named for an unknown English prince who anchored his ship there during the American Revolution, although a conflicting tradition holds that the area was named for a family called Prince. From the earliest times fishing was an important activity, particularly the harvest of clams and oysters that were considered the best in the metropolitan area. A plant for processing palm oil and making candles was built at Seguine Point in 1846. The Johnson Brothers Supply Company was formed after the Civil War and in 1888 was taken over by S. S. White Dental Works, which became the world's largest manufacturer of dental equipment. In the 1860s the Staten Island Railroad built a line through the area with a station on Seguine Avenue near Amboy Road. A small business district took form around the station. After

1900 state officials banned all fishing in the bay because of pollution. The buildings of the dental works were demolished in the 1970s after the firm moved to New Jersey, and a townhouse complex was built on the site. Elegant houses are located inland and on the waterfront. Richmond Memorial Hospital (1919) became part of Staten Island Hospital in 1988 (later Staten Island University Hospital). Many older one-family houses remain near the railroad station. The neighborhood has several recreational facilities: Wolfe's Pond Park, extending from the shore to Hylan Boulevard; Lemon Creek, which has berths for 400 pleasure boats; and the Seguine Mansion at Lemon Creek, built in the Greek Revival style and designated a landmark by the city. Nearby stands the Manee–Purdy House, built in the eighteenth century and also a landmark.

Marjorie Johnson

Princeton Club. Club incorporated in 1899 as an outgrowth of a local alumni association. It first occupied a clubhouse on the corner of 34th Street and Park Avenue, before moving into the former home of Stanford White on Gramercy Park North and Lexington Avenue, where it remained for 10 years. During World War I, when many members were serving overseas, the club shared facilities and membership with the Yale Club at 44th Street and Vanderbilt Avenue. In 1922 the club purchased a mansion on the corner of Park Avenue and 39th Street, to which it added a 10-story annex. It remained there for 40 years. By 1955 there were about 4000 members, and the old facilities were both aging and growing crowded. A new building at 15 West 43rd Street opened in 1963; its facilities include dining rooms, library and reading rooms, squash courts and other sporting facilities, and sleeping accommodations. The club has associate members who belonged to defunct sister clubs, such as that of Columbia University.

James E. Mooney

printing. The first printing press on Manhattan Island was set up in 1693 by William Bradford (1663–1752), who had earlier trained in London and introduced printing in Pennsylvania. He began his operation in a shop near what is now 81 Pearl Street and soon printed pamphlets concerning a trial that he faced in Philadelphia (for printing material critical of the Quaker faith). Bradford held the position of royal printer until 1742 and in the course of nearly 50 years was responsible for printing the first legislative proceedings in America (1694), the first paper money in New York City (1709), the first American edition of the *Book of Common Prayer* (1710), the first edition of an American play (Governor Robert Hunter's *Androboros,* 1714), the first newspaper in New York City (the *Gazette,* 1725–44), and the first map of the city (by James Lyne, 1731). Bradford's former apprentice John Peter Zenger, who served for a short period as the public printer in Maryland, returned to New York City in 1725 and opened a printing shop. Opponents of Governor William Cosby, who despised Bradford's newspaper for representing the government, asked Zenger to launch another paper in 1733. Zenger's *Weekly Journal* appeared on 5 November 1733, edited by James Alexander, a leader of the opposition. Its insistent attacks on Cosby's administration led after a year to Zenger's imprisonment for seditious libel and to a trial (4 August 1735) at which the renowned Andrew Hamilton of Philadelphia secured Zenger's acquittal. News of the trial spread quickly; Alexander's *A Brief Narrative* (1736), in which it was described, was widely reprinted in America and abroad and required some 20 editions before 1800. Although Zenger's trial had no force as legal precedent, it became a popular symbol of the struggle for free speech in America.

Another former apprentice of Bradford, James Parker (1714–70), established the third printing office in New York City in 1742 and the third newspaper, the *Weekly Post-Boy,* in 1743. After Bradford's retirement in 1744 and Zenger's death in 1746, a new generation took over the printing trade in New York City. Under Bradford's successor Henry DeForeest (*b* 1712; *d ca* 1766), the first American-born printer in the city, the *Gazette* became the *Evening Post* (1744–53). Parker printed a number of substantial books during the 1740s, including Samuel Richardson's *Pamela* (the earliest "best seller" in New York City); entered into a partnership with William Weyman (1753); and opened printing offices in New Jersey and Connecticut. His firm produced the earliest magazine in New York City, the *Independent Reflector* (1752–53), noted for publishing the essays of William Livingston. In 1760 Weyman left Parker's firm, and John Holt (1721–84), who worked for the firm in New Haven, Connecticut, moved to New York City to edit Parker's newspaper (now called *New-York Gazette and Weekly Post-Boy*). Holt became one of the most active supporters among printers of the revolutionary cause, serving as a printer to the province and continuing his own newspaper (the *New-York Journal,* launched 1766) outside the city during British occupation.

In 1776 the prolific printer Hugh Gaine left the city (as did many other printers); he supported the Revolution from Newark, New Jersey, where he published his own newspaper, begun as the *Mercury* in 1752. To the shock of many patriots he returned to New York City seven weeks later and transformed his newspaper into an outlet for Loyalist sentiment. His equivocation prevented him from being named the royal printer during the war; in 1777 the position went instead to James Rivington (1724–1802), a bookseller specializing in books from England who also published the *Gazetteer* (from 1773), a widely circulated newspaper that he later renamed the *Loyal Gazette* and then the *Royal Gazette.* The most prominent Loyalist printers in New York City during the war were the brothers James Robertson (*b* 1740; *d ca* 1810) and Alexander Robertson (1742–84), who opened a shop and published two newspapers, the *Chronicle* (1769) and the *Royal American Gazette;* leading patriots included John Anderson (*d* 1798), who printed an edition of Thomas Paine's *Common Sense* (1776), and Samuel Loudon (*b ca* 1727; *d ca* 1813), who created a furor by printing a reply to Paine, both of whom were forced to leave the city in 1776.

The typical printing shop of the colonial and revolutionary periods had one or two presses, four or five fonts of type, and employed two journeymen besides family members and apprentices. It printed forms, almanacs, primers, literary and political writings, and (if it was an official printer) government documents. From 1693 to 1783 there were about 2500 known items printed in New York City (excluding forms and newspapers); about two dozen printers' names appear on these items, but nearly half the total was produced by the two largest printers and 90 percent by the seven largest (in decreasing order of output: Bradford, Gaine, Parker, Holt, Weyman, Rivington, Zenger). Most materials produced during the period were typographically undistinguished, but the number of significant books produced was impressive.

The printing trade was profoundly transformed by technological innovations made in New York City after the Revolution. In 1790 Adam Mappa introduced typefounding and in 1795 Alexander Anderson popularized boxwood engraving, a process used to produce woodcut illustrations. By 1800 there were about 15 printing offices in the city, together employing 70 or 80 journeymen printers. Knowledge of the art of stereotyping was imported in 1813 from England by the printer David Bruce, who made molds of composed type and engravings for cast printing plates. By 1820 there were nine stereotype foundries in the city. Although New York City had 20 printers in 1820, its trade was subordinate in output and reputation to that of Boston and Philadelphia. R. Hoe and Company introduced an iron toggle-jointed hand press in 1822 and by the mid-1830s produced the Washington press, which became the standard iron hand press for the rest of the century; the company also made flatbed cylinder presses for newspaper work.

During 1820–40 the printing trade diversified into a number of branches, including newspaper, book, and commercial printing; at the same time bookbinding, typefounding,

equipment manufacturing, and other auxiliary trades expanded. The city's reputation as a center of book and periodical printing was enhanced by the formation of several influential firms with national distribution: the Methodist Book Concern, the Tract Society, and Harper and Brothers. Faster production methods gave rise in the 1830s to the penny press, a term used to describe inexpensive daily newspapers that focused on commercial information and gossip. James Gordon Bennett, Sr., and Horace Greeley were two of the city's most successful newspaper editors at the time. George Bruce, Jr., in 1838 introduced his pivotal typecasting machine, a device that mechanized typefoundries and increased productivity by 600 percent. In 1847 Richard M. Hoe developed a large rotary, type-revolving press for metropolitan newspapers. A successful treadle-driven press invented by George P. Gordon in 1851 encouraged the production of job work and the proliferation of small shops. The presence of these aggressive entrepreneurs, industrial growth, and the commercial and financial influence of New York City made the city the printing capital of the United States by the 1850s, when more than 1000 printers worked in the city.

By the mid-nineteenth century newspaper companies clustered around Printing House Square at the intersection of Park Row and Nassau Street, and job shops spread from Park Row to the East River along John, Fulton, Ann, Beekman, and Spruce streets; their proximity reinforced competition and promoted the growth of trade associations and labor unions. In 1852 journeymen printers formed New York Typographical Union no. 6, which became the longest-lasting printers' organization in the city. Master printers organized a short-lived employers' association, the Typothetae of the City of New York, in 1865. Dominated by entrepreneurial book and job printers such as Theodore Low De Vinne, the Typothetae opposed the growth of trade unionism. By the 1860s the city had 51 newspaper offices (employing about 2400), 17 book publishers (employing more than 2100 production workers), and 81 job offices (employing 870). Twenty years later, New York City also had become the center of periodical publishing and printing.

Four independent type foundries were consolidated in 1893: American Type Founders Company, J. Conners, D. and G. Bruce, and A. D. Farmer and Son. By the mid-1890s press workers, electrotypers and stereotypers, and bookbinders who were members of New York Typographical Union no. 6 organized their own unions and then formed the Allied Printing Trades Council. After an acrimonious strike in 1906 a group of master printers led by Charles Francis formed the Printers' League. It joined forces with the Typothetae in 1916 to form the New York Employing Printers' Association, forerunner of the New York Employing Printers Association and the Association of the Graphic Arts (formerly the Printing Industries of Metropolitan New York). During the first half of the twentieth century nearly 20 percent of all workers in printing and publishing in the United States were employed in New York City. Increasingly, publishers of magazines and books moved into offices in Manhattan but commissioned their printing to businesses in the surrounding counties, whereas newspaper and commercial printing remained centrally situated. In 1940 the federal census of manufactures found that New York City had more than 18,400 compositors and typesetters, 7700 other printing workers, 700 electrotypers and stereotypers, 3600 photoengravers and lithographers, and 3400 press workers and plate printers.

The number of daily newspapers decreased from 43 in 1892 (when there were also 294 weekly newspapers) to seven in the 1950s. There were just four dailies published in 1990 as digital technology and economic conditions forced industrial restructuring between 1980 and 2000. Firms offering computerized desktop publishing displaced most compositors and printing press plate makers. In 2008 newspaper and book printing were virtually nonexistent in the city as land prices were prohibitive and changes in transportation and computerized printing allowed large production facilities to move to the suburbs, or out of the country. Approximately 1000 firms employed 15,000 production workers in the five boroughs. Two-thirds of these firms, employing about 75 percent of the labor force, were commercial printers, many serving legal and financial clients near City Hall, retail stores near Eighth Avenue and 34th Street, and advertising firms east of Madison Avenue above 42nd Street (see FINANCIAL PRINTING).

Printing House Square. Nickname given to the area near City Hall where the major New York City newspapers had offices during the mid-nineteenth century. Considered the most important press center in the United States at the time, these papers had a daily circulation of more than a quarter of a million. The square was located at the north end of Nassau Street, at Park Row and Spruce Street. The *Tribune, Times, Herald, Sun, Express, Daily News, Mercury,* and *Ledger* were among the publications that had offices there. Statues of Benjamin Franklin and Horace Greeley were on the square. These newspapers began to move uptown in the early twentieth century, and most of them no longer exist.

Lisa Keller

printmaking. Printmaking was the first of the visual arts to herald the birth of New York City. The earliest images of the nascent city were prepared by Dutch artists, followed by the work of British printmakers when England laid claim to the Dutch colony. The few prints that circulated in the seventeenth century were all issued by European presses. A stunning copper engraving of 1717 conceived by the Englishman William Burgis is titled "A South Prospect of the Flourishing City of New York" and depicts the port in four combined images printed from four plates. A few caricatures of political figures were also produced in the eighteenth century. During the first decades of the nineteenth century a group of artists from abroad made topographic albums of the city that were published as collections of aquatints, *Picturesque Views of American Scenery* (1819–21) and *The Hudson River Portfolio* (1821–25), and as a collection of lithographs, *Itinéraire pittoresque du fleuve Hudson* (1828–29).

The quality of topographic views made in the city improved through the work of several artists trained in England, including William James Bennett, Francis Guy, John Hill, William Guy Wall, and William Winstanley; their prints later inspired the artists of the Hudson River School. Alexander Anderson and Cornelius Tiebout were among the first engravers who lived in the city. Formal training in printmaking was first offered by the National Academy of Design (1826), which was modeled on the Royal Academy of Art in London and had a gallery devoted to exhibitions of prints. Members included such printmakers as Bennett, F. O. C. Darley, Alfred Jones, J. F. E. Prud'homme, and James Smillie. Etchings and lithographs lampooning President Andrew Jackson increased the popularity of political caricatures. The Apollo Association, formed in 1839 and later renamed the American Art-Union, awarded many commissions to engravers for reproductions of American paintings; print exhibitions held in its galleries became fashionable.

As the market for prints expanded during the nineteenth century, the number of printmakers increased and thousands of prints were issued by the firms of John Bachman, Lewis P. Clover, Charles Magnus, Ferdinand Mayer and Sons, H. R. Robinson, and Endicott. The most successful firm was that of Currier and Ives, which had its plant at Spruce and Nassau streets and remained in operation from 1857

to 1907. The firm was best known for more than 7000 lithographs depicting scenes of daily life, many of them executed by such well-known artists as George Catlin, George Inness, Eastman Johnson, Louis Maurer, Fanny Palmer, Charles Parsons, and Arthur F. Tait. It was also the best-known publisher of political caricatures, a good number of which were issued around the time of the Civil War by popular artists such as Thomas Worth. The introduction of wood engraving, a process using the grain side of boxwood blocks, allowed illustrations to be printed on the steam-powered presses used to print periodicals and books. Scenes of city life appeared in such periodicals as the *Mirror, Family Magazine,* the *Picture Gallery, Godey's Lady's Book, International Monthly, National Magazine, United States Magazine, Frank Leslie's Illustrated Newspaper, Harper's Weekly,* and the *Illustrated News.* The largest illustrations required several blocks prepared by different engravers and screwed together for printing; among the illustrators who became widely known was Winslow Homer. In addition to wood engraving, intaglio and planographic techniques were used to make illustrations for books. During the 1850s Darley became extremely popular for his illustrations of works by William Shakespeare, Charles Dickens, Edgar Allan Poe, Henry Wadsworth Longfellow, Washington Irving, James Fenimore Cooper, and Joseph C. Neal. A growing number of illustrators were women, who were able to learn printmaking techniques in workshops and classes offered by large cultural institutions such as the National Academy of Design.

Etching became a popular technique in the city after mid-century when artists in France and England demonstrated its expressive possibilities in rendering landscapes. It was embraced by Thomas Moran, Mary Nimmo Moran, Robert Swain Gifford, Samuel Colman, and Stephen Parrish. Their prints were made on fine paper in small runs in print dealers' shops and soon became much sought after, leading in 1877 to the formation of the New York Etching Club, an exclusive organization that sponsored exhibitions until 1893. Many painters were influenced by the work of James McNeill Whistler, whose first exhibition of prints in the United States was held at the Wunderlich Gallery in the city in 1883. About this time political cartoons became popular nationwide in a number of periodicals issued in the city, among them *Yankee Doodle, Phunny Phellow, Vanity Fair,* the *Daily Graphic, Frank Leslie's Illustrated Newspaper,* the *New York Herald, Scribner's,* and especially *Puck,* which developed a format that later became the basis for the editorial page of the *New York Times.* The best-known cartoonist was Thomas Nast, who produced a biting series of cartoons about the Tweed Ring and the first cartoon of a fat, jovial, bearded Santa Claus.

During the 1890s posters became the most popular form of graphic art. Posters by French artists were exhibited in 1890 and 1893 at the Grolier Club. A poster by Edward Penfield advertising the April issue of *Harper's Monthly Magazine* in 1893 set a standard for a bold, simple style that was soon adopted by other American artists. Will H. Bradley, Elisha Brown Bird, Howard Chandler Christy, Arthur Wesley Dow, Joseph Christian Leyendecker, Florence Lundborg, Maxfield Parrish, and Louis John Rhead became well known for their posters, many of which were commissioned by publishers in the city. Posters reached the height of their popularity about 1895: nearly 1500 were shown in an exhibition at the Fidelis Club in Manhattan in 1899. Several members of the exclusive Society of Illustrators including Christy, Leyendecker, Charles Dana Gibson, James Montgomery Flagg, and Jessie Willcox Smith used the grand style popular at the turn of the twentieth century for posters designed to encourage support for the entry of the United States into World War I. By this time prints had been supplanted by photographs as a medium for illustrating newspapers and periodicals. Some artists such as Joseph Pennell expanded the scope of printmaking as an art form; other printmakers and art studios accepted commissions for advertising.

Many innovations in printmaking date from the Depression. Under the auspices of the Works Progress Administration workshops were organized between 1935 and 1941 to encourage experimentation with different techniques. More than 300,000 prints were made nationwide during these years, many of them by a workshop in the city that was the country's largest. American prints became noted for their original compositions, lush colors, and technical innovation, and New York City, known as a center for printmaking, attracted such prominent artists as John Sloan, Edward Hopper, John Marin, George Bellows, Martin Lewis, Louis Lozowick, and Reginald Marsh, and later Andy Warhol, Helen Frankenthaler, Robert Indiana, and Ellsworth Kelly. More workshops were formed; one of the most important was Atelier 17, opened in 1940 by the English printmaker Stanley William Hayter, which promoted new approaches to printmaking until it closed in 1955. A workshop called Universal Limited Art Editions, opened in 1957 by Tatyana Grosman, attracted major painters to printmaking, among them Larry Rivers, Robert Rauschenberg, and Jasper Johns, and became a model for later works.

Prominent early views of the city are held in the print collections of the Museum of the City of New York, the New-York Historical Society, the New York Public Library, and the Metropolitan Museum of Art. Several Manhattan galleries specialize in prints, among them the Hirschl and Adler Galleries, the Susan Sheehan Gallery, and The Old Print Shop.

Priscilla. Steamboat designed by George Peirce and built in 1893. It measured 440 feet (134 meters) by 52 feet (16 meters), and its sidewheels were 35 feet (11 meters) by 14 feet (4 meters). The ship had five boilers, a four-cylinder double-inclined compound engine, and 8500 horsepower. There were 1500 passenger berths, and the ship could carry 800 tons of freight. Frank Hill Smith designed the interior in a Renaissance style. The *Priscilla* was operated by the Fall River Line from 1894 until 1937 and ran between Manhattan and Fall River, Massachusetts.

prisons. See Jails.

prison ships. Between 1776 and 1783 thousands of American soldiers, sailors, and civilians perished aboard British prison ships anchored off Manhattan. This little-known story began on 15 September 1776, the day that British forces again routed Washington's army and seized New York City, bringing with them more than 1000 Americans captured in the fighting on Long Island (26–31 August). To hold them all, public buildings, sugar houses, churches, and even private residences were commandeered for use as stockades. But space in the occupied city was at a premium, especially after a third of it burned in a disastrous fire on 21 September. When several thousand more prisoners were brought in after the capitulation of Fort Washington on 16 November, conditions in the vastly overcrowded, pestiferous prisons went from bad to appalling. In December 1776 the British began shifting some captured Americans to broken-down transports and warships that had been stripped of ordnance, spars, rigging, canvas, rudders, and other reusable equipment. The first of these floating prisons were the *Whitby* and *Grosvenor.* Their appearance did not improve conditions in the

city's stockades, however, because British naval operations as well as military forays into the countryside around New York City ensured the arrival of hundreds of new captives every year. Down to the final year of the war, as a result, additional prison ships would be pressed into service as needed: *John, Glasgow, Preston, Good Intent, Good Hope, Prince of Wales, Falmouth, Stromboli, Lord Dunlace, Scorpion, Judith, Myrtle, Felicity, Chatham, Kitty, Frederick, Woodlands, Scheldt, Clyde, Hunter, Perseverance,* and *Bristol Packet.* The great majority were used only temporarily, and there were never more than five or six in use at a time—usually (but not always) anchored in Wallabout Bay, a shallow cove on the Brooklyn side of the East River, directly across from Corelear's Hook on Manhattan.

Most notorious of the Wallabout prison ships was the *Jersey,* originally a 64-gun frigate that saw decades of service in the Mediterranean before the Royal Navy converted it (circa 1771) to a hospital ship. Sent to America in 1776, the ship spent four years anchored off the East River waterfront where its great black hull—41 feet (12.5 meters) at the beam and 144 feet (44 meters) from stem to stern—became a landmark of sorts among residents of the occupied city. Sometime over the summer of 1780 the *Jersey* was converted to a prison ship and towed up to Wallabout Bay. It remained there for the remainder of the war, packed with as many as 1100 captured Americans at a time, triple its normal complement of crew.

The nightmarish conditions aboard the *Jersey* made it an enduring symbol of British inhumanity during the Revolutionary War. In letters, diaries, and memoirs, prisoners confined in its dim, steaming hold gave graphic descriptions of sadistic guards, scanty and barely edible provisions, stinking water, overflowing waste tubs, and rampant disease (scurvy, yellow fever, typhus, dysentery, and smallpox). From six to 10 men were said to have died between its decks every night, and every morning a gang of prisoners known as the "working party" gathered up the corpses and hastily interred them, along with those from other ships, in graves on nearby beaches. The actual death toll cannot be reconstructed from the surviving records, but it is probable that as many as 12,000 Americans perished aboard the *Jersey* and other British prison ships in New York City—almost twice the 6824 believed to have been killed in action during the war.

The deaths of these and other prisoners in New York hardened anti-British opinion in the former colonies and figured importantly in the negotiations that led to American independence in 1783. Once the war ended, it was a different story. For decades, rotting timbers of the *Jersey* were still visible at low tide in the mud flats of Wallabout Bay, and its beaches remained littered with human remains washed out of shallow gravesites. But despite repeated calls for a permanent marker to honor the dead, nothing materialized until 1873, when a mausoleum for their bones was incorporated by Frederick Law Olmsted and Calvert Vaux into the design of Brooklyn's Washington (now Fort Greene) Park. In 1908, after a national campaign orchestrated by the Daughters of the American Revolution, a proper memorial—the Prison Ship Martyrs' Monument—was belatedly erected over the mausoleum, facing Wallabout Bay.

Procter and Gamble. Firm of household products manufacturers. Formed in Cincinnati in 1837, it opened an industrial plant at Port Ivory, Staten Island, in 1907, which manufactured soaps, detergents, toilet goods, vegetable oil, and food and paper products. At its height during the 1920s the plant occupied 129 acres (52 hectares) and employed 1500 workers to manufacture soap bars, flakes, and granules (most under the brand name Ivory), vegetable shortening (Crisco), and related products for the northeastern United States. As the firm diversified during the following decades, the factory also made synthetic detergents and cleansers (such as Tide), cooking oils, baking goods under the name Duncan Hines, and orange juice (Citrus Hill). Because of mounting costs the firm began phasing out selected operations in the mid-1980s, and it closed all of Port Ivory in 1991. Procter and Gamble was an innovator in developing close relations with advertising and communications firms in Manhattan; it was the first firm to use direct radio promotion (1923) and produce daytime serial "soap operas" on radio (1933) and television (1950). In the early twenty-first century, the firm owned and produced, through its affiliate Procter and Gamble Productions, the television soap operas *As the World Turns* and *Guiding Light* in Manhattan, where it maintained its production, casting, publicity, and writers' offices.

progressive education. The progressive education movement began in the decades after the Civil War as a reaction to the corrupt political control and rote instruction that characterized most public schools in the United States. Many of the goals and tenets of progressive education were conceived and implemented in New York City. The early focus of the movement on hands-on experience was inspired by a display of the Moscow Imperial Technical School at the Philadelphia Centennial Exposition of 1876, where Victor Della Vos exhibited tools, models, and drawings to stress the importance of manual training in instruction shops. Interest in manual training led to the opening of the New York Trades Schools by Richard T. Auchmuty in 1881 and of the Pratt Institute in Brooklyn and the Baron de Hirsch School in the 1890s. The drive to open new schools gained further momentum in 1892 when Joseph Mayer Rice of New York City wrote a series of muckraking articles about the conditions of public schools in the monthly publication the *Forum.*

During the 1880s progressive educators focused on improving the lives of immigrants pouring into New York City. They formed settlements modeled on those of England where university students in the 1880s assisted and lived with the poor. In 1886 the Lily Pleasure Club (later renamed the University Settlement) was opened at 146 Forsyth Street in Manhattan by Stanton Coit (1857–1944), followed by the New York College Settlement (1889), Everett Wheeler's East Side House (1891), Lillian Wald's Nurses' Settlement (1895, later renamed the Henry Street Settlement), the Hudson Guild (1895), and Greenwich House (1902). The settlements' kindergarten programs, health and nutrition classes, cultural activities, manual training, and courses led to reforms in schools throughout the city.

The growth of progressive education, the development of psychology, and the influence of John Dewey gave rise to professional schools of education, notably Teachers College of Columbia University (1887) and the Bank Street College of Education, formed by Lucy Sprague Mitchell in 1916 as the Bureau of Educational Experiments. The graduates of these colleges founded and taught at such experimental schools in New York City as the Play School (1914), the Walden School (1915), the Lincoln School of Teachers College (1917), the Dalton School (1919), and the Little Red School House (1921). At these schools traditional, formalist methods were rejected in favor of programs stressing self-expression and learning by doing. The progressive movement waned during the 1950s, but many progressive schools continued to operate according to the principles on which they were founded.

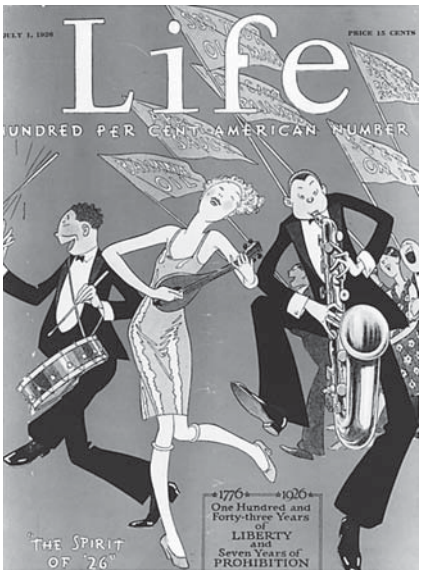
Alfonso J. Orsini

Progressive Party. Political party formed in 1912 and best known for its role in the presidential election of the same year; it is

often referred to as the Bull Moose Party. It advocated far-reaching regulatory and social reforms, including the abolition of sweatshops; laws regulating employer liability, child labor, and wages and hours; public ownership of natural resources; a graduated income tax; the direct election of U.S. senators; woman suffrage; and old-age, health, and unemployment insurance. New York City played an important role in the history of the party. The national headquarters was on 42nd Street, and the party's presidential nominee, Theodore Roosevelt, often consulted with party leaders in Manhattan from his residence at Oyster Bay on Long Island. Leading social scientists and social reformers from the city were instrumental in writing the party's political platform. Frances Kellor, executive director of the party's Progressive Service (based in Manhattan), directed research, education, and legislative efforts. Samuel McCune Lindsay, professor of social legislation at Columbia University, and John B. Andrews, secretary of the American Association for Labor Legislation (also based in Manhattan), addressed delegates at the national convention and were notable contributors to the party's agenda. Other New Yorkers prominent in the party included Edward T. Devine, George W. Kirchwey, and E. R. A. Seligman, all professors at Columbia, and the social reformers Florence Kelley, Pauline Goldmark, Henry Moskowitz, and Homer Folks. The philosopher John Dewey was briefly a codirector of the party's Committee on Education. In addition, Herbert Croly had a formative influence on Roosevelt through his book *The Promise of American Life* (1909).



The Progressive Party engaged in internecine battles with the Republican Party, from which it had broken, and had only slight support from organized labor (Samuel Gompers and the American Federation of Labor endorsed Democratic candidate Woodrow Wilson). As a result the Progressives fared poorly in New York State and elsewhere, electing only one governor, two senators, 16 representatives, and a few hundred local officials nationwide. Nevertheless, the Progressive Party retains a central role in the rise of the modern welfare state and the history of party politics in the twentieth century.

John Recchiuti

Prohibition. The 18th Amendment to the Constitution of the United States went into effect in 1920, making illegal the manufacture, sale, and transport of all alcoholic beverages. The sympathy toward the temperance movement of the national majority thus overrode an antipathy toward it in New York City that was personified by Fiorello H. La Guardia, who as a congressman excoriated the "noble experiment" of Prohibition as unenforceable, discriminatory toward immigrants and workers, and likely to breed contempt for the law. Prohibition did create new opportunities in the city for leaders of organized crime, who recognized the advantages of the harbor for the illegal importation of alcohol, known as rumrunning: their fleets ran liquor past the coast guard, their trucks transported it nationwide, and bootlegging replaced gambling as their main source of revenue. The city provided the country not only with much of its liquor, but also with many of its organized-crime leaders, among them Johnny Torrio and Al Capone, who had criminal careers in Brooklyn before moving to Chicago; Charles "King" Solomon, who used his connections in the city to dominate the rackets in New England from his base in Boston; and the members of the Purple Gang of Detroit.

New York City was also a leading source of demand for illegal alcohol, and with the onset of Prohibition speakeasies, ranging from squalid to elegant, opened throughout the city. Police Commissioner Grover Whalen estimated that the city had 32,000 speakeasies, twice the number of the legal saloons in the city before Prohibition. Some speakeasies restricted their clientele to males, others encouraged the mingling of the sexes, and still others aimed at college students. The part of 52nd Street between Fifth and Sixth avenues was reputed to have the city's greatest concentration of speakeasies, which to the chagrin of the proper old families in the neighborhood took over many of the fine brownstone town houses. The best-known speakeasy on the block and indeed in the city was Jack and Charlie's 21, favored by such literary figures as Robert Benchley, Dorothy Parker, and Alexander Woollcott: it was equipped with a chute so evidence could be quickly disposed of during a raid. The owners of speakeasies had to pay off not only the precinct police captains but the leaders of organized crime, some of whom like Jack "Legs" Diamond made extortion a specialty. They also had to look out for operatives of the Prohibition Bureau, a federal strike force with 1500 agents, of whom the best-known were two partners from the Lower East Side, Izzy Einstein and Moe Smith. They slipped into speakeasies by disguising themselves as milk-wagon drivers, streetcar conductors, visiting musicians, icemen, and once as gravediggers to raid a speakeasy across from Woodlawn Cemetery. Newspapers given to sensational coverage of crime found them colorful, and in time they staged their raids to accommodate newspaper deadlines. In 1925 the Prohibition Bureau was sufficiently embarrassed by their celebrity to discharge them "for the good of the service." By this time the local police had largely relinquished its role in enforcing Prohibition and left it to an increasingly ineffectual federal force.

It is unsurprising that the first presidential candidate to call for the repeal of Prohibition was Alfred E. Smith, a product of the immigrant Lower East Side and Tammany Hall.

"One Hundred and Forty-three Years of Liberty and Seven Years of Prohibition," cover for Life, *1 July 1926*

Although he lost the election of 1928, Prohibition had by then nearly run its course and was repealed in 1933. It left no discernible effect on the drinking habits of New Yorkers but unquestionably invigorated organized crime in the city, and gangs that profited on bootlegging during Prohibition were later able to diversify their operations.

property and liability insurance. The insurance business was established in New York City in the early eighteenth century as maritime insurance became a routine element of commerce. Colonial merchants usually bought their insurance from underwriters in Amsterdam and London, which perfected marine insurance practices; often the distance imposed a long delay, and gradually agents in the ports of Boston, New York City, Philadelphia, Baltimore, and Charleston, South Carolina, accepted applications for marine insurance and offered them to local underwriters in a manner similar to that of Lloyd's of London, where individual insurers wrote their names under descriptions of the voyages they were willing to guarantee. In 1719 Parliament prohibited the formation of stock insurance companies in the colonies, and underwriters in the colonial ports had insufficient capital of their own to meet the demand for insurance.

After the American Revolution joint stock companies that were organized with limited liability raised more capital for insurance

operations. The formation of the Insurance Company of North America in Philadelphia in 1792 freed American shipowners from relying on insurers in London, and the success of the firm inspired entrepreneurs to provide marine insurance in other port cities. Within two years the United States Insurance Company and the Pacific Insurance Company began marine insurance operations in New York City. The city's expansion also led to the formation of several fire insurers: the United Insurance Company (1787), the New York Insurance Company (1798), the Columbian Insurance Company (1801), and the Eagle Fire Insurance Company (1806). By the end of the eighteenth century marine insurance, fire insurance, and life insurance were established lines of business in the United States.

Fire insurers were crippled by the Great Fire of 1835 in the city. Nearly 600 buildings were destroyed, generating losses of about $15 million. Of the 26 fire insurers in business at the time, 23 exhausted their reserves by paying claims and declared bankruptcy. Another severe fire in 1845 destroyed 450 buildings and caused the failure of more insurers, most of which were joint stock companies. The mutual form of organization later came to dominate but proved no more stable. A general insurance law passed by New York State in 1849 placed the licensing and supervision of companies under the authority of the state comptroller and abolished chartering by the legislature. In the following years a number of companies were organized imprudently: 47 of 54 formed after 1849 failed by 1860 and together left unpaid losses of more than $2 million. To protect policyholders the state moved to regulate companies. In 1859 the office of the superintendent of insurance was established, and companies were required to submit financial reports and meet minimum standards.

The New York Board of Fire Underwriters was chartered on 9 May 1867 by the state legislature to "inculcate just and equitable principles in the business of insurance, operate the Fire Patrol and assess all companies writing fire insurance in the City for maintenance of the Patrol." For a short time the board attempted to control rates but ceased to do so in 1877 because members frequently deviated from established rates. The board did succeed in reducing fire hazards by inspecting buildings, investigating arson, and researching technology for firefighting. A standard fire policy was drafted by a committee of the board and in 1888 made mandatory by the state legislature for all fire insurers.

Marine insurers benefited from the great success of American clipper ships but suffered during the era of free trade after the Civil War, when British steam-propelled metal ships carried an increasing share of American exports and British insurers captured most of the market for American marine insurance. Of the 13 domestic marine insurers listed in the first report of the state insurance department in 1864, only Atlantic Mutual survived to the end of the century. British insurers held almost all policies for hull insurance, since most ships were British; American insurers continued to provide large amounts of insurance for cargo.

The city's property and liability insurers did not achieve the same degree of national prominence during the second half of the nineteenth century as its life insurers did. Resentment in the Midwest of eastern financiers led to the establishment there of local and regional insurance companies that competed vigorously with companies in New York City; many states taxed insurers from out of state. Regional distrust was exacerbated by the findings of the Armstrong Commission (1905) of abuses by major life insurers, and those of the Merritt Committee (1910), which examined the sharp increases in fire insurance rates in the city during the 1890s and the early twentieth century.

The revival of the American merchant marine early in the twentieth century improved conditions for American marine insurers. The American Institute of Marine Underwriters, formed in 1920, helped American companies to regain some hull insurance business through syndication. New kinds of insurance were developed about this time, against automobile accidents and theft, burglary, public liability, and inland marine losses; insurers in the city also provided fidelity and surety bonds. Workers' compensation resulted from the efforts of reformers and from the mistrust of business spurred by the investigations by the Armstrong Committee in 1906, which examined the business practices of the insurance industry in the state; the first law in the United States establishing workers' compensation was enacted in New York State in 1910. Several new private insurers and a state fund were formed to provide coverage, in part because many traditional insurers supported employers' resistance to the principle that compensation for work-related injuries should be provided regardless of fault. Eventually many of the traditional insurers did provide workers' compensation insurance.

Insurers became limited to underwriting either fire and marine insurance or casualty and surety by the Appleton rule, first promulgated in 1901 by the deputy superintendent of insurance for New York State, H. D. Appleton, and incorporated into the insurance law of 1939. This rule led to the adoption nationwide of the insurance practices of New York State, although other states were less stringent. The first law in the nation for insurance guaranty was passed in 1947 and assessed all insurers a percentage of their premiums for a guaranty fund to pay the unsatisfied claims against insolvent insurers; it became an important consumer protection measure and was later adopted by all the other states. In 1949 a new law granted full underwriting powers to both fire and marine insurers and casualty and surety insurers, enabling firms to combine different types of coverage in a single policy.

Those Who Underwrite Metropolitan New York (New York: Roberts, 1943)

Robert J. Gibbons

Prospect Heights. Neighborhood in northwestern Brooklyn, lying along the northern edge of Prospect Park and bounded to the north by Atlantic Avenue, to the east by Washington Avenue, to the south by Eastern Parkway (which begins in the neighborhood at Grand Army Plaza), and to the west by Flatbush Avenue. It was developed after Prospect Park was completed in the 1870s. The population consisted mostly of middle-class Italians, Irish, and Jews until after World War II, when it became predominantly African American. Eventually many buildings were abandoned and the neighborhood declined, and during the 1960s Washington Avenue was the site of race riots and arson that destroyed many buildings. In the mid-1980s the city sold off clusters of abandoned buildings to encourage the development of middle-income housing. A wave of speculation resulted, and during the next eight years almost one-third of the neighborhood's housing was renovated. Middle-class residents were attracted by relatively inexpensive condominiums and cooperatives and by the proximity of the neighborhood to Park Slope, Prospect Park, and Manhattan. Most of the immigrants who settled in Prospect Heights during the 1980s were from the Caribbean, especially from Jamaica, Haiti, and Guyana and to a lesser extent from Trinidad and Tobago, the Dominican Republic, Barbados, and Panama. The population in the early twenty-first century included working-class and middle-class homeowners and low-income renters and was largely African American, with some whites, West Indians, and Latin Americans. Along Eastern Parkway stand the Brooklyn Museum, the Brooklyn Botanic Garden, and the Brooklyn Public Library; the side streets are lined with brownstones and town houses built at the beginning of the twentieth century, along with small apartment buildings.

Judith Berck

Prospect–Lefferts Gardens. Neighborhood in northwestern Brooklyn, lying within northern Flatbush and bounded to the north by Empire Boulevard, to the east by New York Avenue, to the south by Clarkson Avenue, and to the west by Ocean Avenue. Founded in 1660 by Leffert Pietersen van Haughwout, the area was farmland until 1893 when James Lefferts divided it into building lots. Rowhouse development began almost immediately. The most active period for construction

was between 1905 and 1911, when more than 500 limestone houses were built. By 1919 the Lefferts Manor Association was formed. The core of this area was called Lefferts Manor, an eight-block restricted zone with building covenants designed by Brooklyn architect Axel Hedman. Maple Street, the heart of Lefferts Manor, has long been known as "Doctors' Row." The Lefferts Homestead (on which the neighborhood was built) and the nearby Brooklyn Botanic Garden offer visual variety. The Peter Lefferts House (built between 1777 and 1783) was moved to Prospect Park in 1918. Residents of Prospect–Lefferts Gardens are racially integrated, professional, and middle class; it was designated a historic district in 1979. In the early twenty-first century residents were from Jamaica, Haiti, the Dominican Republic, and Puerto Rico as well as from white ethnic groups. Housing consists of row houses and some semidetached and detached houses, as well as apartment buildings with storefronts along Rogers and Flatbush avenues, mostly built between the 1890s and the 1920s. Flatbush Avenue is the main thoroughfare, and there is additional shopping along Nostrand Avenue. The annual Prospect–Lefferts Gardens House Tour attracts many visitors.

Prospect Park. Public park in west central Brooklyn, bounded to the north by Eastern Parkway, to the east by Flatbush Avenue, to the south by Parkside Avenue, and to the west by Prospect Park Southwest and Prospect Park West. It occupies 526 acres (213 hectares). Part of the site was acquired by the City of Brooklyn in 1860; the present configuration of the park was first sketched by Calvert Vaux in February 1865 at the behest of James S. T. Stranahan, president of the Prospect Park Commission. A comprehensive plan for development was submitted in the following year by Vaux and Frederick Law Olmsted. The principal features of their design were the Green, or Long Meadow, a rolling expanse of lawn and trees; a rocky, heavily wooded area called the Ravine; and Prospect Lake. Meadowport Arch, Endale Arch, East Wood Arch, and other arches throughout the park separated pedestrian from equestrian and vehicular traffic. The Parade, across Franklin Avenue from the park, provided additional facilities for recreation, and the Plaza (now Grand Army Plaza) routed traffic into and around the park and served as a grand ceremonial space. From 1866 Olmsted supervised construction, a massive undertaking that employed as many as 1800 men to move earth; lay an underground drainage system; create miles of roads and paths; plant grass, trees, and shrubs; and erect bridges. Vaux and a number of associates designed the Thatched Shelter, the Dairy, the Concert Grove and its pavilions, and numerous rustic arbors. Shortly after its opening Prospect Park became a favorite place of resort. In 1868 about two million people visited it to enjoy the scenery or a family picnic, row or skate on the lake, listen to weekly concerts, and take part in athletic contests on the Parade. By the end of the nineteenth century there were perhaps as many as 15 million visitors each year.

Olmsted and Vaux considered Prospect Park integral to the future of Brooklyn and the metropolitan area. As early as 1866 they urged that it be connected to Central Park in Manhattan by a series of wide boulevards, and although this plan was never realized they were able to forge a comprehensive park and avenue system by rearranging the streets approaching Prospect Park, constructing Ocean Parkway and Eastern Parkway, and designing other public spaces. In later years Olmsted was distressed by changes made to the park, particularly the addition of gateways and structures designed by McKim, Mead and White and other architects and the more formal treatment of parts of the landscape. In the twentieth century the advent of the automobile made it necessary to widen and straighten the drives, and playgrounds and other recreational facilities were added. During the Depression the city's parks commissioner, Robert Moses, rehabilitated the landscape and restored many buildings; he also added such new structures as the Wollman Skating Rink (on part of the Concert Grove) and the zoo. Despite these major changes to the original landscape Prospect Park remains the centerpiece of the park system in Brooklyn and one of the greatest of the urban parks designed by Olmsted and Vaux.

Prospect Park and Coney Island Rail Road [Culver Line]. Railroad formed by Andrew Culver in 1874 after consolidating the Park Avenue Horsecar Line in Brooklyn and the steam-operated Greenwood and Coney Island Rail Road, which joined at 20th Street and Ninth Avenue in Brooklyn. Horsecar routes served ferry ships at Catherine Street and Hamilton Avenue. In 1879 Culver leased the New York and Coney Island Rail Road, which ran between Coney Island and Norton's Point near Sea Gate. It was bought by Brooklyn Rapid Transit in 1893 and electrified in 1899. The completion of an elevated line on McDonald Avenue in 1919 provided faster service to Manhattan. During the early 1930s the railroad tested a new trolley car known as the PCC car (for Presidents Conference Committee, an organization of electric railway presidents that redesigned trolleys so that they could compete with automobiles and buses). Trolley service was offered on McDonald Avenue until 1956.

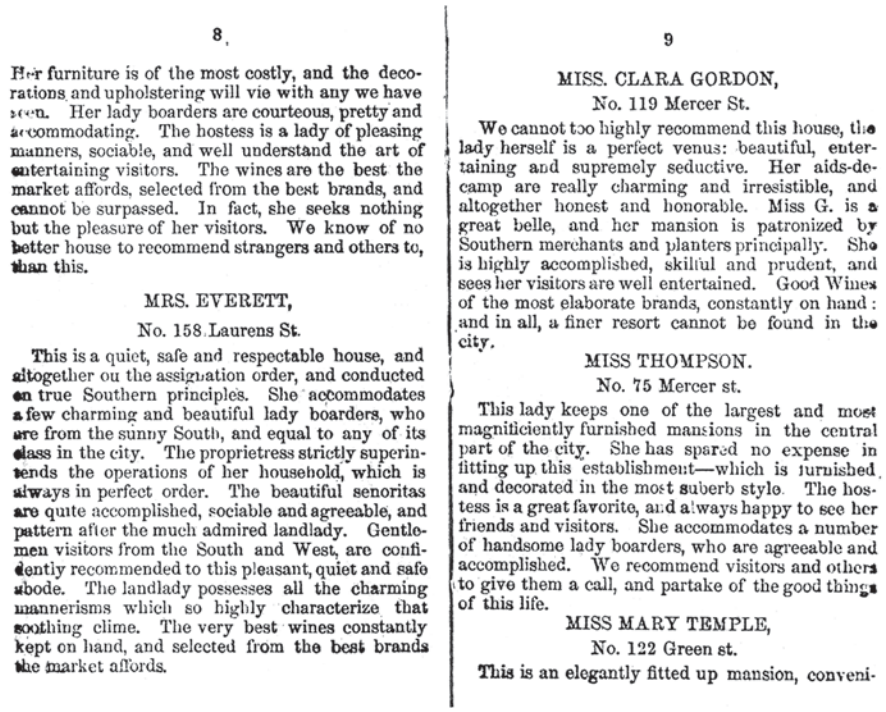
John Fink

Prospect Park South. Neighborhood in northwestern Brooklyn covering 60 acres (24 hectares) and bounded to the north by Church Avenue, to the east by the tracks of the B and Q subway lines, to the south by Beverley Road, and to the west by Coney Island Avenue. Located in the heart of the original Town of Flatbush and once owned by the Dutch Reformed Church (1795) of Flatbush, the area was developed in 1899 by Dean Alvord after the extension of rail service reached Prospect Park South from Manhattan and downtown Brooklyn. Alvord planned the neighborhood to resemble a spacious suburb, a "country in the city," and he engaged John J. Petit as architect and John Aitkin as landscape architect to establish stringent standards. With buried utility lines, the freestanding houses were set back 30 feet (9 meters) from the sidewalk and were built in a variety of styles, including Georgian, Prairie, Queen Anne, Elizabethan, neo-Tudor, Pediment, Japanese, Colonial Revival, French Revival, and Mission. A strip of land 8 feet (2.4 meters) wide between the street and the sidewalk allowed for trees set on the property line to give an illusion of wider streets. Buckingham and Albermarle roads have central planting malls. A neighborhood association dates from 1905. The neighborhood in the early twenty-first century remained mostly upper middle class; the main commercial thoroughfares are Cortelyou Road with its Flatbush Food Co-op, a popular bookstore/café, and multiethnic restaurants along Church and Coney Island avenues. Nearby on East 18th Street is the privately owned Knickerbocker Tennis Club (1889) that burned in 1988 but was later restored. Among the outstanding homes are the former Alvord Mansion at 1522 Albemarle Road and the Japanese house (1902) at 131 Buckingham Road. The journalist Nellie Bly (Elizabeth Cochran) lived on Marlborough Road. The official residence of the president of Brooklyn College is at 15 Westminster Road. Prospect Park South was named a historic district in 1979. Each spring



the neighborhood participates in the Flatbush Victorian House Tour.

Prospect Park Zoo. Zoo on Flatbush Avenue, near Prospect Park's Ocean Avenue entrance. It originated as a menagerie in the late nineteenth century, and the Central Park and Bronx zoos sent animals, including zebras, sheep, and baboons, to supplement it in 1902. A 1906 inventory listed a coyote, two timber wolves, and an angora goat for sale to the public, along with a broken-down automobile and a steam roller. In 1914 the menagerie began its transformation to a proper zoo with the purchase of the Bostock collection of animals from the Anglo-American Exposition grounds in London, which was had cheaply—for $12,000—because of World War I. The new Prospect Park Zoo opened in April 1916, consisting of a $20,000 one-story brick and stone building. By 1923 the zoo had obtained its own elephant. In 1934 Parks Commissioner Robert Moses obtained Works Progress Administration funds to build a new zoo in the park, which opened in 1935 with three new animal houses, a seal pool, and a restaurant. Through the late twentieth century the zoo fell into obsolescence. During the 1980s the Wildlife Conservation Society entered into a partnership with the city to renovate and manage a new facility, and a $37 million renovation began in August 1989, replacing the zoo's old cages and pits with natural habitats. The new zoo opened in 1993. Although much smaller than the Bronx Zoo, in 2008 the Prospect Park Zoo was home to almost 400 animals representing more than 100 species and received almost 240,000 visitors annually.

Kate Lauber

8

Her furniture is of the most costly, and the decorations and upholstering will vie with any we have seen. Her lady boarders are courteous, pretty and accommodating. The hostess is a lady of pleasing manners, sociable, and well understand the art of entertaining visitors. The wines are the best the market affords, selected from the best brands, and cannot be surpassed. In fact, she seeks nothing but the pleasure of her visitors. We know of no better house to recommend strangers and others to, than this.

MRS. EVERETT,

No. 158 Laurens St.

This is a quiet, safe and respectable house, and altogether on the assignation order, and conducted on true Southern principles. She accommodates a few charming and beautiful lady boarders, who are from the sunny South, and equal to any of its class in the city. The proprietress strictly superintends the operations of her household, which is always in perfect order. The beautiful senoritas are quite accomplished, sociable and agreeable, and pattern after the much admired landlady. Gentlemen visitors from the South and West, are confidently recommended to this pleasant, quiet and safe abode. The landlady possesses all the charming mannerisms which so highly characterize that soothing clime. The very best wines constantly kept on hand, and selected from the best brands the market affords.

9

MISS. CLARA GORDON,

No. 119 Mercer St.

We cannot too highly recommend this house, the lady herself is a perfect venus: beautiful, entertaining and supremely seductive. Her aids-de-camp are really charming and irresistible, and altogether honest and honorable. Miss G. is a great belle, and her mansion is patronized by Southern merchants and planters principally. She is highly accomplished, skilful and prudent, and sees her visitors are well entertained. Good Wines of the most elaborate brands, constantly on hand: and in all, a finer resort cannot be found in the city.

MISS THOMPSON.

No. 75 Mercer st.

This lady keeps one of the largest and most magnificiently furnished mansions in the central part of the city. She has spared no expense in fitting up this establishment—which is furnished and decorated in the most suberb style. The hostess is a great favorite, and always happy to see her friends and visitors. She accommodates a number of handsome lady boarders, who are agreeable and accomplished. We recommend visitors and others to give them a call, and partake of the good things of this life.

MISS MARY TEMPLE,

No. 122 Green st.

This is an elegantly fitted up mansion, conveni-

Nineteenth-century advertisements for prostitutes from the Directory to the Seraglios

prostitution. The earliest evidence of prostitution in New York City was reported by late-seventeenth-century visitors who noticed Dutch and English "lasses" soliciting along the Battery. Throughout the colonial period "disorderly houses" along the waterfront catered to sailors who frequented nearby taverns. During the American Revolution prostitutes did most of their business with British soldiers. Commercial sex in the eighteenth and early nineteenth centuries was concentrated in three areas: the "holy ground" adjacent to St. Paul's Chapel and a block east of the Hudson River on land owned by Trinity Church; George Street (later Spruce Street) on the northern edge of the city near the Park Theatre and the "Common" (later City Hall Park); and East George Street (later Market Street) along the East River. Prostitution flourished after 1810. Property owners willingly rented space to prostitutes because they had more money and proved more stable than working-class tenants. Under common law, landlords who owned houses of prostitution were not considered accessories. Prostitution was treated as vagrancy or disorderly conduct, both misdemeanors for which most participants went unpunished. A Victorian double standard sanctioned male sexual activity outside marriage and divided women into two groups: the respectable, who were considered "passion-less," and the unrespectable, who were irredeemable and available for purchase.

Nineteenth-century urban prostitution thrived for several reasons. The number of single, underemployed young women who moved to New York City from rural areas and abroad grew dramatically after 1820. They earned such low wages for what was considered legitimate work that many were forced to seek additional income. Probably 5 to 10 percent became prostitutes because they could earn more in an evening than other employment might bring in a week. Most were prostitutes for only a short time, eventually securing more socially acceptable employment or getting married. Some women attained a social or economic status that transcended their identity as prostitutes. Elizabeth "Eliza" Bowen abandoned prostitution to marry the wealthy French wine merchant Stephen Jumel in 1804 and was reportedly the wealthiest woman in the United States on his death in 1832 (she married Aaron Burr in 1833). Before the Civil War the madams Julia Brown, Adeline Miller, and Rosina Townsend were celebrated figures. The murder of the courtesan Helen Jewett in 1836 and the ensuing trial of her lover and alleged killer Richard Robinson attracted national interest, exposing the popularity of prostitution among men from all ranks of life. By the end of the century Rosie Hertz, the reputed "godmother" for prostitutes in the city, ran several brothels on the Lower East Side while living in an affluent neighborhood of Brooklyn.

Increasingly commercialized leisure activities appealed to a young, transient male population. After the Civil War leading concert saloons like Harry Hill's used "waiter girl" prostitutes to attract these "Bowery B'hoys" as well as prominent businessmen and politicians. From the 1830s procurers, or "pimps," managed prostitutes and lived off their earnings. Nicknamed "Broadway statues," "bullies," and the "fancy men" of prostitutes, they were fixtures in the sexual underworld by mid-century. Prostitution was preeminent in the city's underground economy. Brothels, unlicensed saloons, and illegal gambling dens corrupted neighborhood politicians and police, and antebellum theater proprietors routinely allowed prostitutes to conduct business in the "third tier" of their establishments. The leading "parlor houses" employed 15 to 20 women on weekends, the smaller establishments four or six. Many even advertised their services in local newspapers and guidebooks. From 1820 to 1850 the largest concentrations of prostitutes were found in the Five Points and at Corlear's Hook, Water Street, Church Street, and Chapel Street. By 1860 New York City reportedly had 500 brothels.

After 1850 the city's first exclusive sex and entertainment district took shape in the streets north of Canal Street and parallel to Broadway (the area now known as SoHo). It was eclipsed in importance shortly after the Civil War by the Tenderloin, an area in the heart of Manhattan between Fifth and Eighth avenues, extending as far south as 23rd Street and as far north as 34th Street by 1870, 42nd Street by 1880, and 50th Street by 1900. Allen Street on the Lower East Side and Union Square were also centers of prostitution. Despite controversy, prostitution was never segregated: concert halls, saloons, cigar stores, restaurants, masquerade balls, and later cabarets resorted to commercial sex to attract patrons, and elegant bordellos could be found in elite areas like Gramercy Park. In 1896 the assemblyman and district leader Martin Engel of Tammany Hall and his ally Max Hochstim formed the Independent Benevolent Association. The first "syndicate," it had a membership of several hundred madams, landlords, doctors, and municipal officials and collected dues to pay for "protection" and legal expenses, settled disputes, and organized prostitution on the Lower East Side.

Antiprostitution movements took different forms. In 1831 the young Presbyterian minister John R. McDowall formed a magdalen society to reform prostitutes, followed within a decade by the New York Female Benevolent Society, the New-York Society of Public Morals, and the New-York Female Moral Reform Society (see MAGDALEN SOCIETIES). In 1843 the Roman Catholic Sisters of Mercy and the Sisters of the Good Shepherd began efforts to reform and assist prostitutes. In 1852 evangelical Methodists tore down the notorious Old Brewery and built the Five Points Mission on the same site a year later. Other antiprostitution movements were linked to temperance and emphasized conversion to a morally pure way of life. These purity crusades, however, were sporadic and ineffective in diminishing prostitution. To Judge Charles Daley in 1849 and the newspaper editor Walt Whitman in the 1850s legalizing the trade was the only way to control it. Physicians like William Sanger supported regulation to protect public health and prevent venereal disease. Measures to legalize prostitution were debated by the state legislature in 1871 and 1875 but defeated by a coalition led by the women's rights advocate Susan B. Anthony.

At century's end vice crusades grew in number and significance. The Presbyterian pastor Charles H. Parkhurst instigated an antiprostitution campaign that contributed to an electoral defeat for Tammany Hall in 1892, and within a decade committees led by Senator Clarence Lexow and Assemblyman Robert Mazet further exposed links between the city's sex entrepreneurs and law enforcement officials. Wealthy businessmen, university professors, and other progressive reformers organized the Committee of Fifteen (1900–2) and the Committee of Fourteen (1905–32), which helped pass the Tenement House Law (1901), establish a women's night court (1907), eliminate "Raines Law" hotels (1905), and pass an injunction and abatement law penalizing landlords involved in commercial sex (1914).

Federal intervention also affected prostitution in New York City. Congressional legislation in 1903 and 1907 outlawed the importation of prostitutes and authorized the deportation of immigrants convicted of prostitution. The Mann Act (1910) made it illegal to transport women across state lines for "immoral purposes." Above all the Commission on Training Camp Activities during World War I suppressed open prostitution in the Tenderloin. Municipal officials similarly grew less tolerant of commercial sex and increasingly worked to repress or isolate it. During the 1930s a commission led by Samuel Seabury, the Committee of 100, and Mayor Fiorello H. La Guardia exposed police ties to various sex entrepreneurs. As the brothel and open prostitution became obsolete, prostitutes worked more clandestinely in tenements, dance halls, massage parlors, and "call houses"; they could no longer advertise and had to move their places of business frequently. During Prohibition prostitution developed close ties with the illegal alcohol trade and organized-crime figures such as Lucky Luciano, who by 1935 reportedly dominated prostitution in the city. The best-known madam, Polly Adler, was professionally connected with Al Capone, Dutch Schultz, Frank Costello, Arnold Rothstein, and Vincent Coll.

After 1965 prostitution became more public. Massage parlors proliferated when the City Council ended licensing requirements in 1967, with almost 100 around Times Square by 1976. In midtown and on the East Side many landlords leased their property to prostitutes in the face of rising vacancy rates and foreclosure in a weak economy. Local and federal law enforcement agencies, as well as the general public, increasingly treated prostitution as a "victimless" crime. During the 1970s and 1980s police officials estimated that 25,000 prostitutes worked in New York City. Although most of them lived at the poverty line, exclusive escort services charged $175 an hour to $1000 an evening for their "call girls." These lucrative ventures came to public attention with the arrest in 1984 of Sydney Biddle Barrows, the proprietor of a successful escort business who was known as the "Mayflower Madam" because of her socially prominent ancestry. Prostitutes themselves grew more assertive. During the 1970s the first known labor organization for prostitutes, COYOTE (Call Off Your Old Tired Ethics), defended prostitution as legitimate women's work and attacked laws against it as an invasion of privacy. The high cost of prosecution ($2000 a case) also increased support for legalization.

After 1980 prostitution came under renewed attack, with the feminist group WHISPER (Women Hurt in Systems of Prostitution Engaged in Revolt) condemning prostitution as a form of male domination. Kathleen Barry exposed the pernicious effects of the international traffic in prostitutes. During the 1990s Mayor Rudolph Giuliani led a movement to revise city zoning laws for the purpose of suppressing visible prostitution and other forms of commercial and public sex. Child and male prostitution drew increasing attention because of the efforts of Covenant House, which operates shelters for homeless and runaway youth; growing concerns about child abuse; and the 1986 report of the Attorney General's Commission on Pornography (the Meese Report). In 2002 the New York City Council investigated the alleged rise in teenage prostitution. Finally, fears of venereal infection revived when medical surveys found that 10 to 15 percent of "streetwalkers" were infected with the virus that causes AIDS.

Provident Loan Society of New York. Nonprofit lending organization formed by the Charity Organization Society in 1894. Initially it was a pawn brokerage that also made loans to hospitals and charitable, religious, and educational institutions. Its original headquarters were in the United Charities Building on 22nd Street and Fourth Avenue. The society declined in importance during the 1980s. In 2007 it had five branches in the city in addition to its headquarters (1909) at Park Avenue South and 25th Street.

Provincetown Players. Theater company formed in 1915 by a group of summer residents of Provincetown, Massachusetts; in 1916 they produced Eugene O'Neill's *Bound East for Cardiff* and were encouraged by their success

to move their operation to New York City. Led by the writers George Cram "Jig" Cook and his wife Susan Glaspell, both committed socialists, the group also included the painter Ida Rauh, the arts patron Mabel Dodge, and the political agitator John Reed. The members of the company wrote their own productions and staged them in living rooms and on porches in Provincetown until moving into a makeshift theater on a wharf. In New York City they rented a theater in Greenwich Village and staged one-act plays, including most of O'Neill's early dramas. Their greatest success, a production of O'Neill's *The Emperor Jones* in 1920, also led to their undoing when the play moved to Broadway, bringing renown to the company but also effectively destroying its amateur nature. In 1922 Cook and Glaspell left for Greece and the original Provincetown Players dissolved. The name of the company (although not the spirit of volunteerism) was resurrected in 1923 when O'Neill, the designer Robert Edmond Jones, and the writer Kenneth MacGowan presented a mixture of new plays and classics under the banner of the Experimental Theatre at the Provincetown Playhouse, an effort that ended after four seasons.

Provoost, Samuel (*b* New York City, 26 Feb 1742; *d* New York City, 6 Sept 1815). Episcopalian bishop. The son of Dutch Calvinists, he graduated from King's College and later attended St. Peter's College, Cambridge University, where he studied to become an Anglican priest. He was ordained a priest on 23 March 1766 by the bishop of Chester. Later in 1766 he became an assistant minister of Trinity Parish in New York City. A strong advocate of the patriot cause, he disagreed with the vestry on theological and political issues and resigned after several years. He moved to Dutchess County, where he remained for 14 years, returning to the city after the British evacuated. He and Benjamin Moore, a Loyalist, were chosen by different factions to become the rector of Trinity Parish; after Moore stepped aside, Provoost took the office in 1784 and retained it until 1800. He was appointed the first chaplain to the U.S. Senate and conducted a service of thanksgiving for President George Washington after his inauguration. He also oversaw the construction of a new building for Trinity Church that was consecrated on 25 March 1790. A founder of the Protestant Episcopal Church of the United States of America, he was the first bishop of the diocese in New York City (1787–1801) and represented New York State in the general convention of the church. His insistence that the laity should have representation there brought him into conflict with Samuel Seabury, whose consecration as the first bishop of Connecticut he opposed (the two were later reconciled). Provoost was buried in Trinity Church Yard and reinterred in Trinity Cemetery at 155th Street.

Phyllis Barr

Prudden, T(heophil) Mitchell (*b* Middlebury, Conn., 1849; *d* New York City, 10 April 1924). Pathologist and bacteriologist. He was educated at the Sheffield Scientific School of Yale University (BS 1872), and Yale Medical School (MD 1875). He studied for several years in Heidelberg, Vienna, and Berlin, where he became influenced by many of the major bacteriologists of the late nineteenth century, including Robert Koch. On returning to the United States he took an academic post as a professor of histology, pathology, and bacteriology at Columbia University's College of Physicians and Surgeons in New York City, where he was noted as an inspiring teacher, speaker, author, and bacteriological investigator. He was also involved as a consultant and ex officio member with such organizations as the New York City Board of Health, the Rockefeller Institute of Medical Research, the Rockefeller Foundation, the New York State Public Health Department, the New York Academy of Medicine, and the National Academy of Sciences. Prudden is often credited with having brought the techniques of germ theory from the European laboratories to American shores in 1885. He lived at 437 West 59th Street.

Howard Markel

Prudential Securities. Firm of investment bankers. It was formed as Cahn and Company in 1879 by Leopold Cahn (1836–1904), a member of the New York Stock Exchange and a banker. After the headquarters were moved to 42 Broadway the firm was renamed J. S. Bache and Company when Cahn's nephew Jules S. Bache (1861–1944) became its chairman in 1892. A retail brokerage, it was dedicated to small investors, especially eastern European Jews who set up garment businesses. In 1945 the firm was renamed Bache and Company, and its offices were moved to 36 Wall Street when Harold Bache (1894–1968) became the chairman. During his tenure the firm expanded rapidly, opening branches throughout the country and introducing commodity trading and mutual funds: it was soon the second-largest brokerage house in the United States. Headquarters designed by the firm of Guzen and Partners were built in 1969 at 100 Gold Street and became known as Bache Plaza. The ill-fated attempt by the brothers Nelson Bunker Hunt and W. Herbert Hunt to corner the silver market in 1980 left the firm nearly insolvent, and in 1981 it was sold for $385 million to the Prudential Insurance Company (based in Newark, New Jersey). Under the name of Prudential–Bache Securities the firm became the first broker on Wall Street to offer services in nearly every area of the financial industry. It moved its headquarters to 1 Seaport Plaza in 1986 and took its current name in 1991. In 2001 it started trading on the New York Stock Exchange under the name PRU. As of 2007 its assets were $630 billion.

James Bradley

P.S.1 Contemporary Art Center. Founded in 1971 by Alanna Heiss as the Institute for Art and Urban Resources, the institute began to operate P.S.1, a former 100-room Romanesque Revival schoolhouse in the Long Island City section of Queens in 1976 and transformed it into an exhibition, performance, and studio space for artists. It gained renown as a center for contemporary, often avant-garde, art. In order to highlight the constantly changing exhibits, P.S.1 never established a permanent collection of its own. In 1994 it closed for major renovations and expansions. At 125,000 square feet (11,613 square meters), P.S.1 reopened as one of the largest centers for contemporary art in the world. In 1999 it merged with the Museum of Modern Art (MoMA), which increased P.S.1's visibility and gave MoMA a foray into a younger and more cutting-edge art movement. The first major collaboration between the two institutions took place in the 2000 exhibit *Greater New York,* which showcased emerging New York City artists. Over the years, P.S.1 has hosted such artists as Richard Serra, Christopher Wool, Robert Rauschenberg, Rachel Whiteread, Keith Sonnier, and Pipilotti Rist. In 1999 P.S.1 and MoMA started an annual competition called the Young Architects Program, in which young architects submit design proposals for P.S.1's courtyard. The winning design is implemented to transform the courtyard into a musical performance and party space for the weekly Warm Up music series P.S.1 hosts in the summer. In addition to its exhibit space in Queens, P.S.1 also runs WPS1, an Internet art radio station, from the Clocktower Gallery at 108 Leonard Street in downtown Manhattan.

Breanne Scanlon

Performance Space 122 [P.S. 122]. Theater and performance art venue in a former public school on First Avenue and East Ninth Street. In 1979 a group of choreographers and performance artists created rehearsal and

performance space out of the abandoned Public School 122. Since then, the structure has evolved into a center for avant-garde and experimental theater and performance art. John Leguizamo, Eric Bogosian, and Spalding Gray, among others, have debuted work at P.S. 122.

Melissa Baldock

psychoanalysis. Theory of human behavior developed by Sigmund Freud (1856–1939) and his "Vienna Circle," starting in 1900; it emphasizes unconscious motivation, sexuality, dreams, and childhood experiences. It was introduced to the United States by Freud's disciple, Abraham A. Brill (1874–1948), who formed the New York Psychoanalytic Society in 1911. In 1913 Fordham Medical School professor Smith Ely Jelliffe and William Alanson White cofounded in the city the field's premier journal, *Psychoanalytic Review.* New York City soon became the world center for psychoanalysis. For more than 40 years, following the influx of European émigrés such as Karen Horney, Franz Alexander, and Otto Rank in the 1940s, the number of psychoanalysts concentrated on the Upper East Side of Manhattan (Park and Madison Avenues) exceeded that of all other U.S. cities combined. As of 2009 the city was the home of more than 50 psychoanalytic training institutes. In 2006, despite controversy, New York State became the first state to offer a governmental license for the practice of psychoanalysis.

Harold Takooshian

psychology. The science of behavior. It is typically dated from 1879 when Wilhelm Wundt formed the first psychology laboratory in Leipzig, Germany. In the twentieth century New York City has been instrumental in the developing science and practice of psychology. Besides premier institutions such as Bellevue Psychiatric Clinic, Northside Center, and the Psychological Corporation, New York City has been a base for hundreds of pioneering individuals in the field, such as Anne Anastasi (Fordham University), Neal Miller (Rockefeller University), Kenneth B. Clark and Stanley Milgram (City University of New York), Otto Klineberg and Stanley Schacter (Columbia University), Max Wertheimer and Leon Festinger (The New School), Jerome Bruner and Philip Zimbardo (New York University), Florence L. Denmark (Pace University), and Benjamin B. Wolman (Long Island University).

In 1891, Columbia University formed a psychology department chaired by Wundt's student James McKeen Cattell. Much important early work was done there in experimental psychology, and during the early twentieth century Columbia awarded more doctorates in psychology than any other school in the United States. By the 1920s Cattell, Edward L. Thorndike, and other quantitative psychologists at Columbia had laid the groundwork for the behaviorist school. In the 1930s a rift emerged between academic and practicing psychologists. A group of clinical psychologists in New York City withdrew from the American Psychological Association (APA) to form the Association of Consulting Psychologists, and in 1937 the entire clinical division of the APA seceded and formed the American Association of Applied Psychology. The two opposing groups were reconciled after World War II, when psychologists in general began to expand their roles. Psychological testing was used increasingly to assess schoolchildren, college and job applicants, prisoners eligible for parole, the mentally ill, and a host of others. In 1954 Mamie P. Clark and Kenneth B. Clark of the City University of New York made a historic contribution in the field of social psychology when their research into the effects of racial prejudice on children was cited in the U.S. Supreme Court school desegregation case *Brown v. Board of Education.* With the growth of community mental health services during the 1960s and 1970s, psychologists became more active in providing psychological therapy. In the early twenty-first century more than 3000 psychologists were licensed in New York City, of whom more than two-thirds were in Manhattan.

Sandra Opdycke, Harold Takooshian

public advocate. Municipal office created in 1993–94 to replace that of president of the City Council, which had its powers redefined and curtailed by the charter revisions of 1989. The public advocate presides at meetings of the City Council and is an ex officio member of all its committees but votes only in the event of a tie; she or he can introduce legislation and is first in the line of succession to the mayor's office. The public advocate answers complaints about municipal government and investigates agencies and programs. Democrat Mark Green was elected the city's first public advocate in 1993 and served two terms; Democrat Betsy Gotbaum replaced him in 2002 and also served two terms; in January 2010 she was succeeded by Democrat Bill de Blasio.

public authorities. Semiautonomous government agencies, legally known as public-benefit corporations. They have been used for many different purposes, but their main advantage to policy makers has been their ability to raise money for public improvements by issuing tax-exempt bonds without the need for voter approval and unconstrained by constitutional or statutory debt limits. Also, public authorities have often been used to build and manage public facilities such as transit systems, toll roads, airports, convention centers, and stadiums. They have eased access to the capital markets for nonprofit institutions like hospitals, museums, and universities, providing for long-term loans at relatively low borrowing costs; bonds have also been issued to make low-interest loans to developers of affordable housing and to make funds available for mortgage loans to low-income borrowers. In some cases, the charters for public authorities authorize them to take property using the power of eminent domain. In this process, the authority "condemns" the property and pays the owner a price determined by the courts. Public authorities are typically governed by an appointed board of directors and often operate without any direct control by voters or elected officials.

The Port of New York Authority, formed in 1921, was the first modern public authority in the United States. Under the leadership of Julius Cohen and Austin Tobin, it established many precedents that would be followed by other public authorities, in the New York City area and nationwide. The agency, which later became a bi-state public benefit corporation and was renamed the Port Authority of New York and New Jersey, is responsible for financing, constructing, and operating all of the shipping facilities and airports in the metropolitan area, as well as of the trans-Hudson transportation links, including the George Washington Bridge, Lincoln Tunnel, Holland Tunnel, and the Port Authority Trans-Hudson Corporation (PATH) train system. Another important New York public authority, one of the many that was formed by state and local governments during the New Deal as conduits for loans from federal agencies, was the Triborough Bridge Authority (later renamed the Triborough Bridge and Tunnel Authority), which under the leadership of Robert Moses was used to rebuild and overhaul New York City's transportation infrastructure from the 1930s through the 1960s. In 1968 it was merged into a newly formed public authority, the Metropolitan Transportation Authority, which also took over six other public authorities involved in transportation throughout the metropolitan area.

Two other noteworthy public authorities that operate in New York City are the Urban Development Corporation (later renamed the Empire State Development Corporation) and the Municipal Assistance Corporation. The Urban Development Corporation was responsible for extensive real estate development initiatives, including Roosevelt Island,

Battery Park City, and the redevelopment of Times Square. The Municipal Assistance Corporation was created as a solution to New York City's crippling debt crisis in the early 1970s. Dozens of other less well-known public authorities have operated in New York City, building schools, public hospitals, museums, college dormitories, and public housing projects. Collectively, public authorities in New York City have issued billions of dollars in public debt, several times that of the state and city.

public baths. See Bathhouses.

public executions. Public executions were common in the early history of New York City. The first civilian execution was in 1646 when Jan Creoli was strangled for pederasty. By 1700 there had been nine executions, 93 by 1750, and 219 by 1824. The gallows were initially on Park Row, then at the intersection of Bleecker and Mercer Streets near Washington Square Park, and finally at the south end of Union Square. Hanging was the preferred method for executions, although some early convicts were burned at the stake, slowly roasted, suspended in chains until dead from exposure, forced into a barbed cage, or gibbeted. Executions in the early 1800s were spectacles. Cavalry and a band escorted a procession from the jail to the scaffold, with the condemned wearing a white costume and hat with black trim. A noose was draped around the condemned's neck, and a coffin preceded him or her on a wagon. Officials and the criminal gave short speeches. In 1824 the execution of John Johnson drew 50,000 people—one-third of the city—along a mile-long route from the Bridewell prison near City Hall to 13th Street and Second Avenue. The popularity of executions made them increasingly difficult to administer as the city grew. In 1825 authorities switched from conducting executions on traditional Fridays to nonworking Saturdays to reduce disruption. In 1829 they moved the gallows to Roosevelt Island, but the public was undeterred: chartered steamboats packed with spectators and hundreds of small sailboats assembled to watch a double hanging. Several capsized and drownings were rumored. To ensure executions without disruption, the Common Council decreed that they should take place in prison yards. This regulation was the first of its kind in the world; New York State adopted a similar rule in 1835. Such executions could initially be seen by ticket holders and from rooftops. A scalping market developed for the former, and landlords rented viewing places for the latter. In 1860 the last truly public execution in New York City was conducted by military officials at the federal base on Liberty Island, outside local and state jurisdiction. The gallows was built on a high terrace now occupied by the Statue of Liberty. Thousands watched from boats. In 1867 authorities, again concerned with order and efficiency, erected awnings around the gallows and deployed police to clear nearby roofs, but thousands still gathered. Finally in 1888 the New York State legislature passed the Electrical Execution Act, which mandated the exclusive use of electrocution for state killings. The electric chair, deep inside a prison, was first used in New York City on 7 July 1890 and ended public executions.

public health. Marshes and an inadequate water supply were among the health risks in New Amsterdam during the early seventeenth century. Outbreaks of disease were nonetheless manageable as long as the population remained sparse. Governor Peter Stuyvesant enacted a number of ordinances designed to improve sanitary conditions, including one in 1648 prohibiting goats and hogs from roaming the streets and another in 1657 forbidding the disposal of refuse in the streets. Strict quarantine laws were also introduced under Dutch rule. After the British took control in 1664 new laws sought stricter management of farm animals, waste disposal, street cleaning, and food distribution. Religious organizations also played a role in making decisions that affected public health.

Until the mid-nineteenth century there was broad disagreement regarding the origin and spread of infectious disease. *Sanitarians* believed that disease was transmitted by "miasmas"—vapors from fetid water, open sewage, animal carcasses, and rotting food—and sought to improve sanitary conditions. *Contagionists* believed that it was transmitted from person to person and could best be controlled by quarantines. *Anticontagionists* saw disease as arising from the peculiar social or moral conditions of the victim. Most settlers saw epidemics as manifestations of divine judgment or a statement about the individual morality of the victim or the community from which the victim came. Being Irish, African American, or German was important in understanding both the cause of illness and the means of treatment. Hence, American public health practice often contained a strain of victim-blaming, in which ethnicity, economic status, personal habits, and stereotypes were seen as factors that led to differential susceptibility. Health officials therefore tended to

engage in programs aimed at modifying individual behavior rather than social programs aimed at improving access to better food, housing, or health care.

During the seventeenth and eighteenth centuries epidemics of Smallpox or Yellow Fever did not spread far beyond the borders of the town in which they broke out. But in the nineteenth century Cholera, yellow fever, typhoid, and typhus began to affect entire regions of the country as new commercial trade routes tied the nation together. Furthermore, as poverty, crowding, and a lack of proper sanitation and pure water characterized growing cities, tuberculosis, diarrheal, and intestinal diseases became endemic. Moralists blamed the poor for bringing disease on themselves and accused them of living in filth and depravity by their own choice. Smallpox struck the city in 1679–80, 1690, 1731 (when as much as 8 percent of the population died), and 1752–66; measles in 1729; and yellow fever in 1702 (when a tenth of the population died) and 1743. Malaria became less frequent as swampy areas were filled in for development.

Public health problems increased after the Revolution. Yellow fever epidemics, which devastated the city frequently between 1791 and 1822, deepened the rift between sanitationists and contagionists and also led to the enactment of stricter laws governing burial and waste disposal. In 1796 the state legislature gave the city the power to make its own sanitation laws. Yellow fever in 1798 killed more than 2000 residents, or about 3 percent of the population; death tolls were highest in poor neighborhoods, which were often in swampy areas where mosquitoes bred. In the same year a municipal pesthouse was opened as a quarantine station (it later became the site of Bellevue Hospital). Mortality statistics were first compiled in the early nineteenth century under the direction of the city inspector John Pintard and were important in the development of epidemiology. In 1805 the state authorized the Common Council to appoint a standing board of health. When a smallpox vaccine became available shortly after 1800, many physicians and public health officials argued forcefully for compulsory vaccination; their efforts failed because of suspicion and apathy among the population, but they worked to provide free vaccinations to all who wanted them. The well-known physicians David Hosack and John Griscom were influential in the construction of the city's first working sewage system during the 1820s. Concerns over public health often inspired social legislation: conditions in the debtors' prison were improved in 1811 after an outbreak of disease, and the country's first school for blind children (now the New York Institute for Special Education) opened in 1832 after many children in the almshouse were left blind by an outbreak of conjunctivitis.

Cholera epidemics in 1832 and 1849 spread beyond poor neighborhoods and threatened the entire population of the city, providing motivation for reform during the mid-nineteenth century. Attention focused on overcrowding, but the sanitation movement was nonetheless tinged by a pervasive moralism: many reformers believed that better conditions would uplift the poor spiritually and thus improve the health of society. A campaign to form a powerful municipal health agency was waged by the surgeon Stephen Smith, the epidemiologist Elisha Harris, the reformer Robert M. Hartley, such civic leaders as Dorman B. Eaton and Peter Cooper, and the writer William Cullen Bryant. Public acceptance of immunization grew after a law was passed in 1860 allowing communities to require vaccinations for schoolchildren. In 1866 the Metropolitan Board of Health was established and given enormous powers; Harris was appointed the first registrar. The first agency of its kind in the country, it became a model for cities nationwide after it helped prevent a cholera epidemic in 1866 by removing thousands of tons of manure from the city.

After 1866 physicians gradually replaced businessmen and social reformers as makers of public health policy. Most physicians supported the public health movement, but some protested requirements that they report cases of infectious diseases. At this time political machines supported public health programs because health agencies provided many positions that could be given to loyal followers. By the 1890s leaders such as Charles Francis Murphy of Tammany Hall agreed that scientific advances in public health made it necessary for appointees to have an adequate knowledge of medicine. The health department assumed a central role in regulating sewage facilities, refuse collection, the water supply, and food inspection. Health authorities also had a say in making policies governing public baths and toilets, schools, clinics, hospitals, subsidized housing, and programs to promote kitchen gardening and outdoor recreation.

Toward the end of the nineteenth century new programs emerged aimed at managing health care for the poor. Public health physicians from the U.S. Maritime Hospital Service (soon to be renamed the U.S. Public Health Service) set up extensive screening procedures at Ellis Island and collaborated with city officials in establishing a quarantine hospital on the island for immigrants suspected of carrying disease. William H. Welch, Edward Delafield, and T. Mitchell Prudden were influential in gaining public acceptance of bacteriology as the basis of modern medicine, and in 1892 the world's first municipal bacteriological laboratory for routine diagnosis opened in New York City under the direction of William Park and Hermann M. Biggs. These years also saw the rise of nursing as an important field. Nurses organized treatment during epidemics and provided education and case-finding services in homes, schools, courts, and clinics. The Henry Street Settlement, opened by Lillian Wald in 1893, became a model for visiting nursing services throughout the country. The first public health nurse, Lina Rogers, was employed by the health department in 1902 and sent visiting nurses to homes and public schools to encourage preventive medicine. Physicians often resented the increasing number of clinics that provided free or inexpensive medical care for the poor. Against physicians' staunch opposition Biggs gained Murphy's support for his campaign to improve care for Tuberculosis patients and to require physicians to report cases of the disease. One of Biggs's colleagues in fighting the disease was Homer Folks, executive secretary of the New York State Charities Aid Association. Labor leaders pressed industry and government to provide income and health services to those disabled at work (see Occupational Health).

The advent of bacteriology led health agencies to focus on killing germs and improving the environment. Many infectious diseases were soon eradicated, and by the early twentieth century New York City's sewer system was extended into poor neighborhoods. Pollution of the city's waterways by raw sewage also attracted public attention. Public baths were built after 1901, often by philanthropists. The Milbank Memorial Baths were sponsored by the Milbank family and built by the Association for Improving the Condition of the Poor (AICP) on East 38th Street in 1904. A campaign to improve children's health was begun, inspired in part by an epidemic of Polio during the early years of the twentieth century. The Rockefeller Institute (formed in 1904) conducted research on the disease. Such private charities as AICP led the school lunch movement after the turn of the twentieth century, and in 1908 the pediatrician S. Josephine Baker formed a division of child hygiene in the health department that became a model for other U.S. cities. The city's water supply was chlorinated in 1911, and a program for pasteurizing milk was introduced in 1912. Nathan Straus and other philanthropists set up stations to provide pasteurized milk free of charge.

Advances in public health continued to be made into the early years of World War I. The Rockefeller Foundation (1913) funded many health projects, and the health commissioner S. S. Goldwater (1914–15) devised an innovative system of district health centers in Manhattan; he also set up health education programs, encouraged women to enroll their infants in milk stations, expanded medical record keeping, and formed close ties with private agencies, community groups, and private physicians. His successor, Haven Emerson (1915–17), extended the health district plan to Queens and waged a public campaign

against alcoholism. Under Charles Bolduan a bureau of public health education was formed in 1914 as the world's first such agency affiliated with a municipal health department. In October 1916 Margaret Sanger and her sister Ethel Byrne challenged state law by opening a birth control clinic in Brooklyn, the nation's first, which police soon closed; Sanger continued to fight for birth control in the city and in the 1920s formed organizations that eventually merged to become the Planned Parenthood Federation of America.

The influenza pandemic that battered the country during 1918–19 killed more than 12,000 people in the city. The incidence of Diphtheria declined sharply after Béla Schick developed a means of testing immunity to the disease (1921), allowing the health department to broaden its vaccination program with the help of the financier Thomas W. Lamont. Under John A. Kingsbury (1922–35) the Milbank Memorial Fund sponsored programs for child welfare and presented health demonstrations from 1924 in Yorkville. The Department of Hospitals was formed in 1928 and became the sole administrator of 26 municipal facilities, ending a system of divided jurisdiction under which some hospitals had been run by the Department of Health, others by the Bellevue Board of Directors, and still others by the Department of Public Charities. The department was the largest of its kind in the country and also had under its auspices an independent bureau of nursing (1928), which oversaw work in public school health programs, visits to tuberculosis patients, and the staffing of infant health stations.

During the 1930s the health care system improved owing to the efforts of Mayor Fiorello H. La Guardia and the health commissioner John L. Rice. The health department

Compiled by James Bradley and Andrew A. Kryzak

opened a bureau of district health and expanded the health center system. Other federal projects supported the building of hospitals and clinics and the introduction of programs to promote the health of mothers and children and to fight cancer and chronic diseases. The first major citywide study of the demand for services related to chronic diseases was conducted in 1932, and in 1939 Welfare Island Hospital opened as a clinical research center devoted to chronic disease (renamed Goldwater Hospital in 1941).

From the 1930s labor and business leaders bargained collectively for insurance coverage, which reduced the pressure on public funds to finance the catastrophic cost of illness and injury for workers. The state played an important role in determining the availability of private health insurance in the city, the number and location of hospitals, the purchase of medical technology, and the amount of reimbursements to hospitals by public and private customers. The Bureau of Social Hygiene (1935) overcame a long-standing social taboo when it launched a campaign against venereal disease, which was later brought under control after penicillin was introduced during the 1940s. The city's first facility for detecting and preventing cancer, the Strange Cancer Prevention Clinic at the New York Infirmary, was opened in 1937 by Élise L'Espérance.

Programs dealing with chronic and degenerative ailments such as cancer, heart disease, diabetes, and glaucoma increasingly emphasized early diagnosis and treatment. Improved medical care and education became available to children and pregnant women, and programs were introduced to discourage smoking, drinking, and drug abuse. The health department sponsored on-site screenings for residents unlikely to seek treatment otherwise, using new technology such as the Pap test for

cervical cancer developed by George Papanicolaou at New York Hospital in 1943. Under the direction of Thomas M. Rivers, the Public Health Research Institute of the City of New York (1941) worked on such varied topics as communicable disease and nutrition. From 1943 to 1949 the federal government provided prenatal and postnatal services to the families of military personnel under the Emergency Maternity and Infant Care Program. The city's infant mortality rate was halved during the 1940s, and local facilities became national leaders in the care of premature infants. The incidence of chronic disease soon declined, and the city focused on the elderly and on substance abuse, which was soon classified as a chronic disease and recognized as a public health threat. In 1952 the Department of Hospitals remodeled Riverside Hospital, a former tuberculosis hospital on North Brother Island, as a center for the study and treatment of addiction among young people.

Gains made during the New Deal and the postwar years were consolidated through the efforts of Leona Baumgartner, the first woman appointed health commissioner. During her tenure (1954–62) the health department in 1955 began administering the Salk vaccine against polio; 94 percent of all schoolchildren had received the vaccine by 1962, effectively eliminating polio in the city. She also oversaw the formation of the Poison Control Center (1955) and argued forcefully for fluoridating the city's water supply, which was done in 1965–66 after years of angry debate. In 1959 the use of leaded paint was restricted in the city after researchers found that children who ingested it suffered neural damage; the paint was later banned nationwide and efforts were made to remove it from public buildings. Sunset Park Alcoholic Clinic opened in 1962 and received funds from the city, the Health Research Council of Greater New York, and Downstate Medical School. Methadone was first used as a substitute for heroin in 1964 at Beth Israel Hospital, and in the following year methadone clinics were opened at municipal hospitals. The 1960s saw the federal government increase support for urban health projects. Among the new programs were Medicaid and Medicare, which were established in 1966 and soon paid a large portion of the medical expenses of the city's elderly and poor. Widespread immunizations virtually eradicated measles. During the late 1960s there was a sharp increase in the incidence of sexually transmitted diseases, partly due to changing sexual mores.

A number of public health crises occurred during the 1970s and 1980s. Many shipbuilders who had been exposed to asbestos in the Brooklyn Navy Yard in the 1930s were diagnosed with lung cancer as well as the debilitating lung disease asbestosis; applications of asbestos declined after the early 1970s and were largely banned by the 1990s, and asbestos was removed from most public buildings (a decision to remove asbestos from all 1069 of the city's public schools caused delays in schools opening in 1993). Federal health services were severely reduced during the 1980s, making basic health care unavailable to many poor people. Modern sanitation facilities reduced threats posed by waste, but tuberculosis, hepatitis, and measles reappeared as drug abuse intensified. Sharp disparities in life expectancy and infant mortality persisted along racial lines: in Harlem during the early 1990s only about 40 percent of all men lived to the age of 65, a figure lower than in many developing nations. Nearly half the reported cases of lead poisoning between the 1970s and the 1990s occurred in low-income neighborhoods in central Brooklyn and the southern Bronx. Although city screening programs identified between 600 and 900 annual cases of undue lead exposure, officials believed that the number of children at risk exceeded 200,000.

The AIDS epidemic profoundly affected the Department of Health during the 1980s and 1990s. The causes and treatment of the disease were little understood during the early years of the epidemic, and controversies about the balance between personal rights and confidentiality versus the need to document and track illness led to serious ethical and political dilemmas for the department. Needle exchange policies, educational campaigns, and other traditional public health methodologies also came under attack from a variety of sources. But the development of antiretroviral therapy during the 1990s gave a powerful new tool to the department in its attempt to regain its authority.

In the early twenty-first century the Department of Health has been particularly affected by the increased attention to potential terrorist attacks and appropriate public health responses. The department was scrutinized, for instance, for its ambiguous role in allowing children to return to school in lower Manhattan and residents to return to their apartments after the destruction of the World Trade Center towers on 11 September 2001 despite the potential negative health effects of the toxic dust that lingered in the area for months. Thousands of people suffer from 9/11-related illnesses, and in 2007 Mayor Michael Bloomberg established the World Trade Center Medical Working Group to review research and the adequacy of health and mental health services for those affected by the attacks. The New York City Department of Health and Mental Hygiene helps to cover the costs of treatment and maintains "9/11 Health," a Web site that keeps the public informed about ongoing research and services. In other areas the department remains noted for innovations in chronic disease surveillance, diabetes control, and the regulation of tobacco smoking in public.

public housing. Public housing, as initially conceived in the early twentieth century, was intended to eradicate dilapidated structures to provide better dwellings for lower income families and to serve as a unifying element in urban redevelopment projects in New York City and across the nation. Because of an especially enduring coalition of labor unions, housing reformers, and commercial interests, New York City's public housing program retained broad public support and critical levels of funding even as disillusionment undercut similar programs in other U.S. cities.

Formed in 1934 the New York City Housing Authority (NYCHA), the first such local authority in the United States, became the central agency assigned to administer a broad mixture of state, city, and federally funded projects. In 1935 NYCHA completed the First Houses (Frederick Ackerman, architect) with 123 apartments on Third Street west of Avenue A on the Lower East Side. The U.S. Housing Act of 1937 set aside $100 million for housing construction, and in the same year the Housing Division of the Public Works Administration opened the first federally subsidized housing in the country, the Harlem River Houses (Archibald Manning Brown, Horace Ginsbern, and John Louis Wilson), with 576 units at 153rd Street and the Harlem River.

The First Houses and Harlem River Houses were based on "model" tenement plans that originated in the nineteenth century; both were low-rise, walk-up projects with well-designed apartments, playgrounds, shops, and areas for community meetings. Each apartment had a full bathroom, a kitchen with windows, and access to outdoor light and air on two sides. These features made the dwellings desirable at a time when most of the old tenements offered only windowless rooms and communal water closets. Low-rise designs were also used in the Williamsburg Houses in Brooklyn (1938; Shreve, Lamb and Harmon in association with William Lescaze) and the Vladeck Houses (1940; Richmond Shreve, William Ballard, and Sylvan Bien), which were built on the Lower East Side by the U.S. Housing Authority (which suc-

Williamsburg Houses, 1938. Built by the Public Works Administration in brick and concrete, the project followed the "superblock" principle, replacing 12 regular city blocks. Its low-rise units, compatible with the existing scale of the neighborhood, housed more than 1600 families.

ceeded the Housing Division of the Public Works Authority with the passage of the Wagner–Steagall Act of 1937).

From the inception of public housing, NYCHA officials struggled to balance social and economic realities with the program's original goals and vision. From the start, demand far outstripped supply; in 1938 NYCHA, which controlled 13,000 apartments in both municipal and federal projects and had few vacancies, received 36,000 applications. A family applying for public housing faced stringent requirements: at least one member had to be a U.S. citizen (a major obstacle in a city dominated by immigrants), the family had to have bank accounts and insurance (even during the Depression), and family income had to be at least a certain multiple of the annual rent (which, for a time, effectively excluded the poor).

Racial steering was another key element of the tenant selection process. This policy was based on the belief that public housing had to reflect the racial character of the adjacent community. The segregated neighborhoods of the period caused projects to have almost exclusively white or black tenants. These and other policies reinforced a tendency to relegate the poor to other areas, especially industrial and waterfront sites. Properties intended for redevelopment were often divided among many property owners, and as a result the high cost of the real estate precluded anything but a middle-income project.

In the late 1930s the designs used during the nineteenth and early twentieth centuries were abandoned in favor of high-rise designs based loosely on the concept of the "tower in the park." The first projects to use these were the Red Hook Houses in Brooklyn (1939; Alfred Easton Poor) and the East River Houses in Manhattan (1941; Voorhees, Walker, Foley and Smith). Groups of tall buildings with elevators housed more people and were cheaper to construct, and they became the norm when building costs rose sharply after World War II (doubling in a single 14-month period during 1946–47). NYCHA achieved additional economies by reducing room dimensions, omitting closet doors, and painting rather than plastering concrete-slab ceilings.

During the 1950s construction of public housing peaked at a yearly average of 7500 units, and large high-rise projects were erected in deteriorating neighborhoods in East Harlem, the southern Bronx, and central Brooklyn. These and other projects caused population displacement that worked particular hardship on the poor, the elderly, and long-term residents. The Housing Act of 1954 tried to address the needs of those displaced by urban renewal by giving them priority for apartments and promoting new housing development. The Limited-Profit Housing Companies Law of 1955 (known as the Mitchell–Lama program) provided low-cost mortgages to the builders of middle-income housing, and in 1960 the housing laws of New York State were amended to allow the construction of buildings that could be sold to nonprofit cooperatives. As construction waned, different forms of housing followed the principle of "scatter-site" planning, which provided for small high-rise and low-rise projects, compatible with local neighborhood conditions that were fit into existing residential blocks to minimize the displacement of population. Such projects were built on the Upper West Side, at Twin Parks in the Bronx, and in East New York. In 1967 NYCHA transferred its responsibility for construction to the Housing and Development Administration, while retaining the responsibility for managing its huge inventory of apartments. To further expand housing options, the federal government began in 1976 the Section 8 Housing Assistance Program to encourage the lease of privately owned apartments rather than the construction of new buildings.

As the social and economic profile of some housing projects improved, those of others declined. During the 1960s the city's welfare department successfully pressured NYCHA to change its tenant selection standards to allow in more recipients of public assistance, such that by the 1970s their numbers among the public housing population had skyrocketed. African and Latino Americans became the majority of the tenants during the 1960s (though a portion of housing projects remained predominantly white). By the 1970s NYCHA was forced to take in the homeless in large numbers (in 2001 about 29,115 formerly homeless families were in residence, 77,229 people, or about 18 percent of NYCHA residents).

As the welfare caseload and homeless numbers grew and surrounding communities deteriorated, social disorder mounted. By the 1960s about 60 percent of projects suffered from problems with vandalism. By the 1980s person-on-person crime in public housing was nearly equal in severity to that of the city as a whole. A new shift in policy during the late 1980s tried to grapple with rising levels of crime and the crack epidemic. In 1989 the federal government permitted a speed-up in evictions for families with misbehaving children; by 1999 evictions numbered about 1200 a year.

Despite these setbacks and even as public housing across the country tended to deteriorate and lose public support, NYCHA officials continued to put huge resources into the maintenance and upkeep of the city's vast public housing stock. New York City lost none of its public housing during the 1970s, in contrast to cities like Newark, New Jersey, and St. Louis, which saw many cases of forced closure or demolition. In areas such as the South Bronx and East New York, where property abandonment during the 1970s was widespread, high-rise projects remained as residential islands on empty landscapes. NYCHA made unprecedented investments in tenant patrols, security devices, and the development and expansion of the housing authority police. By the late 1970s NYCHA spent a greater proportion of its budget on security than any other authority in the country. At the same time, NYCHA also made large investments in grounds keeping, maintenance, the development of community centers and health facilities, and a wide range of other social services.

Over the decades, despite national disillusionment with public housing, New York City

remained committed to NYCHA and its public housing stock. City officials effectively resisted large-scale demolition or, worse, prolonged underfunding. In the early twenty-first century the city maintains the largest inventory of public housing in the nation.

public order. New York City's ascendancy to a world capital was facilitated by a drive to establish an orderly city that promoted growth and prosperity. Over the course of two centuries, officials and residents sought to banish chaos and to create an environment in which it was safe to work, live, and play. Starting in the nineteenth century New York City created agencies, policies, and laws that provided for a stable urban foundation. The city's phenomenal growth (from 60,000 inhabitants in 1800 to more than eight million in 2000) required the establishment of public behavior standards and the creation of a police force, specialized regulations, and municipal agencies to enforce them. Public officials became responsible for preventing crime; arresting law-breakers; ensuring access to public spaces, light, water, and sewage services; and preventing disturbances of the public peace. Local residents embraced this structure as a means to improve their lives, thereby agreeing to the new rules.

The period between 1625 and 1850 was marked by significant disorder. Raucous meetings, riots, and unpaved and dirty streets made for a difficult environment. But by the mid-nineteenth century the city began to establish a new platform of order and basic services. In 1842 it opened the country's first public water system. In 1845 a paid, professional police force replaced the volunteer civilian militia and became the first secular local authority to enforce a wide variety of new regulations. The violence of the draft riots of 1863 marked a turning point for the city; it was one of the only times the city virtually shut down. Afterward, the drive for order accelerated. The local police force, reestablished in 1870 after a 13-year takeover by the state government, became aggressive in the creation a "safe" city. Its mandate included the prevention of crime, as opposed to just arresting those who had committed crimes. At the same time the police became the enforcers of hundreds of new regulations controlling traffic, animals, signage, vagrants, pollution, peddlers, and public behavior. Municipal authorities built paved roads and expanded public transit, lighting, and gas and electric infrastructure. Commerce and traffic regulation increased dramatically, as did the number of permits for various commercial activities. Concerns over public health and safety led to the creation of housing and health regulations, a sewage system, fire hydrants, pollution controls, and food safety measures. New regulations controlled drinking, prostitution, gambling, and any activity that caused disruption on the streets. From spitting to begging, personal activity in public became the subject of control, redefining unacceptable public behavior to include drunkenness, urination, and sexual activity. A major step toward controlling public spaces occurred in the 1870s when new laws required permits for preaching, demonstrating, or marching on public streets, making New York City the first major U.S. city to control such activities.

By the twentieth century the foundation for the ordered city was well-established in the country's largest urban center. Authorities enacted policies to ensure that the millions living in Greater New York (formed 1898), including record numbers of immigrants, could live in relative peace and increasing prosperity. Overcrowded tenements, a booming pushcart trade, and burgeoning commerce led to even more regulations to ensure safety and security. Mass transit, including the new subway and expanded bus service, made possible an orderly commute to and from work; new traffic regulations helped ease street congestion. A reorganized Sanitation Department ensured that garbage was picked up and roads cleaned. The Fire Department expanded to help eliminate major fires. Police fulfilled their mandate for order by pursuing both criminal activity and quality-of-life issues, increasingly challenged by the difficulties in dealing with Prohibition, organized crime, street gangs, and a proliferation of guns. Maintaining public order also involved preventing processions and demonstrations, especially when left-wing groups were involved. At the start of the twentieth century the Industrial Workers of the World, or Wobblies, engaged in raucous protests, often ending in arrests. Communists, socialists, suffragettes, antiwar activists, and others used Union Square as their main gathering ground up to World War II. Such demonstrations were quiescent during the 1940s and 1950s, but in the 1960s and 1970s Union Square once again became the setting for public protest, particularly in connection with the Vietnam War. Under liberal city administrations New York City became the setting for numerous feminist and gay rights protests and marches. By the 1970s, coinciding with an increase in crime, the perception of street disorder led to the diminution of these political streets activities. Ethnic and racial unrest resulted in numerous minor riots in the twentieth century, such as those in 1900, 1935, and 1943 involving African Americans. The solid foundation of public order was a major factor in sparing the city from the major violence that engulfed many U.S. cities during the mid-1960s. Throughout varied disruptions, such as blackouts, mass transit strikes (1969, 1980, and 2005), political protests, and labor demonstrations, stability was maintained and daily life functioned efficiently.

The demand for public order gained new urgency in the twenty-first century after the terrorist attacks of 11 September 2001. This marked the beginning of new national and local actions to increase security and maintain public order. City officials enacted measures to keep a watchful eye over potential terrorist threats, and these parameters expanded to include increased requirements for identification, more public and private surveillance, and more limitations on the use of streets, parks, and other spaces for public assembly. In lower Manhattan, a "ring of steel" was constructed in the financial district to thwart terrorists by blocking vehicles through the raising and lowering of steel plates in the streets. New York City police strictly enforced public meeting permit rules, discouraging or disallowing noncelebratory and noncommercial use of public streets and squares. Barriers, usually concrete, were placed in many locations throughout the city to prevent vehicles from accessing sidewalks and buildings. This period also witnessed a significant decline in the city's crime rate.

public relations. In the nineteenth century press agents working on commission in New York City promoted entertainers by means of stunts, hoaxes, and cleverly written press releases. At the start of the twentieth century railroads, utilities, and manufacturers sought the aid of press agents to improve their images and ward off angry customers and stockholders. Some firms engaged independent press agents, while others opened or expanded public relations departments. Ivy L. Lee formed a publicity agency in 1904 and counted the Rockefeller family among his clients. He attracted many advertisers and journalists to the field, including his friend Pendleton Dudley, who left the *Wall Street Journal* in 1909 to open his own publicity agency. In 1919 public relations agencies were formed by Edward L. Bernays, a Broadway press agent who had engaged in wartime government propaganda, and John Price Jones, a newspaper reporter and advertising man who concentrated on fund raising for nonprofit organizations. Richard Maney (1891–1968) began working on Broadway in 1920 and, widely respected for his witty prose, became its most celebrated press agent. In 1923 Bernays taught the first course on public relations at New York University.

The late 1920s and the 1930s saw the formation of many new public relations agencies

and corporate public relations departments in New York City. Among those who had successful firms were Harry Bruno, William H. Baldwin, Carl Byoir, Benjamin Sonnenberg, Stephen Hannagan, Glenn and Denny Griswold, and Earl Newsom. Arthur Page became the head of public relations at American Telephone and Telegraph in 1927, and Paul Garrett led the public relations department at General Motors from 1931. The first public relations trade organization was formed in the 1930s, and by 1948 two such organizations merged to establish the Public Relations Society of America. Hill and Knowlton (formed in Cleveland) opened a branch in the city in 1938 and after moving its headquarters there in the mid-1940s became the largest public relations firm in the United States.

The public relations business enjoyed tremendous growth in New York City after World War II. Companies increasingly turned to public relations for protection against the undesirable consequences of government regulation, scandal, and hostile takeovers. Founded in 1954, Howard J. Rubenstein Associates remained one of the city's foremost public relations agencies more than 50 years later. In the early twenty-first century public relations firms in the city remained essential to managing the images of the city's museums and cultural institutions, sports teams, schools, hospitals, nonprofit organization, and financial, media, and real estate companies, as well as actors, musicians, fashion designers, and chefs.

public schools. During much of New York City's history public education was not perceived as the function of a government agency. Throughout the colonial period and well into the nineteenth century, education was provided primarily through private efforts and voluntary organizations. Independent schoolmasters took in students for a fee, teaching everything from basic literacy to such practical subjects as surveying, French, and bookkeeping; the Dutch Reformed and Anglican Churches opened schools for the poor where the rudiments were taught without charge; and King's College offered a full academic, college preparatory course. The frequency with which people signed their names and the extent of newspaper circulation in 1775 indicate that literacy was widespread at the end of the colonial period.

After the American Revolution a new commitment to public education was made. George Clinton, the first governor of New York, in 1792 articulated the belief that education was the basis of republicanism when he declared that the "diffusion of knowledge is essential to the promotion of virtue and the preservation of liberty." In 1784 the regents of the University of the State of New York were created to oversee academies providing secondary education, as well as Columbia College. The regents granted one of their first charters to Erasmus Hall Academy in Flatbush (1787); with land from the Dutch Reformed Church and funds from its trustees and from tuition, the academy operated both a day school and a boarding school. The State of New York began to fund public education in 1795: in New York City these funds were distributed to the charity schools.

Many peer and immigrant children did not go to school in New York City in the early nineteenth century, in contrast to rural towns and villages of New York State. To make attendance more universal, the city's leaders formed the Free School Society (later renamed the Public School Society), a voluntary agency that channeled private and public funds into schools for poor and working-class youth. At a school dedication in 1809 Mayor DeWitt Clinton described what motivated the society: "A number of benevolent persons had seen, with concern, the increasing vices of the city, arising, in a great degree, from the neglected education of the poor." The schools opened by the society were modeled after the economically operated monitorial schools developed by Joseph Lancaster in London, in which a teacher trained a group of student monitors who in turn instructed a group of pupils; in theory this system enabled one teacher to educate hundreds of children. To encourage attendance the society explicitly defined its schools as nondenominational. The schools multiplied and in effect became the city's public school system, serving a majority of the city's children and receiving a large share of its funds, while more prosperous families continued to patronize private and denominational schools.

By the mid-1820s members of the Baptist and Catholic Churches increasingly asked why schools that they sponsored did not receive public funds. Objections from the Catholic Church held special weight because of the large number of Catholic immigrants from Ireland and Germany, who perceived the Public School Society as essentially Protestant. After years of controversy the state legislature established a new public school system in 1842, governed by elected ward trustees and a central board of education. The new system of "ward schools" grew at the expense of the Public School Society and by 1853 absorbed its remnants.

The school system in Brooklyn evolved much like those of the rural areas of New York State, which were organized within districts supported by state aid, tuition fees, and local taxes. Like many other cities Brooklyn combined these districts under a municipal board of education in 1843. With the absorption of Williamsburgh by Brooklyn in 1855 a unified board assumed responsibility for the schools of the greater city, with small committees assigned to oversee each school.

The curriculum used in the public elementary schools in New York City during the nineteenth century combined basic instruction in language, arithmetic, singing, draw-

ing, and calisthenics with moral and social training; in the higher grades science, history, and civics were taught as well. Early in the century children entered school as young as five, but by mid-century the age of six or seven was more common. Six terms (three years) of primary school followed by eight terms (four years) of grammar school constituted a full course, usually completed by about the age of 14. Secondary education was limited because unlike most northeastern cities, New York City lacked a public high school system. Students who wished to continue their education attended supplementary classes given by grammar school principals, introductory courses at the College of the City of New York (opened as the Free Academy in 1847), and courses at the Evening High School (for men, opened in 1866), the Normal College (opened in 1870), and private preparatory schools. Black children in both Manhattan and Brooklyn were required to attend separate "colored schools" until the 1880s, when both districts opened the regular schools to children of all races; in 1900 the last school to be explicitly separate racially was closed.

Immigration challenged the public education system in New York City during the late nineteenth century. Building enough schools to house a population of students that reached half a million in 1898 was a goal beyond reach. Thousands of children were turned away from school because of a lack of seats, making ineffective the compulsory school law adopted in New York State in 1874. Many schools resorted to half-day sessions so that each classroom could be used twice. After consolidation the city drew on the new capital resources made available, and under C. B. J. Snyder, superintendent of school buildings, it directed these resources toward the building of imposing new schoolhouses throughout the city.

The new schools tried to fulfill their social mission by extending their reach in many directions: they offered expanded kindergartens to accommodate the children of poor families at an earlier age; special education programs for students with physical or mental disabilities; fresh-air classes, usually held in rooms with wide-open windows, for students with health problems such as "pretuberculosis" and anemia; special classes at Bellevue Hospital for the hospital-bound; and schools for truants such as the Parental School in Flushing, in a campus setting far from the centers of population. Day high schools were finally opened throughout the city, with DeWitt Clinton High School and Wadleigh High School in Manhattan, Morris High School in the Bronx, and Curtis High School in Staten Island joining Girls High School, Boys High School, and Erasmus High School in Brooklyn and Bryant High School in Queens. Although New York City was the last major city in the United States to open high schools, it emerged as an innovator by creating schools that specialized in fields such as navigation and the printing trades, a trend that continued as a high school education came to be considered a requirement for entry into many businesses.

The schools also offered programs to help immigrants assimilate: intensive language courses for children who did not speak English, and evening classes in English and civics for adults at several elementary schools. To meet the demand for self-improvement, the schools offered a range of adult vocational classes at night, teaching clerical and business subjects, dressmaking, millinery, and industrial arts. A people's university emerged in the form of a program of Public Evening Lectures conducted from 1888 to 1917, offering hundreds of evening courses throughout the city in science, literature, art, music, and history taught in English, Yiddish, and Italian.

In the mid-nineteenth century school trustees filled most teaching positions with young women who had limited training; but as schools became more elaborate, the standards of training, evaluation, and appointment of teachers were raised. Licensing examinations and a merit-based employment system were established, and increasingly teachers claimed a degree of professional standing. Reflecting an emerging sense of assertiveness as well as the currents of the labor movement, teachers formed the New York City Teachers Union in 1916, affiliated with the American Federation of Teachers. Although it lacked recognition as an official bargaining agent, the union gave teachers a voice in setting salaries, budgets, and employment and educational policies. The union argued that the needs of teachers and students went hand in hand and demanded expanded resources for the city's schools and progressive educational reforms. Parents sought to exert their influence on the schools by forming the citywide United Parents Associations in 1921, the members of which became active in shaping educational policies. During the Depression membership in the teachers' union increased; however, its effectiveness was undermined when an anticommunist faction in 1935 accused the leadership of having communist sympathies and when the union was expelled from the American Federation of Labor in 1941. The expulsion was followed in the 1950s by an anticommunist purge aimed at union members.

During the 1950s the public school system in New York City enrolled more than a million students. At its best the system was a model known for its innovations in teaching and for graduating many students who went on to college and successful careers; Stuyvesant High School (1904) and the Bronx High School of Science (1938) became widely known for academic excellence. Yet at the same time the system contained the worst problems associated with urban education. The proportion of dropouts was high, especially in schools serving poorer neighborhoods and ethnic minorities. Residential segregation in the city led to racial segregation in elementary schools and racially identifiable "tracking" in high schools (the practice of assigning students to separate courses of study). Voluntary transfers and redistricting were implemented during the 1950s and 1960s, but the schools remained virtually segregated and the proportion of white students declined. As the schools came to be perceived as inadequate in the 1960s, parents' and citizens' groups began demanding "community control." Various experts also proposed decentralization of authority, and the Ford Foundation in 1967 funded three "demonstration districts" governed by community boards. The efforts led to years of community demonstrations and teachers' strikes; an especially acrimonious conflict was centered in the Ocean Hill–Brownsville district in 1968, and the United Federation of Teachers, led by Albert Shanker, became increasingly assertive. Tensions were relieved when the state legislature passed the school decentralization law of 1970, which assigned the governance of elementary and junior high schools to 32 elected community school boards while retaining control of high schools by the Board of Education. The community school boards partially transformed the educational system by exercising their power to define the educational goals of their districts and to select principals and community superintendents. But the central administration, led by the chancellor (the new name for the central superintendent of schools), retained significant power over allocation of resources, effectively limiting the ability of community school boards to innovate, especially during periods of fiscal constraint.

The schools during the 1970s and 1980s were affected both by changes in leadership and by broad national movements aimed at meeting the needs of all children. Bilingual education, introduced in Florida and advanced by rulings of the U.S. Supreme Court, was accepted by New York City in 1974 through a consent agreement settling a suit brought against the Board of Education by Aspira, a Puerto Rican community organization. Special-education classes were given more attention after the passage of the Education of All Handicapped Children Act in 1975. The national movement for options in education quickly took root because of the diversity of the city, and an array of experimental, alternative, and magnet schools were opened. At the same time schools were faced with an increasing fear of violence, often related to illegal drugs; in some schools metal detectors were installed.

By the 1990s, two decades of community participation notwithstanding, the public

Fort Hamilton High School, 2009

schools in New York City still faced serious problems. Insufficient academic achievement, unacceptably high dropout rates, and the abandonment of the public schools by much of the middle class were obvious threats. Inadequate financing in comparison with wealthy suburbs, and cuts in municipal and state budgets, seemed to frustrate efforts at improvement. Moreover, the leaders of the school system seemed to get bogged down in conflicts. A chief area of controversy was curriculum reform. A proposed curriculum on sex education, keyed to the prevention of AIDS, generated opposition from some central board members. A draft "rainbow" curriculum for multicultural studies similarly split the board into factions. With the board divided, Mayor Rudolph Giuliani was able to force the resignation of Chancellor Ramon Cortines to influence the selection of his replacement, Rudy Crew, and then to push out Chancellor Crew once he had lost the mayor's favor. In 2002, arguing that the governance structure had contributed to a general failure to meet the educational needs of the city's youth, Mayor Michael Bloomberg succeeded in persuading the state legislature and governor to abolish the Board of Education, to abolish the elected community school boards, and to give full control of the school system to the mayor. This change was in part a response to the national movement for accountability in schooling. In that spirit, Bloomberg and Chancellor Joel Klein set about making a series of administrative changes, including breaking up large high schools and devolving greater administrative responsibility upon principals, who would then be held accountable for results.

The public schools of New York City brought with them into the twenty-first century most of the problems and strengths that had defined them in previous decades. The challenge to provide a full democratic education to the children of a city with manifest economic disparities and uniquely diverse racial and ethnic groups had never completely been met. But the city's leaders had placed a commitment to that ideal high among their expressed goals.

Public Theater [Joseph Papp Public Theater]. Theater founded by Joseph Papp (1921–91) and housed at 425 Lafayette Street in the original Astor Library (built in 1854). After the Hebrew Immigrant Aid Society sold the building to a developer in 1965, Papp worked with the Landmarks Preservation Commission to prevent its demolition. In its first big victory, the commission arranged for Papp, producer of the Shakespeare in the Park festival, to buy the building as an indoor venue for $560,000. Architectural preservationist Giorgio Cavaglieri converted the space into a theater. The Public, which produced new plays as well as Shakespeare and other classical theater, opened on 29 October 1967 with the controversial musical *Hair.* This production, along with other commercially successful work including *A Chorus Line* (1975), which later had a 15-year run on Broadway, allowed Papp to produce the Shakespeare festival at the Delacorte Theater in Central Park and to nurture emerging playwrights like David Rabe, John Guare, James Lapine, David Henry Hwang, and Suzan-Lori Parks. Notable Public Theater productions include *The Basic Training of Pavlo Hummel* (1971), *That Championship Season* (1972), *Bring in 'da Noise, Bring in 'da Funk* (1995), *Topdog/Underdog* (2001), and *Passing Strange* (2007). Papp died in 1991, and in 1992 the theater was named the Joseph Papp Public Theater in his honor. Shortly before his death Papp resigned from the theater and named as his successor JoAnne Akalaitis, former member of the theater company Mabou Mines. She was soon replaced by George C. Wolfe as artistic director in March 1993; Oskar Eustis took over in 2004. Mara Manus became executive director in 2002, and until her resignation in 2008 she stabilized the theater's finances, increasing its operating budget, subscriber base, and corporate support. Manus was succeeded by Andrew Hamingson, former managing director of the Atlantic Theater Company. The theater, which is owned by the city, contains six performance spaces, including the cabaret-style Joe's Pub, which opened in 1998; the Public also operates the Delacorte Theater and offers theater education and outreach services to students in the five boroughs. In the early twenty-first century the city had contributed $19 million and the Public raised $6 million toward a renovation plan for the Lafayette Street Theater. As of 2008 the Public's productions had won 40 Tony Awards, 141 Obies, 39 Drama Desk Awards, 23 Lucille Lortel Awards, and four Pulitzer Prizes.

Kate Lauber

public transportation. The New York metropolitan region has the most extensive public transportation system in the United States,

and along with Tokyo, the most heavily used and complex network in the world. In the early twenty-first century the system included subways, regular buses, express buses, taxis, commuter trains, ferries, water taxis, and trams stretching across the five boroughs. The city has been a public transit mecca since the early nineteenth century, when horse-drawn streetcars and omnibuses carted residents about Manhattan. Metropolitan New York boasts the highest rate of public transit use in the United States, with more than seven million public transit riders per day in 2008, or 40 percent of the national total. More than half of the city's workers use public transportation in their commute—which is also the longest, on average, of any major U.S. city.

Publishers Weekly. Periodical launched in 1872 by Frederick Leypoldt as the *Publishers' and Stationers' Weekly Trade Circular;* it took its current name in the following year. Originally intended for both the book and stationery trades, it soon focused exclusively on book publishing. *Publishers Weekly* is owned by Reed Elsevier Inc. and has offices at 360 Park Ave South. It was published 51 times a year with a circulation of 25,000 in 2007.

publishing. See Book Publishing, Children's Book Publishing, Magazines, and Newspapers.

Puck. Humor magazine that began as a German-language publication of the same name, launched in September 1876 by the cartoonist Joseph Keppler and the publisher Adolph Schwarmann. It was named for the character in Shakespeare's *A Midsummer Night's Dream.* In March 1877 an English-language version with the subtitle "Oh What Fools These Mortals Be!" was introduced under the direction of Henry Cuyler Bunner. Printed in a large format, this attracted some of the best-known cartoonists of the day, among them Frederick Burr Opper, F. Graetz, and Grant Hamilton. It soon surpassed the German edition, becoming the first successful humor magazine in the country. Closely allied with Democratic causes, it opposed free silver, supported the civil service, favored lower tariffs, and often lashed out against big business and monopolies. Circulation exceeded 90,000 by the 1880s when the magazine enjoyed wide influence: Grover Cleveland attributed his victory in the presidential election of 1884 to the magazine's attacks on his Republican opponent, James G. Blaine. The magazine inspired several other publications, including *Puck's Monthly Magazine and Almanac, Puck's Quarterly,* and *Puck's Annual.* Gradually overshadowed in political importance by daily newspapers, it took a more general approach during Harry Wilson's tenure as editor from 1896. Under the editorship of Arthur Hamilton Folwell (from 1905) and his successors circulation declined, and the magazine was eventually taken over by Nathan Straus, who reorganized it and added such regular columns as "The Seven Arts," "Puppet Show," and "Puck's Golf Idiot." The format was reduced in size in 1915 and again in 1917, color illustrations were eliminated under Karl Schmidt, and the magazine was published fortnightly and then monthly under William Randolph Hearst. Puck ceased operations in September 1918. For many years the magazine occupied a building at 295–307 Lafayette Street in Manhattan, designed by the architect Albert Wagner and erected in 1886 as a printing plant. The building is a handsome structure of red brick. Above the entrance is a gold-leaf statue of Puck; a larger one adorns the northeast corner of the building. Wagner extended the building to the south in 1893 and supervised the moving of the west facade to accommodate the widening in 1899 of Elm Place (now Lafayette Street).

Walter Friedman, Sandra Opdycke

Puerto Ricans. During the seventeenth and eighteenth centuries a few entrepreneurs and their families were among the first to move to New York City from Puerto Rico; they traded sugar, rum, tobacco, and molasses grown in Puerto Rico for food staples from the Northeast. Later the city attracted merchants, workers, and students, but from the 1860s to the 1890s most immigrants were political exiles, followed by a growing number of contract and noncontract laborers. During the late 1860s the city became a haven for supporters of El Grito de Lares, a failed attempt in 1868 to make Puerto Rico independent of Spain: Ramón Emeterio Betances, Eugenio María de Hostos, Segundo Ruiz Belvis, and Lola Rodríguez de Tío were among those who joined with Cubans and other Latin Americans in the city to promote Antillean liberation using traditional methods of organizing, meeting, and disseminating propaganda. La Sociedad Republicana de Cuba y Puerto Rico (1865) was the earliest association of Cuban and Puerto Rican exiles formed to promote independence. Several Spanish-language newspapers began publication, including *El Buscapié* (1877), *América* (1883), *El Latino-Americano* (1885), *Las Novedades* (1887), *Revista de Literatura, Ciencias y Artes* (1887), *El Avisador Cubano* (1888), *El Economista Americano* (1887), and *La Juventud* (1889). By 1892 a renewed commitment to independence increased membership in the liberation movement. José Martí formed the Cuban Revolutionary Party, and Sotero Figueroa edited and published the first issue of *Patria,* the official organ of the movement. Independence clubs formed the bases of the movement, including Figueroa's Club Borinquen and Inocencia Martínez Santaella's Club Mercedes Varona. Clubs supported liberation through fund-raising activities advocating emancipation through various means, including swaying public opinion in newspapers such as *Patria, El Porvenir* and *La Revolución.* The Puerto Rican branch of the Cuban Revolutionary Party formed in the city after Martí's death in 1895 and flourished under the leadership of activists like Figueroa, Martínez Santaella, Julio J. Henna, Roberto Todd, Gerardo Forest, Juan de Mata Terreforte, Francisco Gonzálo Marín, and Antonio Vélez Alvarado. Many groups actively supported liberation: Hijas de Libertad, Los Independientes, Rifleros de la Habana, and Dos Antillas. The work of Jesús Colón confirms the observations of writer Bernardo Vega that membership was not determined by race: groups like La Liga Antillana, an association of working-class women devoted to raising funds and establishing international networks, could meet only in centers that admitted people of different races, cultures, or religions, such as the headquarters of the Socialist Party and of the Cigar Makers' International Union.

Black Puerto Ricans like physician José N. Cesteros lived in segregated neighborhoods but took part in social and political activities with other Puerto Ricans. The leadership of Dos Antillas was shared by two black Puerto Ricans: Rosendo Rodríguez and the Africanist historian and bibliophile Arthur Schomburg, a former student of island abolitionist José Julián Acosta. After his arrival in 1891, Schomburg committed to the Antillean liberation movement but is best remembered in subsequent decades for his involvement with the African American community during the Harlem Renaissance. Most Puerto Rican organizations formed in the city during the nineteenth century disbanded in 1898 after Puerto Rico was surrendered to the United States following the Spanish–American War. Former members used their networks and experience as leaders to direct civic, cultural, and political affairs in the barrios. Henna, a well-known physician, helped to establish the

French Hospital. Toward the end of the nineteenth century cigar makers built settlements in Chelsea and on the Lower East Side near Spanish-owned tobacco factories. Practices like *la lectura* strengthened cultural and political awareness: employees in tobacco factories engaged readers to read aloud twice during the workday (once for news, once for literature and political writing), and discussions followed each session. The first female reader in the tobacco factories was the feminist and labor activist Luisa Capetillo, who lived in New York City in 1912 and ran a boarding house on 22nd Street and Eighth Avenue.

More working-class Puerto Ricans moved to the city during the first decades of the twentieth century to escape from economic hardship in Puerto Rico brought on by a series of natural disasters that crippled the sugar and coffee industries, as well as by tumultuous strikes and chronic unemployment. Between 1909 and 1916 a total of 7394 Puerto Ricans moved to the United States, where some were contract laborers on farms in the East; others worked in urban factories. During the next few decades immigration fluctuated according to the availability of work. Fewer than 2000 Puerto Ricans lived in the city by 1910; but during World War I 13,000 Puerto Ricans moved to the United States to work in war industries. After receiving U.S. citizenship under the Jones–Shafroth Act, 10,812 Puerto Ricans moved to the city in 1917, and they were soon followed by a large number of military conscripts.

During these years there were slightly fewer Puerto Rican women than men, and more whites than blacks; most were young, skilled, or semiskilled workers from cities. Many disembarked and settled in Brooklyn, finding work in the Brooklyn Navy Yard and in factories along the waterfront. They created *colonias* around the navy yard and in Greenpoint, Williamsburg, and Red Hook. Others moved across the East River to Chelsea and East Harlem where they formed the large community known as El Barrio. By 1926 most lived in two areas of Manhattan: from 90th Street to 116th Street between First and Fifth avenues, and from 110th Street to 125th Street between Fifth Avenue and Manhattan Avenue. They were attracted to colonias and barrios where other Puerto Ricans lived and Puerto Rican ways of life were preserved. The difficulties of adapting to North American culture were mitigated by forming home town clubs, mutual aid and self-help associations; cultural, social, and political groups also helped Puerto Ricans to adjust to their new surroundings. Books, magazines, newspapers, and Spanish-language radio stations were widely available and enabled Puerto Ricans to network with other Spanish speakers. By the first decades of the twentieth century the newspapers *Cultura Proletaria, El Heraldo, La Prensa, Gráfico,* and *Artes y Letras* were published, in addition to several that had begun publication in the late nineteenth century; many organizations also issued reports and newsletters. More than 40 organizations looked to the interests and needs of Puerto Ricans, including Alianza Obrera, Porto Rican Brotherhood of America, Liga Puertorriqueña e Hispana, and Asociación de Escritores y Periodistas Puertorriqueños.

Most Puerto Ricans worked for low wages in light and heavy industry, domestic service, cigar factories, hotels, restaurants, and laundries. During the 1920s about 60 percent of working Puerto Ricans in New York City were employed in the tobacco industry. Seasonal workers continued to be recruited for farm labor. By 1930 the number of Puerto Ricans in the city was estimated at 53,000 by the U.S. Bureau of the Census, at 100,000 by the New York Mission Society and the *New York Times,* and at 100,000 to 150,000 by the Porto Rican Brotherhood of America. During the Depression more Puerto Ricans left the United States than moved there. By the 1930s many worked in the merchant marine, the postal service, and small businesses. Most struggled with inadequate housing, wages, health care, and sanitation. Their race and ethnicity, as well as their limited skills, barred them from many kinds of work, and they fought to maintain dignity and family values. Women were expected to fulfill traditional family roles even as they entered the workforce in increasing numbers; often they provided the primary income for their families as domestic workers or as workers in restaurants, laundries, the garment trades, and cigar factories. In their own homes they earned a living doing piecework or caring for the children of others. Leaders included members of the small professional class, merchants, owners of bodegas and botánicas, nuns, priests, ministers, missionaries, *santeros* (priests and priestesses of Santería), and spiritualists. Inured in a tradition of activist politics, in 1937 the East Harlem community elected the first Puerto Rican to serve in the New York State Legislature—Oscar García Rivera.

By the mid-twentieth century rapid population growth and unemployment in Puerto Rico spurred massive emigration. Between 1940 and 1970 the Puerto Rican population of the city rose from 61,000, less than 1 percent of the total for the city, to 817,712, more than 10 percent of the total. There were more women, unskilled laborers, and people from rural areas than before. Many Puerto Ricans served in World War II, bringing the total for both world wars to 83,000. As early as 1948 a branch in New York City of the Migration Division of the Department of Labor of Puerto Rico offered assistance in finding work and services, monitored the movements of seasonal contract laborers, and offered protection, legal advice, and links with Puerto Rico; later renamed the Office of the Commonwealth, the department provided citywide leadership that was sometimes compromised by the perception that it was a political intermediary between Puerto Rico and Puerto Rican communities in the United States. Several community organizations were formed before the end of the 1950s, including a coordinating committee for the Puerto Rican Day Parade and the Council on Hometown Clubs. A cadre of young professionals including Antonia Pantoja, Josephine Nieves, Luis Nunez, Yolanda Sánchez, and Eddie González, among others, emerged to help advance the community. They were instrumental in creating the Young Hispanic Adult Association, which became the Puerto Rican Association for Community Affairs (1953). The Puerto Rican Forum (1957) and the Puerto Rican Family Institute (1960) also promoted cultural heritage and education. The Puerto Rican Forum developed a plan for advancing the community that prioritized the formation of local groups. One of its most successful projects was the creation of the education and leadership association Aspira (1961). The forum represented the interests of Puerto Ricans in city and state governments.

The war on poverty in the 1960s did little to improve economic conditions for Puerto Ricans. Militant leaders focused on the status of Puerto Rico as a commonwealth, which they likened to that of a colony. Many community organizations became so dependent on federal funds as to become virtual extensions of the government. New groups such as the Young Lords, the Puerto Rican Socialist Party, El Comité, and the Puerto Rican Students' Union drew their membership mostly from second-generation Puerto Rican New Yorkers and sought to remedy social problems through radical politics; they protested poor sanitation and living conditions and fought for breakfast programs, clothing, day care, and health clinics. These groups took to the streets to advocate open enrollment and Puerto Rican studies programs in the city university system as well as bilingual education in the public schools. Criticizing the established Puerto Rican leadership for being conservative and unresponsive, they challenged the effectiveness of the bureaucracy through which many Puerto Rican leaders had risen to prominence, including Ramón Vélez and Gilberto Gerena Valentín (others such as Herman Badillo made their careers in the reform wing of the Democratic Party).

Most Puerto Ricans were hurt by the decline of manufacturing in the local economy during the 1970s, as factories moved to outlying areas, the South, and countries where labor was cheaper. Discrimination further limited the opportunities available to Puerto Ricans. Urban renewal programs disrupted

working-class communities where crumbling tenements were replaced by highways and low- and middle-income housing. Businesses moved and barrios disappeared. Writers called attention to racial and ethnic discrimination encountered by Puerto Ricans and Nuyoricans (those born to Puerto Ricans in the city); Piri Thomas, Pedro Prieti, Tato Laviera, Nicholasa Mohr, Edward Rivera, and Sandra Maria Esteves were among those who criticized the institutional neglect of the community and the failure of democratic principles in the city. By 1969 educators and professionals established El Museo del Barrio, and during the 1970s many Puerto Rican organizations focused on addressing the issues raised by radical groups. Clubs, social and religious groups, athletic teams, and cultural pageants were organized, as well as political institutions that sought to improve relations with other segments of American society. Some who arrived in the city at midcentury proposed methods for teaching English to Spanish-speaking students that later became the foundation of bilingual education programs across the city. Substitute auxiliary teachers linked the schools with the community and formed the Society of Puerto Rican Auxiliary Teachers and later the Puerto Rican Educators' Association. These groups advocated professional recognition and licensing of bilingual teachers. By 1972 the Puerto Rican Legal Defense and Education Fund had established preprofessional programs and offered educational guidance and counseling for urban youth. It became well known for representing Aspira in a suit against the Board of Education, which was charged with not providing educational opportunities to Spanish-speaking children. The resulting consent decree mandated a transitional bilingual program for all students of limited proficiency in English. In 1973 the Centro de Estudios Puertorriqueños was established at the City University of New York led by Frank Bonilla to promote scholarly research, archive historical documents, and maintain secondary and primary resources on the Puerto Rican experience. The following year Boricua College, designed to cater to the bilingual needs of Puerto Ricans and other Latinos, opened its doors in Washington Heights, followed by campuses in Brooklyn and the Bronx. By the mid-1990s Puerto Ricans were no longer the only visible Latino group in the city. In 2000 the Puerto Rican population had increased to more than four million in the United States but had declined in New York City. However, at 800,000 individuals, it remained the largest Puerto Rican community of any U.S. city and numbered twice the population of San Juan. Despite continuing hardships since the nineteenth century Puerto Ricans have shaped the city's multicultural dimensions; contributed to music, literature, and the arts; crafted influential organizations; and advanced politics and education. The educational and economic attainment of each generation has improved. Most Puerto Ricans continue to identify themselves as Puerto Rican and retain ties with the island.

Virginia Sánchez Korrol

Puerto Rican Traveling Theater. Formed by Miriam Colón in 1967, it performed initially in warehouses and storefronts. In 1974 it began renting from the city the former firehouse of Engine Company no. 54 at 304 West 47th Street, which at a cost of $1.6 million it converted into an auditorium with 196 seats; the first production there opened in 1981. The company performs each of its plays in two languages, with the same cast: on Wednesday, Thursday, and Friday in English, and on Saturday and Sunday in Spanish. It also presents its productions on a portable stage in the streets of poorer neighborhoods. It operates a free program to train aspiring young performers, offers a play-writing curriculum, and tours the five boroughs and New Jersey during the summer months. It has won the New York State Governor's Arts Award, the National Association of Latino Arts and Culture (NALAC) Lifetime Achievement Award, and the U.S. President's Lifetime Achievement Award. In 2008 it premiered the play *Three Calla Lilies* by Abniel Marat.

Melissa M. Merritt

Pulitzer, Joseph (*b* Makó, Hungary, 10 April 1847; *d* harbor of Charleston, S.C., 29 Oct 1911). Newspaper publisher. He immigrated to the United States and soon after his arrival joined the Union army in the Civil War. After his discharge in 1865 he moved to St. Louis; there he worked for Carl Schurz's *Westliche Post* and in 1878 acquired the *Dispatch,* which he merged with another newspaper to form the *Post–Dispatch.* The sensational style of journalism that he developed at this time was perfected in 1883 when he moved to New York City and purchased the *New York World.* Known for its profuse illustrations, entertainment features, and popular "crusades," the newspaper was often criticized for its loose mixture of fact and gossip. Its circulation war with the *New York Journal* (operated by William Randolph Hearst) marked the beginning of yellow journalism. Pulitzer defended his techniques as an effective means of increasing circulation and advertising. His newspapers achieved a combined circulation of 750,000 and quickly made him a millionaire. He provided $16,500 in 1904 to Columbia University for the establishment of the Pulitzer Prize. He lived from 1883 to 1885 at 17 Gramercy Park South; from 1887 to 1900 at 10 East 55th Street (now the St. Regis Hotel Pharmacy); from 1900 to 1904 in the Sloane Mansion, 9 East 72nd Street (now the Lycée Français de New York); and from 1904 at 9 East 73rd Street.

Julian S. Rammelkamp

Pulitzer Prize. Award conceived by Joseph Pulitzer in his 1904 will granting Columbia University $16,500 to establish four prizes in journalism, four prizes in letters and drama, one prize in education, and four traveling scholarships (Pulitzer also bestowed $2 million to establish the School of Journalism at Columbia). The Pulitzer Prizes began in 1917, when panels of specialists recommended awards to an advisory board of journalists, and prizes were granted by the university's board of trustees. Pulitzer's will gave the advisory board the power to change or expand the award system and to withhold any award if they deemed all entries substandard. Thus, new award categories were added for cartoons (1922), photography (1942), and musical composition (1943), and over the years the number of categories increased to 21. Beginning in 1999 online components were permitted in the public service journalism category, and in 2006 online content was allowed in all journalism categories. More than 2400 entries are submitted annually and judged by 102 individuals serving on 20 different juries. The public service winner receives a gold medal designed in 1918 by sculptor Daniel Chester French, and winners in the other categories receive an award of $10,000. The Pulitzer endowment was depleted in the 1970s and a second endowment was created in 1978; the two endowments are managed by Columbia and fund the cash prizes and stipends for the jurors in letters, music, and drama. Journalism jurors receive no compensation. Although the prize money and the award ceremony at Columbia's Low Library are modest, the Pulitzer awards carry great prestige.

Kate Lauber

Punkiesberg. Dutch name for Cobble Hill.

Pupin, Michael [Mihajlo] **(Idvorsky)** (*b* Idvor, near Pancevoy, Serbia, 4 Oct 1858; *d* New York City, 12 March 1935). Nobel laureate,

physicist, and inventor. He immigrated to the United States in 1874 and in 1879 enrolled at Columbia College, graduating with honors. In 1889 he received a doctorate from the University of Berlin and began teaching mathematical physics at Columbia, where he later became a professor of electromechanics (1901–31). His inventions in carrier-wave rectification had important applications in radio broadcasting, and his "Pupin coil" extended the range of long-distance telephony. Through his discovery of secondary radiation, he reduced patients' exposure to X-rays. Busts of Pupin by Ivan Mestrovic stand beside the Serbian Orthodox Cathedral of St. Sava (15 West 25th Street) and inside Columbia University's Pupin Hall. His autobiography *From Immigrant to Inventor* (reprint 2005) won the 1924 Pulitzer Prize. In addition to having a Connecticut estate, Pupin lived at the Dakota in New York City. He is buried in Woodlawn Cemetery in the Bronx.

Val Ginter

pushcart vendors. See Street Vendors.

Putnam. See G. P. Putnam's Sons.

Putnam's Monthly Magazine. Literary magazine launched in 1853. Briefly the foremost magazine of its kind, it was edited by Charles F. Briggs with George William Curtis, Charles A. Dana, Frederick Law Olmsted, and Parke Godwin and was unique in its outspoken commitment to American literature at a time when English serials predominated in such magazines as *Harper's.* It published many stories and articles about life in New York City, among them Herman Melville's short story "Bartleby the Scrivener" (1853). Other contributions were made by Henry Wadsworth Longfellow, James Russell Lowell, Henry David Thoreau, Horace Greeley, William Cullen Bryant, and Henry James. The magazine ceased publication in 1857 and was revived in 1868 without much success.

Alice Fahs

Quakers. Members of the Religious Society of Friends; for practicing members of the religion, the terms *Quakers* and *Friends* mean the same thing. The first English Quakers were missionaries who arrived in New Netherland in 1657. They were unwelcome among the Dutch but found acceptance in some English towns on Long Island under Dutch jurisdiction, including Gravesend, Jamaica, Hempstead, and especially Flushing, a village formed by New Englanders who found the Quaker unpaid ministry to their liking. Soon many were holding Quaker meetings in their homes, attracting the attention of the Dutch civil authorities. New Netherland passed a law against visiting Quakers and those residents who might entertain them, and in 1657 Henry Townshend of Flushing became the first person convicted under it. He was fined, and other residents of Flushing quickly came to his support. Thirty-one signed a petition, later known as the Flushing Remonstrance, articulating their view that residents of Flushing were free to worship as they pleased. Colonial officials soon made clear that such action was unacceptable, and most signers of the original statement withdrew their support for it. Coercion was only briefly successful, for Friends continued to hold meetings. In 1662 John Bowne, another Quaker from Flushing, was arrested, imprisoned, and fined for allowing Quakers to meet in his house; he appealed to the Dutch West India Company, which subsequently instructed Governor Peter Stuyvesant not to persecute dissenters as long as they did not disrupt the workings of the colony. This was a powerful early statement of freedom of religion.

After the English conquest in 1664 Quakers ceased to be targets of persecution, except in wartime when authorities were sometimes reluctant to recognize the validity of the Quakers' support of pacifism. For the next century most Quakers remained in the countryside of western Long Island, especially in Flushing, Hempstead, and Oyster Bay, and for the most part Quakerism expanded north up the Hudson River and later to the west before the twentieth century. Some were attracted by the mercantile opportunities in Manhattan, where a meetinghouse was built in 1696 on Green Street (now Liberty Place).

By the early nineteenth century Friends in New York City were a powerful minority among those of New York State. They were usually wealthier than their counterparts in the country, and their contact with the wider world through commerce introduced them to evangelical groups in England; they stressed such doctrinal issues as atonement and the Trinity and placed greater emphasis on the Bible, putting them at odds with many rural Quakers who continued to emphasize the "inner light" of God in all. After a struggle to control Quakerism in New York State, the two groups formally divided into two factions in 1828. Elias Hicks symbolized the traditionalists of Long Island and elsewhere, who became known as Hicksites. Their beliefs were considered well beyond the bounds of Christian respectability by Friends in the city, who adopted the major tenets of evangelical Christianity and became known as Orthodox Quakers. Both factions opposed slavery and after the Civil War helped freed blacks through such organizations as the New York Colored Mission (1871). The Friends' Employment Society (1862) trained young women for work, especially in hospitals. Among the Quaker agencies for children were the Young Friends' Aid Association (1873) and the Society for the Prevention of Cruelty to Children (1875). Quakers also continued to pursue peace efforts and actively assist noncombatants during the world wars. In the following years they shifted their focus toward social action, and in 1955 the Hicksite and Orthodox factions reunited to strengthen their assault on contemporary problems.

Friends Meeting House on Northern Boulevard, Flushing, 1927

Quantum Chemical Corporation. Firm of distillers and chemical manufacturers. It was formed in 1924 as the National Distillers Products Corporation in a bankrupt distillery by Seton Porter (1882–1953), who made spirits for medicinal and religious purposes and after the repeal of Prohibition in 1933 was able to sell alcoholic spirits. The headquarters were at 52 Williams Street until being moved to 99 Park Avenue in the mid-1950s. After buying U.S. Industrial Chemicals, the firm was renamed the National Distillers and Chemical Corporation. It concentrated entirely on chemicals from the 1970s and in 1988 took its current name. In 2007 Quantum Chemical had sales of $2.3 billion and 8850 employees.

James Bradley

Quarantine Riots. The name of two violent incidents in Staten Island in the late 1850s, resulting from lax enforcement of quarantine laws at the quarantine station on Seguine's Point. Before the riots nearby residents of Tompkinsville and Castleton had set up vigilance committees to keep the arriving sailors and immigrants inside the station until they were cleared of disease. In July 1857 protesters attacked the station but were beaten back by the police. On 2 September of the following year, when several victims of yellow fever arrived at the quarantine hospital, a much larger mob attacked the station and burned all its buildings to the ground. One hospital employee was shot, and many patients were dragged out of the building and beaten.

A large force of Marines and policemen from Manhattan were called to Staten Island to quell the violence, and many of the rioters were arrested. In the next few years local public health officials decided to move the quarantine station to various floating hospitals and uninhabited islands in Lower New York Bay.

Chad Ludington

Queen Elizabeth. Ship. Built in the 1930s, it made its maiden voyage from Clydebank, Scotland, on 3 March 1940, arriving in New York six days later. Used as a troopship during World War II, it carried more than 750,000 soldiers and sailed some 500,000 miles. After the war the ship again became a passenger liner, mainly on the transatlantic route. In 1968 it was retired and was replaced by the *Queen Elizabeth 2.*

Jessica Montesano

Queen Elizabeth 2. Ship. Launched in 1967, the *QE2* was the longest-serving ship in the Cunard Line's history and the fastest passenger ocean liner then in service. The vessel crossed the Atlantic more than 800 times and carried more than 2.5 million passengers before its 806th and last voyage in 2008 out of New York Harbor.

Jessica Montesano

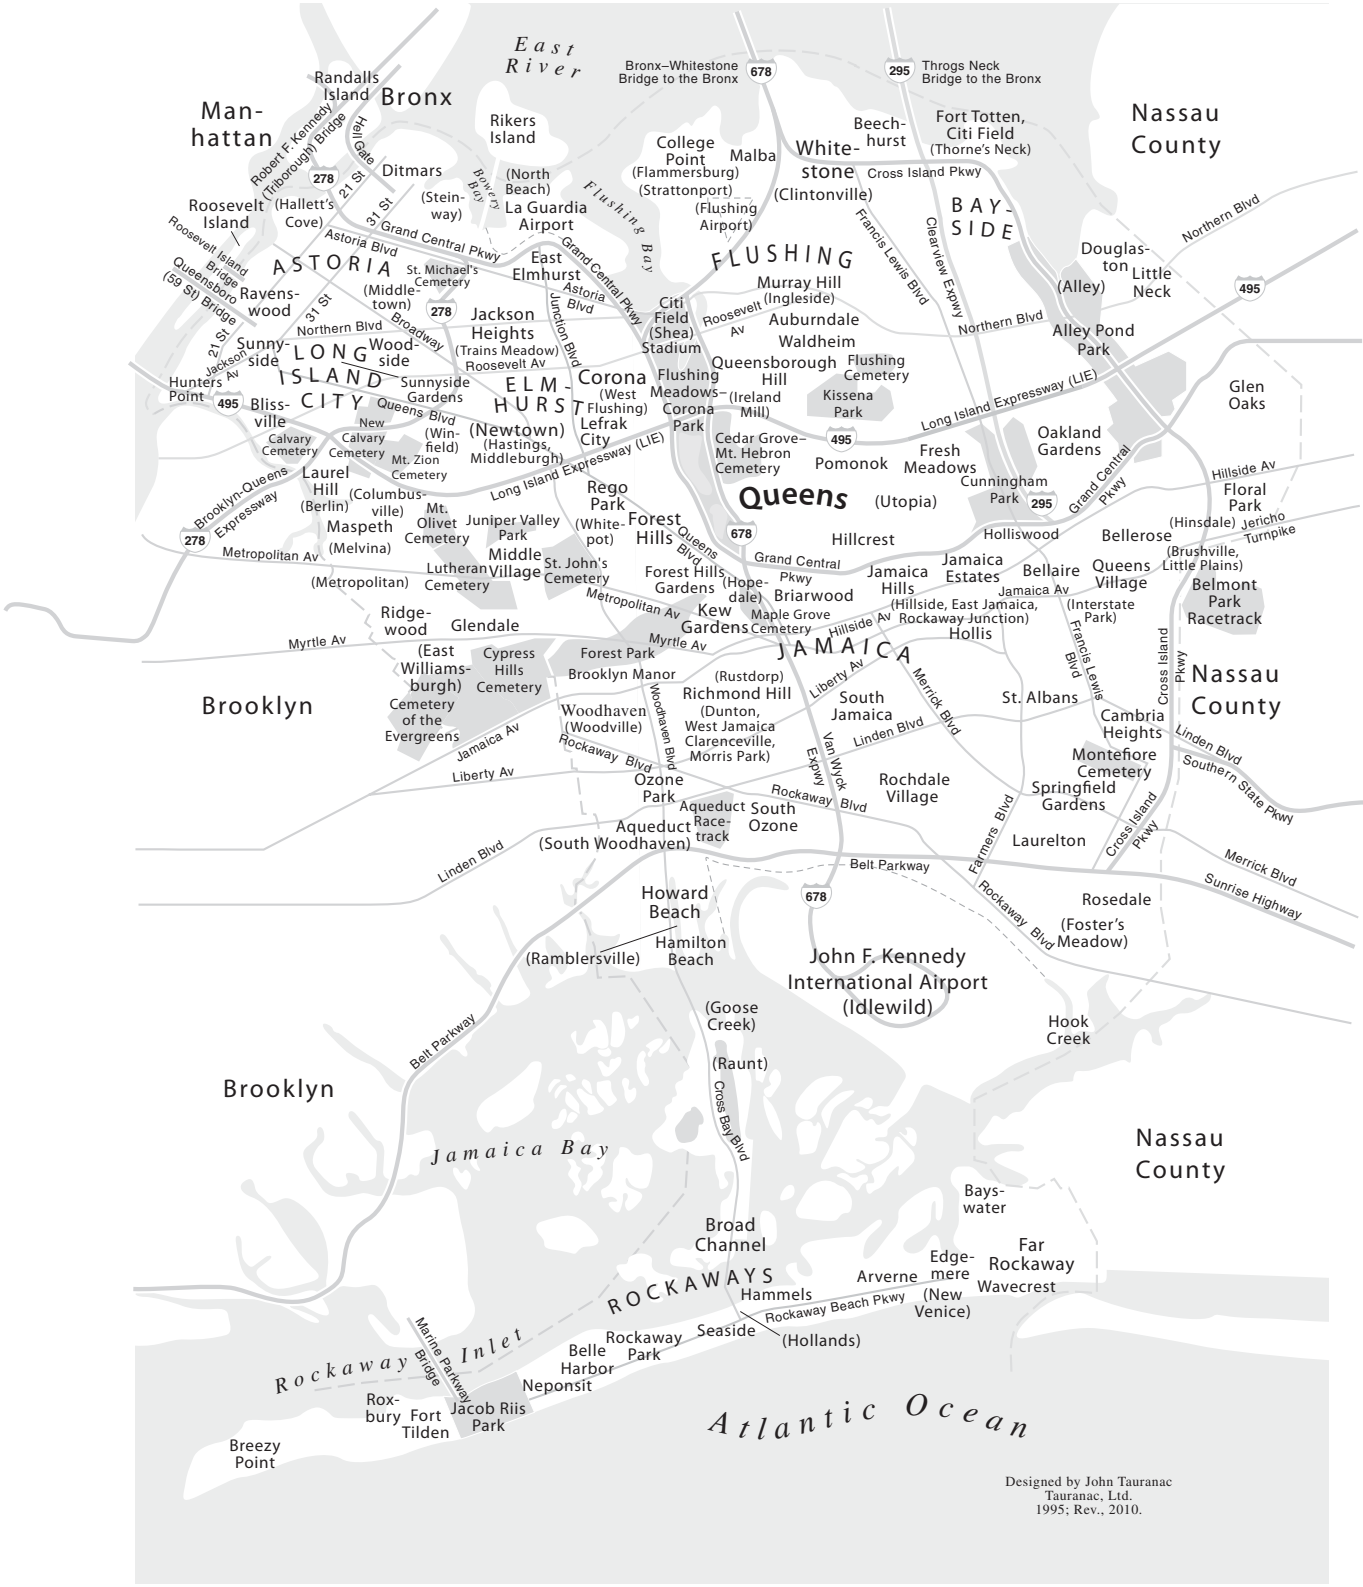
Queen Mary. Transatlantic passenger liner that sailed between England, France, and New York City. It was owned by Cunard–White Star Limited, which, legend has it, wanted to name it the *Victoria*. However, when Sir Percy Bates and Sir Ashley Sparks, leading officials of the firm, told King George V that they planned to name the ship after the greatest queen of England, the king replied that his wife, Queen Mary, "would be delighted." After its maiden voyage to New York City in 1936, the ship held the transatlantic speed record for many years. During World War II it ferried entire army divisions (14,000 men) to Britain and sailed alone because its speed allowed it easily to outrun German U-boats. The ship retired in 1967, and as of 2010 it was a museum and hotel docked at Long Beach, California.

Frank O. Braynard

Queen Mary 2. Ocean liner. Cunard ocean liners had been arriving in New York since 1847 when the line's new flagship, the new Royal Mail Ship *Queen Mary 2,* went into service in 2004. The longest ocean liner ever built at 1132 feet (345 meters), it succeeded the *Queen Elizabeth 2* and the first *Queen Mary* (later a floating hotel in Long Beach, California) as the queen of the transatlantic route. The *Queen Mary 2* is about three times as long as the *Titanic* and twice as long as the *Queen Elizabeth 2.* The ship's name refers to the consort of British king George V, grandfather of Queen Elizabeth II. Built in France by Chantiers de l'Atlantique, and capable of carrying 2620 passengers and making an open ocean speed of 30 knots (34.5 m.p.h.), the *QM2* docked either at the Manhattan Cruise Terminal near 55th Street on the Hudson or at the new Brooklyn Cruise Terminal at Pier 12 at Red Hook, formerly a commercial wharf. On 13 January 2008 the ship participated in one of the most spectacular displays in New York Harbor history when it, the new *Queen Victoria,* and the 39-year-old *Queen Elizabeth 2* rendezvoused near the Statue of Liberty. This reportedly was the first time three Cunard *Queens* were present in the same location.

John Rousmaniere

Queens. The largest borough in land area, comprising 37 percent of the city. At 13.75 miles (22 kilometers) from east to west and 15 miles (24 kilometers) north to south, Queens covers about 120 square miles (311 square kilometers) and is almost as large as Manhattan, the Bronx, and Staten Island combined. It is bounded to the north by the East River and Long Island Sound, to the east by Nassau County, to the south by the Atlantic Ocean, to the southwest by Brooklyn, and to the west by the East River.



1. To the Mid-Nineteenth Century

American Indians lived near bays and inlets along the coast, including Flushing Bay, Little Neck Bay and Oakland Lake, Jamaica Bay, the Rockaway Peninsula, and the headwaters of Newtown Creek. Beginning in 1609 the Dutch explored the region and established the colony of New Netherland; by 1638 some farming began in Queens along the East River in what became Hallett's Point in Astoria. None of these pioneer settlements in Queens endured, but the loamy soils, oak forests, and salt marshes of Long Island soon lured others seeking to raise hay, grain, and livestock and extract timber and firewood. Dutch authorities granted English settlers from New England permission to settle western Long Island. In 1642 Governor Willem Kieft gave Rev. Francis Doughty a patent to settle Mespat at the head of Newtown Creek (Maspeth). That settlement was destroyed in the Indian war the next year, but within a decade English and Dutch settlers built permanent settlements. The Indians left little behind but place-names and trails that became roads, though wampum continued as local currency into the eighteenth century.

While governed from New Amsterdam under Dutch laws and institutions, many of the early residents were English Protestants. They founded Vlissingen (Flushing) in 1645, Middleburgh (Newtown, and later Elmhurst) in 1652, and Rustdorp (Jamaica) in 1656. The Dutch gave each village a Dutch name and installed the Dutch form of government. By the late seventeenth century many families that later became prominent were established, including the Halletts of Newtown, the Lawrences of Flushing, and the Van Siclens of Jamaica. English settlers disliked Dutch rule, particularly in matters of religion and local administration. Only adherents of the Dutch Reformed Church could worship openly. In the most important event in the county's colonial history, Flushing residents signed the Flushing Remonstrance on 27 December 1657, formally protesting the denial to Quakers of freedom of worship guaranteed by the town charter. Governor Peter Stuyvesant immediately arrested and fined several petitioners. In 1662 Stuyvesant imprisoned John Bowne for allowing Quaker meetings in his Flushing home, then banished him from the colony. Bowne traveled to the Netherlands and appealed his banishment to the Dutch West India Company, which upheld him and guaranteed religious freedom for all Protestant sects in the colony. Vindicated, Bowne returned to Flushing. His house, a "Shrine to Religious Freedom," is a city landmark, as is the nearby 1694 Quaker Meeting House.

The English took over New Amsterdam in 1664 and in 1683 divided their new province of New York into 10 counties, including Queens, originally extending east to Suffolk. The new county was divided into five townships: Newtown, Flushing, Jamaica, Hempstead (out of which North Hempstead was formed after the Revolution), and Oyster Bay. The western towns, plus the Rockaway Peninsula, correspond to present-day Queens; the boundaries reflected natural features of the terrain, which influenced the social divisions and the movement of goods and people well into the twentieth century. The terminal moraine, the southern limit of the last ice age, runs through the middle of the borough (roughly the route of the Interborough Parkway and the Grand Central Parkway east of Kew Gardens). Newtown and Flushing are north of the moraine, separated by Flushing Bay and Flushing Creek, meandering south through 3 miles (5 kilometers) of salt marsh (now Flushing Meadows–Corona Park) to the moraine. Flushing Meadows prevented continuous travel by land through northern Queens; the first bridge was built in 1800 at what became Northern Boulevard. Jamaica occupies the sandy outwash plain, the flat expanse created when the glacier melted, to Jamaica Bay, a saltwater lagoon shielded from the ocean by Rockaway Peninsula and noted for its fish, shellfish, water fowl, and salt-marsh meadows.

Jamaica Village was the first county seat, 12 miles (19 kilometers) from the Brooklyn ferry on the East River along an Indian trail to Jamaica. In 1703 the colonial legislature designated this road the King's Highway and authorized its continuation to East Hampton on the east end of Long Island; in Queens it became Jamaica Avenue. The population was largely engaged in agriculture, with a small

Note: Population figures for towns were not included in the censuses of 1810 and 1820.

Compiled by James Bradley

number living in the three village centers. By the early eighteenth century land prices rose steadily and the size of farms decreased; most land was still held by established families. Many families owned slaves, although few owned more than two. The first census (1790) recorded 5393 inhabitants, including 1095 slaves.

In the eighteenth century Queens supplied Manhattan with produce, exporting it also to the Caribbean and England. Around 1730 farmers developed a new variety of apple, the Newtown pippin, which soon spread throughout Long Island and was the first American-grown apple exported to England, where it was considered a luxury and commanded a high price. As early as 1737 William Prince opened the first commercial nursery for trees and plants in America in Flushing, and in the nineteenth century the Prince and Parsons nurseries were cultivating and selling fruit trees and ornamentals from Europe and Asia, making Queens the horticultural center of the nation (the remains of the Parsons nursery can be seen in Kissena Park).

The American Revolution divided Queens. Except in Newtown most residents strongly favored the British. George Washington's defeat in the Battle of Long Island on 27 August 1776 gave the British control of western Long Island, and thousands of troops were quartered in Queens, which became a major staging area for military operations. The British enjoyed nearly total security, disturbed only by the inconsequential raids of rebels from Connecticut in whaleboats. The seven-year occupation left a ravaged countryside and lasting memories of hardship. Officers billeted themselves in homes, the army requisitioned crops and livestock, and soldiers acting on their own stole produce, stripping the land of timber and even fenceposts for firewood. After the peace treaty was signed, Queens became a staging ground for the evacuation of thousands of Loyalists from all over America. The last British troops in New York marched out of Jamaica on 8 December 1783.

In 1788 the county seat was transferred from Jamaica to Mineola in North Hempstead (in 1872 it was moved to Long Island City, reflecting the shift in population and economic growth). Six turnpikes built between 1801 and 1816, two running between Flushing and Brooklyn through Newtown and two separately linking Jamaica and Brooklyn, improved access to urban markets. Between 1800 and 1830 the population rose from 5791 to 7806. The opening of the Erie Canal in 1825 had a dramatic impact on Queens, as farmers shifted from grain to truck gardens supplying the growing city with fruits, vegetables, and flowers. During the 1830s the population grew by 5153.

The greatest agent for change in the nineteenth century was the Long Island Rail Road (LIRR), which began running between Brooklyn and Jamaica in 1836. By the 1860s there were three rival railroads: the Long Island, the Flushing and North Side, and the South Side (both became part of the LIRR in 1889). The railroads not only served the agricultural sector, but also opened up the county to suburban development. In 1839 Astoria became the first village to be incorporated in Queens since the seventeenth century. Ravenswood began as a fashionable suburb along the East River in 1848 and became the first iteration of the "gold coast," which eventually expanded to the east along the northern shore of Long Island through Flushing, Malba, Bayside, and Douglaston and into Nassau County. After the state passed the Rural Cemeteries Act in 1847, banning burials in Manhattan for sanitary reasons, cemeteries were opened in Newtown, including Cavalry (1848) and Lutheran (1852). In the early years cemeteries served as popular picnic sites. Manufacturers scattered widely, building factories in Whitestone, Woodhaven, and College Point.

By the 1850s residential development extended into new sections. Speculators bought up farms between 1852 and 1854 for resale as village lots in Hunters Point, Maspeth, Winfield, and West Flushing (Corona) along the proposed route of the Flushing Railroad. The railroad, financed by wealthy residents of Flushing, began running in 1854 to Hunters Point, and in the late nineteenth century Flushing became preeminent as a commuter suburb and genteel summer colony. Large numbers of Irish and German immigrants moved into Queens about this time. Those displaced by the potato famine in Ireland in the late 1840s settled mostly in Astoria but also in Jamaica and Flushing. Many Germans moved to Queens from Brooklyn, settling along Metropolitan and Myrtle avenues. Middle Village, which had been English in the 1840s, became almost entirely German by 1860.

2. From Mid-century to Consolidation

Industrialists discovered Queens in the 1850s, accelerating the growth of western Queens. Conrad Poppenhusen moved his hard rubber factory from Williamsburg to College Point in 1854 and became a benefactor of the community, even paying the salaries of his workers serving in the Civil War. His 1868 Poppenhusen Institute is a designated landmark. From 1865 to 1898 western Queens grew much faster than the eastern sections. Distilleries, varnish factories, chemical works, and oil refineries opened in Long Island City along Newtown Creek and the East River, facilitated by the relocation of the LIRR terminus from Brooklyn to Hunters Point in 1861. Lalance and Grosjean opened its tinware factory in Woodhaven in 1863; William Steinway moved his piano factory from Manhattan to Astoria in 1871. Sohmer Piano opened along the East River in 1886. Breweries were established in Ridgewood near the Brooklyn line. By 1920 Queens ranked 15th in the nation in industrial output, and though declining, industry persisted into the early twenty-first century in Long Island City, College Point, and Maspeth.

Transformation of the rural landscape into suburban communities accelerated in the second half of the nineteenth century. In fact, suburbanization characterized the development of Queens until the late twentieth century. The first houses in Glendale went up in 1868–69, and Queens Village developed in 1871. Richmond Hill, the first planned suburb in Queens, was begun in 1869 by Albon Platt Man; it was later home to Jacob Riis. Some large farms in Bayside were converted into building lots in 1872, and South Flushing between the old village and what is now Kissena Park was subdivided in the following year. New, privately owned excursion parks catered to working-class German families, and on weekends thousands of visitors went to College Point and Ridgewood, both heavily German, to enjoy the waterfront, the picnic groves, the dance pavilions, and the beer. After the Brooklyn City Railroad built its car barns just across the line in Ridgewood in 1881, that area grew into a prosperous working-class, primarily

German community, and the opening of the Myrtle Avenue elevated railroad in 1888 spurred further growth. Development of Ozone Park (named for the breezes off Jamaica Bay) began in 1882, Morris Park in 1884, and, along the Long Island Rail Road, Hollis in 1885. From 45,468 in 1870, the population nearly doubled to 87,050 in 1890.

By 1890 Queens was a mix of suburban wood-frame homes, noxious industrial facilities along Newtown Creek and other areas, and farms. A handful of Chinese-run vegetable farms in Astoria grew bitter melon, bottle squash, bok choy, and other produce for homes and restaurants in Chinatown in Manhattan. Large greenhouses in Flushing and Bayside provided cut flowers to wholesalers in the city. Floral Park, in far-eastern Queens, supplied tulips and carnations from vast fields to hotels and restaurants in Manhattan. In 1886 William Steinway and brewer George Ehret built Bowery Bay Beach (now the site of La Guardia Airport); renamed North Beach in 1891, it featured picnic grounds, swimming, dance halls, and amusement rides. It closed during Prohibition. The Rockaways also became a leisure destination. The first hotel opened in 1833, and railroad service began in 1869. The area featured large summer cottages in Far Rockaway and Arverne, and smaller bungalow communites and tent colonies, as well as amusement areas, by 1900.

In the 1894 nonbinding referendum on consolidation, Queens voted to join the proposed Greater New York, with Jamaica, Newtown, and Long Island City voting in favor, while Flushing and other parts of eastern Queens were opposed. On 1 January 1898 the municipal borough of Queens was created, consisting of Long Island City, Newtown, Flushing, and Jamaica. In addition, the Rockaway Peninsula, part of the town of Hempstead, was also included to give the new city total control over Jamaica Bay. Consolidation created the untenable condition that part of Queens County was in the city, while the towns of Hempstead, North Hempstead, and Oyster Bay were in Queens County but not in the city, so on 1 January 1899 they formed Nassau County.

3. The Twentieth Century and After

In the first three decades of the twentieth century Queens grew by 750 percent, from 152,999 in 1900 to 1,079,129 in 1930, with nearly half a million arriving during the 1920s. New transportation systems stimulated this growth. The Pennsylvania Railroad bought the Long Island Rail Road in 1900, electrified its route through Queens (1905–8), and opened tunnels under the East River in 1910 to the new Pennsylvania Station, bringing most of Queens within commuting distance of Manhattan. This precipitated the decline of Hunters Point, where passengers had transferred from the LIRR to ferries. The opening of the Williamsburg Bridge in 1903 made possible new elevated lines along Liberty Avenue to Richmond Hill (1915), to Metropolitan Avenue in Middle Village (1915), and along Jamaica Avenue to Jamaica (1918), as well as direct trolley service into Manhattan. The Queensboro (originally Blackwell's Island) Bridge opened in 1909 and had a dramatic impact on the borough, increasing land values and facilitating a building boom along the routes of the new dual subway lines to Astoria (1917) and Corona (1917, extended to Flushing in 1928). In the first decade after consolidation the Topographical Bureau laid out the borough's street network in 1908, including Queens Boulevard, and a new street- and house-numbering system unique to the borough was imposed (the first number in the hyphenated address refers to the cross street).

In addition to the thousands of one- and two-family brick and wood-frame houses (such as those built by the Real Good Construction Company in Rego Park), many distinctive model-housing communities, variations of the garden-apartment idea, were built in the first half of the twentieth century. The Russell Sage Corporation began building Forest Hills Gardens in 1912; the Queensboro Corporation built the first garden apartments in Jackson Heights in 1914; the City Housing Corporation built Sunnyside Gardens between 1924 and 1928 (home to Lewis Mumford); and the Metropolitan Life Insurance Company erected model tenements in Sunnyside, Woodside, and Astoria in the early 1920s. The G. X. Mathews Company built block after block of three-story model tenements, all in distinctive yellow and orange Kreischer brick, across western Queens from Ridgewood to Astoria. After the war the New York Life Insurance Company built Fresh Meadows, a complex housing 14,000 much praised by Lewis Mumford (1947). Parkway Village was built for employees of the United Nations (1946); and Glen Oaks, garden apartments with garages, quickly filled with returning veterans (1946).

As thousands of immigrant families moved from Manhattan and Brooklyn, new ethnic neighborhoods grew in Queens. Italians settled in Astoria and Corona, Germans in Astoria, College Point, Ridgewood, and Middle Village, and Irish in Woodside and Sunnyside. The borough's varied and picturesque settings attracted at least 20 film companies, making Queens the national center of the silent-film industry. This continued until World War II, as many Broadway stars shot films during the day before appearing onstage at night.

The Great Depression stopped virtually all private-sector construction in Queens, but few places benefited more from President Roosevelt's New Deal. An extraordinary collection of public works was built between 1933 and 1941. The Triborough Bridge, begun by the city in 1929, was completed with funding from Washington in 1936; the Grand Central Parkway opened the same year from the bridge to Kew Gardens. The Cross Island, Interborough, Whitestone, and Belt parkways were built, as were the Bronx-Whitestone, Cross Bay, and Marine Park bridges and the Queens Midtown Tunnel. Other projects included La Guardia Airport, the Independent Subway System (IND) Queens Boulevard Line, Boulevard Gardens apartments in Woodside and the Queensbridge and South Jamaica housing projects, Astoria Pool, and the 1939 World's Fair in Flushing Meadow.

The borough experienced a second growth spurt after World War II, facilitated by the transportation infrastructure built during the New Deal. Most of the remaining farms and many private golf courses succumbed to development. The Klein farm in Fresh Meadows, the borough's last working private farm, was sold in 2002 (in 2008 the Queens County Farm Museum in Floral Park occupied a site that has been under cultivation since 1697, the oldest continuously farmed site in the state). Much of the new housing consisted of large apartments, particularly along the subway lines. In those neighborhoods the suburban scale was compromised or lost entirely. Public housing projects were erected in Astoria, Woodside, Flushing, and especially the Rockaways. Transportation infrastructure built after the war included the Throgs Neck Bridge, the Long Island, Van Wyck, and Clearview expressways, and Idlewild Airport (1948), renamed John F. Kennedy Airport in 1963. Postwar growth culminated in the World's Fair of 1964–65 in Flushing Meadow Park (renamed Flushing Meadows–Corona Park in 1967), but already the city was beginning a period of slower growth and declining economic vitality that hit a low point with the fiscal crisis of 1975. The borough lost nearly 100,000 residents in the 1970s, the only time the population fell. That was also when Archie Bunker came to personify blue-collar Queens in the popular television show *All in the Family*.

Following the Immigration and Nationality Act of 1965, many immigrants settled in Queens, especially Asians and Latin Americans, making it the most diverse place in the nation. The population rebounded by a modest 60,273 during the 1980s, and by an impressive 277,781 in the 1990s. In 1980 about 56 percent of the foreign-born residents of Queens had arrived in the preceding 15 years. By 2000 almost half the borough's inhabitants were foreign born, up from about 36 percent in 1990, the most in the city. Less than half the population was white, and African Americans accounted for 20 percent, while Hispanics accounted for 25 percent. By the 2010 census, the Asian population is projected to surpass the number of African Americans. Chinese and Koreans, and immigrants from South and Southeast Asia, transformed Flushing, Jackson Heights, Elmhurst, and Corona, but with

upward mobility many families moved into the suburban neighborhoods of eastern Queens. Jews from the former Soviet Union moved into Forest Hills and Rego Park. Astoria, which grew a sizable Greek population in mid-century, began attracting Muslim immigrants, while Guyanese moved into Richmond Hill, South Ozone Park, and Jamaica. Some schools enrolled a student body speaking over 30 different languages. Jamaica and the communities of southeast Queens, including Cambria Heights, Springfield Gardens, Laurelton, St. Albans, and Hollis, remained the core of black residence. Recent immigrants from the West Indies, primarily Jamaica and Haiti, also moved to those neighborhoods, which were home to many prominent African American jazz musicians and entertainers, including Lena Horne, Ella Fitzgerald, and Count Basie. Louis Armstrong lived in Corona, and his home is now a museum.

Queens has long had a reputation for a tainted political system. In the early 1900s three successive borough presidents had legal problems: Joseph Cassidy went to Sing Sing for corruption, Joseph Bermel resigned and fled to Europe, and Lawrence Gresser was removed by the governor. For much of the twentieth century Queens regularly elected Republicans, but by 2000 the Democrats controlled almost every state, local, and national office. Under first Matthew Troy and then Donald Manes, the Queens Democratic organization was the second largest in the state in the 1970s and 1980s (Troy was convicted of corruption, and Manes committed suicide over the Parking Violations Bureau scandal). Mario Cuomo grew up in Jamaica and rose to prominence brokering a compromise between middle-class homeowners and advocates of low-income housing over new public housing projects in Forest Hills in the early 1970s; he served three terms as governor (1983–1994).

Queens has a long sporting tradition. The first recorded horse races in the colonies were staged on the Hempstead Plains in 1665, and by 1700 there was a course around Beaver Pond in Jamaica. New York State banned horseracing from 1802 to 1821, although "trials of speed" were permitted in Queens. At Union Course in Woodhaven in 1823 a crowd of 60,000 saw Eclipse, the champion New York horse, beat southern champion Sir Henry in three heats. The track saw many such match races, including the Fashion-Peytona contest in 1845. Aqueduct Racetrack opened in 1894 and Jamaica in 1903 (it closed in 1959 and Rochdale Village rose on the site); Belmont Park opened just across the line in Nassau in 1905. By 1930 there were 18 golf courses in Queens, all private but the 1901 Forest Park course, more than any other borough. Fresh Meadows Country Club hosted the PGA Tournament in 1930 and the U.S. Open in 1932, and Pomonok hosted the PGA in 1939 (both were sold for housing after the war). In 1925 Germans and Hungarians opened Metropolitan Oval in Maspeth, today the oldest soccer field in continuous use in the nation. Championship tennis was practically synonymous with the West Side Tennis Club in Forest Hills, which hosted the national championships from 1914 until 1977, when the U.S. Open moved to Flushing Meadows–Corona Park; Arthur Ashe Stadium opened there in 1997. During the 1930s many title fights were staged at Madison Square Garden Bowl on Northern Boulevard in Long Island City; other boxing venues included Sunnyside Garden and Ridgewood Grove. The New York Mets moved into Shea Stadium in 1964, and in 2009 moved into Citifield, built adjacent. Until the 1950s Queens also had many semi-pro teams, most notably the Bushwicks, who played baseball in Dexter Park in Woodhaven (site of the first night game in the city).

There are five institutions of higher education in Queens. St. John's University moved from Brooklyn to a new campus on the site of Hillcrest Golf Club in 1956, and there are four branches of the City University of New York: Queens College (1937), Queensborough Community College (1958), York College (1966), and La Guardia Community College (1971). The Queens Borough Public Library (founded in 1896 as the Long Island City Public Library) has had the nation's highest circulation since the 1980s, while serving the most diverse population on the planet.

Queensboro Bridge. Steel, two-leveled bridge with two cantilevered lengths spanning the East River between 59th Street in Manhattan and Long Island City in Queens, by way of an intermediate link on Roosevelt Island. Completed in 1909, it was designed by Gustav Lindenthal and decorated with ornate ironwork and finials by the architect Henry Hornbostel. The bridge was the first

Queensboro Bridge, 2009

major span in New York City to depart from the suspension form and the third of eight bridges built across the East River. It measures, including approaches, 7450 feet (2272 meters) long and 135 feet (41.1 meters) tall. Often referred to as the 59th Street Bridge, it is a city landmark.

Rebecca Read Shanor

Queensborough Community College. Junior college of the City University of New York, opened in 1958 on the grounds of the Oakland Golf Course. Students attended classes at several locations nearby until a new campus of 34 acres (14 hectares) was completed in 1978 at 56th Avenue and Springfield Boulevard in Bayside. The college offers the only program in the state in laser and fiber optics and is highly regarded for its program for the homebound. In 2006 the college enrolled more than 12,000 students in one of its associate degree or certificate programs and about 10,000 students in its continuing education program.

Marc Ferris

Queensborough Hill. Neighborhood in north central Queens, lying within Flushing and bounded to the north by Booth Memorial Drive, to the east by Main Street, to the south by Mount Hebron Cemetery and Cedar Grove Cemetery, and to the west by College Point Boulevard. The land rises steeply from Flushing Creek to a height of 81 feet (25 meters) above sea level. In the nineteenth century the area was called Ireland Mill after a gristmill on the creek at what is now College Point Boulevard. Residential development began in the 1930s, but most of the homes and businesses were built in the 1940s and 1950s. The population in 2008 was about 15,400: 49 percent Asian, 33 percent white, and 14 percent Hispanic.

Vincent Seyfried

Queens Borough Public Library. See Queens Library.

Queens College. College of the City University of New York (CUNY). It began as a group of extension centers formed by Hunter College and City College in the 1920s and became autonomous in 1937, when it first occupied a campus off Kissena Boulevard in Flushing on grounds used initially as a school for juvenile delinquents. The college became part of CUNY in 1961. The original complex of cottages in the Spanish style was supplemented during the next half-century by a modern campus that in the early twenty-first century spanned 77 acres and included the Kupferberg Center for the Visual and Performing Arts, Townsend Harris High School (part of City College until 1942), and the CUNY School of Law. The college emphasizes the liberal arts and offers undergraduate and graduate degrees. Its 582 full-time faculty has included such distinguished figures as writer Michael Harrington (from 1972 until his death), geologist Barry Commoner, composer Thea Musgrave, and mathematician Dennis Sullivan. In 2008 the college enrolled 18,494 students, including 14,384 undergraduates and 4110 graduate students. Notable alumni include Jerry Seinfeld, Ray Romano, and Carole King.

Selma Berrol

Queens County Farm Museum. New York City's largest piece of continuously farmed land and the oldest such farm in the state, located at 73-50 Little Neck Parkway in Floral Park. The Adriance family, Dutch subsistence farmers, started the farm in 1697. John Bennum, Sr., bought it in 1808, farming for nearly 25 years before selling to Daniel Lent. Peter Cox bought the land in 1833 during a period of exponential agricultural growth in the United States and expanded the original Adriance farmhouse. His son, Henry, joined the Queens Agricultural Society and transformed the farm into a commercial operation, becoming the largest market crop producer in the county by 1879 and increasing the farm's worth almost four times before selling to Daniel Stattel in 1892. Stattel modernized the farm and further increased its value during the age of truck farming, sending his crops to market on wagons. Real estate investor Pauline Reisman bought the farm in 1926 and then quickly sold the land to the state for expansion of the Creedmoor Psychiatric Center. The hospital demolished all the buildings on the farm except the original farmhouse, building new facilities so that its psychiatric patients could help grow produce for the kitchens. Creedmoor moved in 1973; two years later the Colonial Farmhouse Restoration Society of Bellerose founded the Queens County Farm Museum. Seven acres (2.8 hectares) of the farm, including the farmhouse and outbuildings, won landmark designation in 1976, and the state transferred ownership to the Department of Parks and Recreation in 1981. In the early twenty-first century the 47-acre (19-hectare) farm was a historical and educational facility as well as a working farm: it produced fruits and vegetables and raised livestock and honeybees, working toward sustainable production and selling to city restaurants and markets.

Queens Library. The origins of the public library system in Queens date to the mid-nineteenth century. Three libraries joined to form the Long Island City Public Library, chartered in 1896. About the turn of the century four other libraries joined the system, now called the Queens Borough Library. Andrew Carnegie donated $240,000 in 1901 to build eight additional branches, and New York City was authorized to provide operating funds. The Flushing Library, organized in 1858, joined the system in 1902. In 1907 the enlarged system was incorporated under its present name. The library had administrative offices in Long Island City until 1908 when they were moved to Jamaica. The Central Library, built in 1966 at 89-11 Merrick Boulevard in Jamaica, acquired collections in art, music, history, language, literature, the social sciences, science, and technology. In 1978 the Queens Borough Public Library became the first automated library system in the city, and from 1986 into the 1990s it had the highest circulation of any municipal library in the United States (13.2 million items circulated in 1993). By 1994 it was also the fifth-largest public library system in the country, with 62 branches, about one million registered patrons, and a collection of nearly 9.5 million items. Its adult literacy program was the first to use computers and offer driver's education and classes for the deaf. Through its New Americans Project the library also offered cultural programs and classes in English for immigrants, who by the mid-1990s accounted

Bus to the Queens Borough Public Library, ca *1937*

for one-third of the population of the borough. The Chinese-language "Ni Hao" collections were available in 24 branches, the Spanish-language "Say Sí" collections in 16.

In addition to books the Central Library circulates films, videocassettes, compact discs, and magazines and has divisions for teenagers and children; in the Toddler Learning Center children aged one to three years can play with educational toys while their parents meet with child-care professionals. A special collection called the Long Island Division focuses on the history of the four counties of Long Island (Brooklyn, Queens, Nassau, and Suffolk) and contains photographs, slides, manuscripts, maps, postcards, reference books, newspapers, and genealogies. The Langston Hughes Community Library and Cultural Center houses the Black Heritage Reference Collection. The library mails books to the homebound and maintains Kurzweil readers, which convert printed text into synthesized speech, and telecommunications devices for the deaf. In 1993 an online public access catalogue was introduced at the Central Library, providing access to databases, listings of library programs, community information, and library catalogues worldwide. Each branch has Quick Cat, a CD-ROM catalogue that provides access to all catalogued materials in the collections of the Central Library and the branches; online databases may be used free of charge. In 2008 14 million people visited the library, and the system was still number one in the nation for circulation, with more than 21 million loans as of 2007.

Queens–Midtown Tunnel. Double tunnel under the East River between 36th Street in Manhattan and Long Island City in Queens. Designed by Ole Singstad and opened to traffic in 1940, it is the third of four tunnels built to provide access to Manhattan for motor vehicles. The tunnel has a length of 6300 feet (1921 meters); ventilation towers with large, computer-controlled fans at either end of the tunnel provide a complete change of air every minute and a half. Advanced construction techniques made it possible for the Queens–Midtown Tunnel to be completed in four years. The first renovations for the tunnel began in 1998 by the Metropolitan Transit Authority; the approximately $132 million project, which included strengthening the ceiling, improving lighting, and upgrading fire protection, was completed in 2004. The tunnel is closed for one night each spring before the circus opens at Madison Square Garden to allow for the Ringling Brothers and Barnum & Bailey Circus Animal Walk.

Rebecca Read Shanor

Queens Museum of Art. Center for the visual arts in Flushing Meadows–Corona Park. Dedicated in 1972, it occupies the New York City Building constructed for the World's Fair of 1939–40. Best known for its extraordinary panorama of New York City, the largest three-dimensional model of an urban area in the United States, the museum offers a wide array of exhibitions, from classical sculpture to the avant-garde. It also maintains a permanent collection, operates an extensive school-tour and workshop program, and offers gallery talks, performances, and films. In 1994 it underwent major renovations, and in 2010 another renovation project that would double its space was under way.

Kenneth T. Jackson

Queens Village. Neighborhood in east central Queens, bounded to the north by Union Turnpike, to the east by the Cross Island Parkway, to the south by Murdock Avenue, and to the west by Francis Lewis Boulevard. The area was known during colonial times as the Little Plains because it marked the western edge of the treeless plain that extended to Wantagh. Thomas Brush opened a wheelwright and blacksmith shop in 1824 and later built a tavern, a country store, and a shed for curing tobacco. These enterprises became the center of a hamlet on Springfield Boulevard that came to be called Brushville. In April 1854 residents voted to change the name to Queens; Callister's Wagon Works opened in the same year. Extensive development began in 1870 when Scott R. Sherwood subdivided a parcel south of the tracks of the Long Island Rail Road into 700 building lots, and Colonel Alfred Wood persuaded the railroad to build a station. A map of 1873 shows 50 houses; the population increased from 675 in 1891 to 900 in 1898. Growth accelerated after the construction of Interstate Park, a venue for pigeon- and trapshooting (1900) and the opening of Belmont Park (1905). Many streets and houses were added during the 1920s. To obviate confusion with the name of the county, the Long Island Rail Road added "village" to the name of its local station, a change that was soon made to the name of the neighborhood as well. After World War II African Americans from Hollis and St. Albans moved in, along with Latin Americans. In the 1980s many new immigrants settled in Queens Village, especially from Guyana, Haiti, India, and Jamaica, and to a lesser extent the Philippines and Colombia. The population in 2005 was 57,000, about 44 percent African American. Queens Village remained suburban and residential into the twenty-first century.

Vincent Seyfried

Queens West. A redevelopment project along the Queens side of the East River in Hunters Point, authorized by the state legislature in 1984. The site occupies 74 acres (30 hectares), including more than 1 mile (1.6 kilometers) of shoreline between 47th Road and 54th Avenue. The proposal called for apartment towers of as much as 42 stories, as well as a four-block hotel and office complex intended to house agencies of the United Nations in New York City. Ground was not broken until September 1994, and then only for a sliver of park two blocks from the river. In 1997 the 42-story City Lights residential tower opened (Cesar Pelli and Associates, architects), and in 1998 the two-and-a-half-acre Gantry Park was completed, featuring two Long Island Rail Road gantries on the river. The 32-story Avalon Riverview opened in 2002. The site of the Pepsi-Cola bottling plant was slated for additional housing; the plant's large neon sign, a designated landmark, was moved to an adjacent location. Queens West was to have been the site of the Olympic Village had the city bid successfully for the 2012 games.

Kenneth T. Jackson

Queens Zoo. Small zoo formerly known as Flushing Meadows Zoo. Opened in 1968 on the grounds of the 1964 World's Fair, the zoo was built by Robert Moses's Triborough Bridge and Tunnel Authority and by the Metropolitan Transit Authority after Moses resigned. The zoo, which had free admission, collected American animals and had no cages. The aviary was housed in the former Winston Churchill Pavilion, a geodesic dome designed by Buckminster Fuller for the World's Fair, although it was closed for many years: the lack of any boundary between visitors and birds proved problematic. Several years after its opening, the $3.5 million zoo was still a little-known facility at 111th Street and 52nd Avenue. In 1975 several animal-rights groups advocated for closing the zoo, along with the Prospect Park and Central Park zoos, and moving the animals to the Bronx; in the late 1970s the city began negotiations with the Wildlife Conservation Society to take over management of the zoo. After an extensive $16-million renovation, it reopened in June 1992. Otis, a coyote caught in Central Park in 1999, is a resident of the zoo, which continues to focus on North and South American species, including the endangered spectacled bear of the Andes. About 250 animals and 40 different species lived at the zoo in the early twenty-first century.

Kate Lauber

Quill, Michael J(oseph) (*b* Ireland, 18 Sept 1905; *d* New York City, 28 Jan 1966). Labor leader. As a young man he fought in the Irish Republican Army before moving in 1926 to New York City, where he worked in the subway system. He helped to form the Transport Workers Union (TWU) in 1934 and the next year was elected its president. He won a seat on the City Council as a candidate of the

American Labor Party in 1937. Defeated in 1939, he was returned to office in 1943, remaining until 1949. He worked closely with the Communist Party, an influential force in the TWU, until renouncing it in 1948. As a vice president of the Congress of Industrial Organizations and the head of its council in the city, he was a leading labor spokesman and liaison between unions and city government during the 1950s. Quill's ties to communists, outspoken Irish nationalism, strong support for civil rights and other liberal causes, and repeated threats to call subway strikes made him a controversial figure throughout his career. Sharp-tongued and humorous, he was constantly an object of attention from the press and appeared often on radio and television. He died shortly after leading a 12-day strike of bus and subway workers during which he was imprisoned for contempt of court.

Joshua B. Freeman

Quinn, Anthony (Rudolph Oaxaca) (*b* Chihuahua, Mexico, 21 April 1915; *d* Boston, 3 June 2001). Actor. He made his debut on Broadway in 1947. Although best known for his work in films like *Lawrence of Arabia* (1962) and *The Guns of Navarone* (1961), he appeared in Broadway and touring productions of several plays, including Tennessee Williams's *A Streetcar Named Desire* (1961) and *Zorba* (1983–84). He maintained his principal residence in New York City into the 1990s.

Quinn, Christine (*b* Glen Cove, N.Y., 25 July 1966). Speaker of the City Council. In 1999 she ran for City Council in the third district and in 2007 became City Council speaker. A Democrat, she was the first openly gay woman on the City Council.

Jessica Montesano

Quinn, John (*b* Tiffin, Ohio, 24 April 1870; *d* New York City, 28 July 1924). Lawyer and art collector. He became a legal adviser to such clients as Thomas Fortune Ryan and was a strong advocate of the Alien Property Act (October 1917), the constitutionality of which he successfully defended in April 1920. He amassed the largest private collection of modern art and literature of his day. A patron of John Butler Yeats, Gwen John, James Joyce, Joseph Conrad, and Ezra Pound, he was also the contact in New York City for Irish artists and politicians. He incorporated the Association of American Painters and Sculptors, of which he was made an honorary member; in 1912 he arranged for the rental of the 69th Regiment Armory for its important 1913 exhibition of modern art known as the Armory Show. In addition to lending 77 items from his collection to the show, he made the largest purchase from it by a private collector. The library in his apartment at 58 Central Park West contained 18,000 items, including the complete manuscript of Joyce's *Ulysses,* a work that he defended (and lost) against obscenity charges in 1921.

B. L. Reid, *The Man from New York: John Quinn and His Friends* (New York: Oxford University Press, 1968)

Marion R. Casey

Quintero, José Benjamin (*b* Panama City, Panama, 15 Oct 1924; *d* New York City, 26 Feb 1999). Director and pioneer of Off-Broadway theater. He came to the United States to study medicine at the University of Southern California before becoming involved in the theater. He was instrumental in the rebirth of Off-Broadway theater as a viable alternative to large Broadway productions and was a founding member of the original Circle in the Square Theatre in Greenwich Village. His work helped to establish Off-Broadway theaters as venues worthy of critical and audience attention. Quintero revived interest in Eugene O'Neill and became known as the premier director of the playwright's work, staging *The Iceman Cometh* (1956), which launched the career of Jason Robards, Jr.; the Broadway debut of *Long Day's Journey into Night* (1956), in which Robards starred alongside Fredric March; *Moon for the Misbegotten* (1973); and a 1988 revival of *Long Day's Journey into Night* that included actress Colleen Dewhurst. He also directed Tennessee Williams's works, including *Summer and Smoke* in 1952 (a production that brought actress Geraldine Page to stardom) and *The Seven Descents of Myrtle* in 1968. Quintero struggled with bouts of depression and alcoholism throughout his life, and his larynx was removed in 1987 because of throat cancer. He continued to direct plays, however, with the use of a mechanical voice box until his death. The Jose Quintero Theatre at 534 West 42nd Street is named after him.

Patrick Barrett

Quintero, Luisa (*b* Toa Baja, Puerto Rico, 1903; *d* New York City, August 1987). Journalist. She began her career in New York City in 1928 writing and editing for the Spanish-language newspaper *La Prensa.* During her early years in the city, Quintero wrote or edited for other publications, including the United Nations Spanish Bulletin, and was a founder of the Puerto Rican Day Parade. She was best known for "Marginalia," the daily column she wrote for *El Diario–La Prensa* on religion, culture, education, history, current events, and politics.

Rabbinical Seminary of America. Orthodox rabbinical college opened in 1933 at 135 South Ninth Street in Williamsburg in Brooklyn and moved in 1955 to larger quarters at 92-15 69th Avenue in Forest Hills, Queens. It is alternately known as Yeshivas Chofetz Chaim. It has three elementary schools and three high schools in Queens and Brooklyn, as well as eight other schools across the United States and Canada, synagogue centers in California, Arizona, Texas, and Buffalo, and an extension program in Jerusalem. In New York City the seminary also administers Congregation Chofetz Chaim, a Hatzolah volunteer ambulance unit, and Yeshiva Rabenu Yisroel Meir Hakohen, which trains Orthodox rabbis.

Marc Ferris

Rabi, I(sidor) I(saac) (*b* Rymanów [now in Poland], 29 July 1898; *d* New York City, 11 Jan 1988). Physicist and Nobel laureate. As an infant he moved to the United States with his family. After graduating from Cornell University he earned his doctorate in 1927 at Columbia University where he established the physics research center and taught for 60 years. In 1944 he won the Nobel Prize in physics for devising a method of measuring magnetic properties of atoms, molecules, and nuclei. A consultant to the federal government, he was influential in building Brookhaven National Laboratory and advocated controlling atomic energy. Rabi wrote an autobiography, *My Life and Times as a Physicist* (1960).

James E. Mooney

radio. The technological forerunner of radio was wireless telegraphy, introduced in the United States by its inventor Guglielmo Marconi in October 1899. With the sponsorship of James Gordon Bennett, Jr., owner of the *New York Herald,* he broadcast from New York Harbor coverage of the immensely popular race for the America's Cup by following its progress from a steamship and sending frequent reports to a station at 34th Street; these were posted at the Herald Building, where crowds blocked traffic, and at bulletin boards throughout the city. The telegraph was used into the 1920s by a growing number of amateur operators ("hams") to send messages across the metropolitan area. Lee De Forest invented the audion vacuum tube in 1906 and demonstrated it in the city; in 1910 he broadcast a performance by Enrico Caruso from the Metropolitan Opera and by 1916 made regular broadcasts of music and news, including election results. Operators in the city reported on the sinking of the *Titanic,* for which the wireless was the primary source of information. The invention of the regenerative circuit in 1913 by Edwin H. Armstrong, a student at Columbia University, made earphones unnecessary for reception. By the early 1920s a growing audience in the city appreciated the potential of the telegraph. Armstrong invented frequency modulation (FM) between 1925 and 1933.

After the first radio station sponsored by a corporation began broadcasting as KDKA in Pittsburgh, the Radio Corporation of America (RCA), American Telephone and Telegraph (AT&T), and other firms established stations in New York City and the surrounding region: WJZ (1921), WEAF (1922), and WJY (1923). From late 1921 performances by Vincent Lopez and his orchestra were broadcast from the Hotel Pennsylvania, and WHN gave early exposure to such jazz musicians as Fletcher Henderson with its broadcasts from the Club Alabam on West 43rd Street. Some stations in the metropolitan area were operated by colleges, newspapers, churches, hotels, and other enterprises: WOR by Bamberger's department stores, WEVD by the Socialist Party, and WNYC by the city. In 1922 AT&T proposed a "phone booth of the air" for the city: anyone could address the public for 10 minutes in the afternoon for $50 or in the evening for $100, and eventually there would be a chain of stations. The first station to be licensed under the plan was WEAF (based during its first year on lower Broadway and then at 711 Fifth Avenue), which on 28 August 1922 broadcast the first paid advertisement (sold for $50), for a cooperative housing complex in Jackson Heights, and which aggressively exploited the commercial potential of radio. Marion Davies gave a talk called "How I Make Up for the Movies" for the beauty product Mineralava and offered autographed pictures that drew hundreds of requests, and Will Rogers was reportedly paid $1000 to speak during the *Eveready Hour.*

Initially advertising over the radio was controversial, but by the late 1920s it was the primary financial support for broadcasting. The city became the center of commercial radio after the first networks were formed there: the National Broadcasting Company (NBC; November 1926), led by David Sarnoff and comprising WEAF as its "flagship" and 25 affiliates nationwide, and the Columbia Broadcasting System (CBS; 1927), which had WOR as its flagship. In 1927 NBC was divided into the Red Network (with 19 affiliates) and the Blue Network (which offered cultural and public service programs; it was sold by NBC in 1942 and later evolved into the American Broadcasting Company). From 1927 CBS and then NBC broadcast performances at the Cotton Club by Duke Ellington and later Cab Calloway. As governor of New York in the 1920s, Franklin D. Roosevelt made broadcasting an important force in politics by discussing his decisions over the radio.

Programming for radio was influenced by cultural activities in the city. After 1929 many unemployed performers and musicians were engaged for radio programs. A brand of urban, ethnic humor made popular on the vaudeville stage in New York City by Al Jolson, George Burns and Gracie Allen, Ed Wynn, Jack Benny, Fred Allen, and Jack Pearl (as Baron Munchausen) was introduced on the radio to a national audience. Music programs were a staple for most stations: the performances of Bing Crosby, Rudy Vallee, and Arturo

FOURTH SECTION. **THE NEW YORK HERALD.** PAGES 1 TO 14.

NEW YORK, SUNDAY, OCTOBER 1, 1899.—[COPYRIGHT, 1899, BY JAMES GORDON BENNETT.] PRICE FIVE CENTS.

MARCONI WILL REPORT THE YACHT RACES FOR THE HERALD BY HIS WIRELESS SYSTEM.

COMPLETE DETAILS OF THE MARVELLOUS INVENTION BY WHICH NEWS IS REPORTED FORTY MILES AWAY WITHOUT THE USE OF WIRES.

Absolute demonstration of the value of the Marconi system of wireless telegraphy will be furnished the Western world for the first time during the yacht races this week by Signor Marconi and a corps of assistants, who will report every movement of the contending yachts to the HERALD.

This will be a feat unparalleled in the history of journalism. During the last International contest for the America's Cup the cable laying steamer Mackay-Bennett flashed the news by submarine cable to the HERALD, and thence to an eagerly awaiting world. This year there will be no cable, no wires—only the thin air and the Marconi instruments to flash the news instantaneously from the decks of the steamers Ponce and Grande Duchesse, which will follow the yachts, direct to New York.

Elaborate preparations have been made to make the service instantaneous, accurate, complete. In the following article the principles and workings of the Marconi system are described. Sufficeth it here to say that wireless telegraphy is exactly what the term implies. From a mast by means of a transmitter waves are sent to other masts, where receivers collect the waves and reduce them to the ordinary Morse alphabet, so well known to telegraphers. That is all. Electric waves pass from transmitter through the air to receiver without a wire to guide them. And this is not so remarkable when one considers that the earth is a return wire for every ordinary telegraph current. Originally Professor Morse had two wires on every line to complete the electrical circuit. It was soon found that the earth would do half the work. Every telegraph wire in the world depends on the earth to complete the electric circuit. Marconi simply dispensed with the other wire, and the air takes the place of the remaining wire, which had endured for fifty years.

This sounds complex, incomprehensible, impossible. Really it is simple. From the masts of the Ponce and Grande Duchesse waves corresponding in duration to the currents of an ordinary battery will be by a Marconi transmitter sent forth in the air. They will be received by properly adjusted receivers, connected with wires for the purpose, on the Mackay-Bennett, anchored near the Sandy Hook Lightship, where the races begin; a mast specially erected on the Navesink Highlands and a mast on top of a high building in Thirty-fourth street. From each of these three stations every movement of the Columbia and the Shamrock will be sent all over the world.

The HERALD will thus prove a boon not only to science, but to millions of persons who await with eagerness the result of a contest that has excited more interest than any in the history of the America's Cup.

That Marconi and his instruments will do all that is expected from them seems certain. During the recent British naval manoeuvres this system of wireless telegraphy was thoroughly tested, and was found to yield excellent results. Messages were received and transmitted on this occasion over a distance of more than forty miles. This in its way was even a more remarkable success than the transmission of messages between Newhaven and Dieppe, for the reason that during the manoeuvres both the receiver and the transmitter were on swift moving ships during the time that the messages were being sent.

Scientists everywhere have watched Signor Marconi's successive experiments with deep attention, and it is needless to say that they will be much interested in those which will take place during the yacht races. To the unscientific reader the term experiment may appear to be erroneous in this connection, for it may be claimed, and with much justice, that this work is no longer experimental, but as accurate and sure as any work of the kind can be. That the truth of this claim will be further manifested when the story of the yacht race is flashed from the water into the HERALD office is the firm belief of all those who know what Marconi has done hitherto.

By W. B. Bradfield.
Assistant to Signor Marconi.

A FEW words about the apparatus used and the actual working of a wireless telegraph station may not prove altogether uninteresting, and in view of the many erroneous descriptions that have already been published are perhaps necessary.

As is, of course, well known, the Marconi system is worked by means of Hertzian waves, so called after the late eminent German professor, Heinrich Hertz, who first experimentally proved their existence thirty years or so after Clerk Maxwell had mathematically predicted them.

At the New Jersey station Mr. Marconi employs the following apparatus to generate and collect these waves:—The first thing that is apparent to the observer is a tall mast, 150 feet high, from the top of which is suspended a wire—it is actually an ordinary insulated copper wire, such as is used for electric lighting purposes—which passes through a window of the operating room and is joined up inside with the apparatus. There is nothing strange in the appearance of the mast itself, and no effort is made to clothe this part of the apparatus with mystery. With regard to apparatus within the room, simplicity is the most amazing part of it. The whole apparatus is fixed on a small table about four feet long and two feet wide, and the battery for supplying the power is packed underneath it.

This battery consists of ninety-eight dry cells, which are connected up fourteen in series and seven in derivation, and is joined up in parallel with eight accumulator cells to give a steady current of six amperes. The actual generator of the waves is an ordinary inductor or Ruhmkorff coil, such as is used for the production of X rays, and is capable of giving a ten inch spark. Each end of the secondary winding of this coil is fitted with a sparking rod, to which is attached a brass ball one and a half inches in diameter.

To one of these balls is connected the vertical wire; the other is joined to earth. With the single addition of a Morse key in the primary circuit the transmitting apparatus is complete.

What Happens.

Consider for a moment what happens when this key is depressed. The immediate and apparent result is a loud, crackling spark discharge between the two brass balls, which are adjusted to be about two centimetres apart. The more important result is that the vertical wire at the moment the spark passes emits waves which go out into space in all directions, and continue to do so as long as the key is depressed. It is quite easy to understand, therefore, that by depressing the key for a short or a long period short and long series of waves or oscillations are emitted, and the Morse alphabet, which is used in ordinary telegraphy, may be employed.

The only thing that remains is to get something that will pick up and indicate the presence of these oscillations.

The apparatus which Marconi employs to do this is what is commonly known as a "coherer," a name which is due to Professor Oliver Lodge, of Liverpool. An Italian named Calzecchi was the first to discover the sensibility of coherers and filings tubes to Hertz waves. He found that metallic filings in a loose state of contact offered an appreciable resistance to the passage of a current. He found also, however, that on exposing these filings to the action of Hertzian waves the resistance fell enormously, but that on shaking them up the resistance was increased again to its original value. Marconi's coherer works on the same principle, but is vastly more sensitive and reliable than those used by Calzecchi, Branly and others.

It consists of a small glass tube about two inches long, in which two small silver plugs a quarter of an inch long are tightly fitted and separated from each other by about one thirtieth of an inch, the gap between them being partially filled with a mixture of nickel and silver filings, these metals having been found to be the most sensitive and reliable after a long series of experiments. The coherer exhausted to a vacuum of four millimetres.

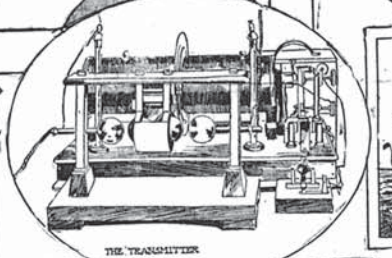
So much for the coherer. The rest of the receiving apparatus is perfectly easy to understand. In circuit with the coherer is a single dry cell and a telegraphic relay of the ordinary type. This relay is used to close the circuit of a local battery, which works a Morse writing instrument and also an electric bell hammer, which strikes the coherer a smart tap to restore it to its normal high resistance after it has received an impulse from the distant transmitter.

To protect the coherer from the too powerful effects of the local transmitter the whole receiver is enclosed in a metallic box.

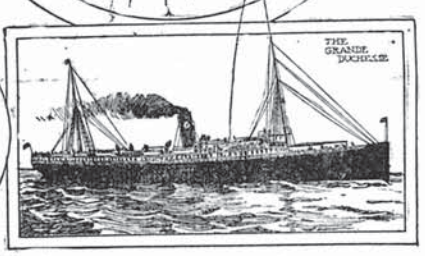
Receiving a Message.

To receive a message all that is now necessary is to connect the vertical line either directly or through a small induction coil to one end of the coherer, the other end of it being connected to earth.

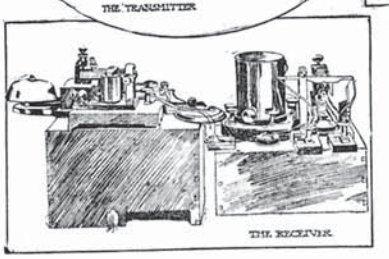
Such is the Marconi apparatus in use at the HERALD'S New Jersey land station, and it is in exact duplicate aboard the steamer Ponce, which is to report the progress of the Yacht racing this week. She has been specially rigged with a new topmast to give the same height of wire as that at the land station, and the instruments are installed in the chart house.



The distance that will have to be bridged will probably not exceed thirty-five miles; the apparatus employed would, however, be capable of sending and receiving messages at a distance of nearly eighty miles.



The chief factor in determining the distance possible is the height of the vertical wire. Mr. Marconi finds that by doubling the height the distance becomes quadrupled. That is, assuming twenty feet will give one mile, forty feet will give four miles, eighty feet sixteen miles, and so on. There are, of course, other factors, such as the sensitiveness of the coherer and the adjustment of the apparatus generally, but apparently they are not as marked in their effects.



Why this vertical wire is necessary for long distances is not very certain. It has been suggested that the earth's curvature may have something to do with it. Compare this, however, with Mr. Marconi's results in the English naval manoeuvres this summer, when with one hundred and fifty feet of wire at each end he succeeded in telegraphing seventy-five miles. To do this the waves must have passed through a "hill" of water thirty-five miles long over seven hundred feet high. More probably the vertical wire is necessary because its use lengthens the waves and propagates them in a plane vertical to the surface of the earth, and they are, therefore, less likely to be absorbed by it. The fact that the waves are lengthened of course causes them to be more penetrative and capable of affecting a receiver at a greater distance.

Of the working of a wireless telegraph station there is not much to say, as it is essentially the same as that of any other telegraph office. At present the speed of transmission is rather less; it does not ordinarily exceed about fifteen words a minute, but this will of course increase with time. A call is indicated by a bell which is switched off during the reception of a message. As before stated, the telegrams are printed in dots and dashes on an ordinary Morse inker, the operator having merely to read them from the tape.

The key used is of a slightly different form from the usual Morse key, the back contact being used to connect the vertical wire to the receiver, so that no changing over from the transmitter to the receiver is necessary after sending a message.

POPULAR EXPLANATION OF MARCONI'S METHOD

From Pearson's Magazine for July.

[Copyright, 1899, by Pearson Publishing Co.]

WHILST telegraphy is now no longer the dream of the scientist, it is an accomplished fact. A year or two ago it was thought wonderful that you could signal without wires across half a mile. Now signals have been sent over thirty-four miles. Before the century is out wireless telegraphy between America and England will probably have been accomplished, and the great ocean liners on the high seas will be able to keep up constant communication with the land on either side.

Some few months since, Mr. Marconi, whose name will be familiar to most readers of this magazine, succeeded in sending messages between the two English towns Salisbury and Bath, a distance of thirty-four miles, although there was no connection in the shape of a cable between them.

This remarkable feat did not arouse the public interest that it deserved, and has been put into the shade by Mr. Marconi's most recent achievement in telegraphing without wires between England and France.

It was on March 21 that the very first wireless message was sent across the Channel. The instruments had been taken over to France a week before in charge of two assistants, and a house, the Chalet l'Artois, at Wimereux village, two miles west of Boulogne, was hired to serve as a station.

A suitable pole one hundred and fifty feet high was then erected, and within a week from the start telegraphic communication was established between the coasts of England and France. The station on the English side is at the South Foreland lighthouse, near Dover. In the presence of the committee appointed by the French government, consisting of Colonel le Comte du Postavins de Heusey, Captain Ferrié and M. Vodenet, the first message was sent from France to England, across thirty two miles of sea, by Mr. Marconi, and the reply was promptly returned by his assistant at Dover.

It was only natural that these experiments across the English Channel should arouse more general interest than those before mentioned between Salisbury and Bath, because it is always more difficult to establish telegraphic communication between two points separated by water than two places with no water barrier between them.

Wonderful, however, as is wireless telegraphy between two fixed points, it is even more wonderful that one should be able to signal across space from a moving boat to any selected point.

During the summer of 1898 His Royal Highness the Prince of Wales spent some weeks on board the royal yacht Osborne, while slowly recovering from the effects of the serious accident to his knee which he sustained at Wadsedon Manor, while on a visit to the late Baron Ferdinand Rothschild.

The Prince had read with interest the account that had been published concerning the experiments made by a young Italian in signalling across space without the employment of connecting wires, and it occurred to him that his period of enforced rest, until the fractured knee should have quite recovered, might be considerably relieved were the system put to a practical test under his special notice.

An invitation was accordingly sent to Mr. Guglielmo Marconi, asking him to establish wireless telegraphic communication between the royal yacht Osborne and Osborne House, Isle of Wight, in order that Her Majesty might communicate with H. R. H. the Prince of Wales from Osborne House

CONTINUED ON SECOND PAGE.

Article in the New York Herald *about Guglielmo Marconi's plans to report the America's Cup using "wireless telegraphy," 1 October 1899*

Toscanini with the New York Philharmonic were heard throughout the country, and from 1935 Martin Block, one of the first disc jockeys, broadcast his *Make Believe Ballroom* on WNEW, on which he played selections by several bands rather than only one (the program became one of the most popular of the following decade). Probably the most notorious program of the time was *War of the Worlds,* Orson Welles's highly realistic radio play about an invasion of New Jersey by Martians, broadcast on the eve of Halloween in 1938. Public reaction to the play demonstrated how much New Yorkers relied on radio for news bulletins and live reports; residents created havoc as they fled their homes in panic. After the outbreak of World War II radio became a vital source of information about world events. It was still being broadcast by amplitude modulation (AM), as the commercial development of FM was thwarted by RCA until the 1950s and 1960s, when it became used mostly to broadcast classical music.

After the introduction of television the popularity of radio comedies, dramas, and variety programs broadcast by the networks declined while that of local programs featuring the music of Tin Pan Alley increased. Recorded music gained in importance and by the early 1960s accounted for some of the most popular programming in the city. Disc jockeys such as Alan Freed, Murray the K, Cousin Brucie, and Scott Muni played rock-and-roll and popular music on powerful stations like WINS, WABC, and WMCA, which adopted a format known as "Top 40" (their playlists always consisted of the 40 best-selling records). Many considered the new programs emblematic of the frenzied pace of life in the city and its growing youth culture. As AM radio was increasingly given over to top forty, FM stations like WNEW and WOR developed a new format known as "underground," or "progressive rock," in which advertisements, the banter of disc jockeys, and station identification were kept to a minimum. By the mid-1970s AM had declined in popularity. In the following decades FM stations directed their programming at narrow segments of the audience and specialized increasingly in one type of programming: Top 40 (which remained the dominant format), oldies, easy listening, country, rhythm and blues, rap, jazz, classical music, foreign-language programming, news, and talk. Controversial disc jockeys like Howard Stern also became popular for developing a genre known as "shock," or "raunch," radio, characterized by savage humor and sexual innuendo. Broadcasters in the 1990s sought to cater to the diverse population of the city, which remained a national center for radio broadcasting.

In the early twenty-first century subscription satellite radio transformed the airwaves. XM Satellite Radio and Sirius Satellite Radio began broadcasting in 2001 and 2002, respectively, and the two merged in 2008; Sirius XM is headquartered at Rockefeller Center and broadcasts 130 channels. Subscription satellite radio attracted Stern and other New York shock jocks like Opie and Anthony because it provided freedom from Federal Communications Commission regulations. Internet radio stations also abounded, and stations like WNYC allowed audiences to listen to live radio broadcasts online or as downloadable podcasts.

Radio City Music Hall. Large indoor theater situated at Rockefeller Center. Conceived by Samuel Rothafel as a palatial entertainment center affordable to the general public, it was designed by Donald Deskey in the art deco style with an opulent interior and 5874 seats and opened on 27 December 1932 with a performance by Martha Graham, Ray Bolger, and Gertrude Niesen. The ceiling gives the illusion of a giant sunset; three large elevators on an enormous stage make possible fast and extensive scene changes and such effects as whole choruses rising up through the floor. The opulent foyer has a ceiling 60 feet (18 meters) high and drapes extending from the ceiling to the floor, ornate mirrors, and long, slender chandeliers. Soon after its opening the theater offered programs combining feature films with stage shows, a format that remained popular for almost 50 years. In 1979 the interior was declared a landmark and restored. Under Robert Jani's direction the theater became principally a venue for live spectacles and television events. Among the events staged there in the 1980s and early 1990s were the Grammy Awards, performances by the Moscow Circus, the annual Radio City Christmas Spectacular, and concerts by Michael Jackson, Frank Sinatra, Liza Minnelli, and Shirley MacLaine. In the early twenty-first century the hall continues to draw international music stars and is frequent host to the Grammys, the Tony Awards, the MTV Music Awards, and the Daytime Emmy Awards; the Christmas Spectacular is seen by more than a million people each year. The best-known act to perform at Radio City Music Hall is the Rockettes, a company of 36 long-legged, bejeweled dancers who first appeared in 1933 and soon became emblems of the entertainment business and the city.

ragtime. The term *ragtime* is probably derived from "ragged time," a phrase that evokes the syncopated rhythms of the music. Its beginnings in New York City may be traced to the minstrel shows of the 1880s, but ragtime did not become popular until 1896 when singer and pianist Ben Harney introduced it to the city's vaudeville stages. Piano ragtime quickly developed into an improvised idiom that prefigured jazz and lent itself to performance competitions, such as one held at Tony Pastor's vaudeville house in 1900, in which Mike Bernard was declared the reigning champion of ragtime. Although it is frequently thought of exclusively as piano music, ragtime was also played by instrumental ensembles and was even more popular as a song style marked by lively rhythms and often by lyrics in African American dialect. Ragtime of all types was heard often in African American cabarets. During the first decade of the twentieth century the outstanding cabarets were in the Tenderloin and Black Bohemia districts (on the West Side from the 20s to the 50s) and in the "Jungles" (the West 60s). These clubs included Ike Hines's (West 27th Street), the Douglass Club (West 31st Street), Barron Wilkins's Savoy Club (West 35th Street), the club at the Marshall Hotel (West 53rd Street), and Jim Allen's (West 61st Street). In the second decade of the twentieth century the leading cabarets were in the West 130s in Harlem and included Leroy's, Barron's Astoria Cafe, and Connor's Royal Cafe. Well-known pianists heard at these clubs included Eubie Blake, James P. Johnson, Willie "the Lion" Smith, Luckey Roberts, and Jelly Roll Morton, all of whom were published composers as well. Scott Joplin and his protégé Joseph F. Lamb, both living in New York City at the time, were atypical in that they were major composers of piano ragtime who were not also active as performers. The most important composer of vocal ragtime was Irving Berlin, who composed the song "Alexander's Ragtime Band" (1911).

Ragtime was disseminated nationwide principally through sheet music, and most of the largest publishers were in New York City. At the turn of the twentieth century many of these publishers were on a single block—West 28th Street between Broadway and Sixth Avenue—which became known as Tin Pan Alley because of the clamor of piano playing and singing emanating from the offices there. As publishers moved elsewhere in the city, Tin Pan Alley came to refer to the entire music publishing business. Most purchasers of ragtime sheet music were young. Older generations usually disapproved of the music: whites did so because they feared the effects of African American music on impressionable white youth, and many African Americans did so because they feared that their own youth would be corrupted by a music associated with brothels and cabarets and because they found the texts of ragtime songs racially demeaning. In New York City this disapproval was manifested officially as ragtime was banned from the free pier concerts in the summer of 1902 and from school music programs in 1914.

Ragtime was always associated with dances. In the early days these included the cakewalk, the two-step, the slow drag, and the syncopated waltz. During the second decade of the twentieth century new dances associated with ragtime proliferated: the grizzly bear, the turkey trot, the fox trot, the one-step, the hesitation waltz, and two Latin American dances that shared some of the rhythmic traits of ragtime, the tango and the maxixe. These new dances were eagerly learned by the middle and upper classes, prompting the installation of dance floors at elegant restaurants in midtown (known as "lobster palaces"), including Murray's Roman Gardens, Bustanoby's, Rector's, and Martin's Café de l'Opéra. The leading musician associated with these new dances was James Reese Europe, whose work with the dance team of Vernon and Irene Castle helped to make his recordings well known throughout the country.

About 1917 the popularity of ragtime declined, but many of its elements were retained in jazz and in such idioms as novelty piano and Harlem stride. During the 1940s ragtime was rediscovered by bands seeking to reclaim the roots of jazz: although their popularity was short-lived they inspired an interest in ragtime that led to the formation of fan clubs and to research by collectors of sheet music, recordings, and piano rolls. These activities had only a limited influence until the 1970s, when Scott Joplin's music, fashioned into a film score for the movie *The Sting,* won an Academy Award and launched a nationwide ragtime revival.

Rahv, Philip [Greenberg, Ivan] (*b* Ukraine, 10 March 1908; *d* Cambridge, Mass., 23 Dec 1973). Editor. As an editor of the *Partisan Review* from 1934 to 1969 he helped to shape intellectual life in New York City. A communist early in his career, he became a leading anti-Stalinist after 1937, supported World War II, opposed McCarthyism, and was skeptical of the intellectual fashions of the 1960s. Rahv took pride in promoting new writers, including Delmore Schwartz and Saul Bellow. In such works of literary criticism as *Image and Idea* (1949) and *The Myth and the Powerhouse* (1965) he rejected the methods of "New Criticism" and emphasized the need to interpret literature within its cultural context.

Terry A. Cooney

railroad apartments. Apartments with narrow, oblong layouts recalling those of railroad cars. They had no hallway, and each room opened directly onto the next. The railroad apartment became prevalent in multistory tenement buildings in New York City after 1850 when available land was becoming scarce and the demand for housing was increasing. The buildings usually stood on lots with 25 feet (8 meters) of frontage and a depth of 100 feet (30 meters), contained an average of four railroad apartments on each floor, often occupied more than 90 percent of their lots, and had windows only at the front and rear, causing interior rooms of the apartments to be narrow, dark, and poorly ventilated.

Craig D. Bida

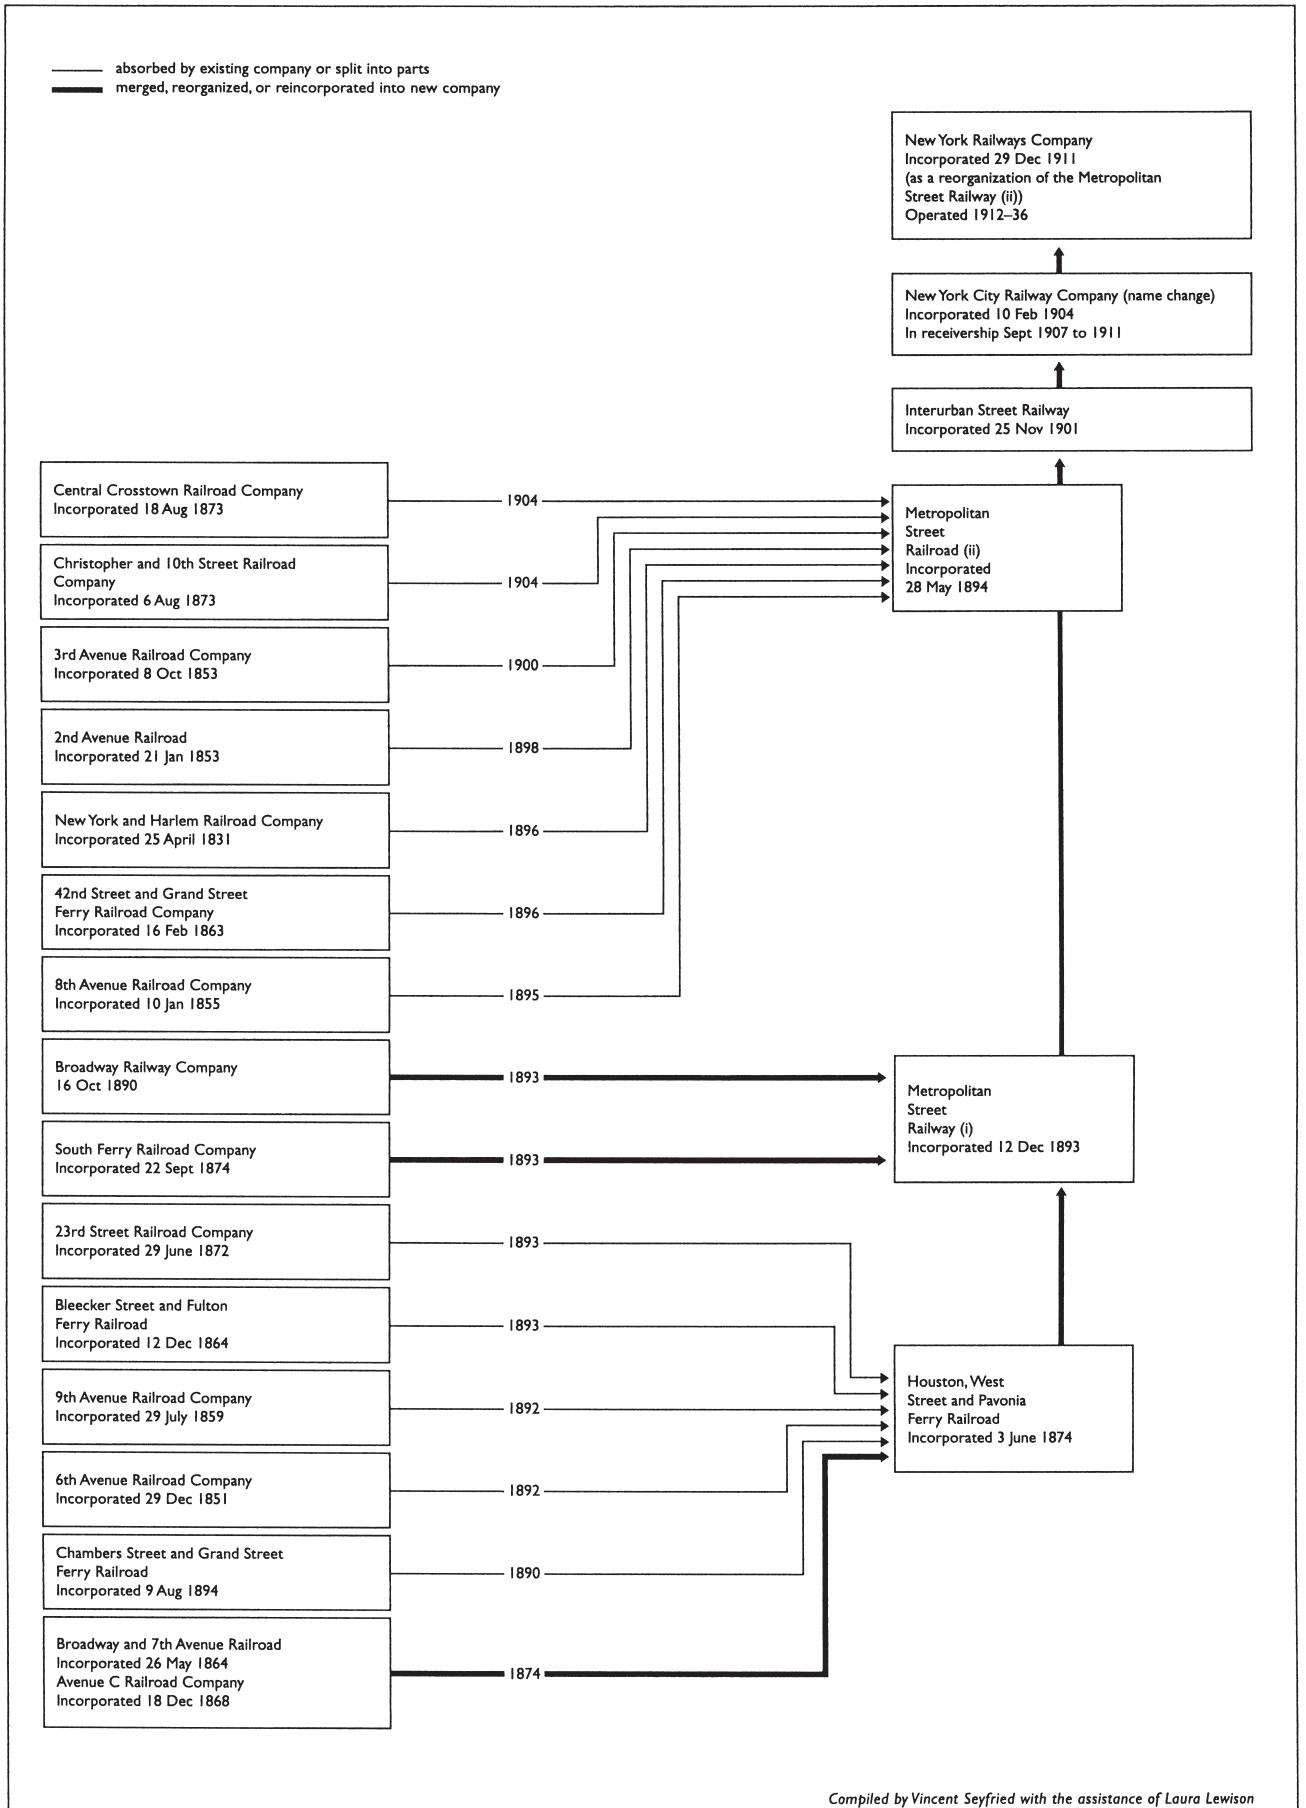
railroads. Freight and passenger rail have played an important role in the development of New York City. Although freight trains have been surpassed by airplanes and trucks, New York City remains much more dependent on passenger rail service than other cities in the United States.

1. To 1900

The age of the railroad in New York City began on 24 November 1832 when the New York and Harlem Railroad began service connecting Union Square with 23rd Street and Fourth Avenue. Service in Brooklyn began on 1 April 1836 when the Brooklyn and Jamaica Railroad began running along Atlantic Avenue. The Brooklyn and Jamaica also built a tunnel 3000 feet (900 meters) long under Atlantic Avenue between Boerum Place and Willow Street to serve a shoreline freight terminal; in 1861 the city banned steam service in the tunnel, which was then sealed. The Long Island Rail Road (LIRR) was chartered on 24 April 1834 to construct a line between Brooklyn and Greenport, with the purpose

View of Grand Central Station from Fourth Avenue, ca *1896*

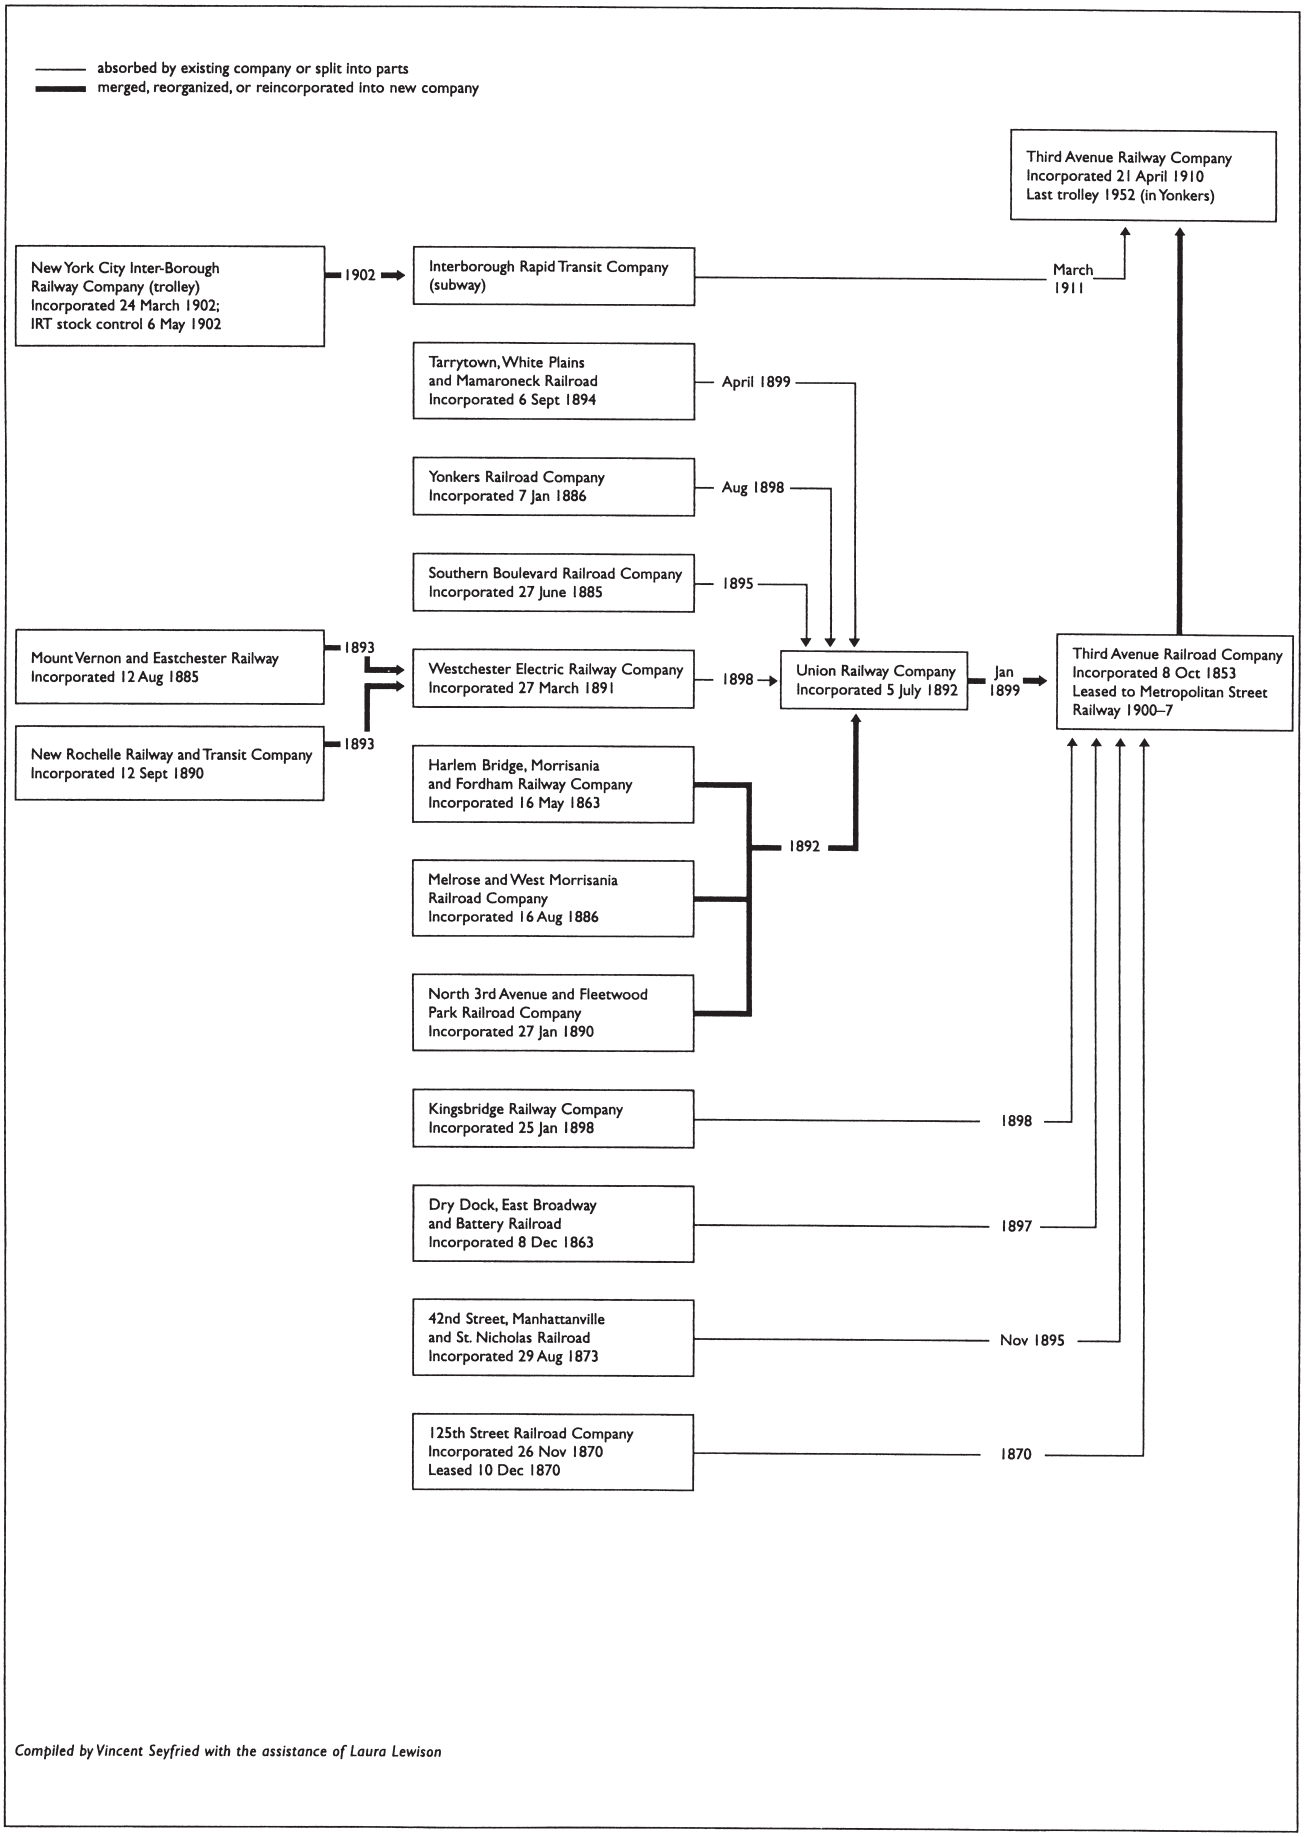
of improving connections between New York City and Boston. Lease of the Brooklyn and Jamaica provided direct service between the East River and eastern Long Island. Steam service was introduced in the city in 1837 by the New York and Harlem Railroad, which built a freight depot two blocks south of Canal Street between Franklin and White streets, and a line along Fourth (now Park) Avenue between 125th Street and a terminal between 26th and 27th streets; until 1876 the city required that the trains be powered by horses south of 32nd Street. The New Jersey Rail Road was the first rail company to establish regular ferry service between New Jersey and Manhattan (1838). The New York and Harlem Railroad built a bridge over the Harlem River in 1840 and completed the Williams Bridge over the Bronx River in 1842. In 1844 the LIRR reached Greenport, and the New York and New Haven Railroad was incorporated; it connected with the Harlem line just northeast of Woodlawn Cemetery and began service from New Haven, Connecticut, to Manhattan in 1848, sharing track and renting terminals in Manhattan and the Bronx that belonged to the Harlem line. The completion of the New York and New Haven Railroad hastened the suburban development of the coastal regions of eastern Westchester County and southern Connecticut. It also took the business of the LIRR, which was forced into receivership in 1850.



Steam rail service linking Manhattan with the Bronx and the rest of the mainland was begun in October 1851 by the New York and Hudson River Railroad, which had been chartered in 1846 and had track running along the eastern bank of the Hudson River to Rensselaer. This was the first line to carry freight directly into Manhattan, and it played a role in developing the Upper West Side. Later the railroad was enjoined from using steam engines south of its terminal at 30th Street and 11th Avenue and so carried cargo by horse to its warehouse and handling center on Chambers Street. The first railroad to provide service between the Midwest and the Great Lakes and the western shore of the Hudson River was the New York and Erie Railroad, which in October 1852 leased three small rail systems in northern New Jersey. In 1853 the Harlem line acquired a local track between Melrose and Port Morris in the southeastern section of the Bronx. Settlement on the Upper East Side and in parts of the Bronx and lower Westchester County was aided by the Harlem line, which ran as far upstate as Chatham by 1857. In 1861 the New York and Erie Railroad built elaborate terminal facilities at Jersey City. These and similar facilities of the Delaware, Lackawanna and Western Railroad in Hoboken, New Jersey, and the New Jersey Central Railroad in Jersey City placed New York City, its market, and its port within reach of the coalfields of Pennsylvania. By 1863 two rail routes joined New York City and Philadelphia: that of the Pennsylvania Railroad; and one formed by the New Jersey Central Railroad and the Philadelphia and Reading Railroad (which had a junction in Trenton, New Jersey). More than 50 railroads were built in Brooklyn during the nineteenth century; many were horsecar lines that were electrified and converted into trolley lines during the 1890s. The first, opened on 3 July 1854 by the Brooklyn City Railroad, ran from Fulton Ferry to Marcy and Myrtle avenues.

The rest of the track on Long Island was laid by five small commuter railroads that were eventually absorbed by a renascent LIRR. By 1860 the LIRR was a fully developed commuter railroad that helped to settle outposts formerly considered remote, such as Flushing and Maspeth. All tracks fed into a terminal in Flatbush owned by the company and into a large facility at Hunter's Point in Long Island City on the East River, which was connected with Jamaica in 1861; until 1910 Hunter's Point was the interchange point for all traffic bound to the LIRR in Manhattan and included a freight station, passenger areas, ferries, docks, a coach yard, an engine house, and a machine shop. The first railroad in Staten Island was the Staten Island Railway (SIR), completed in 1860, which ran between Clifton and Tottenville. Renamed the Staten Island Rapid Transit Railroad (SIRTRR), it built a line along the northern shore and connected at Cranford Station, New Jersey, with the Lehigh Valley Railroad and the New Jersey Central (later renamed the Central Railroad of New Jersey). In the 1880s the Baltimore and Ohio Railroad, the first railroad company established in the western hemisphere, began providing financial backing for the SIRTRR and acquired full control in 1899, including the connecting ferries to Manhattan (in 1905 the ferries were transferred to New York City's government, in response to a 1901 accident).

Cornelius Vanderbilt became a lessee of the highly successful Harlem line, acquired a majority of its stock in 1864, and built a large freight and passenger terminal at St. John's Park, bordered by Varick, Hudson, Beach, and Laight streets just south of Canal Street. In 1867 he became the president of the New York Central Railroad, a trunk line from Albany to Buffalo with connections to the Midwest. He soon recognized that separate terminals in Manhattan were an inconvenience to passengers and reduced profits, so in 1869 he consolidated the New York and Harlem Railroad and the New York and Hudson River Railroad to form the New York Central and Hudson River Railroad, connecting the lines with a track between Spuyten Duyvil and Morrisania in the Bronx. He then excavated a site between 42nd and 57th streets and Lexington and Madison avenues for the Grand Central Depot, which was completed in 1871. Trains were run in an open cut to obviate dangerous grade crossings on Fourth Avenue.



Between 1865 and 1900 terminals were built along the shore of New Jersey by several railroads, including the New York, Ontario and Western Railroad and the New York, West Shore and Buffalo Railroad, both of which established terminals in Weehawken. Several trunk lines provided rail service from the

Midwest and the Great Lakes to the western shore of the Hudson River. In 1868 the New Haven line added a short spur from New Rochelle in lower Westchester County to Port Morris in the Bronx to increase its freight capabilities and provide ferry service between connecting lines at Jersey City. Freight service to New Jersey allowed the shipping of goods to the metropolitan region from the South and the West, particularly coal and food. New York City was then the busiest port in the world and the hub of a vast shipping network.

The New York and New Haven Railroad built rail yards in the Bronx at East 132nd Street (Harlem River) and East 149th Street (Oak Point). It had almost a monopoly in New England and changed its name to the New York, New Haven and Hartford Railroad in 1872. The Pennsylvania Railroad built extensive facilities on the Hudson riverfront (Jersey City) in 1876 that included a new station, repair and maintenance shops, freight-handling terminals, and ferry and lighterage docks for conveying passengers and cargo across New York Harbor. The LIRR passed into a second receivership in 1877 and was restored to solvency only after Austin Corbin bought a majority of its stock in 1880. To gain access to the markets of the city, the Philadelphia and Reading Railroad obtained control of the system operated by the Central Railroad of New Jersey in 1883.

During the same era steam-powered elevated railroads appeared in Manhattan and Brooklyn. Between 1867 and 1881 four north-south routes were built in Manhattan along Second, Third, Sixth, and Ninth avenues; beginning in 1887 an extension of the Second and Third avenue routes was built farther northward into the Annexed District (the Bronx). This entire system ultimately became the Manhattan Railway Company. In Brooklyn the first elevated was the Lexington Avenue line, opened on 13 May 1885 by the Brooklyn Elevated Railroad. Several lines ran directly to Coney Island, where many workers spent their leisure time: the Prospect Park and Coney Island Rail Road; the New York and Sea Beach Railway; the Brooklyn Bath and West End Rail Road; the Brooklyn, Flatbush and Coney Island Railway; and the Brooklyn, Canarsie and Rockaway Beach Rail Road were in service by 1890 (these lines later became part of the city's subway system). Most elevated lines and trolley lines in Brooklyn came under the control of the Brooklyn Rapid Transit Company. Trolley traffic in Brooklyn was so busy that the baseball team there, the Dodgers, was named for a local practice known as trolley dodging. The Lehigh Valley Railroad in 1891 reached Jersey City, to which it provided service from the Midwest via Buffalo. In 1897 the New York Central and Hudson River Railroad improved service to Manhattan with a four-track bridge over the Harlem River. The railroads around the city hastened the industrialization of southern Bronx, Long Island City, and New Jersey between the ports of Weehawken and Elizabeth, and along the waterfront in Brooklyn and the western shore of the East River in Manhattan. Residential settlements developed along commuter routes and increased land values in Queens, the Bronx, and Brooklyn.

2. After 1900

The Pennsylvania Railroad increased its share in the railroads of the city by buying a majority of the stock of the LIRR in 1900. Takeovers and consolidations became commonplace as financiers like Vanderbilt, Jay Gould, Daniel Drew, and J. P. Morgan engaged in railroad speculation. Overlapping corporate directorships, competition in a constricted market, and superfluous and unconnected rail networks embroiled the rail companies as well as the municipal, state, and federal governments in scandal and confusion.

By the turn of the century the network of rails in the area was complete but lacked facilities for direct shipment of goods from rails to ships (except in New Jersey); therefore, other forms of transport were also used. Almost every line that served the Port of New York built elaborate facilities for equipment maintenance and freight handling, including those along the Hudson River from Christopher Street to 23rd Street, the rail compound between 60th and 72nd streets operated by the New York Central and Hudson River Railroad, the large yard at Mott Haven, and extensive facilities along the waterfront in Brooklyn. Upper New York Bay and the rivers around the city were crowded with ferries shuttling passengers from New Jersey and Long Island City to Manhattan. Loaded railroad cars were carried by floats, and goods were transferred from rail to ship by lighters (specially designed freight ferries).

Several carriers with terminals in New Jersey extended rails into the heart of the city. The Hudson and Manhattan Railroad, a subway system, built the first tunnel under the Hudson River to the city, offering service between Newark, Jersey City; Hoboken; and Manhattan from 1908. The Pennsylvania Railroad (PRR) had a tunnel dug under the Hudson and East rivers, principally by Irish and Italian laborers. With the permission of a charter granted by the Common Council in 1902, the company built Pennsylvania Station between 31st and 33rd streets and Seventh and Eighth avenues to rival Grand Central Depot and serve passengers on the Pennsylvania and Long Island railroads. The well-known architectural firm of McKim, Mead and White designed the station, which opened for the LIRR on 8 September 1910 and for the PRR on 27 November 1910. To the east the Pennsylvania electrified its lines initially to Sunnyside where it built what was then the largest coach yard in the world. With the New York, New Haven and Hartford Railroad, the Pennsylvania improved the circulation of through-traffic by building the New York Connecting Railroad, which linked the PRR and LIRR with the New Haven line at Port Morris over the elaborate Hell Gate Bridge. About this time the New York Central and Hudson River Railroad rebuilt Grand Central Depot according to the ambitious plans of the engineer William J. Wilgus. He envisioned a terminal with 67 tracks along double levels and a highly sophisticated signaling and interlocking system that could efficiently serve 70,000 passengers an hour while concealing the train traffic. Completed in 1913 and renamed Grand Central Terminal, the facility was the largest railroad complex in the world.

Concurrent with main line railroad developments, New York City provided capital funds for new underground rapid transit routes (subways) and gave two private companies franchises to operate these routes, which encompassed all boroughs excepting Staten Island. The Interborough Rapid Transit (IRT) began operations in 1904; a year earlier it leased for 999 years the Manhattan Railway network (in Manhattan and the Bronx) in order to coordinate operations with the new subways. The Brooklyn Rapid Transit Company (BRT) had acquired control of all Brooklyn elevated routes by 1900. In 1913 the so-called dual contracts allowed the IRT and BRT operating rights over a large network of new subways in all boroughs except Staten Island.

The pollution from steam-powered trains operating in closed tunnels drew criticism from urban reformers and lowered property values along routes where trains ran above ground or in open cuts. Public complaints prompted several companies to undertake the demanding project of electrifying their lines. The LIRR's Atlantic Avenue (Brooklyn) route and connecting lines through Queens to Far Rockaway and Rockaway Park were electrified using a third-rail system in 1905, which represented the first large-scale railroad electrification in North America; the remaining LIRR routes in Queens were electrified between 1908 and 1917 as part of the overall Penn Station project. The PRR's main line west from Penn Station into New Jersey was initially electrified using the same third-rail system that extended to a junction just east of Newark known as Manhattan Transfer, where steam power took over. In 1935 an overhead catenary system replaced the third rail and ultimately was used on the entire route to Philadelphia and Washington, D.C. Lines were electrified by the New York Central and Hudson River Railroad between Grand Central Terminal and Harmon, New York (Hudson Line), and White Plains, New York (Harlem Line) in 1906, using an unusual under-running third-rail system, and by the New York, New Haven and Hartford Railroad between Woodlawn Junction (Bronx) and

New Haven by 1914 using an overhead catenary. Electrification altered the landscape of Park Avenue. Between 1921 and 1924 the New York Central and Hudson River Railroad covered the train yards that stretched to 57th Street and the open cut that ran up the middle of Fourth Avenue; it then rented the air rights above its property, and a new complex of hotels and office buildings known as Terminal City changed the character of midtown Manhattan. Park Avenue then became one of the most fashionable residential streets in the world.

Despite these improvements the railroads remained inadequate and congestion increased during World War I. When bottlenecks on the rails threatened the war effort, the federal government formed the U.S. Railroad Administration in December 1917 to operate the rails. Locally the BRT declared bankruptcy and was succeeded by the Brooklyn Manhattan Transit Company after a severe accident on 1 November 1918 at the Malbone Street (now Empire Boulevard) underpass. The Port of New York Authority was formed in April 1921 to increase freight-handling capabilities in the region. The authority was caught between public and private interests and hindered by jurisdictional conflicts (between state and city and between New York and New Jersey), and it eventually abandoned the rails to promote highways and airports. Also in 1921 the Erie Railroad began using trucks to transport freight, and traffic on the waterways around the city declined as other railways followed. A decade later the Port of New York Authority opened the first rail and truck terminal, the Union Inland Freight Station, between Eighth and Ninth avenues and 15th and 16th streets. In 1925 the Baltimore and Ohio's (B&O) Staten Island Railway was electrified using a subway-type third rail and cars.

By the 1930s changes to the rail system were hastened by corporate debt, mismanagement, and competition from trucks, buses, and airplanes. The Depression forced the New York, New Haven and Hartford Railroad to file for bankruptcy in 1935, marking the ascendancy of the automobile; this bankruptcy lasted until 1947. In the mid-1930s the New York Central relocated its West Side freight tracks from 11th Avenue into a depressed cut south of 59th Street, and north of 72nd Street it relocated its riverside tracks into a new tunnel constructed as part of Robert Moses's Henry Hudson Parkway project. In June 1940 New York City purchased the Brooklyn–Manhattan Transit and IRT companies and merged both into the Board of Transportation (which already operated the Independent Subway System) to form the New York City Transit System (today, the New York City Transit Authority).

Although the number of rail passengers peaked during World War II and the Port of New York remained the busiest in the nation until 1960, the railways in the region lost about two-thirds of their passenger traffic and half their freight tonnage between 1945 and 1970. Companies abandoned their facilities along the waterfront in New Jersey and their yards in Mott Haven, as well as rights of way throughout the region; the New York Central and Hudson River Railroad abandoned its yard on the Hudson River between 60th and 72nd streets. Several bankruptcies, mergers, and takeovers also occurred. In 1957 the state legislatures of New York and New Jersey established the Metropolitan Rapid Transit Commission, which recommended a rapid transit loop system connecting Manhattan with various commuter railroad terminals in Hudson County, New Jersey. Nothing ever came of this recommendation, but in 1962 the Port of New York Authority purchased the bankrupt Hudson and Manhattan Railroad, which became the PATH (Port Authority Trans-Hudson) system.

Railroads in the metropolitan region continued to decline during the 1960s. The New York, New Haven, and Hartford Railroad entered a second and final bankruptcy in 1961. The landmark Pennsylvania Station was demolished in 1964 and replaced by a smaller underground station and a new Madison Square Garden above street level. In the following year the State of New York, as directed by Governor Nelson A. Rockefeller, purchased the troubled LIRR and took over its operation; in March 1968 it became part of the much larger Metropolitan Transit Authority (MTA). Later that year the Interstate Commerce Commission effected what was then the largest corporate merger in history by joining the three largest metropolitan rail companies—the New York Central, the Pennsylvania, and the New Haven railroads—to form the Penn Central Corporation, which ultimately failed in 1970; in 1971 the administration of its long-distance passenger lines was assumed by the National Rail Passenger Corporation (Amtrak), an agency newly established by the federal government. Despite this assistance, several railroads in the area remained bankrupt, particularly in New Jersey. Besides the Penn Central, this group included the Erie–Lackawanna, the Central of New Jersey, the Reading, the Lehigh Valley, and the Lehigh and Hudson River. The United States Railway Association formed the Consolidated Rail Corporation (Conrail) to take over commuter and freight operations of these six railroads in April 1976.

The MTA continued to manage service on the LIRR and after 1971 leased commuter operations on the Hudson, Harlem, and New Haven lines to the Penn Central Conrail, and in conjunction with the New Jersey Department of Transportation leased services between Hoboken, N.J., and Manhattan, and to Rockland and Orange counties in New York. The passenger service of B&O's Staten Island Railway came under MTA operation in 1971. To prevent Conrail from becoming a permanent government agency, the federal government during President Ronald Reagan's administration sought to make it attractive to private buyers. Conrail was divested of its commuter operations, which required large investments of labor and capital, on 1 January 1983. The MTA created a new subsidiary, Metro-North Commuter Railroad, to operate the Hudson and Harlem lines, as well as the New Haven line, for which it shared jurisdiction with the Connecticut Department of Transportation. New Jersey Transit, an agency established by the State of New Jersey in 1979, in 1983 assumed responsibility for managing the complex commuter rail systems in the Garden State, which fed into Newark, Manhattan's Pennsylvania Station, and the former terminal of the Erie–Lackawanna at Hoboken. After 1983 the federal government dismantled the U.S. Railroad Administration and in 1987 sold to private buyers its share of 85 percent in Conrail, which by 1991 was a prosperous freight carrier. In 1999 Conrail in turn was split and roughly equal portions were sold to CSX Transportation and Norfolk Southern, the two largest freight railroads in the United States east of the Mississippi River. In 2000 the CSX route along the Hudson's east bank between Albany and the Bronx was significantly improved when the New York State Department of Transportation opened its 1.9-mile (3-kilometer) Oak Point Link, which connects High Bridge (just north of Yankee Stadium) to the Harlem River and Oak Point yards in South Bronx. The link eliminated a complicated interface with MTA Metro North Railroad and permitted CSX to use the Hell Gate Bridge for access to Queens, Brooklyn, and Long Island. Both CSX and Norfolk Southern railroads continued to provide freight service into New York City in 2008.

In the early twenty-first century New York City's metropolitan population depended more heavily on commuter rail than did the residents of any other area in the United States. To meet this demand, beginning in the late 1980s, the commuter and intercity rail operators undertook major capital projects that altered the city's railroad landscape. In 1987 the LIRR constructed a new passenger train yard west of Penn Station, on the site of the New York Central's old freight facility, between 30th and 33rd streets and 10th and 12th avenues; in 2008 the MTA was reviewing proposals to lease the air rights over this facility. Amtrak in 1990 rerouted its New York–Albany–Buffalo traffic from Grand Central Terminal to Pennsylvania Station, thus consolidating all New York intercity trains there, by restoring the Spuyten Duyvil Bridge and using the old New York Central freight tracks on Manhattan's West Side. The LIRR replaced its electric car repair shops in Morris

Park, Queens, with the Hillside Maintenance Complex, a modern facility in Hollis, Queens, covering 26 acres (11 hectares).

New Jersey Transit completed three important projects that vastly improved Manhattan access for Erie–Lackawanna lines formerly terminating only at Hoboken. The Kearny Connection (1996) allowed Morristown and Gladstone Line trains a direct entrance into Penn Station; the Montclair Connection (2002) did the same for the combined Boonton and Montclair branches. In 2003 a huge new station in Secaucus, New Jersey, permitted passengers to transfer between diesel-powered train services based at Hoboken and electric trains operating to and from Penn Station. Thus, rail customers originating in Bergen, Rockland, and Orange counties received Penn Station access. In 2008 New Jersey Transit was designing a new trans-Hudson tunnel to double its capacity into the Penn Station vicinity.

Also in 2008 the LIRR East Side Access project was constructing new tunnels in Queens and Manhattan, enabling trains to use the previously unused lower level of the 63rd Street tunnel originally built in the 1970s. In Queens a connection to existing LIRR lines in the Sunnyside area is under construction. On the Manhattan side, new tunnels will lead to a new terminal directly below Metro-North's existing Grand Central; the entire project is scheduled for completion in 2013.

The LIRR, the largest commuter line in North America, carried 282,000 passengers on an average weekday in 2006; Metro-North carried about 260,000. New Jersey Transit carried about 250,000 weekday riders, which included trips on lines operating from Hoboken through Bergen County (New Jersey) terminating in Rockland and Orange counties (New York) operated jointly with Metro-North. The vast majority of these riders traveled to or from Manhattan's two rail terminals or accessed Manhattan via rapid transit connections at Brooklyn (Atlantic Terminal), Queens (Long Island City), Hoboken, and Newark.

Carl W. Condit, *The Port of New York: A History of the Rail Terminal System* (Chicago: University of Chicago Press, 1980, 1981)

John Fink, Andrew Sparberg

Rainbow Room. Restaurant and nightclub opened in the new RCA Building (later the GE Building) in Rockefeller Center in October 1934. It was the first large dining and dancing club atop a modern skyscraper. The name was inspired by an organ on the premises that translated music into shifting color patterns. For many decades the restaurant was considered one of the most elegant in New York City. It offered stunning views of the skyline and a revolving dance floor and over the years featured the music of Duke Ellington, Noël Coward, and other leading performers. A renovation in 1974 at a cost of $25 million restored the restaurant's grandeur. In 1998 the Cipriani family, known for its Italian restaurants across New York and the world, took over the operation of the Rainbow Room. Restaurant operations ceased in the summer of 2009, when the Ciprianis surrendered possession of the restaurant. As of 2010 a new operator had not been named, and the bar, restaurant, and banqueting facilities remained closed.

James Bradley

Raines Law. Law passed by the New York State Legislature in 1896 to discourage the consumption of alcohol and increase state revenue. Introduced by Senator John Raines and passed at the urging of the state Republican leader Thomas C. Platt, it replaced local (often Democratic) excise boards with a state (often Republican) excise commission, raised liquor license fees, and limited the sale of liquor on Sundays to hotels. When the excise commission defined a "hotel" as an establishment that served meals and had at least 10 furnished rooms to let, many taverns in the city qualified by renting tenements in the buildings that they occupied. Reformers including Charles H. Parkhurst and William Travers Jerome denounced these "Raines Law hotels" for prostitution and gambling; journalist Lincoln Steffens emphasized their corruption of police officers. Efforts to shut down the hotels were opposed by those who argued that workers had a right to drink on their only day off, including many Germans, Czechs, and others whose votes could swing mayoral elections in New York City. Battles over the enforcement of the Raines Law bedeviled police commissioners from Theodore Roosevelt to Francis V. Greene and gave Mayors William L. Strong and Seth Low reputations for puritanism that may have contributed to their failure to serve more than a single term.

David C. Hammack

Ramaz School. Coeducational Jewish day school opened in 1937 by Joseph H. Lookstein. Its name is derived from letters contained in the name of the rabbi Moses Z. Margolis. The school was among the first Orthodox Jewish day schools to have a curriculum comparable to that of secular high schools. Ramaz offers both a traditional general curriculum and a comprehensive Judaic studies program. In 2006 it had a combined enrollment of about 1100 in the lower school (nursery to the eighth grade) at 125 East 85th Street and the upper school (ninth to 12th grades) at 60 East 78th Street.

Erica Judge

Ramblersville. Name applied until 1916 to Howard Beach.

Rand, Ayn [Rosenbaum, Alissa] (*b* St. Petersburg, 2 Feb 1905; *d* New York City, 6 March 1982). Philosopher and novelist. She moved to the United States in 1926 and to New York City in 1951 and formulated a philosophy of radical individualism "upholding capitalism in politics, egoism in ethics, and reason in epistemology." In reclusion she wrote essays and books that became available at the Objectivist Book Service on East 34th Street. The Nathaniel Branden Institute offered information and courses about objectivism from 1958 to 1968. During the 1960s Rand acquired a following on college campuses; her program "Commentary" was broadcast by the radio station WBAI, and "Ayn Rand on Campus" was broadcast by WKCR, the radio station of Columbia University. Rand's best-known works are novels such as *The Fountainhead* (1943) and *Atlas Shrugged* (1957) that exemplify her philosophy; she also wrote *We the Living* (1959) and *The Virtue of Selfishness* (1964). She is buried in Kensico Cemetery in Westchester County.

David A. Balcom

Randall, Tony [Rosenberg, Leonard] (*b* Tulsa, Okla., 26 Feb 1920; *d* New York City, 17 May 2004). Actor. He attended Northwestern University and Columbia University, and studied at the Neighborhood Playhouse with Sanford Meisner. He made his debut on Broadway in 1941, later appearing in Rudolf Besier's *The Barretts of Wimpole Street* (1947), *Antony and Cleopatra* (1948), George Bernard Shaw's *Caesar and Cleopatra* (1950), and Jerome Lawrence and Robert E. Lee's *Inherit the Wind* (1955–56). He became best known for his performance as the fastidious Felix in the television series *The Odd Couple* (1970–74), based on the play by Neil Simon. For many years Randall lived in a 10-room apartment in the Beresford at 81st Street and Central Park West. In 1991 he founded a nonprofit subscription company called the National Actors Theatre to stage works by Gogol, Ibsen, Shaw, and others at popular prices, and in its first two seasons he directed and acted in some of its productions. Through this theater company Randall met his second wife, Heather Hanlan. They married in 1995, three years after the death of Florence Gibbs, his wife of 53 years. Tony and Heather Randall had two children before he died from pneumonia following heart surgery in 2004.

Randall Manor. Neighborhood on the northern shore of Staten Island. It was formed in the 1930s on 50 acres (20 hectares) of woodland in the southern section of Sailors' Snug Harbor (now the Snug Harbor Cultural Center) and is named for Captain Robert R. Randall, who bequeathed his fortune to build Sailors' Snug Harbor, a home for retired sailors. The original homes are in the Tudor, Colonial, or Federal Revival styles and are well maintained. At the center of the neighborhood is Allison Pond and Park, a picturesque public

recreation area. Henderson Avenue, the main thoroughfare, is residential; most shops lie along Castleton Avenue nearby.

Marjorie Johnson

Randalls Island. An island of 273 acres (111 hectares) at the confluence of the East River and the Harlem River, legally part of Manhattan. It was called Minnehanonck by the Indians; Barent Eylandt by Wouter van Twiller, who purchased it in 1637; and Montresor Island by the British army before it was renamed Randalls in 1784 by its new owner, Jonathan Randal (or Randell). Five years after his death in 1830, his heirs sold it to the city for $60,000. It was then used successively for a potter's field, an almshouse, a smallpox quarantine station, a reformatory called the House of Refuge, the Idiots' and Children's Hospital, and the Inebriate Asylum. These institutions were later moved to Welfare Island (now Roosevelt Island), and the island was cleared to make way for construction of the Triborough Bridge. In the 1930s the Triborough Bridge and Tunnel Authority set up its headquarters on the island. Randalls Island is connected to Wards Island by landfill.

The flat terrain of Randalls Island makes it ideally suited for athletic facilities. Municipal Stadium, built in 1936 (also called Triborough Stadium and Randall's Island Stadium), was renamed Downing Stadium in 1955 to honor the former director of recreation John J. Downing. Among its notable sporting events was Jesse Owens's victory in the 100-yard dash conducted at the 1936 Olympic trials. After the stadium stopped being a major sporting facility, it hosted concerts and music festivals, including the three-day New York Pop Festival in 1970. In 2005 the new Icahn Stadium, built on the site of the old stadium, was opened. It is maintained by the Randall's Island Sports Foundation (RISF), founded in 1992, together with the New York City Department of Parks and Recreation. Other facilities on the island include soccer and baseball fields, a tennis center, a golf center, a ferry dock, picnic areas, and playgrounds. RISF also organizes the free Randall's Island Kids (RIK) program, outdoor and sporting events and camps that bring as many as 14,000 children from Harlem and the South Bronx to the island year round. Furthermore, RISF has worked with the city and parks department to restore freshwater wetlands and a saltwater marsh on the island. The familiar *Discus Thrower* statue by Greek sculptor Kostas Dimitriadis (1926) once stood on Downing Stadium's plaza. Over the years it was vandalized and was removed in 1970, but in 1999 it was restored and placed at the entrance to the island.

Gerard R. Wolfe

Randel, John, Jr. (*b* Albany, 1787; *d* Brooklyn, 1865). Surveyor and civil engineer. After conducting early survey work for the state in the Albany area, Randel was hired in 1807 by the state commission charged with planning the future streets of Manhattan. After completing an initial survey, he produced a map for the Commissioners Plan of 1811, which featured a rigid grid of streets and avenues stretching from North (now Houston) Street to 155th Street. Over the next decade Randel and his survey crews ranged over Manhattan's rural landscape, enduring arrests, lawsuits, and verbal and physical abuse (including, allegedly, unleashed dogs and hurled cabbages and artichokes) precipitated by landowners who preferred that their farms, homesteads, and country estates not be divided by the grid. Randel's men marked every future intersection with over 1500 white marble monuments, each engraved with its prospective street, avenue, and elevation; where the landscape was rocky they used iron bolts as markers. Randel also produced dozens of large-scale topographical maps covering the survey area; these highly detailed folio sheets form the most accurate document of Manhattan's pre-grid landscape. Randel laid out numerous other streets in New York State, including Syracuse and the Brooklyn Navy Yard. He was also an engineer for the Erie Canal and other significant canal and railroad projects outside of New York. In 1848 he proposed the first elevated railroad for Manhattan and displayed a working model at the New York Crystal Palace; it featured such innovations as express/local service and passenger elevators. He founded the community of Randalia, Maryland, in the 1840s, but soon returned to New York City and lived the remainder of his life in Brooklyn.

Gerard Koeppel, Caleb Smith

Random House. Firm of book publishers formed in 1927 at 73 West 45th Street by Bennett Cerf and Donald S. Klopfer, also the owners (since 1925) of the Modern Library. It was so named because Cerf thought they might "publish a few books on the side at random." The firm began as a publisher of costly, elegant limited editions but developed into a trade publisher by the early 1930s. The firm made bold choices: working against censorship laws, it was the first to publish James Joyce's *Ulysses* in the United States, in 1934. The acquisition of Alfred A. Knopf and Vintage Books in 1960 made Random House one of the nation's largest publishers of high-quality books. It became known as well for its substantial and profitable children's department and for its commitment to publishing dramatic works. The firm was acquired in 1966 by the Radio Corporation of America, which sold it in 1980 to Newhouse Publications; in 1998 it was acquired by German media conglomerate Bertelsmann. Among the well-known books published by the firm are Whittaker Chambers's *Witness* (1952), Ayn Rand's *Atlas Shrugged* (1957), Truman Capote's *In Cold Blood* (1965), William Styron's *The Confessions of Nat Turner* (1967), Philip Roth's *Portnoy's Complaint* (1969), and the works of such diverse authors as William Faulkner, Robert Penn Warren, Eugene O'Neill, Lillian Hellman, Gertrude Stein, and Theodor Geisel, aka Dr. Seuss. Bertelsmann appointed Markus Dohle chief executive in May 2008; with headquarters at 1745 Broadway, Random House was the largest English-language trade-book publisher in the world in the early twenty-first century.

Ranelagh Gardens. Tavern and pleasure garden at Broadway and Thomas Street, opened by John Jones in 1765 and named after a similar establishment in London. Once the homestead of Anthony Rutgers (*d* 1746), it had a house, garden, and orchard. At night the grounds were illuminated and used for concerts, fireworks, and other entertainments. Samuel Fraunces, owner of Fraunces Tavern in New York City, was the lessee in 1769, apparently its last year in operation. The house, which stood at what is now 232–36 Church Street, was demolished in 1796.

Gilbert Tauber

Rangel, Charles B(ernard) (*b* New York City, 11 June 1930). Congressman. He served in the U.S. Army from 1948 to 1952 and received the Bronze Star for Valor and the Purple Heart during the Korean War. After graduating from New York University (1957) and St. John's University School of Law (1960), he was an assistant U.S. attorney for the Southern District of New York (1961–62). He was elected as a Democrat to the New York State Assembly in 1966 from Harlem and to the U.S. Congress in 1970 from the fifteenth congressional district after defeating Adam Clayton Powell, Jr., in the Democratic primary. He was a member in 1974 of the House Judiciary Committee, which voted articles of impeachment against President Richard M. Nixon. In 1983 he was appointed deputy whip of the Democratic Party in the House of Representatives and in July 1984 he was named a chairman of the Democratic presidential campaign of Walter F. Mondale. In 2006 he was elected to a 19th term in Congress and in 2007 became the chair of the House Ways and Means Committee. In 2008 Rangel was confronted with a series of accusations concerning tax evasion, which prompted an investigation by the House Ethics Committee into his personal and campaign finances. In 2010 he took a leave of absence from his position as chair of the House Ways and Means Committee.

Larry A. Greene

rap. See Hip-Hop and rap.

Rapelye, George Bernard (*b* New York City, 1784; *d* New York City, 27 March 1863). Antiquarian and real estate magnate. He worked as a merchant's clerk from 1802 to 1806 before setting up a real estate business in 1807. He owned nearly all the houses in the area bounded by 40th Street, Eighth Avenue, 13th Street, and 11th Avenue but lived in miserly circumstances in a one-room apartment on Broadway. He also bought stocks and collected materials associated with the history of the city, including autographs, maps, and directories. Rapelye was a friend of John Pintard, an organizer of the New-York Historical Society, and a vestryman of St. Thomas's Church on Broadway.

James E. Mooney

Rapp–Coudert Committee. Committee of the state legislature active during 1940–41. It was led by George Rapp of upstate New York and the very active co-chairman Frederic R. Coudert of the law firm Coudert Brothers. The committee originally was charged with investigating allegations of excessive spending in schools but soon shifted its focus toward purging communists from the municipal colleges and particularly from City College of New York and Brooklyn College. In addition to being centers of student radicalism, these colleges had large communist units among faculty and staff that published lively shop papers, demanded improved working conditions, led local chapters of the College Teachers Union (affiliated with the American Federation of Labor), and supported the Soviet Union on major issues. The committee induced informers to testify about communists on the campuses and then called those who were implicated to testify themselves; uncooperative faculty members were dismissed by the New York City Board of Higher Education. The committee abruptly halted its investigations when the Nazis invaded the Soviet Union, but after the war its work was continued by such arms of the U.S. Congress as the Internal Security Subcommittee of the Senate Judiciary Committee, which also adopted many of its techniques and employed some of its staff members. With the cooperation of the Board of Higher Education several professors at Brooklyn College who had been overlooked earlier were dismissed during the 1950s, as were scores of teachers in the city's elementary and secondary schools.

Marvin E. Gettleman

Raritan Bay. Body of water at the southernmost point in New York City and State, at the confluence of the Raritan River, Arthur Kill, and Atlantic Ocean. Raritan Bay separates Middlesex and Monmouth counties (New Jersey) from the southern end of Staten Island, touching the neighborhoods of Tottenville and Pleasant Plains. The name *Raritan* derives from an Algonquin word meaning "stream overflows"; it was also an Indian tribe on Staten Island that existed before European settlement.

Clyde L. Mackenzie, Jr., *The Fisheries of Raritan Bay* (New Brunswick, N.J.: Rutgers University Press, 1992)

Andrew Sparberg

Raunt. Former neighborhood in south central Queens, lying on several marshy islands along a wide channel of the same name in Jamaica Bay; the name is of unknown origin. A fishing platform once stood on the southern shore of a marshy island facing the channel, and from July 1888 it was a station on the Cross Jamaica Bay line of the Long Island Rail Road. Small hotels on piles accommodated weekend fishing parties, and the area was soon favored by rod and gun clubs, but it was abandoned after the Board of Health declared Jamaica Bay too polluted for fishing in 1916. Railroad service was suspended after the railroad trestle was destroyed by fire on 7 May 1950. When the city rebuilt the line in 1956 as part of the rapid transit system, the channel was filled in.

Vincent Seyfried

Rauschenberg, Robert (*b* Port Arthur, Tex., 22 Oct 1925; *d* Captiva, Fla., 12 May 2008). Painter. Drafted into the Marines during World War II, he saw his first paintings while traveling in the service, in California at the Huntington Art Gallery. He first saw European paintings in 1943. After moving to New York City in 1949 he became acquainted with the composer John Cage and the choreographer Merce Cunningham (with whom he later collaborated) and began to experiment with the economical medium of blueprint paper. His display windows for the clothing store Bonwit Teller brought him to the attention of *Life* in 1951; critics disdained his exhibition of white oil paintings in the same year and his all-black paintings soon after. He then executed a series of "combine-paintings," in which he sought to communicate a coherent message through disparate images. These wildly imaginative, bizarre collages juxtaposed diverse everyday objects (one consisted of a paint-splattered bed and pillow). He won prizes at the Venice Biennale (1954) and the Corcoran Gallery (1955) and in 1958 was given a one-man show by Leo Castelli. Rauschenberg was a leading figure in the avant-garde movement and one of the founders of pop art. After suffering a stroke in 2002, he learned to paint with his left hand. His work was shown at major exhibitions in Paris (1981), at the Guggenheim (1997), and in Los Angeles (2005); these works are now in the Metropolitan Museum. He also photographed, choreographed, and took part in performance art.

Leslie Gourse

Rauschenbusch, Walter (*b* Rochester, N.Y., 4 Oct 1861; *d* Rochester, N.Y., 25 July 1918). Theologian. Educated as a minister in Rochester and abroad, he moved to New York City in 1886 as a pastor of the Second German Baptist Church. While ministering to his congregation during the blizzard of 1888 he contracted influenza that left him deaf. He had a strong social conscience, and after becoming acquainted with Henry George and studying economics and theology he helped to formulate the Social Gospel, a theology based on social reform. He became known nationally for his book *Christianity and the Social Order* (1907). Toward the end of his life Rauschenbusch was disillusioned by the social breakdown that he believed had contributed to World War I.

James E. Mooney

Ravenswood. Former name for the shore of Long Island City in Queens along the East River. The land was acquired in 1814 and developed by Colonel George Gibbs, a businessman from Manhattan. After his death in 1833 his land was divided by three developers into nine estates, and from 1848 there were several fine mansions lining the shore. In 1875 the first commercial buildings were erected, and the mansions eventually became offices and boardinghouses. The area was heavily commercial by 1900. The name Ravenswood survives in that of the large housing project

Proposed development along the East River in Ravenswood, Long Island, near Hallett's Point, ca *1836*

bounded by 34th Avenue, 24th Street, 36th Avenue, and 12th Street.

Vincent Seyfried

Ravitch, Richard (*b* New York City, 7 July 1933). Public official, lawyer, and businessman. After graduating from Columbia and receiving his law degree from Yale, he worked in Washington, D.C., in 1959–60. He then became a principal of the HRH Construction Corporation, where he was responsible for the development, financing, and construction of 45,000 units of affordable housing in New York City and other locations. In 1975 he was appointed by Governor Hugh Carey to serve as chairman of the New York State Urban Development Corporation (UDC), an agency with 30,000 dwelling units then under construction, which had become insolvent and faced bankruptcy. He designed a bailout plan for UDC, part of which involved the creation of the New York State Project Finance Agency to issue credit-worthy revenue bonds secured by UDC's federal subsidy payments. This, together with other actions, helped to restore New York State's fiscal credibility. Later in 1975 and in 1976 Ravitch assisted New York City and New York State officials in resolving the city's defaults.

In November 1979 Ravitch was appointed by Governor Carey chairman and CEO of the Metropolitan Transportation Authority (MTA). At the time the subway and bus systems, the Long Island Rail Road, and the commuter rail services that were to become Metro-North Railroad in 1983 were not in a state of good repair because of long-term disinvestment in the capital plant and equipment, poor maintenance, and inadequate management. Ravitch worked with the New York State legislature to increase capital funding, including selling bonds backed by future operating revenues; he also implemented the first MTA five-year capital programs (one for the commuter railoads, the other for the city's subway and bus systems), for 1982–86, which committed $8.5 billion in total to begin rebuilding the MTA transit network and to purchase new buses and subway and commuter rail cars. Ravitch was also able to convince the state to approve a set of regional taxes to provide increased operating subsidies for MTA services, while also asking the MTA Board to approve fare increases; he also argued for the need for a stable source of revenue for capital expenditures. Although he resigned as MTA chairman in August 1983, MTA's rebuilding efforts continued over the next 25 years at these increased levels, and transit services improved substantially. In addition, his effort to introduce a fare card in New York finally came to fruition with the introduction of Metrocard in the late 1990s. In part as a result of improved service, as well as the introduction of free bus to subway transfers, ridership on MTA services boomed.

Following his MTA service, he led an effort to recapitalize the Bowery Savings Bank. In 1989 he ran unsuccessfully for mayor. In 2008 Ravitch's attention returned to MTA issues, when he was asked by Governor David A. Patterson to head a commission charged with recommending long-term solutions to the authority's capital and operating funding problems. Paterson, who had assumed the position of governor in March 2008 when the elected governor, Eliot Spitzer, resigned, subsequently appointed Ravitch as lieutenant governor in July 2009.

Peter Derrick

Raymond, Henry (Jarvis) (*b* Lima, N.Y., 24 Jan 1820; *d* New York City, 18 June 1869). Newspaper editor and congressman. He began his career in journalism as an assistant to Horace Greeley at the weekly journal the *New Yorker* and in 1841 helped Greeley to publish the first *New York Tribune;* in 1843 he joined the *Courier and Enquirer,* published by James Watson Webb. With George Jones and several other bankers from Albany, New York, he launched the *New York Times* on 18 September 1851. The success of the newspaper helped Raymond's political career: he replaced Greeley as the principal advocate for such prominent Republicans as William H. Seward and Thurlow Weed, and he became a state assemblyman and lieutenant governor. In 1864 he led President Abraham Lincoln's reelection campaign and was elected to the U.S. Congress, but after Lincoln's death he espoused President Andrew Johnson's Reconstruction policy at a time when most Republicans had abandoned its racist principles; as a result his influence and that of the newspaper declined. Raymond eventually returned to the mainstream of the Republican Party and worked on rebuilding the *Times* until the end of his life.

Harrison Salisbury

Razaf, Andy (*b* Washington, D.C., 16 Dec 1895; *d* New York City, 3 Feb 1973). Lyricist. The son of a Malagasy nobleman and an African American woman, he moved to Manhattan in 1905 where for more than 50 years he was a songwriter in Harlem and Tin Pan Alley and on Broadway. Over the years he collaborated with many musicians, including his principal songwriting partners Fats Waller and Eubie Blake. Some of Razaf's most popular lyrics are those to the songs "Ain't Misbehavin'," "Honeysuckle Rose," and "Memories of You."

Barry Singer

RCA Corporation. Firm of radio and television equipment manufacturers, formed in 1919 as the Radio Corporation of America (RCA) at the urging of the U.S. Navy, which was convinced by wartime experience of the need for a communications system under U.S. ownership. The corporation was a monopoly that held all the patents in the new field of wireless communication. Its stock was controlled by such companies as General Electric and American Telephone and Telegraph under the leadership of Owen D. Young, later joined by Westinghouse. In broadcasting it also competed with Westinghouse, on the whole unsuccessfully until 1921, when David Sarnoff, then 30 years old, was brought in as the general manager and promptly broadcast the heavyweight boxing match between Jack Dempsey and Georges Carpentier to an audience of three million. Sarnoff then carried out his intention to manufacture radio receiver sets for less than $100 each and had sales in the hundreds of thousands each year. In 1926, with one station in Providence, Rhode Island,

"His Master's Voice," advertisement for RCA's Victor Phonograph

RCA went on the air as the newly incorporated National Broadcasting Company (NBC), which within a few months was operating on two networks. The federal government broke up the firm in the 1930s, and RCA became an independent corporation with NBC as its sole property. Among its many successes was the *Amos 'n' Andy Show,* to which half the receivers in the United States were tuned for each program. RCA helped to fund the construction of and operated out of 30 Rockefeller Plaza, known as the RCA Building upon its completion in 1933.

While having great success in broadcasting and the manufacture of radios, RCA allocated $1 million in 1935 for testing television, largely in an important research laboratory founded by Sarnoff. The firm launched commercial television in July 1941, but only a few hundred sets were able to receive the signals, and when war broke out the full production effort of RCA was given over to military purposes: its research staff had experience in developing radar and such other electronic systems as loran, sonar, and walkie-talkies, and many of the tubes designed for television sets were used in radar rooms. Sarnoff also went off to war, using as his entry a commission as a lieutenant colonel in the reserve of the Signal Corps that he had received in 1924 and his promotion to colonel in 1930. He served with General Dwight D. Eisenhower as a communications expert for the invasion of northern Europe and went with the troops to France, where he restored communications. Promoted to the rank of brigadier general, he returned to RCA by the end of 1944, where he resumed full control.

Postwar life for RCA and Sarnoff meant television, and the first sets began to reach the public in late 1946. During the next year a quarter of a million sets were sold, four-fifths of them made by RCA and all of them black and white. The Columbia Broadcasting System (CBS) was working on a color television but could not get its mechanical system approved by the Federal Communication Commission. Benefiting from this delay and from the resources of its electronics laboratory in suburban Princeton, New Jersey, RCA prevailed in the race to develop color television by successfully arguing to regulators that the approach to color television taken by CBS would be incompatible with the millions of monochrome sets in U.S. homes. As a result of this victory RCA had annual sales in the range of $100 million in the late 1950s and twice that in 1965 (by which time color sets accounted for half of total sales). In that year Sarnoff resigned as chief executive of the firm and became chairman. His son took over as president and introduced a number of changes, two of which were scorned by his father: the adoption by the firm of its acronym as its official name, and its expansion into such disparate businesses as automobile rentals, frozen foods, greeting cards, and office buildings. Sarnoff died in 1971; his son's contract was not renewed by the board in 1975.

Anthony Conrad's resignation from the board in 1976 and the failure of several commercial ventures left the firm with a debt of $1 billion by 1981. After a series of changes in management the firm reverted to its original businesses: electronics, communications, and entertainment. Sales and profits increased by the mid-1980s, but soon afterward a plan to acquire RCA was put forth by General Electric, and despite protests by some staff and stockholders, the acquisition was realized in 1986.

Illustration of RCA television relay

Reader's Digest. Monthly magazine, launched in 1922 from a basement office on Minetta Lane in Greenwich Village by DeWitt Wallace (1889–1981) and Lila Acheson Wallace (1889–1984). Only a few issues were published in New York City. In 1922 the office was moved to Pleasantville and then to Chappaqua, both in Westchester County. The company retained its Pleasantville mailing address in the early twenty-first century.

real estate. From colonial times the development of New York City was heavily influenced by shortages of land and housing that led city and state government aggressively to encourage investment and private development through urban planning, the provision of infrastructure, tax abatement, and other incentives. One of the city's first efforts toward this end was the implementation of a street plan in 1811 (see GRID PLAN). As the population increased and the developed city expanded northward, land in Manhattan gradually became scarce and valuable. During the first half of the nineteenth century John Jacob Astor became the wealthiest man in the United States largely by buying up land in the city; he built his empire in part by foreclosing on mortgages and buying land during the panic of 1837, when others could not afford to keep distressed property, and holding it until it regained value. During the second half of the century real estate developers gained readier access to debt and equity capital, as the city became the most important financial center in North America. The intense demand for increasingly limited space led developers to erect ever-taller buildings, and during the 1860s multistory office buildings, apartment buildings, and TENEMENTS were introduced. Apartments were generally designed for middle- and upper-class tenants; many began as luxury units for rent and were later owned cooperatively. Tenements covered virtually the entire lot on which they were built and could accommodate many tenants, allowing landlords to collect a large rental income; the high value of such properties deterred architects from incorporating open spaces and recreational facilities into their design. Overcrowding became so severe that the city enacted

tenement regulations in 1867, the first in the United States. Efforts to relieve the housing crisis were made by a number of private concerns, among them the City and Suburban Homes Company of Alfred T. White, which during the late nineteenth century built model housing projects for workers. At the same time the number of skyscrapers increased, as did the number of loft buildings, which had rooms with open floors and high ceilings for use as workshops and showrooms.

As the rate of development increased, real estate interests became more highly organized, and public concern grew for controlling building standards more closely. One of the first trade publications, the weekly *Real Estate Record and Builders' Guide,* was launched in 1868 by the Real Estate Record Association, which later published the influential books *A History of Real Estate, Building, and Architecture in New York City* (1898) and Richard M. Hurd's *Principles of City Land Values* (1903), the first systematic attempt to analyze patterns of urban development in the United States. Hurd, president of the Lawyers Mortgage Company and vice president of the Mortgage Bond Company, was a leading lender for office and apartment buildings at the turn of the century. The Real Estate Board of New York (1896) was one of the first organizations of its kind in the country. From the 1890s private developers in the city vied with each other to build the world's tallest buildings, and successively taller skyscrapers were built: the Pulitzer and Flatiron buildings, the Times Tower, the Singer Building, the Metropolitan Life Tower, and the Woolworth Building (1913), which at nearly 800 feet (243 meters) held the record for almost two decades. Large-scale projects such as the Equitable Building, built by the Du Pont family in 1915, received a great deal of publicity and aroused much public concern, leading to demands for public control. About this time reformers sought to regulate development more tightly. Efforts to improve building standards, eliminate unsanitary conditions, and relieve overcrowding in tenements culminated in the Tenement House Law of 1901, which prescribed minimum standards for light, air, indoor plumbing, and other housing improvements. During the first decade of the twentieth century owners and tenants of office buildings, hotels, department stores, and boutiques fought to prevent the garment industry from building lofts in commercial districts; they eventually won such protection through ZONING. In 1916 the city implemented the country's first comprehensive zoning regulations controlling the height, bulk, and use of all private structures. The new zoning law required skyscrapers to be built with setbacks above a certain height, thus allowing more light, air, and open space between buildings and also leading to fundamental changes in the design of skyscrapers.

The 1920s saw a tremendous increase in the construction of residential housing and commercial buildings. Large-scale projects were undertaken by such developers as Fred F. French, Harry Black, Henry Mandel, Abraham E. Lefcourt, Irwin Chanin, Leo Bing, and Alexander Bing, financed by such lenders as Chase Manhattan Bank, Bowery Savings Bank, and Dime Savings Bank. Skyscrapers were concentrated near Wall Street and on lower Broadway until the 1920s, when the first ones were built around Grand Central Terminal. Midtown Manhattan soon flourished and became the site of the garment district after a number of developers led by Lefcourt built lofts along Seventh Avenue. By this time the city had more buildings of at least 20 stories than all other U.S. cities combined. Competition to build the world's tallest building escalated, and the Woolworth Building was surpassed by the Bank of Manhattan (1929), followed by the Chrysler Building (1930).

An acute housing shortage led the city to introduce property tax benefits and bold policies for encouraging the construction of more housing. Various philanthropic organizations and limited-dividend ventures also sought to promote innovative residential planning and to reduce rents and the cost of housing. They built such developments as Forest Hills Gardens, a middle-income community in Queens financed by the Russell Sage Foundation and designed by Frederick Law Olmsted, Jr., and Grosvenor Atterbury; the Paul Lawrence Dunbar apartment buildings in Harlem, built by the Rockefeller family; and Sunnyside Gardens in Queens, sponsored by the City Housing Corporation and planned by Alexander Bing and the architects Clarence S. Stein and Henry Wright. Large-scale developments were also undertaken by such life insurance companies as Equitable Life, New York Life, and Metropolitan Life, which in 1924 under Frederick H. Ecker built Sunnyside, a 2125-unit apartment complex in Queens. The greatest number of units were built by limited-dividend cooperative housing organizations, often formed by labor unions; the largest was the United Housing Foundation of the Amalgamated Clothing Workers, directed for six decades by Abraham E. Kazan. Its first projects, completed in the 1920s, were the Amalgamated Houses in the Bronx and the Amalgamated Dwellings on the Lower East Side. Building codes for apartment buildings improved, especially under the Multiple Dwellings Law of 1929, which strengthened minimum housing quality and development standards.

Real estate developments grew in scale and increasingly attracted the public's attention. Publicity focused on such projects as the Empire State Building, financed by the Du Pont family, which at 1250 feet (381 meters) was the world's tallest building from its completion in 1931 until the World Trade Center surpassed it in the mid-1970s. Rockefeller Center, built by the Rockefeller family in the 1930s, was even more ambitious and costly and became a model for mixed-use projects with buildings containing offices and retail space. In addition to these spectacular successes, the high cost of property and the importance of the real estate market in the local economy also caused devastating failures, such as that of French in the Depression. During these years the New York City Housing Authority began erecting PUBLIC HOUSING; the number of units reached 175,000 by the mid-1990s. City government also encouraged private development by expanding public infrastructure, a practice engaged in to an unprecedented degree by Robert Moses, who oversaw the construction and maintenance of bridges, highways, parks, and such public projects as the world's fairs of 1939–40 and 1964–65 in Flushing Meadow. Government agencies and special public authorities also built tunnels, airports, and convention centers. The Metropolitan Life Insurance Company sponsored Parkchester, a complex of more than 12,000 apartments in the Bronx opened in 1941, as well as Stuyvesant Town and Peter Cooper Village on the East Side and Riverton in Harlem, which became prototypes for national redevelopment programs. In the 1950s the state and city introduced the MITCHELL–LAMA program of subsidized mortgages and property tax abatements for the construction of middle-income rental housing. Urban renewal projects were undertaken by the private developer William Zeckendorf, who assembled the land for the site of the United Nations in 1946 and built such residential developments as Kips Bay Plaza, Lincoln Towers, and Park West Village. During the 1940s and 1950s, 30 major skyscrapers were completed in New York City (many of them in midtown Manhattan), compared with 10 in the rest of the United States. By mid-century multifamily housing occupied most of Manhattan and much of Brooklyn, the Bronx, and Queens.

The pace of development accelerated and the price of property in the city rose. By the 1960s office towers dominated midtown Manhattan, especially Park Avenue, and the redevelopment of lower Manhattan resulted in the construction of the Chase Manhattan Bank and the planning of the World Trade Center. The city cleared a number of sites for urban renewal projects, among them the site of Lincoln Center for the Performing Arts. Many developers prospered, including HRH–Starrett, Tishman Speyer, Rose Associates, the Trump Organization, Levitt and Sons, the Durst Organization, and Helmsley–Spear; a decline in the market forced Zeckendorf into bankruptcy in 1965. Under the leadership of Austin Tobin the Port of New York Authority built much of the region's

infrastructure as well as the World Trade Center, an office complex dominated by twin towers 1350 feet (411 meters) tall. Programs to build and rehabilitate rental housing, condominiums, and cooperatives were begun by nonprofit community development corporations, sometimes using "sweat equity," under which prospective owners and tenants rehabilitated buildings with their own labor. During the 1960s and 1970s the city led the nation in generating capital for real estate investment trusts (REITs). Under Kazan the United Housing Foundation in the late 1960s and early 1970s built Co-op City in the Bronx, one of the largest residential complexes in the world (15,372 units). During a slump in the city's real estate market in 1977 the Canadian firm of Olympia and York attracted international attention by buying eight office buildings at "distress" prices: when the market later improved, the value of the buildings quadrupled. In the 1980s public authorities built the new communities of Roosevelt Island and Battery Park City, both highly successful; Battery Park City in the mid-1980s became the site of the World Financial Center, a flourishing development by Olympia and York. Homeownership programs for low- and middle-income families in the outer boroughs were sponsored by the East Brooklyn Congregations and churches in the southern Bronx, and by the New Homes Program of the New York City Housing Partnership, inspiring similar efforts by other community builders. The developer Donald Trump amassed real estate holdings worth billions of dollars; he experienced severe financial difficulties, as did Olympia and York, after a decline in the real estate market brought on by the stock market crash of 1987 and the loss of jobs in financial services. The downturn in prices continued well into the next decade. By 1993 the crime rate in the city began to fall, and financial services employment began to rise. The recovery of the real estate market followed, and by the turn of the twenty-first century, New York City was booming once again and the suburbs began to lose relative to Manhattan.

The terrorist attacks on the World Trade Center on 11 September 2001 persuaded many observers that high-rise development would be less attractive and that both employers and citizens would flee from the dense environment of Manhattan. Such predictions proved to be wrong, as new towers for corporate headquarters began to soar in midtown, such as the Bloomberg, New York Times, Hearst, and Time Warner buildings. High-end residential buildings of considerable height also began to answer a strong demand for luxury units in Manhattan. Neighborhoods became more desirable in all five boroughs. Particularly significant was the transformation of older industrial sections, such as DUMBO and Williamsburgh in Brooklyn and the meatpacking district and the Bowery in Manhattan. Hotels, bars, and boutiques soon followed.

Real Estate Board of New York

[REBNY]. Trade association of real estate brokers formed in 1896 as the Real Estate Board of Brokers. Among its forerunners were the New York Real Estate Exchange (1847), the first real estate trade organization in the United States (which lasted only a year), and the Real Estate Exchange of the City of New York, formed in 1885 by property owners and brokers to standardize practices and win public confidence in real estate transactions; the latter worked closely with trade magazine Real Estate Record and Builders' Guide (1868). In 1904 REBNY introduced an education program at the West Side YMCA that was one of the first of its kind; it supported the city's 1916 zoning law and took part in national efforts to introduce licensing for real estate agents. In 2008 it had about 12,000 members, including developers, brokers, property owners, managers, and lenders. REBNY works as an advocate for tax policies and other public programs to encourage real estate development in the city, and supports education and research programs.

Marc A. Weiss

Real Estate Record and Builders' Guide.

Weekly trade publication for the real estate and building industries of Greater New York. It was launched in 1868 by Clinton W. Sweet, the publisher for four decades. The journal was at its peak during the late nineteenth century when Manhattan developed into the hub of the integrated metropolitan area. It made itself indispensable to large development interests in the city by publishing regular, accurate, and geographically comprehensive reports of lot transactions, mortgage rates, and failures; copies of building plans and tabulations of building costs that helped to rationalize the metropolitan markets in real estate, credit, and building supplies; and "insider" columns and editorials. With the West Side Association, the powerful defender of property owners' interests, it advocated a visionary program of planned growth through comprehensive park, street, transit, and other public improvements, and it was an early supporter of using planning and landscape design to coordinate private development. Although its influence over development policies and planning debates declined early in the twentieth century, the *Record and Guide* continued to be published into the twenty-first century.

David Scobey

Recovery Party. Party label used during the three-way mayoral election of 1933 by Joseph V. McKee, who was running against John P. O'Brien and Fiorello H. La Guardia. McKee, who had served briefly as acting mayor of New York City after James J. Walker resigned in September 1932, had counted on support from Franklin D. Roosevelt that never materialized. McKee outpolled the incumbent mayor, O'Brien, but the winner was the fusion candidate, La Guardia.

Frank Vos

recreation piers. According to its charters, New York City initially had use of its waterfront only for shipping and commerce, but in 1892 these restrictions were eased by the state legislature, which permitted the upper stories of certain piers to be set aside for public use. In 1897 the Third Street Recreation Pier at Corlear's Hook was built by the Dock Department; measuring 350 by 60 feet (107 by 18 meters), it had space on the first story for landing produce and a pavilion in a French Renaissance style with seating for 500 on the second story. Similar facilities were soon opened on the East River at 112th Street and on the Hudson River at Christopher and at 50th streets. Attendants were present and offerings included music on weekday evenings, inexpensive food concessions, and free milk. By the time of World War II the oldest recreation piers were closed. During the 1980s the city and state opened unused piers in Manhattan, Brooklyn, and Queens for fishing, sunning, and jogging. Food concessions, shopping, and cultural programs were introduced at the foot of Wall Street (at Piers 15–17 in South Street Seaport); a pavilion built by Robert Moses at 107th Street was refurbished for fishing and community events; and indoor sports were offered in the Cromwell Recreation Center, a renovated commercial pier shed built in 1936 in an art deco style at the foot of Victory Boulevard in Tompkinsville. Pier 84 on the Hudson became the site of rock concerts during the summer. In the early 1990s the city and state began renovating piers on the Hudson between Battery Park City and West 72nd Street for recreational use. By 2008 plans were complete for the transformation of Pier 15 on the East River in Manhattan and former Port Authority piers below Brooklyn Heights in Brooklyn.

Ann L. Buttenwieser

recycling. New York City generates more refuse than any other city in the United States:

Recycling signs, 2009

nearly 41,000 tons (37,195 metric tons) each day. The need to recycle became especially pressing during the 1980s as the environmental hazards of burning garbage became more apparent and landfills rapidly neared capacity (the city's only operating landfill, at Fresh Kills on Staten Island, was closed in March 2001; it was temporarily reopened to accept waste after the terrorist attacks of 11 September 2001). A state law requiring a deposit on most glass bottles and aluminum cans in which beverages are sold was enacted in 1982 and took effect in the following year. The city's recycling program began in earnest with the passage in 1989 of Local Law 19, a measure intended to combat the air pollution caused by large-scale incineration of garbage. In 1992 the city began phasing in mandatory recycling, and by 1997 residents of all five boroughs were required to place newspapers, magazines, corrugated cardboard, glass, metal, plastic containers, and aluminum foil in special containers or clear plastic bags. The materials are collected by sanitation workers and then stored until they can be processed for resale to manufacturers. Superintendents in apartment buildings must provide space and bins for their residents, and sanitation enforcement officers are authorized to ensure that recyclable materials are not discarded along with garbage; fines for violations range from $25 to $500. In 2002 Mayor Michael Bloomberg announced plans to eliminate glass, plastic, paper, and metal recycling because of a budget deficit. Public opposition led metal and paper recycling to be retained, and collection of glass and plastic recyclables returned in 2004 when the city signed a 20-year contract with the Hugo Neu Corporation to recycle glass, metal, plastic, and eventually paper.

Materials collected through municipal recycling increased 54 percent from 1991 to 1992. In 1993 13 percent of the city's residential refuse was being diverted from landfills and incinerators to recycling plants. The figure rose to 20 percent by 2001 but had dropped to 13 percent in 2006.

Jacqueline Lalley

Red Hook. Neighborhood in southwestern Brooklyn (2000 pop. *ca* 10,200), occupying a peninsula of 680 acres (275 hectares) that is bounded to the northeast by the Gowanus Expressway and the entrance to the Brooklyn–Battery Tunnel, to the south by Gowanus Bay, to the west by Upper New York Bay, and to the northwest by Buttermilk Channel. Settled by the Dutch in 1636, initially for farms and mills in the wetlands, the area was called Roode Hoek for the color of its soil and its shape, and for 200 years it remained a marshy, rural enclave. The opening of Atlantic Basin in the 1840s, with its influx of Scandinavian, German, and Irish workers, brought about rapid maritime, industrial, and residential development in the 1850s, and the area became one of the busiest shipping centers in the nation; it was the second row-house district to be extensively developed in Brooklyn (after Brooklyn Heights). By the time of the Civil War ships from all over the world docked at Red Hook to receive and unload cargo and for repair where William Beard's wharves and warehouses serviced Union forces. Hundreds of grain barges from the Erie Canal clustered at the mouth of the Gowanus Canal; there were also a few shipyards such as Todd Shipyards from the 1860s until 1985. The neighborhood at the turn of the century, known generally as South Brooklyn because it was south of the original city of Brooklyn, was a tough, lively, bustling place where Al Capone worked as a petty criminal before moving to Chicago. Although dominated by Italian dockworkers, it also had a small but thriving colony of immigrants from Puerto Rico and from the Middle East centered along Atlantic Avenue. In 1936 the Red Hook Houses and the Red Hook Recreation Center were built for the families of the dockworkers. This was one of the first housing projects in the city and also one of the largest, and continued into the 1990s to house most of the local residents. The ambience of the neighborhood in the 1930s and 1940s is conveyed in Arthur Miller's play *The View from the Bridge,* Elia Kazan's film *On the Waterfront,* Hubert Selby's novel *Last Exit to Brooklyn.* and H. P. Lovecraft's short story "The Horror at Red Hook."

The deterioration of Red Hook was brought on by the construction of the Gowanus Expressway (1964), the Brooklyn–Queens Expressway (1957), and the Brooklyn–Battery Tunnel (1950), which cleaved the waterfront from Columbia Street (which eventually reemerged as the Columbia Street Waterfront District) and the rest of the neighborhood, and the neighborhood from the rest of the city. After reaching 25,000 in 1960 the population declined sharply. The chief means of employment, break-bulk shipping, was displaced in the 1960s by container shipping. In 1964 the city decided to replace much of the neighborhood with a container port that opened in 1981, but although this consumed much land it provided little employment, as most shipping activity had already shifted to New Jersey. The neighborhood became desolate and poor with high crime statistics; eventually some 90 percent of the population was African American or Latin American. They organized into two sections: "The Front" or "The Houses" and "The Back" or "The Point."

Red Hook, 2009

The Fishport at Erie Basin, operating briefly in 1987–88, did little to help, but the late 1980s saw a slow, hopeful renaissance along Columbia Street. With notoriously poor public transportation, the principal commercial thoroughfares remain Atlantic Avenue and Court and Smith streets.

In recent years, Red Hook has developed as an attractive neighborhood with townhouses, warehouse condos, and rental apartments. Artists have acquired subsidized housing and have created the Brooklyn Waterfront Artists' Coalition; the Hudson Waterfront Museum, a former railway barge, is docked at Conover Street; and the Pier 41 Association, another artists' group, has been formed. The Red Hook Waterfront Arts Festival includes opera performances on decommissioned ships. Controversy over land use and gentrification have attended the neighborhood's transformation. In 1996 Home Depot, the first "big box store," appeared in the area. Restoration of the Beard Street piers by developer Greg O'Connell included the arrival of Fairway Foods. In 2006 Carnival Cruise Lines took over Pier 12 to dock their "Princess" ships and their Cunard Lines, the QM2, or Queen Mary 2. In 2006 the Swedish furniture store IKEA opened and began providing free transportation out of Red Hook by bus or water taxi. The same year the abandoned Revere Sugar Works factory was demolished, and Thor Equities planned to build on the cleared space. Meanwhile, the Visitation Roman Catholic Church (1897) continued as a bulwark, and from the row houses on Visitation Place, people could reconnect to the waterfront when visiting several new restaurants and microbreweries such as the Liberty Heights Taproom.

Ellen Fletcher, John J. Gallagher

Reed, John (Silas) (*b* Portland, Ore., 22 Oct 1887; *d* Moscow, 19 Oct 1920). Journalist and revolutionist. Educated at Harvard University, he moved to New York City to work for the *American Magazine,* where he became acquainted with Lincoln Steffens and Ida M. Tarbell; he then went to work for *The Masses,* was imprisoned for supporting strikers, and worked as a war correspondent in Mexico and Europe for *Metropolitan Magazine.* He lived at 42 Washington Square South (1911–12) until moving to the mansion of Mabel Dodge at 23 Fifth Avenue (1913–14). In January 1916 he began living with Louise Bryant at 43 Washington Square South. Declared ineligible for military service for reasons of health, he traveled to Russia, witnessed the October Revolution, and wrote articles for *The Masses* that led to charges of sedition. On his return to the city he lived briefly at 1 Patchin Place before settling in the autumn of 1918 at 147 West Fourth Street where he wrote his best-known work, *Ten Days That Shook the World* (1919). After a number of problems with the law he escaped to Russia using a forged passport but soon died of typhus. He is buried with Lenin and several other Soviet leaders in Red Square in Moscow.

David C. Duke, *John Reed* (Boston: Twayne, 1987)

James E. Mooney

Reed, Lou(is Alan) (*b* Brooklyn, 2 March 1942). Singer and songwriter. He grew up on Long Island, learned to play the guitar, and earned his BA at Syracuse University, where he studied with the poet Delmore Schwartz. In 1963 Reed moved to New York City, accepting a job as a staff songwriter at Pickwick Records. With John Cale (with whom he lived on the Lower East Side) he led the Velvet Underground from 1965 to 1970, a rock group inspired by the work and ideas of the artist Andy Warhol. The poignant and often lurid imagery of its music violated taboos by evoking such themes as sadomasochism and heroin addiction, and stood in sharp contrast to the innocence and optimism of much popular music of the late 1960s. The group was regularly seen at the Manhattan nightclub Max's Kansas City. After the group disbanded, Reed's work was extremely erratic; his most accomplished record albums include *The Blue Mask* (1982, with the guitarist Robert Quine), and *Songs for Drella* (1990, with Cale), a tribute to Warhol. Much of Reed's work has incorporated his New York roots, including the albums *Coney Island Baby* (1976) and *New York* (1989) and a book of photographs, *Lou Reed's New York* (2006). He has performed with avant-garde performance artist Laurie Anderson, whom he married in 2008. Although best known for his low monotone voice and abrasive guitar style, Reed is more highly regarded by critics for his lyrics and his poetry.

Gene Santoro

Reed, Luman (*b* Green River, N.Y., 4 Jan 1785; *d* New York City, 7 June 1836). Merchant and art patron. Brought up in Coxsackie, New York, on the Hudson River, in 1815 he moved to New York City and opened a produce shop at 13 Coenties Slip; in 1821 he established the mercantile firm of Reed and Lee at 125–27 Front Street. His neoclassical mansion at 13 Greenwich Street was designed by Isaac Green Pearson and completed in 1832; he converted the third story into a private art gallery. Initially a collector of works by Flemish, Dutch, German, and Italian masters, he was inspired by patriotism to buy paintings by American artists. From Thomas Cole he commissioned "The Course of Empire," a series of five paintings, and he gathered portraits and historical and genre paintings by Asher B. Durand, William Sidney Mount, and George W. Flagg (1816–97) to fill his gallery, which opened to the public once a week (it was one of a few institutions with public viewing hours). He was a member of the Sketch Club (circa 1834) and a patron and honorary member of the National Academy of Design (1834). In 1844 Reed's collection was bought by his son-in-law Theodore Allen (1800–50) and his business partner Jonathan Sturges to form the New-York Gallery of the Fine Arts (1844–58); the collection was given to the New-York Historical Society in 1858.

Wayne Craven, "Luman Reed, Patron: His Collection and Gallery," *American Art Journal* 12 (Spring 1980), 40–59; Ella M. Foshay, *Mr. Luman Reed's Picture Gallery: A Pioneer Collection of American Art* (New York: Harry N. Abrams/New-York Historical Society, 1990)

Timothy Anglin Burgard, Ella M. Foshay

Reed, Willis, Jr. (*b* Hico, La., 25 Jul 1942). Basketball player. He played for the New York Knickerbockers from 1964 to 1974, leading the team to its only two National Basketball Association (NBA) championships in 1970 and 1973. Reed is best remembered for his performance in the 1970 NBA finals when after missing game six of the series with a torn thigh muscle he limped onto the Madison Square Garden court and scored the Knicks' first four points of the decisive game seven, igniting the crowd and inspiring the team to victory over the Los Angeles Lakers. Reed retired in 1974 with a career average of 18.7 points and 12.9 rebounds per game. He later coached the Knicks (1977–78), worked in the front office of multiple NBA teams, was enshrined in the Basketball Hall of Fame (1982), and was named one of the 50 greatest players in NBA history (1996).

Ben Silk

Reformed Church in America. Protestant denomination originally known as the Dutch Reformed Church. Its first congregation in New Amsterdam was formed in 1628 and administered by Jonas Michaëlius, who reported 50 communicants at the first communion that he celebrated there. This was the official church of the colony, and through its influence Dutch Calvinism expanded steadily under the supervision of the classis of Amsterdam. After the English assumed control in 1664, they aggressively replaced Dutch customs and institutions with English ones. Little resistance was offered by Dutch merchants and traders or by Dutch ministers, or dominies, who felt compelled to cooperate in the interest of preserving their freedom to worship: they generally won a measure of autonomy from English magistrates, despite Governor Edmund Andros's efforts to install

a dominie with Anglican orders in the Dutch Reformed Church in Albany, New York. Irked by the economic hardship incurred during the English conquest, many congregations disputed the salaries of dominies willing to assimilate. In 1689 Jacob Leisler led an uprising of lower-class Dutch settlers against Andros, English rule, and a perceived threat of papism, and soon the rebels also found themselves pitted against the dominies and the Dutch mercantile elite (see Leisler's Rebellion). When the rebellion was put down in 1691, Henricus Selyns, minister of the Dutch Reformed Church in New York City, lambasted Leisler and praised the restoration of political order. He later persuaded Governor Henry Sloughter to sign the warrant for Leisler's execution. During the following decade the Dutch Reformed Church was torn by feuding between supporters and opponents of Leisler, whose rebellion came to be viewed as a protest against assimilation to English ways; control of church offices was sought by both factions. In 1698 supporters were permitted by the governor to exhume the bodies of Leisler and Jacob Milborne, his lieutenant, which were reinterred in the city's Dutch church after a cavalcade through the streets. Tensions within the Reformed Church eased somewhat as many of Leisler's supporters moved to New Jersey to escape political and ecclesiastical factionalism. A greater degree of harmony was restored after Selyns's death in 1701.

For the first half of the eighteenth century Gualtherus Du Bois led the city's Dutch Reformed churches, which faced steady attrition owing in part to the success of the Society for the Propagation of the Gospel (1701), an organization of Anglican missionaries who distributed the Book of Common Prayer in Dutch and also opened schools that taught Anglican theology and English. The society's efforts were reinforced by several governors who sought to advance Anglicanism, which they considered the official religion of the colony according to the Ministry Act of 1693. Education was left increasingly to Anglicans as the Dutch churches allowed their own schools to decline. Recognizing that the future of the colony lay with the English, many young people became Anglicans and Presbyterians, and to encourage their return to the Dutch church, congregants at mid-century called on Du Bois to appoint an English-speaking minister. William Livingston, publisher of the *Independent Reflector,* lamented the "melancholy declension" of the Dutch churches because the young, "forgetting the religion of their ancestors, wandered in search of new persuasions"; he himself had left the Dutch Reformed Church because he could not understand the Dutch language. In 1763 the Dutch church in the city engaged Archibald Laidlie, an English-speaking minister who had graduated from the University of Edinburgh. His sermons soon drew three times as many congregants as those of Dutch dominies. By the time of the American Revolution the Dutch Reformed Church was one denomination among many in the city. The denomination took its present name in 1867 and remained active in the early twenty-first century. One of its better-known congregations was the Marble Collegiate Church in Manhattan.

Randall Balmer

Reformed Church of South Bushwick. Church at 15 Himrod Street in Brooklyn, organized in 1851. Known as the White Church, it is a white-frame structure with Greek Revival elements, a central tower, and a steeple.

Kenneth T. Jackson

Reformed Dutch Church of Newtown. One-story church at 85-15 Broadway in Elmhurst. Erected in 1831 in Greek Revival style, it is one of the city's few remaining churches built entirely of wood. The building replaced a small octagonal church built in 1735 in the colonial settlement of Newtown that the British used as a powder magazine in 1780. The 1970s saw many Asian immigrants move into the neighborhood, and a Taiwanese ministry was initiated in August 1980. This influx of immigrants led to the creation of a second head pastor position to minister in Taiwanese and Tamil. In 1995 the church began offering services in Mandarin. It is part of the Reformed Church in America.

Amanda Aaron

Reformed Episcopal Church. Religious movement launched at a meeting in the Young Men's Christian Association Hall (Fourth Avenue and 23rd Street) on 2 December 1873 by George David Cummins. Its formation was the result of a breach opened in the 1840s between the evangelical wing of the Protestant Episcopal Church (of which Cummins, the assistant bishop of Kentucky, was a member) and the Anglo-Catholic movement (which entered the church through the General Theological Seminary of New York City), and more immediately of Cummins's participation in the closing communion service of the Evangelical Alliance in New York City (2–12 October 1873), for which he received a severe censure from Bishop Horatio Potter that led him to resign from the church on 10 November. The new movement advocated a moderate episcopacy but failed to attract many evangelicals and suffered a serious setback when Cummins died in 1876; its national membership never grew beyond 12,000 (in the 1920s). The Reformed Episcopalians at one time had 12 parishes in New York City, but in 2008 only the First Reformed Episcopal Church on East 50th Street remained.

Allen C. Guelzo, *For the Union of Evangelical Christendom: The Irony of the Reformed Episcopalians, 1873–1930* (University Park: Pennsylvania State University Press, 1994)

Allen C. Guelzo

Reformed Protestant Dutch Church. Church at 630 New Lots Avenue in Brooklyn, also known as the New Lots Community Church and the New Lots Reformed Dutch Church. The building was erected in 1823 by local Dutch farmers who had grown weary of the weekly trek to the Flatbush Reformed Church. A registered landmark, it is a simple wood clapboard church with a pitched roof, an impressive steeple, and Gothic Revival stained-glass windows.

Kenneth T. Jackson

Regional Plan Association of New York [RPA]. Private organization formed in 1929 to implement the *Regional Plan of New York and Its Environs,* a study comprising 10 preliminary and two final volumes proposed by the Committee on the Regional Plan of New York and Its Environs, which was founded in 1922. RPA superseded the committee, which continued to function until the two organizations completed their merger in 1931. Among the many experts in urban development who contributed to the plan were Edward Bassett, the attorney who wrote the zoning law of 1916; Clarence Arthur Perry, who developed the concept of the "neighborhood unit"; Raymond Unwin, founder of the urban planning program at Columbia University; and other well-known planners such as Harland Bartholomew, Edward Bennett, and George Ford. The authors of the plan proposed a detailed system of land use and transportation improvements for Manhattan, the outer boroughs, and surrounding areas in New York State, New Jersey, and Connecticut. They intended to maintain the New York metropolitan region as the economic center of the United States by strengthening the financial and commercial centers, improving the upper-income residential areas of Manhattan, and dispersing manufacturing throughout the region. Special attention was given to highway and bridge construction and to the preservation of open space. Upon the plan's release funds for monitoring its success were granted by the Russell Sage Foundation.

With the support of the Ford Foundation and the Rockefeller Brothers Fund the association sponsored further planning studies during the 1950s and early 1960s, including the New York Metropolitan Region Study, directed by the economist Raymond Vernon, and *Spread City,* an influential forecast of suburban sprawl published in 1962.

C. McKim Norton, son of Charles Dyer Norton and president of the RPA, guided the preparation of the *Second Regional Plan* in 1968. The plan proposed to control suburbanization in the region and revitalize its core by coordinating the construction of office buildings and the planning of public transit; building the Citicorp Center, the World Trade Center, and new plazas and arcades in Manhattan; reviving downtown Brooklyn; and redeveloping the region's waterfronts. In 1996 the RPA released *A Region at Risk: The Third Regional Plan for the New York–New Jersey–Connecticut Metropolitan Region,* which urged cooperation between the public and private sector in improving the metropolitan region and was organized into five areas: greensward, mobility, centers, workforce, and governance. In the early twenty-first century the RPA remained actively involved in the future of the metropolitan region, including the redevelopment of lower Manhattan after the terrorist attacks of 11 September 2001, the transfer of Governors Island to the people of New York in 2003, and improving the region's rapid transit system.

Forbes B. Hays, *Community Leadership: The Regional Plan Association of New York* (New York: Columbia University Press, 1965)

John T. Metzger, Marc A. Weiss

Regis High School. Jesuit day school for boys at 55 East 84th Street, opened in 1914. Its building, designed by the firm of Maginnis and Walsh, was completed in 1917 and later designated a city landmark. The school is known for its competitive admissions and rigorous academic program, and all its students receive scholarships covering all expenses except laboratory and activity fees. In 2005 it enrolled 530 students drawn from the entire metropolitan area, including New Jersey and Connecticut.

Gilbert Tauber

Rego Park. Neighborhood in east central Queens, bounded to the north by Queens Boulevard, to the east by Yellowstone Boulevard, to the south by the intersection of Yellowstone and Woodhaven boulevards, and to the west by Woodhaven Boulevard. The name is derived from that of the Real Good Construction Company, which developed the neighborhood in the 1920s. Until 1920 the area was covered by farms and had one road, Remsen's Lane (now 63rd Drive, Fleet Court, and 64th Road), which abutted the Zeiler farm; for several years Chinese farmers who kept strictly to themselves grew vegetables there for sale in Chinatown. The Rego Construction Company bought out the farms during the 1920s and built one-family row houses, multi-family houses, and apartment buildings, and in 1923 the area was named by the developers Henry Schloh and Charles I. Hausmann. The core of the development was 525 eight-room houses costing $8000 each; the first stores were built in 1926 on Queens Boulevard and 63rd Drive. Apartment buildings were erected in 1927–28, among them Jupiter Court, Remo Hall, and Marion Court. A railroad station was open from 1928 to 1967. The IND subway line to Union Turnpike began service on 31 December 1936. In 1939–40 the World's Fair spurred development. The city's first Howard Johnson restaurant was built on Queens Boulevard for the fair (demolished 1969). The Rego Park Jewish Center was dedicated in 1948. In 1945 construction began on the Long Island Expressway from the Brooklyn Queens Expressway through Rego Park. Part of the neighborhood south of the boulevard with handsome single-family homes is known as the Crescents for the concentric curving streets. Lefrak City (1962–67), a huge housing complex adjacent to the Long Island Expressway, at first was predominantly Irish, German, and Italian, but in the 1970s it attracted many immigrants from the Soviet Union and Asia. About 15 percent of the immigrants settling in Rego Park in the 1980s were Chinese, but many more were Jews from the Soviet Union, Iran, and Israel; there were also enclaves of Indians, Colombians, Koreans, and Romanians. The population in 2008 was about 25,000: half white, 27 percent Asian, 16 percent Hispanic. Queens Boulevard remains a lively retail center, with several national chains as well as local businesses.

Vincent Seyfried

Reid, Whitelaw (*b* near Xenia, Ohio, 27 Oct 1837; *d* London, 15 Dec 1912). Journalist and diplomat. After covering the Civil War for the *Cincinnati Gazette* he joined the staff of the *New York Tribune* in 1868. On Horace Greeley's death in 1872 he became the principal owner and editor in chief of the newspaper and was considered by many to be the nation's most influential Republican editor. He relinquished active editorship of the *Tribune* in 1889 but retained financial control. In the same year he was appointed minister to France by President Benjamin Harrison, and in 1892 he returned to the United States and was the unsuccessful Republican candidate for vice president. He became President Theodore Roosevelt's ambassador to Great Britain in 1905, a position he held until his death.

Bingham Duncan, *Whitelaw Reid: Journalist, Politician, Diplomat* (Athens: University of Georgia Press, 1975)

Steven H. Jaffe

Reinhardt, Ad(olf D. Frederick) (*b* Buffalo, N.Y., 24 Dec 1913; *d* New York City, 30 Aug 1967). Painter. He grew up in Brooklyn and Queens and studied at Columbia University from 1931 to 1935. While working in a studio next to Stuart Davis's in 1938 he began a series of brightly colored abstract paintings inspired partly by what he called Davis's "loud ragtime jazz records" and "loud colored shirts on the clothes-line." Reinhardt had his first major exhibition in 1946 at the Betty Parsons Gallery. Unlike most other painters of the New York School, he opposed painterly expressionism and decried what he considered the corrupt relationship of artists, dealers, and critics (especially Clement Greenberg). During the 1940s he drew cartoons for the newspaper *PM* that satirized the art world and was himself the subject of "Pure Paints a Picture" (1957), a spoof written by Elaine de Kooning. He also took part in a protest in November 1940 against the Museum of Modern Art because of its reluctance to exhibit contemporary abstract painting. From 1947 to 1967 he taught at Brooklyn College. Reinhardt's paintings were eventually acknowledged as some of the most theoretically rich work produced by the New York School. Though he took Greenberg's formalism to an extreme, his work also directly influenced the antiformalist minimal and conceptual movements that took shape during the decade after his death. In 1991 he was given a posthumous retrospective exhibition at the Museum of Modern Art. Reinhardt is best known for a series of black monochrome paintings exhibited at a retrospective exhibition at the Jewish Museum in Manhattan in 1966 and for his writings on art, which address notions of autonomy and purity in painting and set forth a dogma of radical formalism.

Melissa M. Merritt

reinsurance. Insurance by firms that spread their risks by transferring some of them to other insurers. The validity of reinsurance contracts was recognized by the supreme court of New York State in *New York Bowery Insurance Company v. New York Fire Insurance Company* (1837). One of the first companies to offer reinsurance was founded in New York City: Atlantic Mutual, which had a reinsurance agreement with the Insurance Company of North America that enabled both companies to provide larger amounts of insurance for single ships. Reinsurance became vital for fire insurers after the Great Fire of 1835 and the fire of 1846 in New York City, and the fire of 1871 in Chicago, when companies that wrote most of their policies in a single geographic area found that they had to pay losses on many of the policies simultaneously. Lower Manhattan was found to be a convenient

location for firms offering primary insurance and reinsurance. The opportunities there about the turn of the twentieth century also attracted many foreign firms, such as Cologne Re and Munich Re in 1898, Skandia in 1900, and North American Re, a branch of Swiss Re that in 1910 opened offices in the city to transact business throughout the nation; the city soon emerged as one of the leading reinsurance centers in the world. After the terrorist attacks of 11 September 2001 on the World Trade Center, the insurance and reinsurance industries were hit with huge losses; Swiss Re and six other companies were involved in a nearly six-year legal battle over claims by Larry Silverstein, the developer who leased the World Trade Center shortly before the attacks. Under a 2007 settlement the seven companies agreed to pay Silverstein $2 billion, on top of $2.55 billion previously paid by other insurers; the $4.55 billion—the largest single insurance settlement in history—went toward rebuilding the World Trade Center site.

Reisman, Philip (*b* Warsaw, 1904; *d* New York City, 17 June 1992). Painter and printmaker. After arriving in New York City in 1908 he studied at the Art Students League during the 1920s and had his first solo show at the Painters and Sculptors Gallery in 1931. He worked in the tradition of the Ashcan School and was especially known for his views of the teeming streets, tenements, parks, and bars of the city. In 1979 the Museum of the City of New York presented an exhibition of Reisman's work.

Kenneth T. Jackson

Rejection Show. Live show in New York City in which writers, comedians, artists, and others read or perform pieces on the theme of rejection. The show was created in 2003 by writer and comedian Jon Friedman. In 2006 it began being performed monthly at the Upright Citizens Brigade Theatre in Manhattan. Past venues included The Tank and Performance Space 122, as well as Mo Pitkin's, where it ran weekly in summer 2006. While much of the material is presented by professionals in the entertainment and publishing industries whose work has been rejected, laypeople are also invited to tell stories involving rejection of a personal, romantic, professional, or other sort. Regular guests include writers for *Saturday Night Live* and the *Onion* as well as cartoonists from the *New Yorker*. Often the presenters' comments and stories of the rejection process are emphasized as much as the work itself. Friedman edited the anthology *Rejected: Tales of the Failed, Dumped and Canceled* (2009). Recordings and written material from the show are also available on a broadband channel.

Jacqueline Lalley

Reles, Abe (*b* Brooklyn, 1907; *d* Brooklyn, 12 Nov 1941). Gangster. Born in the Brownsville neighborhood of Brooklyn, he began his criminal career as an adolescent. Also known as "Kid Twist," Reles worked for the Shapiro brothers before being caught and sent to juvenile detention for two years. Upon his return, Reles and childhood friend Buggsy Goldstein killed the Shapiros and took control of the Ocean Hill and Brownsville rackets. Reles's growing stature in organized crime led him to work with Louis "Lepke" Buchalter, a leader in the gang of contract killers known as Murder Incorporated that performed many mob executions during the 1930s. Linked to well over a dozen killings, Reles once told an attorney he got used to killing men the same way the attorney grew accustomed to trying cases. After being picked up on murder charges, Reles turned informant in 1940, implicating Goldstein and Buchalter as well as other members of Murder Incorporated. Held at the Half Moon Hotel on Coney Island under police surveillance, Reles fell to his death from a sixth-story window before he could testify against Albert Anastasia and other high-ranking crime figures. Although many believed the police allowed Reles to be pushed from the window or did it themselves, Reles's death was officially ruled an accident sustained during an escape attempt. The fall earned Reles the nickname, "the Canary who sang but could not fly."

Ben Silk

religion. A tradition of religious diversity was established in New York City by Dutch colonists and strengthened by the position of the city as a trading post. The colonists espoused toleration, and the Dutch West India Company did not want the enforcement of the Dutch Reformed faith to interfere with trade. The difficulty of attracting settlers led the company to accept a religiously diverse population that included Italians, Danes, Dutch from the lower classes, and refugees of religious persecution, including 30 Protestant Walloon families in 1624. The practice of Dutch Pietism, as represented by the Reformed Church, was not enforced by the first governor, Peter Minuit, a nominal Huguenot. For this he drew criticism from Jonas Michaëlius of the Dutch Reformed Church, with whom he often disagreed. After becoming governor in 1647 Peter Stuyvesant tried unsuccessfully to establish the exclusive rights of the Dutch church, which was poorly staffed and attended. Most able *predikanten* (pastors) were unwilling to cross the Atlantic for a frontier ministry, and less able ones in the colony attracted few congregants. At this time the city was rapidly evolving from a trading post into a diverse, international community. In 1654 Stuyvesant protested the emigration to the city of Jews from Recife, Brazil, for fear of encouraging other immigrants who did not belong to the Dutch Reformed Church, but the Dutch West India Company welcomed Brazilian Jews for their knowledge of international affairs; that the company had Jews among its prime stockholders in Amsterdam may also have played a part. One of Stuyvesant's supporters was Dominie Johannes Megapolensis, who in 1655 complained to officials in Amsterdam: "We have here Papists, Mennonites and Lutherans among the Dutch [and] also many Puritans or Independents and many atheists and various other servants of Baal."

When the English took control of the city in 1664 they made efforts to establish the Church of England, which had a growing number of adherents in the colony. In the 1680s the Dutch Reformed Church in New York City was led by Dominie Hendrik Selijns, who had integrity and was popular among merchants. At times fierce disputes arose between members of the Anglican, Dutch Reformed, and Presbyterian faiths, but in general there was widespread tolerance of religious difference. The African Methodist Episcopal Zion Church, formed in 1821, was the first African American church in the city. The New York City Mission Society was formed as an interdenominational organization in 1812 by clergy and laymen to help the poor. Members raised funds for charitable causes and worked in slums to promote good health and education; they also used religious motivations grounded in congregants' understanding of benevolence and formed religious organizations to combat urban problems. Several other charitable organizations were formed during these years, among them the New York City Mission and Tract Society, the New York Female Moral Reform Society, and the New York Society for the Relief of Widows and Orphans of Medical Men. The American Bible Society was formed in 1816. After the founding of Union Theological Seminary by Presbyterians in 1836 Protestantism developed a new intellectual focus. Scholars at the seminary were pioneers in ecumenism who experimented with liberal theology. Among the faculty members was the religious historian Philip Schaff, who urged American Protestant churches to join in a federation.

Like most other parts of the United States, New York City remained heavily Protestant until emigration of Catholics from Ireland and continental Europe began in the 1830s. The leaders of the city were reluctant to welcome immigrants whom they feared would be resistant to evangelistic appeals and unwilling to adopt such Protestant customs as observing a quiet Sabbath and abstaining from alcohol. In 1833 there were five Catholic churches in New York City. Tension between

Hindu Temple Society in Flushing, 1992

Catholics and Protestants in the city peaked after controversies over religion in public schools and an attack on Catholics in Philadelphia in the early 1840s. Bishop John Hughes staved off attacks in New York City by threatening to arm his churches. By 1863 the city was the Catholic center of the country and had 32 Catholic churches, many of which drew large congregations. Some Protestant evangelists tried to convert Catholics in the city, as they had done in small towns upstate and in other parts of the nation. The best-known evangelist of the day, Charles G. Finney, worked closely with wealthy merchants, including Arthur and Lewis Tappan, who built for him on Broadway a tabernacle that resembled a theater and attracted large crowds. Nevertheless, few Catholics attended his sermons: most of his adherents were Protestants displaced from small towns.

At the end of the nineteenth century hundreds of thousands of Jews fleeing pogroms in eastern Europe immigrated to the United States and settled in New York City. German Jews were at the time forming Conservative and Reform congregations in the city and often conflicted with the Jewish immigrants from eastern Europe, who either remained Orthodox and organized small shuls or ceased to practice their religion altogether. Reform and Conservative Judaism later became influential: about the turn of the twentieth century the founding of the Jewish Theological Seminary established an intellectual focus for Conservatism; Reform temples were presided over by rabbis who became known throughout the nation.

In 1892 Episcopalians laid the foundation in Morningside Heights for the Cathedral of St. John the Divine. Designed to overshadow St. Patrick's Cathedral, it became the largest church in the United States and the largest Gothic cathedral in the world. Churches well known for their fine music and splendid architecture drew many tourists. Protestant ministers who hoped to influence elite New Yorkers and become known through religious publications aspired to a fashionable pulpit in the city. There were also a number of well-known ministers in Brooklyn, the "city of churches," among them Henry Ward Beecher. Some ministers, including William S. Rainsford (1850–1933) of St. George's Episcopal Church, became known as reformers. They attacked Tammany Hall and other corrupt political organizations and fought against social vices such as prostitution and liquor trafficking. Rainsford and others solicited funds from philanthropists like J. P. Morgan to found "institutional churches" that offered gymnasiums, health centers, game rooms, and educational facilities for the poor. Charles A. Briggs of Union Theological Seminary was tried in 1892–93 for heresy by his fellow Presbyterians for offering new, critical views of the Bible. After his acquittal the seminary became interdenominational and eventually led the mainstream of the Protestant ministry in the city; in 1910 it moved to Morningside Heights next to Columbia University.

The city was a major center after the 1890s for the Social Gospel, a movement begun by liberal Protestants. Its best-known leader, Walter Rauschenbusch, was a Baptist who worked in Hell's Kitchen, where he could occasionally be seen leading his fellow Baptist John D. Rockefeller through the streets to gain his support for ministries to immigrants. For members of many ethnic groups that settled in the city, religion became a way of preserving ethnicity and finding community. They continued to practice the religions of their native countries and also used their houses of worship for social gatherings. Christians from Russia, Greece, eastern Europe, and the Middle East erected Orthodox and national Catholic churches (independent of papal authority) that were influential in their neighborhoods, although less so in the nation. Chinese houses of worship were first recorded in the census of 1890.

About the time of World War I large numbers of blacks moved from the South to New York City. Most settled in Harlem, displacing Jews. Black Protestant congregations often met in disused churches and synagogues that became rallying points for the concerns of the community. Some ministers, including Adam Clayton Powell, Sr., and Adam Clayton Powell, Jr., of the Abyssinian Baptist Church, inspired their large followings to take up political causes. In the 1920s Marcus Garvey formed a "back to Africa" movement that incorporated religious imagery, attracted the support of some ministers, and led to the rise of the African Orthodox Church, which remained a small denomination. Many black radicals active in the Harlem Renaissance found religion confining and became averse to it, but African American spiritual lore did find its way into the work of some poets, soul and gospel musicians, and playwrights. After 1920 many Puerto Ricans moved into an area of New York City that became known as Spanish Harlem. Most remained Catholic but did not practice Catholicism the way Europeans did: one estimate suggested that only 4 percent of Puerto Rican Catholics attended church regularly, less than one-tenth the proportion for all Catholics in the nation.

Religious and social conscience took new forms in New York City in the mid-twentieth century. George Baker assumed the name Father Divine and in the 1930s formed the Father Divine Mission, which attracted a largely black congregation and became known nationally. Dorothy Day, a convert to Catholicism, began publishing the *Catholic Worker* in 1933 and with her colleagues ministered to the poor and promoted social justice. The best-known liberal Protestant minister of the century, Harry Emerson Fosdick, was helped by John D. Rockefeller, Jr., to build Riverside Church at 120th Street and Riverside Drive in Morningside Heights. This interdenominational church helped to shape American theology for decades. At mid-century the faculty of Union Theological Seminary included the preeminent religious thinkers Reinhold Niebuhr and Paul Tillich; Francis Cardinal Spellman was the head of the Archdiocese of New York and often regarded as the leader of American Catholicism; and Rabbi Abraham J. Heschel dominated Jewish theology. With funds from John D. Rockefeller, Jr., Protestants opened the Interchurch Center in 1958 in Morningside Heights

at 475 Riverside Drive, nicknamed the God Box for its architecture and function.

In 1957 the evangelist Billy Graham began a crusade in Madison Square Garden, where he held nightly gatherings that were broadcast on national television. His large audiences were drawn from churches in the city and even from congregations hundreds of miles away. He made thousands of conversions and gained the approval of the Protestant Council of New York, which was often skeptical of conservative evangelists. He also won many friends, some of them celebrities, and fended off criticism from theologians like Niebuhr who found his evangelism lacking in social justice and relevance to the modern world. By the 1960s other Protestant evangelists, many of them Pentecostalists, came into conflict with the Catholic Church by attracting Puerto Ricans and other Latin Americans. As elsewhere in the United States, Pentecostal congregations prospered notably in the quarter century after 1985, becoming commonplace in all the boroughs with substantial Latino populations, with a special appeal to recently arrived immigrants from Mexico and Latin America. The ministry of the Nation of Islam (the members of which were known as the Black Muslims) formed in the city and led by Malcolm X during the 1960s suffered losses after his assassination in 1965 but also presaged the rise of a modest Islamic presence generally within the city's African American communities.

Pluralism continued to flourish in the city in the early twenty-first century, creating community amid urban anonymity. Perhaps ironically, given its secular reputation, New York City remained an important center of national denominational enterprise. Some denominations and many interdenominational agencies continued to make their headquarters there, including the National Council of Churches and Church Women United USA (both at the Interchurch Center on Riverside Drive). Other less ecumenical Christian organizations also were well established in the city. The Watchtower in Brooklyn Heights became the international headquarters of the Jehovah's Witnesses, and many evangelical denominations were strongly represented in the mid-1990s, including the American Bible Society (at 1865 Broadway). The Young Women's Christian Association (YWCA), not as explicitly religious as it had been in its early years, established its national headquarters on Broadway. The major interfaith organization in the United States, the National Conference of Christians and Jews, maintained offices on Fifth Avenue, and Religion in American Life, also a national organization, had offices on Second Avenue.

Many of the world's religions continued to be practiced in the city, including Islam, Buddhism, and Hinduism. The largest denomination was Catholicism, with 2.35 million adher-

ents in the early twenty-first century. The city continued to have the largest Jewish community in the nation, invigorated by plural communities of Reform, Conservative, Orthodox, and sectarian Hasidic Jews. By 2000 the city was home to more than 700,000 Muslims worshipping in more than 80 mosques. The city's well-known black Protestant congregations continued as principal institutions within New York's African American communities, and the city's prominent white Protestant congregations retained an influence beyond their numbers. "Megachurches," such as the 10,000-member Brooklyn Tabernacle, aligned "born-again" New Yorkers with the national evangelical Protestant movement. New York City's several thousand churches, synagogues, and mosques testified to a 300-year engagement with religion that belied its reputation as the epitome of American secularism.

remittances. Payments made by immigrants back to their home countries. As New York City has always had the nation's largest immigrant community, it has become a center for remittances. In 2006 the Inter-American Development Bank estimated that people living in New York State sent more than $3.7 billion in remittance payments to Latin America alone. Much of the money is sent through informal channels that are untraceable, thus there are few estimates on payments to other regions because informal channels make up the bulk of monetary transfers from the United States to these regions.

Nathan Morgante

Remsen Village. East Flatbush neighborhood in northeastern Brooklyn, bounded to the north by Linden Boulevard, to the east by Rockaway Parkway, to the south by Ditmas Avenue, and to the west by Ralph Avenue; it is named for Remsen Avenue, which bisects it. In the late 1930s real estate developer Fred Trump built blocks of attached and semiattached brick houses that he called bungalows on Remsen Avenue, a site that formerly housed quarters for the Barnum & Bailey Circus. Remsen Village's modest homes attracted a growing Jewish population that formed an active community council. By the 1970s many had moved to the outer suburbs and were replaced by immigrants from the Caribbean, chiefly Jamaica, Haiti, and Guyana. The main commercial district lies along Remsen Avenue; small industries and shopping pockets line Linden Boulevard, while the Brooklyn Terminal Market, which replaced Fort Greene's Wallabout Market, sits off Ditmas Avenue.

rent regulation. Government regulation of the amount of rent charged for housing. Its goal is to protect tenants from steep rent increases and unfair eviction, and ensure that landlords keep buildings in good order; at the same time it aims at allowing landlords reasonable increases in rents with adjustments for cost of living. In New York City rent stabilization/control means that the landlord/owner can only charge rents determined by government agencies. Rent control covers tenants who have lived continuously in the same apartment from before 1971, or family members who succeeded to those tenancies before 1947. Rent stabilization covers buildings built before 1974 with six units or more. Rent levels are based on criteria including length of residency, size of building, and economic factors. To qualify, the tenant must have been living in the apartment continuously for an extensive period of time. The rent formula (maximum base rent, or MBR) takes into consideration the costs for the owner, including taxes, water and sewer costs, and other carrying costs. The formula is changed every two years, subject to public hearings that are usually contentious. Rent laws in New York City are subject to approval by the state legislature in Albany. The New York City rent control program, formally started in 1943, is the oldest in the United States.

In New York City a housing shortage and high rents after World War I prompted the state legislature to pass emergency laws enabling tenants to challenge "unjust, unreasonable and oppressive" rent increases in magistrates' courts. These laws were annually renewed until 1928; residents of " old-law" tenements that were in violation of these rent regulations gained further protection under the Minkoff Law (1939), which prohibited rent increases in old-law housing that did not fully comply with the Multiple Dwellings Law of 1929 (which regulated structural, maintenance, and hygienic standards in apartment housing).

During World War II the U.S. Office of Price Administration (OPA) declared the city a "defense rental area" to encourage landlords to maintain fair rents voluntarily. In 1942 the Metropolitan Fair Rent Committee, an influential group of large-apartment owners, promised that the landlords whom it represented would comply, but there were still reports of exorbitant rents. They precipitated a riot in Harlem in August 1943. On 1 November the OPA froze the rents of 1.4 million dwellings at the level of 1 March, with some exceptions: landlords were permitted to increase rents by 15 percent in cases of hardship and to evict tenants to provide housing for their immediate families. Despite charges that rent controls were creating a black market, they were maintained by the OPA until 1947, whereupon tenant groups persuaded Governor Thomas E. Dewey and Mayor William O'Dwyer to impose a state-run system that placed controls on apartments built before 1947 (landlords were allowed a "catch-up" rent increase of 15 percent); it was at this point that the year when a building was constructed became a factor in determining how much rent could be charged. Under the new system the vacancy rate was measured at three-year intervals: a rate below 5 percent constituted a housing emergency that could justify a renewal of rent controls by the state legislature. Landlords were granted occasional rent increases of as much as 15 percent.

New York City and New York State began shared administration of rent regulation in 1962. By 1968, 75,000 high-rent apartments were gradually deregulated. Rents kept increasing, and in 1969 the Rent Stabilization Law affected units built after the 1947 cutoff for buildings to be eligible for rent control, covering approximately 325,000 units in New York City. Rent increases were subject to self-enforcement by landlords belonging to the Rent Stabilization Association. The method of setting rent control prices changed with the Local Law 30 of 1970, which, using the maximum base rate, adapted prices to the changing costs faced by landlords, allowing them to pass those costs on to renters. Fears that housing abandonment would become chronic moved the legislature to weaken rent controls in 1971; it allowed a rent increase of 15 percent and an inflation adjustment of 7 percent, and linked stabilized rents to a "maximum base" calculated according to a reasonable return on investment. In 1972 it adopted "vacancy decontrol," under which apartments were removed from rent control altogether when they became vacant, but owing to pressure from tenant groups it reimposed rent stabilization on decontrolled apartments in 1974. Landlords in the 1980s increasingly perceived rent control as permanent, and as a result many converted rental apartments to cooperatives and condominium units. In 1997 the Rent Regulation Reform Act provided that stabilization be applied only to apartments with rents under $2,000 per month. Such apartments would be deregulated after that amount if vacated or if renters' household gross income surpassed $175,000 for two years. The house must be a primary residence. There are also programs for renovated or new buildings, and provisions for temporary stabilization.

In the first decade of the twenty-first century there were 2.5 million tenants living in one million apartments subject to rent control. Rent regulation continued to be fiercely debated. Opponents of the system contend that it contributes to abandonment and reduced

revenues from property taxes. They also argue that rent regulation benefits the middle class rather than the poor: regulated rents do not take into account a tenant's income (except in the highest-priced rent-stabilized apartments, because of a limited provision passed in 1993), and the higher turnover of apartments in poor neighborhoods allows for more frequent rent increases. Defenders of the system maintain that the inadequate supply of affordable housing stems not from regulation but from more fundamental problems, and that in any case rent regulation does not apply to new construction. They also doubt whether a repeal of regulation would achieve its purported benefits, arguing that rents in poor neighborhoods would still be higher than what local residents could afford to pay, and that a repeal would lead to widespread price gouging. Rent-regulated apartments in the city are highly sought after and are often the subject of legal disputes, especially concerning tenants' principal domicile, subletting, and rights of succession.

Joel Schwartz, Lisa Keller

Renwick, James (*b* New York City, 1 Nov 1818; *d* New York City, 23 June 1895). Architect. Trained as an engineer, he oversaw the construction of a reservoir on the site at 42nd Street now occupied by the New York Public Library. He soon won a competition to design Grace Church, a success that led to commissions for St. Bartholomew's Church and St. Patrick's Cathedral; he also designed the fountain at Bowling Green, the Free Academy, hotels including the St. Denis, banks, palatial residences such as that of Charles Morgan, and buildings on Blackwell's, Wards, and Randalls islands for the Department of Charities and Correction. Toward the end of his life he was a senior warden of Grace Church.

Republican Party. From its creation in 1854, the Republican Party has always been a minority party in New York City, but with a disproportionately large effect on local, state, and national politics. Its origins were among free-soil, antislavery advocates. Although some of the city's most prominent newspapers, including the *Tribune,* the *Evening Post,* and the *New York Times* supported Republicans, the party had limited political appeal. Most Republicans tended to be affluent Protestants of English descent. Irish Catholics and other poor and working-class immigrants were put off by Republican support for moral reforms such as abolition and temperance and had little in common culturally with Republicans, some of whom had been members of the anti-immigrant and anti-Catholic Know-Nothings.

By the late 1850s Republicans dominated New York State government and often clashed with Democratic city officials, going so far as to revise the city's charter in 1857 to weaken Democratic control. Before the Civil War, New York City was the center of the cotton trade, which led many Manhattan business leaders to become advocates for the South and oppose the abolition of slavery. Though Abraham Lincoln's path to the presidency began with a famous speech at Cooper Union in 1860, he found little political support in the city during the Civil War, which became a hotbed of anti-Lincoln Copperhead Democrats. The draft riots of 1863 showed how deep the resentment of Republican war policies was among working-class New Yorkers.

In the second half of the nineteenth century, Republicans were often at the forefront of attacks against the corruption of Tammany Hall, the city's Democratic political machine. Republicans were also supporters of a wide range of municipal reforms. In 1882 a young Manhattan-born patrician named Theodore Roosevelt was elected to the state assembly as a Republican. He ran unsuccessfully for mayor as a Republican in 1886 and was appointed head of the city's Police Commission by Republican mayor William Strong in 1895. By 1901 Roosevelt would be living in the White House. Like many Republicans in twentieth-century New York City, Roosevelt often clashed with party leaders at home and in Washington, D.C.

In the same year that Roosevelt ascended to the presidency, his friend Seth Low was elected mayor as a reformer. Realizing that Republican support was not enough for victory, Low ran as a "fusion" candidate with the support of the Citizens Union. Throughout the twentieth century, Republican mayoral candidates followed Low's example and created their own anti-Tammany fusion tickets. One of the city's most famous Republican politicians was Fiorello H. La Guardia, although he wore his Republican identity loosely. First elected mayor in 1933 La Guardia was a strong supporter of the New Deal and organized labor. In each of his three mayoral victories, he ran as a fusion candidate.

New Yorkers played an important role in the national Republican Party in the mid-twentieth century. Thomas E. Dewey and Wendell Wilkie headed the national Republican tickets in 1940, 1944, and 1948. Jacob K. Javits began a decades-long career as a leading liberal Republican in Congress. Nelson A. Rockefeller was governor from 1959 to 1973 and was appointed vice president by Gerald Ford in 1974. Rockefeller was a national leader of the liberal wing of the Republican Party, which soon drew opposition from conservative Republicans such as Barry Goldwater and Ronald Reagan.

John V. Lindsay was the embodiment of postwar liberal New York Republicans. He had represented the affluent "silk stocking district" of Manhattan's East Side in Congress and was elected mayor in 1965 running on both the Republican and Liberal party lines. During his first term, Lindsay became a polarizing figure and was defeated in the Republican primary in 1969 by Staten Island's John Marchi, but he won reelection by running on the Liberal and Independent lines. As his politics drifted leftward, Lindsay grew uncomfortable in an increasingly conservative Republican Party. In 1971 he formally switched parties before making an unsuccessful run for the Democratic presidential nomination.

During this time the base of the city's Republican Party shifted away from liberal and wealthy silk stocking district voters and became increasingly located among middle-class Irish and Italian Americans living in Staten Island, southern Brooklyn, and central and eastern Queens. These voters were represented by politicians such as Marchi, Vito Battista, and Guy Molinari. A dwindling number of liberal Republicans remained on Manhattan's Upper East Side, represented by politicians such as Roy Goodman, Bill Green, and John Ravitz, but by 2002 no silk stocking Republican remained in elected office.

While the Republican Party flourished nationally during the 1980s, it stagnated in the city. In 1989 a former prosecutor named Rudolph Giuliani ran for mayor on both the Republican and Liberal party lines. Though Giuliani lost to Democrat David Dinkins, he won in a rematch four years later, again running as a fusion candidate. Though Giuliani was liberal on abortion and gay rights, he was pro-business and took conservative positions on taxes, welfare, and crime. He crossed party lines in 1994 to support Mario Cuomo for governor but would become popular among national Republicans because of his actions in response to the terrorist attacks of 11 September 2001. Giuliani's successes as mayor did little to strengthen the city's Republican Party; many conservative and moderate Democrats happily voted for Giuliani while retaining their party membership and voting for Democrats for other offices. Despite this, the Republican line for mayor was still a highly prized commodity. Billionaire Michael Bloomberg, a lifelong Democrat, switched parties in 2001 and successfully ran for mayor. He was reelected in 2005 as a Republican, but it proved to be a marriage of convenience. In 2007 Bloomberg left the party and became an independent; he was elected again in 2009, this time on the Republican and Independent party lines. In 2008 Rudolph Giuliani unsuccessfully sought the Republican nomination for president.

Throughout the 1990s and the first decade of the twenty-first century the Republican

Party became weaker throughout the Northeast. In New York City the party's already small numbers grew even smaller. In 1996 Republicans made up 13.8 percent of registered voters in the city; by 2008 that figure was down to 11.6 percent. At that time Republicans accounted for only three of the 51 seats in the City Council; three of the 27 seats in the city's delegation to the state senate; and only one of the 65 seats in the city's delegation to the state assembly.

Vincent J. Cannato

Republic New York Corporation. Commercial bank, formed in 1966 as the Republic National Bank of New York by Edmond J. Safra (1932–99) with headquarters at the Knox Hat Building on Fifth Avenue and 42nd Street (declared a landmark in 1980 and incorporated in 1986 as the National Bank Tower). The bank undertook a series of mergers and acquisitions beginning in 1974, when it bought the Kings Lafayette Bank, based in Brooklyn. Later acquisitions included 12 branches from Bankers Trust Company (1980), the Williamsburgh Savings Bank (1987), and the Manhattan Savings Bank (1990). In 1990 the bank adopted its current name. By 2007 Republic was one of the 15 largest commercial banks in the city, with nearly $40 billion in assets.

James Bradley

rescue dogs. Trained dogs that helped search for survivors and human remains after the terrorist attacks of 11 September 2001 on the World Trade Center. More than 300 dog and handler teams from across the country assisted the New York City Police Department's K-9 Unit with the search effort. Despite some handlers' concerns, a study undertaken between 2001 and 2004 found that the dogs' health did not suffer as a result of their exposure to toxic air at Ground Zero. DOGNY, a 2002 sculpture project sponsored by the city and the American Kennel Club, placed 300 life-sized sculptures of rescue dogs throughout the city to commemorate their work.

Kate Lauber

restaurants. The restaurant as Americans know it began in New York City in 1827 when the Swiss brothers Giovanni and Pietro Delmonico opened a small establishment on William Street where businesspeople could order a variety of hot meals. Taverns, coffeehouses, and eating houses existed in most American cities at the time, but restaurants that offered fine dining did not. Based on the Parisian model, Delmonico's established the pattern for all restaurants in the United States. It became a favorite place for eating and socializing and eventually expanded to four restaurants; one of these, at Fifth Avenue and 14th Street, was the place from which Samuel F. B. Morse sent the first cablegram across the Atlantic Ocean. After the Civil War Delmonico's competed with opulent establishments decorated with Italian marble, fine oak, and velvet draperies, such as Louis Sherry's, Rector's (at Broadway and 54th Street), the Maison D'Orée, and the restaurant at the Waldorf Hotel (opened in 1893 at Fifth Avenue and 34th Street), where the maître d', Oscar Tschirky, installed a velvet rope at the door to keep out those deemed unworthy of a table. In 1899 the Café Martin on Fifth Avenue and 26th Street introduced banquette seating, and Rector's introduced dancing. Along Broadway extravagant new restaurants like Churchill's, Murray's Roman Gardens, Shanley's, the Knickerbocker Grill, and Maxim's appealed to theatergoers; large oyster bars identified by red and white signs in the shape of a balloon appealed to everyone, offering an unlimited number of servings under the "Canal Street plan" (see OYSTERS). The best-known of the oyster palaces was the Grand Central Oyster Bar and Restaurant, opened on the lower level of the Grand Central Terminal and still in operation in the early twenty-first century.

The city's selection of restaurants was enriched by the arrival of immigrants during the late nineteenth century. The food served in the first Italian restaurants in the city was adapted from recipes of Naples and Sicily. Pizza was a Neapolitan food uncommon in most of Italy but popular in New York City after Gennaro Lombardi opened a pizzeria on Spring Street in 1905. Barbetta, opened in 1906 by Sebastiano Maioglio on West 39th Street (moved in 1925 to West 46th Street), served Piedmontese cuisine to the musicians who played at the Metropolitan Opera House nearby, and Sardi's (1927) became a favorite of theatergoers. The most popular Italian restaurant of the time was Mamma Leone's, which began in 1906 over a wine cellar near the back of the original Metropolitan Opera House and then moved to West 48th Street after World War I. Of the many German restaurants that opened at the turn of the twentieth century, the most famous was Lüchow's on East 14th Street, run by August Guido Lüchow. Jewish immigrants had grocery-restaurants called DELICATESSENS, some strictly kosher, which offered an array of breads, smoked salmon, dried fish, noodle pudding, frankfurters, pastrami, pickles, and cream soda. In Chinese restaurants New Yorkers were introduced to dishes developed for American tastes such as chop suey, egg foo young, and chow mein. Russian restaurants of the early twentieth century, such as the Russian Tea Room on West 57th Street next to Carnegie Hall, were often run by émigrés and patronized by artists and writers. Later Russian immigrants in Brooklyn opened large, colorful family restaurants like the National and the Zodiac. At the same time soul food such as fried chicken, biscuits and ham, and fried pies was served at restaurants in black neighborhoods and during the 1930s and 1940s at nightclubs in Harlem like Connie's Inn, the Cotton Club, and Smalls' Paradise, where the clientele was largely white (sometimes exclusively so).

The onset of Prohibition in 1920 crippled fine dining in New York City, and Delmonico's, Louis Sherry's, Rector's, and other such places closed by the early 1920s. In their place rose the speakeasies, which at first were nothing more than illicit saloons but later developed into private eating houses for what the *New York Journal American* columnist "Cholly Knickerbocker" (Maury Paul) called café society. The best-known speakeasy, the "21" Club (1922) at 21 West 52nd Street, the last of many such establishments opened by Jack Kriendler and Charlie Berns, was a multistoried restaurant and bar where good food was served at exorbitant prices to the important and glamorous; a system of trapdoors ensured that no liquor would be found during police raids. After the end of Prohibition, "21" continued to dominate the social scene in New York City, rivaled only by the Colony Club, which itself began as a speakeasy and later developed into a fine restaurant. In the outer boroughs notable restaurants included Gage and Tollner and the steakhouse Peter Luger in Brooklyn.

Americans were introduced to authentic French cuisine at the World's Fair of 1939–40, after which Henri Soulé, maître d' at the restaurant of the French pavilion, opened a deluxe French restaurant called Le Pavillon on East 55th Street. It set the standard for fine French restaurants in the United States and became a training ground for chefs and restaurateurs. Other important French restaurants in the city included Lutèce and later Le Cirque. Japanese restaurants opened in New York City during the 1950s and 1960s: Toyo-Kwan, Daruma, and Miyako served sukiyaki, teriyaki, and tempura; Saito on West 52nd Street, run by Moto Saito, had the first sushi bar (1957); and Benihana of Tokyo, opened in 1964 by Rocky Aoki, was the first Japanese steakhouse (the formula was later copied in Japan, where the restaurant was called Benihana of New York). During the late 1950s and 1960s the firm Restaurant Associates developed Zum Zum (a German sausage restaurant), Trattoria (an Italian restaurant in the Pan Am Building), the Forum of the Twelve Caesars (an extravagant rendering on West 48th Street of an imperial Roman dining room), La Fonda del Sol (a Latin American restaurant in the Time-Life Building), and the Four Seasons Restaurant (opened in 1959 in the Seagram Building). T.G.I. Friday's, founded in New York City in 1965, is often considered to have been the first "singles bar."

Partly as a result of growing immigration, the 1970s saw a proliferation of ethnic restaurants in the city, which in addition to the now well-known cuisines of Italy, China, and Japan introduced New Yorkers to those of India, Thailand, and Ethiopia. At the same time French restaurants expanded their offerings to include "nouvelle cuisine" as well

as more traditional dishes. The trend toward increasingly lavish restaurants was exemplified by Windows on the World, built at a cost of $6 million on the 107th floor of the World Trade Center in 1976. Restaurants became still more extravagant during the 1980s, and prices reached unprecedented levels. Several developments were in evidence at the end of the decade: young chefs like Larry Forgione of An American Place on Park Avenue and 32nd Street sought to fashion inventive menus and promoted what was called "new American cuisine," a rendering of traditional American dishes with modern refinements; innovations in seafood dishes were made by such chefs as Gilbert LeCoze of Le Bernardin, which opened on West 51st Street in 1988; and casual Italian trattorias and French bistros appealed to a clientele increasingly concerned with saving money.

Owing to high real estate prices in midtown, more and more of New York City's finest, well-trained chefs and restaurateurs moved or opened casual, innovative places downtown, in the Flatiron District, Tribeca, the Lower East Side, the West Village, the meatpacking district, and Nolita (North of Little Italy). Steakhouses, bistros, and huge Asian restaurants opened along with casual corner eateries such as The Spotted Pig in the West Village, which became as well known for its cuisine as for its bar scene, while at wd~50 on the Lower East Side chef Wylie Dufresne became the first chef in the city to emulate the experimental "molecular cuisine" of Spain's eminent chef Ferran Adrià. Across the Brooklyn Bridge in newly gentrified neighborhoods like Park Slope, Carroll Gardens, and DUMBO, similar casual restaurants with serious French, American, and Mediterranean menus flourished, while in other sections of the borough immigrants from Central and South America, the Caribbean, Russia, Croatia, and Albania took up residence in neighborhoods that were revitalized by cafés, luncheonettes, take-out establishments, and restaurants featuring those ethnic food cultures. In the early twenty-first century there are approximately 26,000 food-service establishments throughout New York City, including about 18,700 restaurants, with total sales of $15 billion annually.

Restell, Madame. Pseudonym of Ann Trow Lohman.

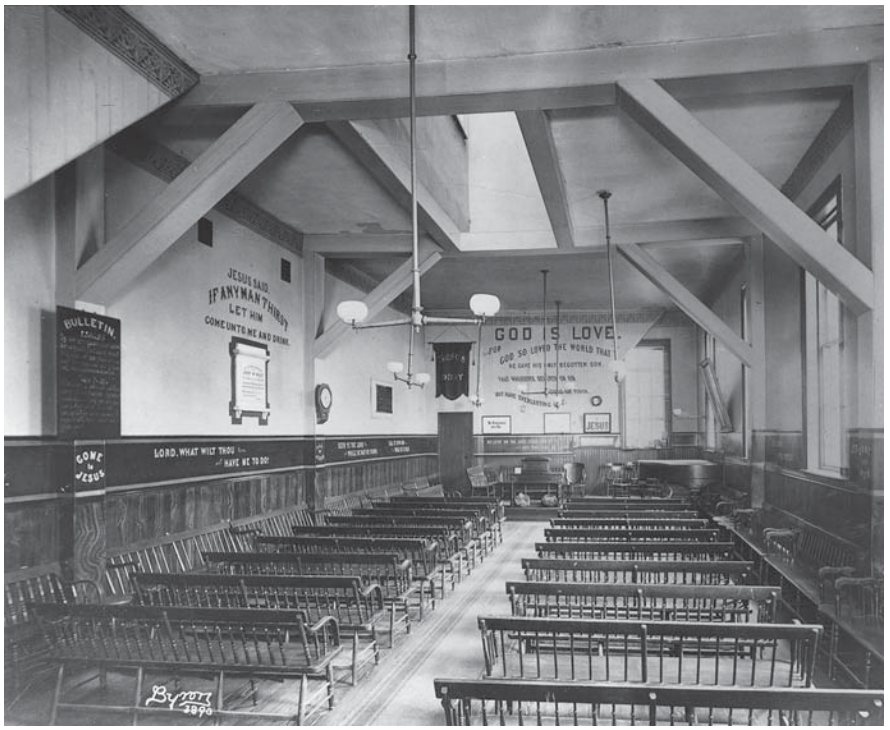
Retail, Wholesale and Department Store Union [RWDSU]. Labor union formed in New York in 1937 as the United Retail Employees of America; it took its current name in 1940. In 1941 RWDSU struck against Gimbel's department store and won a 40-hour workweek. The number of members increased dramatically during the late 1930s and early 1940s, but the union was divided up by the international leadership in the 1940s and 1950s. RWDSU was resurrected in 1954 when it merged with the Distributive Processing and Office Workers of America and the Playthings, Jewelry, and Novelty Workers International Union. In 1993 RWDSU affiliated with United Food and Commercial Workers.

Kerry Candaele

Reuben's. Delicatessen opened in 1908 by Arnold Reuben (1883–1970), a German immigrant, at 802 Park Avenue near 75th Street. It moved successively to Broadway and 82nd Street, Broadway and 73rd Street (1916), 622 Madison Avenue at 59th Street (1918), and 6 East 58th Street (1935), where it became well known among entertainment figures and tourists. The restaurant popularized but did not originate the Reuben sandwich (corned beef, Swiss cheese, sauerkraut, and Russian dressing on rye bread). Reuben retired in 1964 and although the restaurant closed in 1966, the brand name continued in different locations into the 1990s under various owners.

Val Ginter

Reverend Ike [Eikerenkoetter, Frederick J.] (*b* Ridgeland, S.C., 1 June 1935). Evangelist. The son of a Baptist minister and a teacher, he served as a chaplain in the U.S. Air Force before becoming an assistant pastor at the Bible Way Church in Ridgeland, South Carolina, in 1958. In 1962 he formed the United Church of Jesus Christ for All People and the United Christian Evangelistic Association. He moved to Boston in 1964, where he opened the Miracle Temple, and to New York City in 1966, where in the former Sunset movie theater on 125th Street he gave sermons based on the principle that "no one has to be poor, and no one has to be a failure." He soon made radio broadcasts and undertook national tours. During the following years Reverend Ike developed the Science of Living, a program of self-awareness and motivation, and in 1969 he bought the huge Loews theater at 175th Street and Broadway, which became the site of the United Church, Science of the Living Institute. The church flourished during the 1970s and was known for such catchphrases as "Welfare has its place but don't make it a resting place"; "I believe in God, therefore I believe in myself"; and "The best thing you can do for the poor is to not be one of them." A semimonthly magazine, *Action,* reached a circulation of 1.5 million, and Reverend Ike's broadcasts were eventually heard on more than 1500 radio stations. Known for his flamboyant demeanor and clothes as well as extensive real estate holdings and Rolls Royces, Reverend Ike continued to give sermons at the United Church in the early twenty-first century but keeps somewhat of a lower profile.



Eric Wm. Allison

revivalism. A movement in Protestant churches to renew, or revive, religious ardor and spirituality of adherents and to convert others. It was introduced to New York City by the English missionary George Whitefield, who on 14 November 1739 preached to an audience of 2000 outside the Wall Street Presbyterian Church. Whitefield's style was adopted by other revivalists who, like him, were attracted to the city because of its size and prominence, held mass meetings at unconventional times and places, and relied on charisma, sensational publicity, and fervent preaching. By 1829 the Methodists' success led Presbyterians in the city to engage Charles G. Finney, the best-known revivalist of his time. During the next six years he organized seven free churches, which did not charge rent for pews, to attract the poor. Finney also organized the first city mission, which visited the poor and campaigned against vice in nearby Five Points. During a financial panic in 1857, prayer meetings attracted thousands in lower Manhattan and inspired the only national revival that began in the city. In October 1872 Jerry McAuley, a former alcoholic, formed the Water Street Mission and emphasized the spiritual power to overcome addiction; the mission opened branches throughout the city and established the Crittenden (1883) and the Door of Hope (1890), homes for "fallen women," which grew into national organizations linked by the *Christian Herald,* a magazine published in the city from 1878. Several missions gave rise to denominations, including the Christian and Missionary Alliance, which was led in the 1880s by Presbyterian minister Albert B. Simpson and eventually became one of the largest evangelical denominations in the country.

In his campaign from 7 February to 19 April 1876 Dwight L. Moody adapted music hall entertainment to a brand of revivalism carefully fashioned for the middle class. Moody spoke to audiences of 10,000 a day in P. T. Barnum's Hippodrome at Madison Avenue and 27th Street and claimed to inspire 5000 conversions. With the help of meticulous planning by a professional staff, Billy Sunday became the best-known revivalist in the city from 1896 to 1935: his comic rhetoric, frenzied stagecraft, and adaptation of vaudeville entertainment attracted audiences of 1.4 million to his meetings, where there were 65,000 conversions. He reached the height of his career during a rally that lasted from April to June 1917. Billy Graham came to prominence in the city during his 1957 revival in Madison Square Garden that lasted from 15 May to Labor Day; he addressed two million people, among whom he claimed 55,000 as converts. He made his national debut on television in the city on 1 June 1957, launching the "electronic church," which soon became the largest outlet for revivalism. Graham's return visits in 1960 and 1969 were not as successful. More notable was a mission to drug addicts begun in the city in 1958 by the Pentecostal pastor David Wilkerson and expanded into the nationwide ministry Teen Challenge.

Jerry McAuley Bowery Mission, 1897

Revlon. Cosmetics firm formed in 1932. The company achieved success with a nail polish developed by its founders, Charles Revson (1906–75), his brother Joseph, and a chemist, Charles Lachman, for whom the "L" was included in the company name Revlon. Revson introduced in 1940 the first color-coordinated nail polish and lipstick ("matching lips and fingertips") and the first pink nail polish, and by 1941 he achieved a near monopoly for his products in beauty salons. He introduced new color lines each spring and autumn and devised advertisements that associated his products with heightened sexuality (an advertising campaign in 1952 based on the slogan "fire and ice" caused a sensation). His firm also sponsored a television program (*The $64,000 Question*) and made vitamins, toilet bowl cleaners, and shoe polishes. For many years Revlon enjoyed a rivalry with Estée Lauder; at one point both firms had their headquarters in the General Motors Building at 767 Fifth Avenue. At the time of Revson's death in 1975, Revlon was the second-largest cosmetics firm in the world. In 1985 the company was sold to a subsidiary of MacAndrews and Forbes Holdings, and in 1996 it became a public company. In the early twenty-first century its headquarters are located at 237 Park Avenue.

Revolution. Weekly periodical launched in 1868 in New York City by Susan B. Anthony. It emphasized news of the reform movement and favored an informed electorate and the abolition of standing armies. The publication was edited by Elizabeth Cady Stanton and Parker Pillsbury until Laura J. Curtis Bullard took charge in 1870; under her direction the focus was more on the well-being of women than on their equality. In 1871 *Revolution* was bought by W. T. Clarke, who tried unsuccessfully to transform it into a literary journal. It merged in February 1872 with the *Liberal Christian.*

Sandra Roff

Rheingold Breweries. Firm of brewers formed in Brooklyn in 1855 by Samuel Liebmann, a German immigrant. After his death in 1872 the firm of Liebmann Breweries was taken over by his sons, who expanded it by buying smaller local breweries, and during the 1880s Rheingold became its principal marque. From 1940 to 1965 the firm achieved wide publicity by running a promotional beauty contest in which customers cast ballots to choose Miss Rheingold. Like other smaller

Macy's food counter, 1902

brewers it could not survive the competition from large firms with modern facilities, national distribution, and enormous advertising budgets. In 1964 it took its current name after being sold by the family to Pepsi-Cola United Bottlers. Sales declined, the firm was put up for sale in 1974, and a purchase by Chock Full O'Nuts was arranged by the city. Under the new ownership sales continued to decline, and the factory in Brooklyn closed in 1976 when operations were moved to Orange, New Jersey. The beer returned to New York City bars and grocery shelves in 1998, however, when Walter Liebman and Michael Mitaro restarted the company. They also launched a new Miss Rheingold campaign. In 2005 the company was purchased by Drinks America.

K. Austin Kerr

R. H. Macy. Department store founded in 1858 by Rowland H. Macy. It began as a small shop on Sixth Avenue between 13th and 14th streets, far north of the existing dry-goods district bounded by Broome Street, the Bowery, Grand Street, and Broadway. The early Macy's was an innovative operation. Specializing in "fancy" and imported dry goods for women, the store was known for odd pricing (setting prices only one cent or a few cents below a full-dollar amount), a "cash-only" policy (which lasted until the 1950s), good value, and a money-back guarantee. Throughout the nineteenth century there was a factory on the premises; and before ready-to-wear women's clothing was introduced, more than 200 employees, mostly women, sewed made-to-measure suits, coats, jackets, and undergarments for women and shirts for men. The store grew rapidly and by the 1870s had an unprecedented number of departments, among them a large and profitable one devoted to home furnishings, and a range of merchandise that included toys, china, glassware, men's furnishings, jewelry, candy, and books. Macy's helped to secularize the American Christmas. Illuminated window displays, introduced in 1874, became a tradition that signaled the beginning of the Christmas shopping season; a Santa Claus first appeared in the store during the 1870s and afterward remained a fixture of the modern Macy's Thanksgiving Day Parade.

The firm was taken over in 1888 by Isidor and Nathan Straus, who moved the store from the declining shopping district on 14th Street to a building that they erected in 1902 at 34th Street and Broadway. A National Historic Landmark and the largest department store in the world, Macy's flagship store at Herald Square was the first large store above 23rd Street; despite the proximity of the Sixth Avenue elevated line, Macy's initially had to run a steam wagonette between 14th and 34th streets for customers reluctant to make the trip so far north.

For many years Macy's was characterized by a remarkable profitability and continuity of ownership. The Straus brothers' partnership became a family partnership in 1919 and a public corporation in 1922. The Straus family remained at the helm until the firm became privately held once again in 1986 after a leveraged buyout led by senior management. The buyout, coupled with the economic recession of the late 1980s, put such a strain on the operations of the firm that in January 1992 Macy's filed for bankruptcy. Not until it merged with Federated Department Stores in 1994 did the corporation emerge from bankruptcy protection. The merger created a true retail giant that has grown even larger in recent years with the "rebranding" of local, nameplate stores in major cities across the country. Chicago's legendary State Street store Marshall Field and Company is now a Macy's, as are stores in 45 states. Featured in movies (*Miracle on 34th Street*) and television (*Desperate Housewives*); sponsoring a spectacular fireworks display on the East River on the Fourth of July, a tap dance extravaganza in Herald Square, and the traditional Thanksgiving Day Parade; Macy's has become a New York institution and is often a stop on the itinerary of foreign visitors.

R. Hoe and Company. Firm of printing-equipment manufacturers formed in New York City in 1822. It was famous for innovative printing presses, including the Washington press, a toggle-jointed iron hand press; a flatbed cylinder newspaper press; and a type-revolving, rotary press invented in 1847 by Richard M. Hoe (1812–86). The firm occupied buildings on the Lower East Side until 1930 when it moved to the Bronx; it was dissolved by bankruptcy in 1977.

William S. Pretzer

Rice, (Henry) Grantland (*b* Murfreesboro, Tenn., 1 Nov 1880; *d* New York City, 13 July 1954). Sportswriter. He studied classics at Vanderbilt University (BA 1901) and worked for newspapers in Nashville; Washington, D.C.; Atlanta; and Cleveland before moving to New York City in 1911 to write for the *New York Evening Mail*. In 1914 he joined the *New York Tribune,* with which he remained associated until 1930. Rice's effusive, hyperbolic writing style, often painting the athlete in heroic terms, was immensely popular and influenced a generation of sportswriters. He wrote three volumes of verse and an autobiography, *The Tumult and the Shouting: My Life in Sport* (1954). In New York City he lived at 450 Riverside Drive (1911–30) and 1158 Fifth Avenue (from 1930).

Rice, William Marsh (*b* Springfield, Mass., 14 March 1816; *d* New York City, 23 Sept 1900). Businessman and philanthropist. He moved to Houston, Texas, in 1838 and became a partner in the mercantile firm of Nichols (renamed Rice and Nichols) and then moved to Mexico at the beginning of the Civil War and to New York City in 1865, where he oversaw finances and purchases for the Houston and Texas Central Railroad. For many years he lived in hotels, but by 1883 he had an apartment in the Grenoble on 57th Street. After his wife's death in 1896 he moved to an apartment at 500 Madison Avenue. He was murdered by his valet, Charles F. Jones, at the instigation of a lawyer, Albert T. Patrick, who hoped to gain some of Rice's wealth through a forged will. Most of Rice's estate went to form the William Marsh Rice Institute in Houston, which opened in 1912 and is now Rice University.

Eileen K. Cheng

Rice High School. Catholic high school for boys in Harlem, opened in 1938 and run by the Congregation of Christian Brothers. Named for the founder of the Christian Brothers, Edmund Ignatius Rice (1762–1844), it once occupied three buildings that had previously been the campus of Power Memorial Academy. In 1940 it moved to its current facility, which the Young Women's Christian Association (YWCA) formerly occupied. It is well known for high academic standards and a consistently superior basketball team.

Gilbert Tauber

Richmond, Mary E(llen) (*b* Belleville, Ill., 5 Aug 1861; *d* New York City, 1928). Social worker. She moved to New York City in 1909 as the first director of the charity organization department of the Russell Sage Foundation. Richmond believed that the complex problems of impoverished people could be solved only by trained caseworkers in privately funded social service agencies and not by public welfare programs. A pioneer in the professionalization of social work, she developed casework techniques while opposing popular measures for public assistance, such as widows' pensions. Her books *Social Diagnosis* (1917) and *What Is Social Case Work?* (1922) greatly influenced the first generation of academically trained social workers. Richmond lived in an apartment on West 120th Street near Columbia University.

Sarah Henry Lederman

Richmond County. One of the five counties of New York City, coextensive with the borough of Staten Island.

Richmond Hill. Neighborhood in east central Queens, lying adjacent to Jamaica and bounded to the north by Myrtle and Hillside avenues, to the east by the Van Wyck Expressway, to the south by Linden Boulevard, and to the west by 100th Street. The 2000 population was about 46,000: 35 percent Hispanic, 29 percent white, 16 percent Asian, 8 percent African American. The area was mostly farmland until it was developed by Albon P. Man, a wealthy lawyer of the firm of Man and Parsons in New York City who in 1867 engaged the landscape architect Edward Richmond to buy land and lay out a community. Between 1868 and 1874 streets were laid out, a school was built, trees were planted, and a railroad station began service. Together with Morris Park and Clarenceville, Richmond Hill was incorporated as an independent village in 1894. Most residents were businessmen from Manhattan who erected large houses in the Queen Anne style costing from $2500 to $5000 each on generous plots. Jacob Riis moved there in 1886 (his home on 120th Street was demolished). By 1900 the high school had opened and a hilly section toward Kew Gardens was covered by luxurious houses costing $8000 each. The City of Brooklyn began creating Forest Park abutting Richmond Hill in 1895. The Episcopal Church of the Resurrection began in 1874, followed by Union Congregational Church (1902), St. John's Lutheran Church (1903), and Holy Child Jesus Christ Catholic Church (1910). The Richmond Hill library opened in 1899, and in 1905 a Carnegie library opened (one of only seven in the borough); the Works Progress Administration (WPA) mural *The Story of Richmond Hill* by Philip Evergood was finished in 1938. The Republican Club building opened in 1908, and like the library is a city landmark. Real estate development intensified and Jamaica Avenue became commercialized after the Jamaica Avenue elevated line reached the area in 1918. By 1920 there was no open land and the only sort of development possible was infilling (building new houses in between older ones, often on substandard lots, or demolishing large houses and putting up smaller ones in their place). The population was mostly German and Irish until an influx of Latin Americans began after 1975. In the 1980s almost 40 percent of the immigrants who settled in Richmond Hill were from Guyana; others were from the Dominican Republic, Colombia, Ecuador, India, and Jamaica. Early in the twenty-first century, Richmond Hill was a well-maintained residential neighborhood retaining many elegant structures from the turn of the twentieth century. The center of the neighborhood is the Triangle, formed by the intersection of Lefferts Boulevard with Myrtle and Jamaica avenues. Nearby, the Triangle Hofbrau was an inn and restaurant from 1864 to 1999. The Richmond Hill Historical Society began lobbying for historic district status in the 1990s, but the Landmarks Preservation Commission resisted, claiming that too many houses had been altered.

Vincent Seyfried, Jeffrey A. Kroessler

Richmondtown. Neighborhood in Staten Island near the geographic center of the borough. Its main streets are Richmond Road and Clarke Avenue. In the 1690s the area was the site of a crossroads settlement known as Cocclestown because of its abundance of oyster shells. It later became Richmond Town, the county seat and the site of the county jail (1710) and courthouse (1728). The first building of the Church of St. Andrew (Episcopal) was constructed from 1711 to 1713. In 1837 a local entrepreneur named Henry Seaman bought the Swaim farm, divided it into lots, and constructed five houses (three of which

Richmondtown Courthouse, 2009

remain standing in the early twenty-first century). In the same year a new Greek Revival courthouse was built, followed by a new jail in 1860 (later demolished). The Church of St. Patrick (Roman Catholic) was erected in 1868. Consolidation in 1898 led to the gradual removal of county government operations to St. George, but the neighborhood continued to grow after Staten Island Rapid Transit was built to its south. In the early twenty-first century Richmondtown is a middle-class residential neighborhood. The firehouse at 3664 Richmond Road is the home of one of the two remaining volunteer fire companies in New York City.

Barnett Shepherd

Richmondtown Restoration. Former name of Historic Richmond Town.

Richmond Valley. Neighborhood in southwestern Staten Island, bounded to the north by Outerbridge Crossing Plaza and the exchanges of the Richmond Parkway and West Shore Expressway, to the south by Mill Creek and Amboy Road, and to the west by the Arthur Kill. A mill that stood on the creek for centuries was run by the Dissosway, Weir, and Cole families. The area was named by the Staten Island Railroad, which opened a station there in the 1860s. Luxury houses and warehouses were built in the 1980s. Since 2000 several "big box" shopping centers, commercial building, and office buildings have been constructed.

Marjorie Johnson

Rickard, Tex [George Lewis] (*b* Leavenworth, Kans., 2 Jan 1871; *d* Miami, 6 Jan 1929). Boxing promoter. The first boxing match that he promoted in New York City was the heavyweight championship between Jess Willard and Frank Moran on 25 March 1916 at Madison Square Garden, the first heavyweight title fight in the city since 1900. In the following years Rickard made Madison Square Garden into the best-known boxing venue in the nation, especially when he made it the site of Jack Dempsey's defense of the heavyweight title against Georges Carpentier on 2 July 1921, the first fight to draw $1 million in gate receipts. This figure was exceeded by a fight that Rickard promoted between Dempsey and Luis Firpo on 14 September 1923 at the Polo Grounds before 75,000 fans. In 1925 Rickard's syndicate built a new Madison Square Garden that featured boxing, ice hockey, and six-day bicycle races.

Steven A. Riess

Rickey, (Wesley) Branch (*b* Little California [now in Stockdale], Ohio, 20 Dec 1881; *d* Columbia, Mo., 9 Dec 1965). Baseball executive. After a career as a player and manager he spent 26 years as an executive with the St. Louis Cardinals. As president and general manager from 1942 of the Brooklyn Dodgers he was influential in having Jackie Robinson enter the major leagues in 1947. Forced from the Dodgers in 1950 by the team's owner Walter O'Malley, he tried with the lawyer William A. Shea to form a new baseball league in the late 1950s; their efforts led indirectly to the admission of the New York Mets into the major leagues in 1962. From 1943 to 1950 Rickey lived at 215 Montague Street in Brooklyn Heights.

Murray Polner, *Branch Rickey: A Biography* (New York: Atheneum, 1982)

Joseph S. Lieber

Ridgewood. Neighborhood in Brooklyn and Queens bounded to the north by Metropolitan Avenue, to the east by the tracks of the Long Island Rail Road and Conrail, to the south by Central Avenue, and to the west by Flushing Avenue. The area was inhabited by Mespachtes Indians and during the seventeenth and eighteenth centuries was tilled by Dutch farmers. The only surviving Dutch farmhouse is the Adrien Onderdonck House (1731); it burned in the 1970s but was restored by the Greater Ridgewood Historical Society and became a city landmark in 1996. Arbitration Rock was set at Onderdonk and Montrose avenues to end a dispute over the boundary between the towns of Bushwick and Newtown that lasted from 1660 to 1769; the rock was unearthed and moved to the Onderdonk House in 2001. English settlers in the early eighteenth century named the area for its high wooded terrain. Transportation links to Brooklyn facilitated development in the mid-nineteenth century. The horsecar line along Myrtle Avenue was extended to Broadway in 1855, as was the elevated rapid transit line in 1879; the Brooklyn City and Bushwick trolley lines built large depots at Myrtle and Wyckoff avenues in 1881; and the Myrtle Avenue elevated line was extended to Wyckoff Avenue in 1888. Brooklyn built the Ridgewood Reservoir for its water system in 1858, and it remained in service until 1959. From the late 1880s until the end of World War I the area was sometimes known as Evergreen, in deference to a community on Long Island that claimed priority in using the name Ridgewood. The population was largely middle class and German and supported many local businesses, including several breweries and knitting mills. At first small frame houses were erected, and from 1906 Gustav Mathews acquired the remaining farmlands and built the Mathews Flats, more than 800 six-family row houses of three stories each in distinctive yellow and orange brick from the Kreischer brick works on Staten Island (a few blocks were designated as city landmarks). The houses sold for more than $11,000 or rented for $15 a month. Paul Stier built a similar development from 1908 to 1914 between 67th and 70th avenues, using tan brick and lumber of the highest quality (much of the housing in the neighborhood consists of his row houses, about half of which are occupied by their owners). The homes on Stockholm Street, and the brick street itself, comprise another historic district. In the 1920s the boundary between Brooklyn and Queens was redrawn, changing the historic straight line to a line following the street grid, eliminating the situation where the border cut through houses.

After World War II a large number of Romanians, Italians, and Slovenes settled in the neighborhood. In an effort to disassociate themselves from Bushwick, a largely African American area to the south with high rates of crime and arson, the local residents in 1979 voted to change from a postal zone in Brooklyn to one in Queens. In September 1983 an area comprising 2980 buildings was listed on the National Register of Historic Places, the largest such historic district in the nation. Some six-family apartment buildings were converted into cooperatives in the late 1980s to attract young working-class families. In addition to its large German community Ridgewood during the 1980s attracted many immigrants from eastern Europe, especially Romania (accounting for more than a quarter of all immigrants settling there), the former republics of Yugoslavia, and Poland. The neighborhood also drew large numbers of Chinese, Dominicans, Italians, Koreans, and Ecuadorians. In 2000 the population was about 88,000: 46 percent white, 43 percent Hispanic, 7 percent Asian.

Vincent Seyfried, Stephen Weinstein

Ridiculous Theatrical Company. Theater company formed in 1967 by Charles Ludlam as an offshoot of John Vaccaro's Play-House of the Ridiculous. As the company's producer, director, playwright, and leading actor, Ludlam took much of his material from popular culture and used exaggerated characterizations and sexual ambiguity in his performances. After Ludlam's death in 1987, his duties were assumed by his companion Everett Quinton. The company shut down two years later.

D. S. Moynihan

Rihani, Ameen [Amin] **(Fares)** (*b* Freika, near Bikfaya, Lebanon, 24 Nov 1876; *d* Freika, 14 Sept 1940). Writer. After moving to New York City in 1888 he worked in his father's dry-goods shop on Washington Street. He became a member of al-Rabitah al-Qalamiyya (the Pen League), an influential literary circle of Syrian émigré writers, and wrote *The Book of Khaled* (1911), believed to be the first novel about the earliest Syrian immigrants in America. As a writer he sought to bridge two cultures and therefore returned often to the Middle East. Rihani was one of the first Syrians in New York City to speak out against militant Zionism. His writings on the Arab

world include the book *Maker of Modern Arabia* (1928) and articles in the *New York Times, Harper's Weekly,* and the *Nation.*

Paula Hajar

Riis, Jacob A(ugustus) (*b* Ribe, Denmark, 3 May 1849; *d* Barre, Mass., 26 May 1914). Social reformer, photographer, and writer. After immigrating to the United States from Denmark in 1870 he worked as a police reporter for the *New York Tribune* from 1877 to 1888 and became known for his vivid descriptions of crime along Mulberry Bend in the Five Points neighborhood. The extreme poverty and overcrowding that he witnessed there led him to become an advocate for immigrants. Riis' lurid and sensationalist photographs that accompanied his stories forced his middle-class readers to confront the filth and degradation of the slums. His article "Flashes from the Slums" (1888) in the *Sun* was highly successful, and in 1890 he became nationally known for his book *How the Other Half Lives,* an account of the squalid conditions on the Lower East Side. A showman, he also gave lantern slide lectures to religious and charitable organizations, seeking to close police lodging houses and promoting tenement regulation, care for homeless children, and the construction of playgrounds. He eventually left newspaper work to write and give lectures full time. Among his supporters was Theodore Roosevelt, who as the city's police commissioner closed the police lodging houses. In 1887 Riis built a house at 84-41 120th Street in Richmond Hill, his home until 1911. Later he lived at 524 North Beech Street in Richmond Hill.

Jacob A. Riis

Rikers Island. Located in the East River off the southeastern edge of the Bronx, it originally covered 87 acres (35 hectares) of land and belonged to descendants of Abraham Rycken, a settler who moved to Long Island in 1638. The city bought the island from the family in 1884 and used it as a prison farm. In 1931 it opened a prison for men there to replace its crumbling one on Blackwell's Island. After 1954 landfill was added to enlarge the area of the island to 415 acres (168 hectares), enabling the prison facilities to expand. The only transport was a ferry to the Bronx until 1966, when a three-lane bridge 4200 feet (1280 meters) long was extended to Queens. In 1985 the Rose M. Singer Center for women opened the nation's first jail-based nursery. The facility also included a bakery, laundry, tailor shop, print shop, power plants, and infirmary. By most measures Rikers Island, with a capacity for 17,000 inmates, is the largest jail facility in the United States.

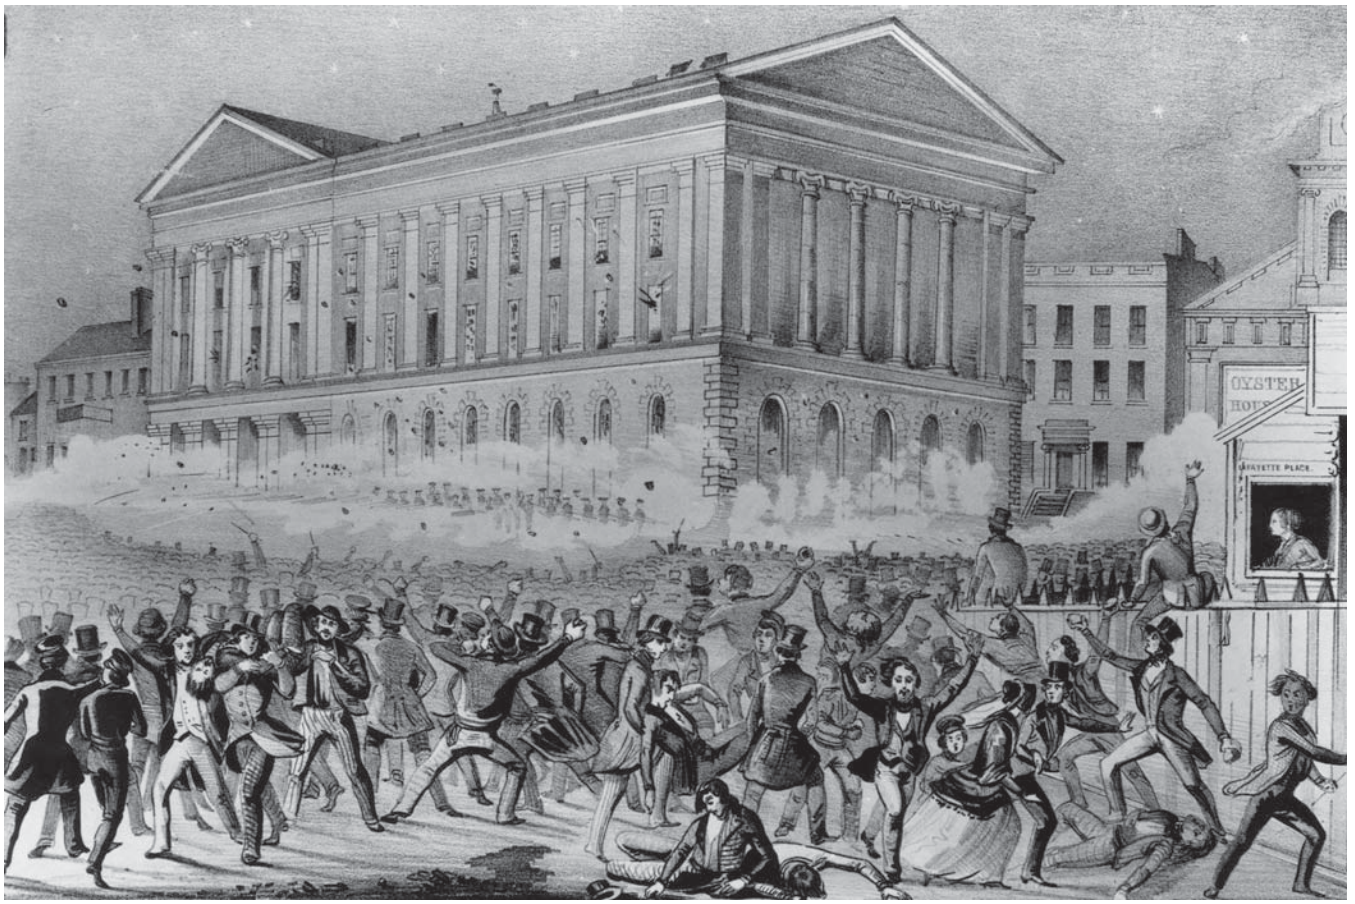
Joseph P. Viteritti



Rio de San Antonio. Former name of the Hudson River, given by Estevan Gomez (*ca* 1483–1538), a Portugese explorer who arrived at the river's mouth in 1524.

riots. Although New York City was considered a center of Loyalist sentiment during the American Revolution, British imperial policy frequently drove the local populace into the streets in the years before armed revolt. The English traditions that shaped colonial New York sanctioned rioting, and in the eighteenth and early nineteenth centuries it was an established part of the city's political culture. On 1 November 1765 mobs demonstrated against the Stamp Act by parading with effigies of Cadwallader Colden, the lieutenant governor of New York; they controlled the streets until the act was repealed the next spring. Other effigy processions took place in opposition to the Townshend Duties on 14 November 1768, 10 May 1770, and 5 November 1770. On 15 June 1774 a crowd paraded with effigies of British officials to protest the Boston Port Bill. British soldiers and residents of New York City defending the Liberty Pole clashed several times from 10 August 1766 to 18 January 1770 (the Golden Hill Riot). Crowds harassed royal officials, whom they threatened with bodily harm and sometimes tarred and feathered.

The end of hostilities with Britain and the departure of the redcoats did not bring peace to the streets. On 26 July 1788 enraged supporters of the proposed Constitution gutted the printing office of the anti-Federalist Thomas Greenleaf. Political differences led to several disturbances in the 1790s, including a demonstration against the Jay Treaty at which Alexander Hamilton maintained that the crowd pelted him with stones. The Doctors' Riot of 1788 began on 13 April when 5000 people marched on New York Hospital to protest the purported theft of cadavers for dissection. Searching for evidence of illegal behavior, the rioters destroyed laboratories, ransacked offices, and buried (or reburied) every cadaver they found. They took into custody a group of medical students (whom they later surrendered to the authorities for "safekeeping"). The rioters returned the next day to search the homes of physicians and other facilities and then disarmed a small militia detachment and threatened to storm the jail where the students were being held. The authorities reacted by firing on the crowd and killing three people. Concerns about immoral behavior inspired two riots aimed at bawdy houses (14–15 October 1793 and 17–20 July 1799).

During the nineteenth century ethnic and religious differences, politics, and racial prejudice led to the most violent rioting in the city's history, typified by a battle on Christmas Day 1806 in the sixth ward between Catholics (mostly Irish) and Protestants (mostly native born). There were also violent strikes by stevedores (1825 and 1828), weavers (1828), and stonecutters (1829). Many regard 1834 as the city's worst year for riots because of election rioting between Whigs and Democrats (9–10 April) and mob attacks on abolitionists and blacks (7–11 July). Both these disturbances and several others in the 1830s were marked by intense physical violence. The Flour Riot (12 February 1837) was different: after a political meeting decrying the plight of the poor, a large crowd attacked Eli Hart's warehouse and gave away flour; two other warehouses also were attacked. The police were powerless to stop fights on 4–5 July 1857 between the Protestant street gang the Bowery Boys and the Catholic gang the Dead Rabbits, and 12 lives were lost as a result.

By this time widespread crowd violence had become commonplace, setting the stage for the second-most serious riot in the city's history. The Astor Place Riot (10–11 May 1849) began when supporters of the American actor Edwin Forrest interrupted a performance by his English rival, William C. Macready. Protests both in and outside the Astor Place Opera House brought forth the militia and the police, who killed 22 people (nine more may have died later of their injuries) and wounded 48 when they fired into a crowd that refused to disperse, and 50 to 70 policemen were injured when the crowd retaliated. The riot reflected deep ethnic and class resentments within the city. In the Kleindeutschland Riot (12–13 July 1857) the police killed one man and wounded several others in a

Lithograph of the Astor Place Riot, 1849

disturbance in a German neighborhood that began when police officers attempted to break up a street brawl.

The DRAFT RIOTS of 13–16 July 1863, the bloodiest riots in U.S. history, began in front of a conscription office on Third Avenue and 47th Street when the city's Irish poor arose against a new law exempting from conscription anyone who paid a fee of $300. The riot assumed a racial dimension: some blacks were hanged, many were assaulted, and African American institutions and homes were destroyed. Contemporary estimates reported from 105 to 1000 deaths, though the most widely accepted figure is around 100. Eight people were killed and 15 were injured in the Orange riot of 12 July 1870, in which Irish Catholics attacked Irish Protestants commemorating the victory of William of Orange over French and Irish forces in 1690 (see ORANGE RIOTS). In the following year Catholics assaulted a truncated Protestant parade on the same anniversary despite the presence of a large police and militia guard.

Hard times after the Civil War prompted a resurgence of labor strife, which became the principal source of rioting in the late nineteenth century. The Tompkins Square Riot (13 January 1874) was the result of a demonstration planned by the Committee of Safety, a political group with many members in the communist organization the International Workingmen's Association, or First International. The police board and the parks commissioner at first seemed cooperative but at the last moment denied the necessary permits. Although the organizers revised their plans and canceled part of the proceedings, most of the participants were left uninformed of any changes, and in the ensuing confusion about 7000 men and women gathered in Tompkins Square. The demonstrators were ordered to disperse by the police commissioner and soon after were charged by a force of 1600 police officers, who indiscriminately beat and arrested demonstrators and bystanders. News of the riot spread, and hundreds of demonstrators converged on police headquarters to demand the release of those arrested, but city officials were aware that the behavior of the police was largely sanctioned by middle-class New Yorkers and ignored the demands for an inquiry. On 22 April 1886 eastern European sugar refinery workers attacked delivery wagons and fought with police in Williamsburg.

The employees of the city's many privately owned streetcar and elevated railroad companies were particularly noted for aggressive behavior, especially during strikes over wages and working conditions. Although riots took place on several occasions (notably in Manhattan in 1886), the most serious were the Brooklyn Surface Railroad Riots (14 January to 2 February 1895), in which strikers tore down electrical wires, damaged tracks, beat nonunion workers, and confronted the police and militia. Shots fired by rioters on 21 January wounded two police officers, and in partial retaliation soldiers charged into the crowd with bayonets and injured many people. Almost 7000 militia members were deployed along the rail lines to guard the streetcar tracks against sabotage, and on 23 January the militia shot and killed one man. Race relations remained a persistent problem. Whites attacked African Americans in 1889 and in response to an arrest did so again in 1900 in San Juan Hill.

In the early and mid-twentieth century riots in New York City resulted less from conflict between whites and African Americans than from attacks on property that pitted blacks against the city's police force. On the whole riots caused fewer deaths than they had previously. There were riots in Harlem in 1935 (killing three people), 1943 (killing six), 1964, and 1965 and during the citywide power blackout of 1977. Protests of the antiwar movement and the student Left in the 1960s

Newspaper illustration of the Whisky War in the City of Brooklyn

and early 1970s sometimes resulted in politically motivated riots. The best-known incident of the period took place between 23 April and 1 May 1968 at Columbia University, where students protested the university's cooperation with the Institute for Defense Analysis and its decision to build a gymnasium in Morningside Park, the dividing line between the university and poor residents of Harlem. The students staged large rallies, destroyed fences at the construction site, occupied campus buildings, held three university officials hostage for more than 24 hours, and ransacked several offices, including that of President Grayson Kirk in Low Library. With classes mostly suspended and the university in turmoil, police removed the protestors forcibly on 30 April. Four faculty members, 132 students, and 12 police officers were injured in clashes on the first day, as were five more police officers and six students the next day. The confrontation did not subside until the end of the spring semester, and the bitterness on both sides remained for many years. The Stonewall Riots of 28 June 1969, precipitated by a police raid at the Stonewall Inn, a gay bar at 53 Christopher Street, marked the beginning of the gay-rights movement. Another violent incident connected with the Vietnam War occurred in 1970, when construction workers attacked antiwar demonstrators on Wall Street.

Disagreement about a park curfew and its effect on the homeless led to a confrontation between the community and the police in the Tompkins Square Riot of 6 August 1988, characterized as a "police riot" because of the manner in which the police dealt with the protestors. During the summer of 1991 an automobile in the motorcade of Menachem Mendel Schneerson, the spiritual leader of the Lubavitcher sect of Hasidim in Crown Heights, struck and killed a Guyanese boy named Gavin Cato who was playing on the sidewalk. A group of black men killed a visiting Hasid, Yankel Rosenbaum, in retaliation. Existing tensions between Lubavitchers and West Indian residents of the neighborhood boiled over and several days of rioting ensued; about 200 people were injured. Accusations that Mayor David Dinkins did not act quickly enough to quell the riots became a major issue in his reelection campaign against Rudolph Giuliani. As of the early twenty-first century the incidents in Crown Heights were the last violent riots in the city. Although demonstrations were staged in response to allegations of police brutality in such cases as the shooting of Amadou Diallo in the Bronx (1999) and Sean Bell in Queens (2006), the protests did not escalate to violent rioting as many had in the past.

Ripley, Robert [LeRoy] (*b* Santa Rosa, Calif., 25 Dec 1890; *d* New York City, 27 May 1949). Originator of Ripley's "Believe It or Not!" In 1913 he moved to New York to try out for the New York Giants baseball team and was accepted. However, an injury in his first game ended his baseball career before it started. That same year, the *New York Globe* hired him to draw sports cartoons. He titled one cartoon about unusual sports events "Believe It or Not!" which formed the basis for a weekly column about odd achievements. He traveled around the world to collect inspiration for the cartoons. When, in 1923, the *New York Globe* shut down operations, the *New York Post* hired Ripley to continue to publish his popular cartoons. Ripley continued to have a presence in sports and in 1926 won the title of New York City handball champion. In 1929 "Believe It or Not!" was syndicated and began to be published around the world. The year 1930 marked the beginning of a 14-year career in radio, which centered on live radio broadcasts from places underwater, in the sky, in snake pits, and in other unusual places. Through the 1930s Ripley opened Ripley's "Believe It or Not!" Odditoriums in Illinois, California, Texas, and New York City. His popularity reached such a height that in 1936 members of the Boys Club of New York voted his job as the most desirable and popular in America, with the presidency of the United States coming in second place. In 1949 during the taping of the 13th weekly installment of his television show, which that week was dealing with death and death rituals, Ripley died from heart failure.

Breanne Scanlon

Ritz Tower. Luxury hotel and apartment building. When it opened in 1926 on the corner of 57th Street and Park Avenue, it was the world's tallest residential building. At 540 feet (165 meters) and 41 stories the building signaled the increasing height and luxury of Park Avenue apartment buildings. Developer Arthur Brisbane, a popular columnist for the *Evening Journal,* developed the hotel as an apartment hotel, which provided furnished public rooms and restaurants on the building's lower floors and suites of private rooms above. Such buildings were not subject to the height restrictions of other residential buildings, and they also addressed the growing realization that multifamily housing was the only way to accommodate Manhattan's many residents. As such, the Ritz Tower served a significant residential population but also had facilities for transient guests. The building created by primary architect Emery Roth and contributing architect Thomas Hastings is a testament to the belief that classical design is applicable in modern architecture. Its steel frame is clad in limestone, brick, and terracotta and adorned with decorative details of the Italian Renaissance. The building's setback structure created terraces meant to enhance the living quarters of residents and to draw the eye upward from street level. The Ritz-Carlton Company was hired by Brisbane to provide services to the building's residents and manage the building and its restaurants.

In return the company lent the building the use of the company's famous name to increase the building's appeal. When Brisbane later realized he could not handle the heavy debt of the $4 million mortgage he had taken out for the project, he offered the property to his friend and employer William Randolph Hearst and moved to less spectacular quarters in the building. In 1955 the building was purchased by the Sonnabend hotel chain, and the interior was redecorated by designer Dorothy Draper. After the renovation, the building was converted to cooperative apartments while it continued to provide luxury hotel services. In 1987 the Ritz Tower discontinued transient rentals. In the early twenty-first century it is still considered one of the city's most desirable addresses.

Carol Willis, Joe Piscina

Rivera, Diego (*b* Guanajuato City, Mexico, 8 Dec 1886; *d* Mexico City, 24 Nov 1957). Painter and muralist. After gaining fame in Mexico and Europe, Rivera's first American one-man exhibition, Frozen Assets, was shown at the Museum of Modern Art (MoMA) in December 1931. The following year he was commissioned to paint a mural for the west wall of the Grand Lobby of 30 Rockefeller Plaza, which was then under construction. The work was titled *Man at the Crossroads Looks Uncertainly but Hopefully towards the Future,* and was intended to depict the themes of "human intelligence controlling the powers of nature" and "the era of science." Rivera began the fresco in April 1933 but controversy soon arose when he included a portrait of Vladimir Lenin leading a May Day parade. The Rockefeller family considered the portrait inappropriate and asked Rivera to remove it, but he refused. In spite of his offer to add a portrait of Abraham Lincoln on the opposite side of the mural, Rivera was removed from the commission. After being paid his full fee, he was barred from the site, and the mural was covered up by a large curtain. The Museum of Modern Art unsuccessfully petitioned to have the mural removed and added to their collection, but despite demonstrations by supporters, ax-wielding workmen destroyed the work on 10 February 1934. The mural was soon replaced by José María Sert's painting *American Progress,* and Rivera never worked in the United States again. However, in 1935 he re-created the frescoes in the Palace of Fine Arts in Mexico City, with the addition of an unflattering portrait of John D. Rockefeller, Jr. in a nightclub.

Caleb Smith

Riverbank State Park. State park running from 137th Street to 145th Street between Riverside Drive and the Hudson River in Manhattan. The Board of Estimate approved the site in 1985; construction began in 1992, and the park opened a year later. Sitting 69 feet (21 meters) above the Hudson River over a wastewater treatment facility and modeled after Japanese urban rooftop designs, Riverbank offers panoramic views of lower Manhattan, the Hudson River, the Palisade Mountains, and the George Washington Bridge. The park's outdoor facilities include playgrounds, lawns, and picnic areas; a carousel; community gardens; basketball, tennis, and handball courts; a running track; a swimming pool; and a football field. The park also has a 900-seat indoor amphitheater at water level, a 2500-seat athletic complex with a fitness room, an Olympic-sized swimming pool, a covered rink for ice skating and roller skating, a greenhouse, and a restaurant. During the summer the park holds free concerts and plays as well as special events for children and senior citizens. Riverbank is the only state park in Manhattan and receives more than two million visitors annually.

Riverbank Park, 2009

Ben Silk

River Café. Restaurant moored on the East River at 1 Water Street in Brooklyn Heights. It took many years for restaurateur Michael "Buzzy" O'Keeffe to gain city approval for a barge café in this once seamy waterfront area known as DUMBO. The 130-seat River Café, which opened in May 1977 and faces the Manhattan skyline, was called by the *New York Times* "the restaurant that launched a thousand chefs," including Larry Forgione and Rick Laakkonen. The French restaurant guide Gault Millau rated the River Café one of the five best restaurants in New York City.

Harold Takooshian

Riverdale. Neighborhood in the northwestern Bronx, lying on the ridge east of the Hudson River south of Westchester County. Its eastern and southern boundaries are constantly in dispute. It began as a railroad station of the Hudson division of the New York Central Railroad called Riverdale-on-Hudson. In the 1860s the high ground overlooking the Hudson was an ideal site for the summer mansions of the city's industrial and mercantile elite, who could travel easily by rail to and from their offices in Manhattan. Before World War II a number of luxurious one-family houses were built on landscaped grounds near the mansions. The construction in the 1930s of the Henry Hudson Parkway spurred development, as did the addition of a bus line connecting the neighborhood to the Seventh Avenue line of Interborough Rapid Transit at 231st Street and to the Eighth Avenue line of the Independent Subway System in northern Manhattan. During the years after the war most of the estates were sold to institutions and developers. Fewer high-rise apartment buildings were erected than in nearby Spuyten Duyvil.

Many structures dating from the nineteenth century are local landmarks: Fieldston Hill (circa 1865) at the western end of 246th Street, Greyston (1864) at 247th Street and Independence Avenue, Wave Hill (1844) at 249th Street and Independence Avenue, and Stonehurst (1861). From the same period are Christ Church (1866) and the Riverdale Presbyterian Church (1863), which stand on either side of the Henry Hudson Parkway. The College of Mount St. Vincent, operated by the Sisters of Charity, has a castle originally built in 1852 for the well-known Shakespearean actor Edwin Forrest, as well as his cottage and stable. The college's administration building was built in stages from 1857 to 1908. Along Sycamore Avenue between 252nd and 254th streets is the Riverdale Historic District, the residences of which were originally the barns and carriage houses of the nearby estates. North of Manhattan College Parkway is the Fieldston Historic District with beautiful landscaped grounds and sumptuous homes. Major institu-

tions in Riverdale include the Riverdale Country School, the Wave Hill Center, the Henry Ittleson Center for Child Research, the Cardinal Spellman Retreat House, and the Hebrew Home for the Aged. Riverdale is geographically separated from the rest of the city because of its ridge. It has few major commercial thoroughfares, giving the neighborhood a distinctive suburban character.

William A. Tieck, *Riverdale, Kingsbridge, Spuyten Duyvil: New York City* (Old Tappan, N.J.: Fleming H. Revell, 1968); Gary Hermalyn and Robert Kornfeld, *Landmarks of the Bronx* (New York: Bronx County Historical Society, 1989)

Lloyd Ultan

Riverdale Country School. Coeducational elementary and secondary school opened in 1907 by Frank Sutcliff Hackett and his wife, Frances Hackett, on a country estate high above Van Cortlandt Park. In 1935 the Riverdale Country School for Girls opened on a nearby estate west of the original campus. Riverdale Country School became fully coeducational in 1972; the original campus became the site of its secondary school, and the former girls' school the site of its elementary school. The enrollment stood at 1060 students in 2006.

Richard Schwartz

Riverdale Presbyterian Church. Church formed in 1863 at 4765 Henry Hudson Parkway West by J. Joseph Eagleton, Samuel W. Dodge, William Earl Dodge, Jr., Robert Colgate, and John Mott. The building was designed by James Renwick on land donated by Joseph Delafield. With the active support of the philanthropist Grace Hoadley Dodge, church members established Riverdale Neighborhood House (1872) and the Riverdale Neighborhood and Library Association. Notable members of the congregation included Cleveland H. Dodge and George W. Perkins. In 1965 the city designated the church building and the attached Grace H. Dodge Church House as landmarks.

David Meerse

Riverside Church. An interdenominational church on the east side of Riverside Drive between 120th and 122nd streets. It occupies a huge, steel-framed Gothic Revival building, financed by John D. Rockefeller, Jr., and completed in 1930. The congregation began as a Baptist church in 1841 in lower Manhattan and soon became known for its interracial and international character. The first minister at the new site uptown was the controversial and influential Harry Emerson Fosdick. The church seats 2500 people and is notable for the excellence of its stone carving and stained glass. The Laura Spelman Rockefeller Memorial Carillon, the largest in the world, contains 74 bells and occupies a space extending from the 23rd story to what would be the 28th; it was the first carillon in history to achieve a compass of five octaves, and its Bourdon, or hour-bell, is the largest and heaviest carillon bell ever cast. An observation platform 355 feet (108 meters) above the ground is served by the tallest elevators in any church in the world. Riverside Church is affiliated with both the American Baptist churches in the United States and the United Church of Christ.

Kenneth T. Jackson

Riverside Park. Public park in Manhattan, situated on a 4-mile (6.4-kilometer) strip of land along the Hudson River from 72nd Street to 125th Street and from 135th Street to 158th Street, and occupying more than 323 acres (131 hectares). Prehistoric glaciers left rocky outcroppings and steep bluffs on the site, and before European settlement the rough terrain was only sparsely populated by American Indians. In 1846 the Hudson River Railroad was built along the shoreline. A proposal for a scenic drive and park was advanced in 1865 by William R. Martin, a commissioner on the Board of Central Park. During the next two years the city acquired land between the railroad and the bluffs, for which a park was commissioned in 1873 by the park board from the chief designer of Central Park, Frederick Law Olmsted. His proposal, calling for a parkway that would adapt to the rolling contours of the land, was accepted in 1875; the final plans were drawn up by others, including Samuel Parsons, Julius Munkwitz, and Calvert Vaux, and implemented during the next 25 years. The park was built in English pastoral style, with a rustic retaining wall, informally arranged plantings, and meandering paths. Dockside industries and noisy railroads along the riverfront, however, threatened the park. A plan made as early as 1891 to build a bridge over the tracks was neglected for more than 40 years. Proponents of the "city beautiful" movement at the turn of the twentieth century introduced formal elements into the park, including the Soldiers' and Sailors' Monument and its plaza at 89th Street, Grant's Tomb at 121st Street, and the Firemen's Memorial at 100th Street. Between 1934 and 1937 a plan known as West Side Improvement was executed along the riverfront under the guidance of Robert Moses, who expanded earlier proposals, including one by McKim, Mead and White from the 1920s, to build a rotunda and a marina at 79th Street and to double the size of the park by adding to it the West Side Highway and Henry Hudson Parkway. The architect and engineer Clinton Lloyd replaced rustic stone with granite, bluestone, and concrete to give the park a more orderly appearance; the landscape architect Gilmore Clarke contributed a complementary planting scheme. Most of the labor was provided by relief workers, who enclosed the railroad tracks and built a promenade over them and added a lower level on landfill for athletic fields and tennis courts. When their work was completed, the park incorporated

Riverside Park, 2009

Soldiers' and Sailors' Monument (designed by Stoughton and Stoughton with Paul E. M. Duboy) on Riverside Drive, ca *1900*

elements of several styles of landscape design. In 2000, 7 acres (2.8 hectares) of land stretching between 68th and 72nd streets were developed into Riverside Park South, which included a soccer field, three basketball courts, and a public pier extending 750 feet (289 meters) into the Hudson River.

Jonathan Kuhn

Rizzuto, Phil(ip Francis) [The Scooter] (*b* Brooklyn, 25 Sept 1917; *d* West Orange, N.J., 10 Aug 2007). Baseball player and broadcaster. A Brooklyn-born graduate of Richmond Hill High School in Queens, he played shortstop for the New York Yankees (1941–42, 1946–56), was the American League's Most Valuable Player (1950), and became a member of the Baseball Hall of Fame in 1994. Rizzuto was well known as an elite defensive infielder and was also regarded as one of the best bunters in the major leagues. When he retired, his 1217 career double plays ranked second in major league history. Beginning in 1957 he broadcast Yankee games on radio and television for nearly 40 years; his signature phrase "Holy cow!" and birthday wishes to fans made him a New York City institution.

Andrew Sparberg

RJR Nabisco. Firm of food processors formed in 1890 as the New York Biscuit Company by the lawyer William Henry Moore. In 1898 it acquired the brands Fig Newtons and Premium Saltines when it merged with the American Biscuit Company to form the National Biscuit Company, a group of 114 bakeries with total capitalization of $55 million. Under the direction of Adolphus Greene, during the following decade it introduced small, sealed cardboard boxes of soda crackers known as Uneeda Biscuits, which were tremendously successful owing largely to an advertising campaign handled by the firm of N. W. Ayer and Son; it also developed uniform production standards, innovative packaging, and trademarks. The firm moved its headquarters from Chicago to New York City in 1906 and introduced several brands, among them Oreo cookies and Barnum's Animal Crackers, and was soon the leading manufacturer of cookies and crackers in the United States. It also operated a bakery at 10th Avenue and 14th Street in Manhattan that was the largest in the world; the name Nabisco became a trademark in 1941. After a period of losses during the 1930s and World War II, the firm recovered by expanding its line of products and marketing them aggressively. By the 1970s it was again the country's leading cookie and cracker manufacturer; the headquarters were moved to suburban East Hanover, New Jersey, in 1975. The firm merged in 1981 with Standard Brands, a food and beverage manufacturer, to form Nabisco Brands. After being acquired by R. J. Reynolds Industries in 1985, Nabisco Brands became part of RJR Nabisco, a firm with annual sales of more than $19 billion that was the largest consumer-products company in the United States. An attempt in 1988 by F. Ross Johnson, president of the firm, to take it private led to one of the costliest corporate bidding wars in history; Johnson's group eventually lost out to another led by the brokerage firm Kohlberg Kravis Roberts, which prevailed by bidding nearly $25 billion in cash, notes, and securities. Despite the debt incurred by its new owners, RJR Nabisco remained successful. In 1999 RJR Nabisco became the Nabisco Group to distance itself from tobacco litigation. The following year Philip Morris Companies (now known as Altria Group) acquired Nabisco and merged it with Kraft. Nabisco, along with the other Kraft Foods brands, was spun off as an independent entity in 2007.

Peter A. Coclanis

Robards, Jason (Nelson, Jr.) (*b* Chicago, 26 July 1922; *d* Bridgeport, Conn., 26 Dec 2000). Actor. Robards's family moved to Manhattan when he was six years old, but lived there only a year before relocating to Los Angeles (his father, Jason Robards, Sr., was an actor). Robards attended Hollywood High School. He served in the navy during World War II, receiving multiple citations for valor, including the Navy Cross. After the war Robards moved to New York to pursue an acting career and found small roles on stage and in radio. He attended the American Academy of Dramatic Arts (1946) and performed at the Circle in the Square in 1953 under the direction of José Quintero. On Broadway he appeared in *The Iceman Cometh* (1956) and *Long Day's Journey into Night* (1956–58) by Eugene O'Neill, the playwright with whom he became most strongly associated. He also won a Tony Award for his performance in Budd Schulberg's *The Disenchanted* (1958–59) and was nominated for eight others. In later years Robards appeared in Arthur Miller's *After the Fall* (1964) and revivals of *Long Day's Journey* (1976, 1988), as well as in many television shows and films, while maintaining a residence in the Southport section of suburban Fairfield, Connecticut. Robards died of lung cancer in 2000.

Jessica Montesano, Meghan Lalonde

Robbins [Rabinowitz]**, Jerome (Wilson)** (*b* New York City, 11 Oct 1918; *d* New York City, 29 July 1998). Dancer, choreographer, and director. He joined Ballet Theatre in 1940 and became a soloist in 1941. Robbins danced and choreographed for, and subsequently became artistic associate director of, George Balanchine's New York City Ballet from 1949 to 1956. From the 1940s to the 1960s he choreographed and directed numerous Broadway shows. Under Robbins, dance advanced the plot, and dialogue and music grew out of the physical action onstage. Among his Broadway musicals are *On the Town* (1944; based on his 1944 ballet *Fancy Free*), *High Button Shoes* (1947), *Call Me Madam* (1950), *The King and I* (1951), *Peter Pan* (1954), *West Side Story* (1957, film version 1961), *Gypsy* (1959), and *Fiddler on the Roof* (1964). *Jerome Robbins' Broadway* (1989) was a retrospective of his choreography from nearly a dozen musicals. In 1958 he formed the Lena Robbins Foundation to increase public awareness of new choreographers and to develop a film library dedicated to the preservation of dance. For the Spoleto Festival of 1958 he formed his own company, Ballets U.S.A., which he reconvened on and off for four years. Robbins left Broadway and returned to New York City Ballet in the 1960s, becoming its ballet master in 1969. With Peter Martins he became ballet master-in-chief on Balanchine's death in 1983, a position he retained until 1990. Robbins's work includes more than 60 ballets, among them *The Cage* (1951), *Interplay* (1952), *Afternoon of a Faun* (1953), *New York Export: Opus Jazz* (1958), *Moves* (1961), *Dances at a Gathering* (1969), *In the Night* (1970), *The Goldberg Variations* (1971), *Watermill* (1972), *In G Major* (1975), *The Four Seasons* (1979), *Glass Pieces* (1983), *I'm Old Fashioned* (1983), *In Memory Of . . .* (1985), and *Ives, Songs* (1988). Robbins received numerous awards, including five Tony Awards, five Donaldson Awards, two Academy Awards, an Emmy Award, the Screen Directors' Guild Award, the New York Drama Critics' Circle Award, a Kennedy Center Honor, the French Legion of Honor, a Capezio Dance Award, and the National Medal of Arts.

Norma Adler

Robert F. Kennedy Memorial Bridge [Triborough Bridge]. Viaduct structure containing three steel bridges and spanning the waters among Manhattan, the Bronx, and Queens, designed by Othmar H. Ammann and the architect Aymar Embury II. Construction began on 25 October 1929; on the same day the stock market crashed, and construction soon halted when investors were unwilling to purchase municipal bonds. The Triborough Bridge Authority was formed as an alternative source of funds in 1933, and the bridge opened to traffic on 11 July 1936 as the first of several structures built by the authority in New York City. During its first year it carried 9.65 million vehicles and generated $2.72 million in tolls. The most prominent feature is a suspension bridge spanning the East River between Queens and Wards Island that is 2780 feet (848 meters) long, with a height above water of 143 feet (43.6 meters). A lift bridge of 770 feet (235 meters) spans the Harlem River between 125th Street in Manhattan and Randalls Island, and a truss bridge of 1217 feet (371 meters) links Randalls Island to the Bronx. The bridge was renamed in 2008 to commemorate New York senator Robert F. Kennedy, who had been assassinated in Los Angeles 40 years earlier.

Rebecca Read Shanor

Roberto Clemente State Park. First state park in New York City. Opened in August 1973 as Harlem River–Bronx State Park, it spanned 25 acres (10 hectares) of land along the Harlem River north of the Washington Bridge in the Bronx. The site was occupied by boating clubhouses and shipyards in the nineteenth century. It was given its current name in September 1974 in memory of the Pittsburgh Pirates baseball player killed in a plane crash while on a relief mission to earthquake victims in Nicaragua. The park has a large outdoor pool, a gymnasium, and ballfields and abuts the River Park Towers.

Gary D. Hermalyn

Robertson, R(obert) H(enderson) (*b* Philadelphia, 29 April 1849; *d* New York City, 4 June 1919). Architect. An early association with the architect William A. Potter helped him to achieve a reputation as a skilled designer of religious and commercial buildings. His most important projects included St. Luke's Church, a Romanesque Revival structure at 285 Convent Avenue (1892–95), and the classically inspired St. Paul's Methodist Church (now the Church of St. Paul and St. Andrew) at West End Avenue and 86th Street (1896). Robertson explored diverse solutions to the problems encountered in designing tall office buildings while working on the Lincoln Building (1889–90, Union Square West), the McIntyre Building (1890–92, 874 Broadway), the Corn Exchange Bank (1892–94, Beaver and William streets, demolished), the American Tract Society Building (1894–95, Nassau Street), and the Park Row Building (1896–99, 15 Park Row), on its completion the world's tallest building.

Marjorie Pearson

Robeson, Paul (Leroy) (*b* Princeton, N.J., 9 April 1898; *d* Philadelphia, 23 Jan 1976). Actor, singer, athlete, and civil rights activist. Born to Maria Louisa Bustill and William Drew Robeson, a runaway slave and Methodist minister, he attended Rutgers University on an academic scholarship. The only African American student then at Rutgers, he was the valedictorian and a star football player. Robeson pursued professional football and boxing while attending law school at Columbia University in the early 1920s. During a performance in an amateur play at the YMCA, he captured the attention of playwright Eugene O'Neill, who cast Robeson in *Taboo, The Emperor Jones,* and *All God's Chillun Got Wings;* he later became known as one of the first actors to portray realistic, nuanced black characters in motion pictures. One of the most popular baritone singers of his time, he mastered many languages and performed classical repertory, spirituals, and folk songs from around the world in concert. "Old Man River," which he sang in both the film and stage versions of *Showboat,* was his signature song. From 1939 to 1941 he lived at 555 Edgecomb Avenue in Harlem (the house was later designated a National Historic Landmark). During World War II he was one of the first to sing on behalf of the war effort. Inspired by his experience of discrimination in law and by the perspectives he gained while touring abroad, he later joined several causes devoted to labor and antifascism and also spoke out for civil rights; the government subsequently suspended his passport from 1950 to 1958, cutting short his career. He was banned from appearing on television during the 1950s and many of his films were deemed illegal. In protest Robeson spent many of his latter years in England and the Soviet Union. His last home in the city was at 16 Jumel Terrace in Manhattan, where he lived from 1963 to 1966.

Martin Bauml Duberman, *Paul Robeson* (New York: Alfred A. Knopf, 1988)

Amanda Aaron

Robinson, Bill (Luther) "Bojangles" (*b* Richmond, Va., 25 May 1878; *d* New York City, 25 Nov 1949). Tap dancer, actor, humanitarian. Robinson performed from a young age in the taverns of Richmond, Virginia, and later Washington, D.C. He was already a veteran performer when he developed his own vaudeville show with comedian George Cooper in 1905, around the same time he got the nickname Bojangles. Robinson spent the next two decades touring as one of the biggest performers during vaudeville's twilight years, sometimes earning more than $3000 as a solo performer beginning in 1914. He moved to New York City in 1928 where he found Broadway fame in the revue *Blackbirds of 1928.* He appeared in more than a dozen major films over the next 15 years, notably opposite Shirley Temple in *Rebecca of Sunnybrook Farm* (1938) and *The Little Colonel* (1935), and with Lena Horne and Fats Waller in *Stormy Weather* (1943). Robinson is reported to have contributed nearly $1 million to charitable causes, from black hospitals and schools to orphanages and cancer research. Robinson performed at as many as 400 benefits a year, including an annual concert for the blind on his birthday.

Robinson's most famous stage performance was in *The Hot Mikado* (1939), a jazz adaptation of Gilbert and Sullivan's operetta that was popular among both critics and Broadway audiences. Robinson was a cofounder of the Negro Baseball League's New York Black Yankees and mascot for the New York Giants. He never left home without a gold-plated, pearl-handled .32 revolver that was the gift of retired officers of the New York Police Department, and he was the only nonofficer in New York City with a permit to carry such a gun. He lived on 149th Street and Seventh Avenue for 20 years, and was appointed unofficial mayor of Harlem in 1934. When he died, Harlem schools closed while his body lay in state at the 142nd Street Armory, and police estimated that half a million people lined 8 miles (13 kilometers) of streets to watch his funeral procession from Abyssinian Baptist Church, where he was eulogized by Adam Clayton Powell, Sr., to his burial in Brooklyn's Evergreens Cemetery.

Bill "Bojangles" Robinson, with a pearl-handled gold revolver given to him by the 32nd police precinct of New York City, a platinum key to the city of Richmond, Virginia, two gold deputy sheriff's badges from New York City and Brooklyn, and a gold badge for the honorary mayoralty of Harlem, all awarded to him for charitable work.

Rowan Moore Gerety

Robinson, Boardman (*b* Somerset, Nova Scotia, 6 Sept 1876; *d* Stamford, Conn., 5 Sept 1952). Canadian American illustrator, cartoonist, and socialist. Boardman began his career drawing distinctive ink wash and black crayon cartoons for the *New York Times* and the *New York Tribune.* In 1917, as an illustrator for the socialist journal *The Masses,* he was accused of violating the Espionage Act of 1917 for his controversial political cartoon titled "Making the World Safe for Democracy." He was later acquitted, but *The Masses* was forced to cease publication as a result of the litigation. Robinson later worked as an illustrator and contributing editor for other left-wing magazines such as *The Liberator* and *The New Masses.* He illustrated several books, including John Reed's *The War in Eastern Europe* (1916), which depicted his travels with Reed through Russia and the Balkans. He taught at the Art Students League in New York City from 1919 to 1930, and in 1932 was commissioned to paint a mural in the RKO Building in Rockefeller Center, which he described as the "supremacy of man's spiritual nature over industrialization." Robinson left New York in 1936 to become director of the Colorado Springs Fine Arts Center.

Caleb Smith

Robinson, Jackie [John Roosevelt] (*b* Cairo, Ga., 31 Jan 1919; *d* Stamford, Conn., 24 Oct 1972). Baseball player. He became the

first student at the University of California–Los Angeles to earn four letters (one each in football, baseball, basketball, and track). During World War II he was nearly court-martialed when he refused to play on the football team at Fort Hood in Texas, an act of protest prompted by having been forced to move to the back of an army bus. After the war he played baseball in the Negro Leagues for the Kansas City Monarchs; soon many believed that he would become the first black player in the major leagues. At the East–West Game of the Negro Leagues in 1945 he was approached by a scout for Branch Rickey, president of the Brooklyn Dodgers. After secret negotiations Rickey announced on 23 October 1945 in Montreal that he had signed Robinson, who soon joined the Dodgers' farm team the Montreal Royals. He was promoted to the major leagues on 9 April 1947. In 10 years as a second baseman for the Dodgers he batted .311, stole 197 bases, had 1518 hits in 1382 games, and played in six World Series. His performance on the field and his ability to handle the pressures of his role became an inspiration to all who fought bigotry. He was elected to the Baseball Hall of Fame in 1962, the first year he was eligible. From 1947 to 1949 he lived at 5224 Tilden Street in Flatbush; for most of his years as a player he lived in St. Albans in Queens. After his retirement from baseball he was a business executive, a founder of Freedom National Bank in Harlem (1964), a civil rights activist, and a prominent Republican. In 1990 *Life* named him one of the 100 most influential Americans of the twentieth century. Robinson wrote an autobiography, *I Never Had It Made* (1972).

Arthur Ashe, *A Hard Road to Glory* (New York: Amistad/Warner, 1988)

Arthur Ashe

Robinson, Sugar Ray [Smith, Walker, Jr.] (*b* Detroit, 3 May 1921; *d* Culver City, Iowa, 12 April 1989). Boxer. At the age of 12 he moved with his mother to New York City where he attended DeWitt Clinton High School for three years. After a successful career as an amateur boxer he turned professional in 1940 and won the world welterweight title in 1946 in a 15-round decision over Tommy Bell. In 1951 he defeated Jake La Motta in a contest for the world middleweight title, a championship he held five times during his long career. Although he retired several times, financial problems forced him back into the ring. At the time of his final retirement in 1965 after a loss to Joey Archer, his record stood at 174 wins, 19 losses, six draws, one no-decision, and one no-contest. He was elected to the Boxing Hall of Fame in 1967. With Dave Anderson he wrote *Sugar Ray* (1970).

Randy Roberts

Rochdale Village. Limited-equity cooperative in southeastern Queens (2007 pop. *ca* 25,000), lying within South Jamaica and bounded to the north by Baisley Boulevard and Bedell Street, to the east by Bedell Street, to the south by 137th Avenue, and to the west by Guy R. Brewer Boulevard. Built on the site of the former Jamaica Racetrack, it was a favorite project of Robert Moses and was built for $86 million as a middle-income cooperative by the United Housing Foundation. Its 20 cruciform redbrick buildings of 14 stories each contained 5860 apartment units in all. Laid out on 170 acres (69 hectares), the cooperative also contains two shopping malls, three schools, a community center, and recreational facilities. When Rochdale opened in 1963 it was the largest cooperative housing complex in the world and was the largest experiment in integrated housing in New York City. At first its population was 80 percent white and 20 percent African American. Integration did not last, and white families started leaving in the late 1960s. In 2008 its population was predominantly African American.

James Bradley, Peter Eisenstadt

rock. New York City played an important role in the development of rock and of its precursors rock and roll and rhythm and blues. In the 1940s and 1950s rhythm and blues recorded in Kansas City, East St. Louis (Illinois), Chicago, Cincinnati, New Orleans, Texas, and California was transferred to disc at Bell Studios. Atlantic Records began in the city as a small independent record label led by Ahmet Ertegun, Nesuhi Ertegun, Herb Abramson, and (later) Jerry Wexler; it recorded such rhythm-and-blues musicians as Big Joe Turner. Record companies in the city helped to develop a style of rhythm and blues that was more polished and jazz-oriented than its counterpart elsewhere by engaging as studio musicians a number of sidemen from big bands, including those of Duke Ellington and Count Basie: among the best-known studio players were the guitarist Mickey Baker and the saxophonist King Curtis (both of whom recorded for Atlantic), the guitarist Cornell Dupree and the drummer Bernard Purdie (both members of Curtis's band), and the guitarist Jimmy Spruill (who recorded for the labels Fire, Joy, and Fury, all owned by Bobby Robinson). Early rhythm-and-blues recordings by Fats Domino and Little Richard were broadcast on the radio station WINS in New York City from 1954 by the disc jockey Alan Freed (who is believed to have originated the term *rock and roll*); he later organized concerts at the Paramount Theater in Brooklyn. Other disc jockeys in the city included Murray the K (Murray Kaufman), Cousin Brucie (Bruce Morrow), and B. Mitchell Reid.

The line between rhythm and blues and rock and roll became increasingly blurred by white performers like Elvis Presley, Buddy Holly, and Bill Haley, who found a wide audience by combining elements of rhythm and blues and country music. Berry and Holly were among the few rock-and-roll performers who wrote their own songs: most relied on material written by other songwriters that adhered closely to the popular-song formulas of Tin Pan Alley. Many of these songwriters worked in the Brill Building at 1619 Broadway, including Jerry Lieber and Mike Stoller, Gerry Goffin and Carole King, Neil Sedaka, Bert Berns, Ellie Greenwich, Barry Mann, Bobby Darin, and Neil Diamond (all employed by Don Kirshner's firm Aldon Music), Doc Pomus and Mort Shuman, and Burt Bacharach and Hal David. By the early 1960s songwriters were powerful figures in the music business, and many began performing themselves: among those who did was Paul Simon. Doo-wop emerged as a genre of rock and roll that combined the smooth, intricate harmonies of the barbershop quartet, the rhythmic drive of black gospel music, and often ludicrous lyrics. Early doo-wop groups included the Mills Brothers and the Ink Spots; the gospel element predominated in the work of later groups like the Ravens, the Orioles, the Dominos, the Clovers, the Drifters, the Platters, and the Coasters. Popularized by Freed and often performed on street corners, doo-wop had an enormous impact on white, black, and Latin American teenagers in New York City in the late 1950s and early 1960s. Italian groups were especially numerous, among them Johnny Maestro and the Crests (1958–60, best known for their recording "16 Candles"), the Brooklyn Bridge (also formed by Maestro), Dion DiMucci and the Belmonts (named for the predominantly Italian neighborhood in the Bronx), Frankie Valli and the Four Seasons, Joey Dee and the Starlighters (whose recording "Peppermint Twist" was named for the Peppermint Lounge, a discotheque in the city), and Danny and the Juniors (well known for their recording "At the Hop"). In the early 1960s doo-wop was largely eclipsed by the music of the Beatles and other groups from Britain.

At the same time small clubs like Gerde's Folk City, the Bitter End, the Cafe Wha?, and the Gaslight achieved success as venues for folk music and blues, both associated in the popular mind with the bohemianism then fashionable and the brand of leftist populism embodied by such folk musicians as Woody Guthrie and Pete Seeger. The clubs drew college-educated listeners familiar with the music of Doc Watson, Bill Monroe, Sonny Terry and Brownie McGhee, Elizabeth Cotten, Mississippi John Hurt, Skip James, Muddy Waters, and the Reverend Gary Davis. Among the more distinctive performers were Phil Ochs and Dave Van Ronk; others were dutiful imitators of genres ranging from Scottish ballads to Mississippi Delta blues. Bob Dylan, who began his career by performing folk music on the acoustic guitar, took up the electric guitar at the Newport Folk Festival in

1965 and soon gained a large following. His album *Highway 61 Revisited* and such songs as "Like a Rolling Stone" had a profound influence on the Beatles, the Rolling Stones, and other groups, who in their music and especially their lyrics now gave greater attention to irony and political topicality. Rock was first played on FM radio in New York City in 1966 on the classical-music station WOR by the disc jockey Scott Muni; he later moved to WNEW-FM, where he became known for innovative programming that demanded rather more from his listeners than the steady regimen of pop singles to which they were accustomed. Rock was also broadcast by WBAI, which combined highly eclectic music programming with counterculture politics.

The musical explorations of the Beatles in their albums *Revolver, Rubber Soul,* and *Sgt. Pepper's Lonely Hearts Club Band* contributed further to the growing self-consciousness and diversity of rock. Musicians largely abandoned the conventions of Tin Pan Alley in favor of adventurous material of their own composition. Their lyrics became more sophisticated and ambitious, and they freely drew on inspirations as diverse as the music of Erik Satie and the cacophony of the city. On disc and at clubs like the Electric Circus, Lou Reed and his influential band the Velvet Underground sang about sadomasochism and drugs to the accompaniment of shrieking, microtonal viola lines, guitar feedback, and a thundering rhythm section. The Fugs and the Mothers of Invention engaged in anarchic musical satire; blues and soul were performed by the Blues Project, by Aretha Franklin and B. B. King (both of whom recorded with Curtis), and by a number of "garage" bands, including the Young Rascals, Vanilla Fudge, and Mountain. The recording studio took on a more prominent role as overdubbing and editing were used to create increasingly dense sounds. From the late 1960s the producer Bill Graham presented concerts featuring three or four widely disparate groups at the Fillmore East, a converted vaudeville house on lower Second Avenue, and a club called the Scene in a basement in the West 40s offered performances by Buddy Guy, Johnny Winter, Jerry Garcia, and Jimi Hendrix, who regularly played at the Cafe Wha? and had a recording studio at 55 West Eighth Street called the Electric Lady Studio. Inspired by the innovative guitar playing of Hendrix, the jazz trumpeter Miles Davis added electric instruments to his band and helped to launch a genre known as jazz-rock, which was heard at venues like the Fillmore East and appealed to a broader audience than jazz had reached for some time.

By the mid-1970s, a new genre called punk rock emerged, centered on the Lower East Side and played at places such as CBGB-OMFUG (Country, Bluegrass, and Blues, and Other Music for Uplifting Gourmandizers) on the Bowery. Inspired by the garage bands of the 1960s, the Velvet Underground and the New York Dolls, and often the jazz musicians John Coltrane, Ornette Coleman, and Albert Ayler, punk musicians created a raw, stripped-down sound; among the better known were Television (which included the guitarists Tom Verlaine and Richard Lloyd), Richard Hell and the Voidoids (including the guitarist Robert Quine), Patti Smith, the Ramones, Talking Heads, and Blondie. The music influenced English bands like the Clash and the Sex Pistols (overtly modeled after the Voidoids by Malcolm McLaren, a former manager of the New York Dolls), some of which performed in New York City in the late 1970s, achieving success that in turn helped some bands from the city to sign record contracts with Sire (Talking Heads and the Dead Boys), Chrysalis (Blondie), Elektra (Television), Arista (Smith), and Capitol (Mink DeVille). A few bands were heard on commercial radio (Blondie and Talking Heads made hit recordings), but locally most were broadcast on college stations and briefly in 1978 on WPIX-FM. At the end of the decade punk rock thrived at such clubs as Max's Kansas City, Hurrah, the Mudd Club, Danceteria, and the Ritz (on East 11th Street), though by this time the musical differences among the bands had become accentuated and punk rock soon fragmented into such genres as new wave, noise rock, hardcore, and thrash. Although punk rock was a spent force by 1981, it achieved a lasting impact by bringing more women into rock and animating nightlife in lower Manhattan.

Other rock musicians were more difficult to categorize. Elements from such disparate sources as avant-garde jazz, the music of John Cage, and conceptual art were incorporated into the work of Eugene Chadbourne, Glenn Branca, Laurie Anderson, and the groups Curlew, DNA, the Lounge Lizards, and Naked City (consisting of the saxophonist John Zorn and the guitarists Fred Frith and Bill Frisell). An amalgam of punk rock and funk was forged by Material (the electric bass guitarist Bill Laswell and the electric guitarist Ronnie Drayton) and the Music Revelation Ensemble (the saxophonist David Murray and the electric guitarist James Blood Ulmer). James Chance, a white saxophonist, led a largely black band at the Squat Theater called James White and the Blacks that evolved into Defunkt, led by the trombonist Joseph Bowie. In the early 1990s New York City had become more inhospitable to rock musicians, with much of the prominent rock music coming out of other major cities such as Seattle (grunge). A prominent exception was Living Colour: led by the virtuoso electric guitarist Vernon Reid, it developed a distinctive style by drawing on jazz, calypso, and heavy metal. The band was active in the Black Rock Coalition, a group formed in the city to combat racism in the record business.

In the twenty-first century rock music went through a renaissance with the Garage Rock Revival, led by New York City groups such as the Strokes, Interpol, and the Walkmen, who combined the spirit of 1960s garage rock with post-punk and 1990s melodic indie rock. This reinvigorated New York as the cutting edge of new rock music. Many of these bands had commercially successful albums initially, but their careers proved short-lived. At the same time increasing rent prices pushed many artists out of Manhattan and into Brooklyn, particularly into the Williamsburg neighborhood, where a tight-knit indie rock scene took root and thrived. Many of these bands combine art rock, electronics, funk, and more experimental forms of rock music to create ebullient, challenging work with little regard for mainstream success. The scene also took a lot of inspiration from the DIY (do-it-yourself) spirit of punk, and over the decade featured a flourishing live scene, much of which revolved around organizer and promoter Todd P. Despite the insular nature of the scene, it has produced several breakout artists, including the Yeah Yeah Yeahs, TV on the Radio, MGMT, Liars, Grizzly Bear, and Animal Collective, who have all jumped into the national landscape, playing to sold-out crowds across the country, and scoring top-20 albums on the Billboard charts as well as appearances on late-night shows.

Gene Santoro, George Winslow, Benjamin Yakas

Rockaway Junction. Former name of Hillside.

Rockaway Park. Neighborhood in southern Queens, lying on the Rockaway Peninsula and bounded to the north by Rockaway Inlet, to the east by Beach 110th Street, to the south by the Atlantic Ocean, and to the west by Beach 126th Street. There was rapid development after the New York, Woodhaven and Rockaway Railroad was extended to the area in 1880. On 25 July 1889 Austin Corbin, president of the Long Island Rail Road, set aside 300 acres (120 hectares) with one-half mile (1 kilometer) of beachfront for an exclusive residential neighborhood. The failure of the Hotel Imperial, built for $1 million, slowed development. In 1900 the owners of the beach resumed promotional efforts and invested $500,000 to fill in 23 acres (9 hectares) of the bay and build a boulevard along the ocean and a boardwalk 12 blocks long; 14 streets were laid out, utilities were installed, and Rockaway Beach Amusement Park in Rockaway Beach nearby opened in 1901. Soon there were large crowds of summer visitors and hundreds of houses by the time of World War I. A smaller amusement park called Rockaway Playland, also in Rockaway Beach, lasted until 1987. Rockaway Park, an attractive residential neighborhood, now draws few vacationers but has a larger permanent population.

Vincent Seyfried

Rockaway Peninsula [Rockaway]. Narrow peninsula consisting of a barrier beach 4 miles (6 kilometers) long and less than 1 mile wide in southern Queens, bounded to the north by Rockaway Inlet, to the east by Nassau County, and to the south and west by the Atlantic Ocean; it includes Fort Tilden and Jacob Riis Park as well as the neighborhoods (west to east) of Breezy Point, Roxbury, Neponsit, Belle Harbor, Rockaway Park, Rockaway Beach, Holland, Hammels, Arverne, Edgemere, and Far Rockaway. The area was uninhabited until a fishing shack was built in 1856. Transportation for the first summer visitors was provided by a ferry from Canarsie in 1864. In 1869 the South Side Railroad was constructed from the Queens mainland through Valley Stream to Far Rockaway, and hotels were soon built, leading to the peninsula's development as a summer resort. The Long Island Rail Road (LIRR) absorbed the Rockaway service in 1876; in 1880 LIRR built a timber trestle across Jamaica Bay to provide direct service between the Queens mainland and all communities between Rockaway Park and Far Rockaway; LIRR electrified the trestle route in 1905. Summer-only residents, who often rented small bungalows for the season, could now easily commute to jobs in Manhattan and Brooklyn. At the same time electric train service began Rockaway's slow transformation from a summer resort into a year-round urban neighborhood. The trestle was subject to fires; after a particularly serious one in May 1950 New York City bought the LIRR route (September 1952), rebuilt the trestle using concrete, and connected it to Brooklyn's Fulton Street subway in 1956. In the 1960s many of the old summer bungalows in Arverne and Hammels were removed as part of a redevelopment effort that never became reality, leaving large areas of vacant beachfront land. By the late 2000s the Rockaway Peninsula was a beachfront residential community with a mixture of private homes, large apartment complexes, and a sprinkling of summer-only residential units. Some long-vacant land in Arverne was being redeveloped with new, low-rise housing.

Vincent Seyfried, Andrew Sparberg

Rockefeller, David, Sr. (*b* New York City, 12 June 1915). Banker and businessman. The youngest of six children of John D. Rockefeller, Jr., and Abigail "Abby" Aldrich Rockefeller, he graduated from Harvard College and studied for a year at the London School of Economics before taking his doctorate in economics at the University of Chicago in 1940. He served as an intelligence officer in North Africa and southern France during World War II and then as an assistant military attaché at the American embassy in Paris until late 1945. In the following year he returned to New York City to work for Chase National Bank. He was the chairman during the late 1940s and 1950s of a coalition of educational and religious groups that sought to improve conditions in Morningside Heights by building low-cost cooperative apartments with federal funds. In the early 1950s he was instrumental in the Chase Bank decision to remain in lower Manhattan and build a new headquarters there rather than in midtown or outside the city, a decision that led most of the large banks and brokerage houses in the city to remain near Wall Street. In 1956 he led the merger of Chase with the Bank of Manhattan. He became president and vice chairman of Chase in 1959 and chairman of the board and chief executive officer in 1969. Under his direction the bank expanded overseas, increased its capitalization and asset base, and began lending to the third world after the first Arab oil embargo in 1973. During the city's fiscal crisis of the mid-1970s he joined with Walter Wriston of Citicorp, Felix G. Rohatyn of Lazard Frères, and many others to form the Municipal Assistance Corporation, which stabilized the city's finances. After retiring from Chase in 1981 he continued to serve as the chairman of its international advisory committee; he was also chairman of the Downtown–Lower Manhattan Association, which helped to plan the South Street Seaport, the World Trade Center, and Battery Park City, and of the New York City Partnership, an organization of major corporations that constructs low-cost housing and works with city agencies to improve the delivery of services. An important collector of modern art, Rockefeller was a patron for 60 years of the Museum of Modern Art, to which he gave $100 million in 2008.

Peter J. Johnson

Rockefeller, John D(avison) (*b* near Richford, N.Y., 8 July 1837; *d* Ormond Beach, Fla., 23 May 1937). Businessman and philanthropist. In 1859 he opened a sales office in New York City that was the forerunner of the Standard Oil Company of New York, of which he became the principal shareholder. He organized the firm as a holding company, or trust, with national and international networks of production, refining, transportation, and distribution. Under his guidance Standard Oil reached a position of near-monopoly in an industry that had previously been characterized by ruinous competition. He moved with his family to New York City in 1884, taking up residence at 4 West 54th Street (now the site of the garden of the Museum of Modern Art). He also purchased an estate of 5000 acres (2000 hectares) in Westchester County. In the late 1880s he made large charitable donations to the Northern Baptist Convention and the educational and welfare agencies affiliated with it. On the advice of his associate Frederick T. Gates he shifted his support in the late 1890s to such causes as the settlement house movement, public health, education, housing, and municipal reform. For many years he was the principal supporter of the Bureau of Municipal Research, which had a profound influence on the structure of the city's government and led to reform of the police force, schools, and public health system. He remained active in the daily management of Standard Oil until 1897 and retained the title of president until 1912, the year following the dissolution of the firm by the U.S. Supreme Court. Considered the richest person in the world, Rockefeller later formed several major philanthropic foundations: the Rockefeller Institute for Medical Research (1901; now Rockefeller University), the General Education Board (1903), and the Rockefeller Foundation (1913). He also played a major role in the establishment of the Riverside Church and the University of Chicago.

Johnson, *The Rockefeller Conscience: An American Family in Public and in Private* (New York: Macmillan, 1991); Ron Chernow, *Titan: The Life of John D. Rockefeller, Sr.* (New York: Random House, 1998)

Peter J. Johnson

Rockefeller, John D(avison), Jr. (*b* Cleveland, Ohio, 28 Jan 1874; *d* Tucson, Ariz., 12 May 1960). Businessman and philanthropist, father of John D. Rockefeller, III; Nelson A. Rockefeller; and David Rockefeller. He was the only son and principal heir to the fortune of John D. Rockefeller. In his early thirties he married Abigail "Abby" Greene Aldrich, the daughter of Senator Nelson W. Aldrich of Rhode Island, and devoted himself to managing his father's business and philanthropic affairs. He was deeply influenced by his friend Harry Emerson Fosdick, who advocated Christian involvement in social problems, and by Frederick W. Taylor's writings on scientific management. His family's involvement with the mining strikes surrounding the 1914 Ludlow Massacre in Colorado turned him toward a greater involvement with issues of reform. His personal fortune, which reached $1 billion by 1929, enabled him to help finance the Paul Lawrence Dunbar Apartments in Harlem, the Thomas Garden Apartments in the Bronx, and Sunnyside Gardens in Queens. He was also active in creating public parks and open spaces: Fort Tryon Park, site of the Cloisters, was developed with his personal funds and then contributed to the city in the 1930s, and in 1946 he donated to the United Nations a parcel of land in Turtle Bay that he had purchased for $8.5 million, which became its permanent site. He also supported the early efforts of Margaret

Sanger and her colleagues to promote contraception. Rockefeller Center, built almost entirely with his own money during the Depression, became a focus of the city's life and had an enduring effect on urban design. Rockefeller's residences in New York City included 13 West 54th Street (1901–8), 10 West 54th Street (1908–36), and 740 Park Avenue (from 1936). He also lived at the huge Rockefeller estate at Pocantico Hills in Westchester County.

Peter J. Johnson

Rockefeller, John D(avison), III (*b* New York City, 21 March 1906; *d* Tarrytown, N.Y., 10 July 1978). Philanthropist. The eldest son of John D. Rockefeller, Jr., and Abigail "Abby" Aldrich Rockefeller, he graduated from Princeton University in 1929 and embarked on a world tour. He returned to the United States just after the stock market crash and went to work for his father, serving on the boards of more than 30 foundations and nonprofit organizations. He also took part in the development of Radio City Music Hall and the other theaters in Rockefeller Center. After World War II he prevailed on the Rockefeller Foundation to conduct research on world population growth, agriculture, and agricultural economics. Frustrated by the resistance of the foundation's trustees and officers, he used his own funds to form the Population Council and the Agricultural Development Council in the early 1950s. Both organizations made enormous contributions to the development of safe and effective contraceptives and to a better understanding of economic development. During the 1950s and 1960s he formed the Asia Society, revived the Japan Society, and was a leader of the group that planned and built Lincoln Center for the Performing Arts (of which he served as chairman for 15 years). He lived at 1 Beekman Place from 1934 to 1978, as well as at the huge family estate in Westchester County.

Peter J. Johnson

Rockefeller, Nelson A(ldrich) (*b* Bar Harbor, Maine, 8 July 1908; *d* New York City, 26 Jan 1979). Governor and vice president of the United States. A grandson of John D. Rockefeller, he attended the Lincoln School, a private school in Manhattan. One of the family's three homes was at 10 West 54th Street. After graduating from Dartmouth College in 1930 he returned to the city in the following year, settling into an apartment on East 67th Street; he later moved to Fifth Avenue and 63rd Street. In 1932 he became a trustee of the Museum of Modern Art, marking the beginning of an increasingly active career as an art collector and patron. Under his presidency in 1939 and 1959 the museum developed into a prominent and popular cultural institution. He also assembled an exceptional private collection of modern and primitive art, and used his own collection of primitive sculpture to found the Museum of Primitive Art in 1954. From 1931 he worked at various branches of the family's business. He became president of Rockefeller Center in 1938. His political career grew out of his 1935 investment in Creole Petroleum, the Venezuelan subsidiary of Standard Oil. His involvement in Latin American affairs led to his appointment as coordinator of Inter-American Affairs in the U.S. Department of State in 1940, and assistant secretary of state for the American Republics in 1944.

After serving in appointed posts under Presidents Harry S. Truman and Dwight D. Eisenhower, Rockefeller turned his attention to elective office. Nominated by the Republicans for the governorship of New York in 1958, he defeated the incumbent, W. Averell Harriman. He became a leader of the moderate wing of the Republican Party, and mounted unsuccessful campaigns for the Republican presidential nomination in 1960, 1964, and 1968. Despite these setbacks he was reelected governor in 1962, 1966, and 1970. Rockefeller was the first governor to establish a permanent office in New York City, and he governed the state largely from headquarters at 22 West 55th Street, staying in Albany for legislative sessions. For many years he feuded with Mayor John V. Lindsay (initially an ally) and with Robert Moses, who lost his commanding influence over the city's politics in 1968 when Rockefeller established the Metropolitan Transit Authority, which absorbed Moses's last base of power, the Triborough Bridge and Tunnel Authority. As governor, Rockefeller's tough stances left a mixed legacy: when inmates at the Attica State Penitentiary rioted in 1971, he ordered state troopers and National Guardsmen to retake the prison by force, resulting in the deaths of 29 prisoners and 10 hostages. Two years later he pushed the severe "Rockefeller drug laws" through the state legislature, establishing mandatory prison sentences for the possession and sale of drugs; opponents noted the laws' unfairness toward first-time and nonviolent offenders, as well as African Americans and Latinos. He also pushed for increased access to higher education and a major expansion of the State University of New York. In 1973 Rockefeller resigned as governor to lead the National Commission on Critical Choices for Americans. He returned to public office the following year when Richard Nixon resigned the presidency and was succeeded by Gerald Ford, who nominated Rockefeller as his vice president. Rockefeller withdrew from consideration as Ford's running mate in 1976, and when Ford's term ended in 1977 he retired from politics.

Eileen K. Cheng

Rockefeller Center. Complex of 19 commercial buildings in Manhattan, bounded by 52nd and 49th streets, and Fifth and Seventh avenues. It has inspired developers elsewhere, including those for Battery Park City. The land, earlier occupied by tenements, was leased by Columbia University to John D. Rockefeller, Jr., who in early 1929 planned to increase the area's value by erecting three tall office buildings and a new Metropolitan Opera House around a plaza. After the stock market crashed in October, the opera could not afford to move, so Rockefeller reconceived the development as entirely commercial. He engaged development consultants Todd, Robertson and Todd, along with three architecture firms: Reinhard and Hofmeister (expert in dividing office spaces); Corbett, Harrison and MacMurray (known for civic concern and sober design); and Hood, Godley and Fouilhoux (known for innovative design). The first group of office towers and theaters surrounding a sunken plaza was completed in 1929, bounded by 51st and 49th streets, and Fifth and Sixth avenues. Four low buildings on Fifth Avenue provide an entrance of inviting scale to the two northern blocks. A downward slope in the central block between the low buildings leads pedestrians past shop windows toward the sunken plaza where plants, flags, sculptures, and fountains were installed. An outdoor restaurant operates in summer and an ice-skating rink in winter. West of the plaza, on a street added to relieve traffic, the architects placed the tallest tower, the RCA (now GE) Building. Two theaters on Sixth Avenue occupied less desirable lots but were visible from the theater district. The Center Theater was demolished in 1954, but Radio City Music Hall survives, used now for popular music shows rather than the original vaudeville acts and films. Some of the elegant shops that lined Fifth Avenue and the plaza have been replaced by chain stores. Rooftop gardens and an observation deck produced income, as did the Rainbow Room restaurant (opened 1934), which is still among the city's most glamorous. The owner commissioned many murals and works of sculpture, including the massive *Atlas* by Lee Lawrie with René Chambellan (1937) at the entrance to 630 Fifth Avenue, and *Prometheus* in the sunken plaza by Paul Manship (1934).

Todd, Robertson and Todd planned an underground corridor leading to a subway station at 47th–50th streets along a new Sixth Avenue line that opened in 1940. Shops and

Rockefeller Center Plaza, 2009

services flank the corridors. A second underground system clears traffic from the area by providing off-street truck loading and delivery. The imaginative design and high standards for construction and maintenance continue to attract tenants and tourists.

The center's increasing profitability during and after World War II inspired the owners to add buildings on the northern and western sides after 1947, including four coordinated office towers designed by Harrison and Abramovitz on Sixth Avenue between 48th and 57th streets. The first, the Time–Life Building, was erected in 1960, the three south of it in 1973. These tall prismatic towers surrounded by open space reflected the new standards introduced by the zoning changes of 1961, but they drew less admiration than the earlier buildings had. Gensler Associates created a sensitively inserted addition for Christie's auction house on 49th Street in 1999. The Rockefeller Group bought the land in 1985, sold a part interest to Japanese investors, and in 2000 sold the center to Tishman–Speyer, a real estate company. The new owners altered the center's Fifth Avenue facades and remodeled the underground shopping street in white marble. Other architectural changes have been made to the buildings that are not landmarks.

Carol Krinsky

Rockefeller Foundation. Charitable foundation, one of the oldest and largest in the United States. It was formed in 1913 "to promote the well-being of man-kind through out the world" by John D. Rockefeller and his advisers Frederick T. Gates (1853–1929) and John D. Rockefeller, Jr., who had also formed the Rockefeller Institute for Medical Research (1901; later Rockefeller University), the General Education Board (1903), and the Rockefeller Sanitary Commission for the Eradication of Hookworm Disease (1909). The work of these institutions influenced the direction of the fund: its trustees set up the International Health Division (1913–51) to enable the sanitary commission to combat malaria, tuberculosis, and yellow fever in addition to hookworm, and the China Medical Board (1914–28) to promote modern Western medicine in China; the fund also financed the construction of the Peking Union Medical College. Under the leadership from 1917 to 1929 of George E. Vincent (1864–1941), the fund was active principally in public health and medical education. A reorganization of the Rockefellers' various philanthropies in 1928 left the fund with five divisions devoted to international health, the medical sciences, the natural sciences, the social sciences, and the humanities. It merged with the Laura Spelman Rockefeller Memorial, a foundation formed in 1918 by John D. Rockefeller in honor of his late wife, and also continued the work of the International Education Board, formed by John D. Rockefeller, Jr., in 1923. The China Medical Board became an independent foundation charged with operating the Peking Union Medical College; by 2008 its endowment was $270 million, and it had granted nearly $1 billion since its inception.

The efforts of the Rockefeller Foundation in the natural and medical sciences were strengthened during the presidencies of Max Mason (1877–1961) from 1929 to 1936 and of Raymond B. Fosdick (1883–1972) from 1936 to 1948. Under the direction of Dean Rusk from 1952 to 1961 and J. George Harrar (1906–82) from 1961 to 1972, attention shifted to agricultural development, equal opportunity, and population concerns. Led from 1972 to 1979 by John H. Knowles (1926–79), the foundation began to fund social history projects, established a fellowship program in the humanities, and expanded its work in agricultural and medical science in the third world. Under the presidency of Richard Lyman (*b* 1923) from 1980 to 1988, the foundation continued its work in developing countries with scientifically based development programs and also undertook new initiatives in secondary education and the fight against persistent urban poverty. Peter C. Goldmark, Jr., served as president from 1988 to 1997 and brought about a clearer focus on housing, education, and the environment. Goldmark was succeeded by Gordon Conway, who served from 1998 to 2004 and Judith Rodin (*b* 1944) in 2005. In the early twenty-first century the foundation's New York City–focused initiatives included Opportunity NYC, aimed at lifting up poor families, the NYC Cultural Innovation Fund, and the Jane Jacobs Medal, which is awarded annually to two individuals whose work embodies Jacobs's urbanist ideals. Many universities, health-care facilities, and cultural institutions in the city have received support from the foundation for experimental and model programs: by 2008 the Rockefeller Foundation had granted about $14 billion since its founding and maintained more than $4 billion in assets.

The Rockefeller Foundation is one of several independent foundations based in New York City that carry the Rockefeller name. The Rockefeller Brothers Fund, formed in 1940 by John D. Rockefeller's grandchildren, had assets in 2008 of $923.5 million and granted more than $30 million in 2007; one component of its programs focuses on New York City. Rockefeller's great-grandchildren in 1967 formed the Rockefeller Family Fund, which in 2006 held assets of nearly $90 million and granted more than $6 million.

Kenneth W. Rose

Rockefeller University. Research institute offering graduate training in the physical and medical sciences. Founded in 1901 by John D. Rockefeller as the Rockefeller Institute for Medical Research, it first occupied quarters on Lexington Avenue and 50th Street. In 1906 the institute moved to its present site at 1230 York Avenue, between 63rd and 68th streets, where it opened Central Laboratory (now Founder's Hall). The hospital built for the institute in 1910 combined the study and treatment of human disease. Rockefeller's two chief philanthropic advisers, John D. Rockefeller, Jr., and Frederick T. Gates, were deter-

mined to create a world-class research institute on American soil. Rockefeller gave $2.6 million to the institute in 1907 and $3.8 million in 1910.

At its inception the institute functioned as a grant-giving body that supported private and public scientific research. In cooperation with the city's health department, one of its first grants supported a study of the city's milk supply. The institute's early research emphasis on the biology of infectious disease broadened by 1935 to keep pace with new developments in biological research. The first director, Simon Flexner (1901–35), developed the institute's administrative organization. By the 1950s the institute was one of the leading research facilities in the nation; it became a degree-granting institution in 1954 and first awarded the PhD in 1959. The current name was adopted in 1965, reflecting a commitment to the academic exploration of science. Twenty-three Nobel laureates have been associated with the institution, among them Alexis Carrel, Karl Landsteiner, Peyton Rous, Fritz Lipmann, Joshua Lederberg, David Baltimore, and Paul Greengard. Other prominent scientists who have worked there include Rebecca Lancefield, Hideyo Noguchi, Louise Pierce, Oswald Avery, and René Dubos. The university and its hospital have been the site of important developments and research in diverse areas, including human blood groups, antibiotics, viral cancers, DNA, vision, taste, and smell, methadone-based drug rehabilitation, aging, tuberculosis, neurobiological disorders, obesity, schizophrenia, hepatitis C, poliomyelitis, yellow fever, heart disease, diabetes, leukemia, arthritis, AIDS, alcoholism, parasitic diseases, and genetic disorders. The first effective treatment for African sleeping sickness was also developed there. The laboratory led by a senior professor is the basic unit of organization; there are no academic departments. Graduate courses, discussion groups, tutorials, and research apprenticeships all revolve around the laboratory. Students attend tuition-free and receive a yearly stipend. Unlike most universities it is dedicated exclusively to graduate study, conferring only earned doctorates and honorary degrees.

Rockettes. Precision dance team. Modeled on the 16 Missouri Rockettes, the group was formed by Russell Markert for the opening of Radio City Music Hall at Rockefeller Center on 27 December 1932. As they first performed at the Roxy Theater, the dancers were called the Roxyettes until 1934. When motion pictures were shown in the theater, they performed at least three times a day and learned new routines every week. The ensemble participated in United Service Organizations (USO) tours during World War II and began appearing in the Macy's Thanksgiving Day Parade in 1957. Decades of controversy over the all-white membership of the troupe ended when Jennifer Jones became the first black member in December 1987. Known for their high kick line and lavish costumes (the toy soldier uniform takes 12 hours to make), the ensemble maintains the illusion of uniform height by lining the tall dancers in the middle and arranging the shorter dancers at the ends, and then adjusting the size of their hats. As of 2007 the group had 36 members.

Barbara Cohen-Stratyner

Rock Pigeon [domestic pigeon]. Plump bird about 13 inches (33 centimeters) long with a short, fan-shaped tail, a white rump, two black wing bars, and an iridescent green neck patch; it is usually blue gray but the color varies from black to white. Originally a cliff dweller, it was introduced to New York City from Europe at an unknown time and soon proliferated; pigeons are especially common in Central and Prospect parks. The birds build nests in trees, and more often on windowsills and cornices, usually producing clutches of two eggs three times a year. Pigeons are ubiquitous in New York City and referred to as "rats with wings"; their droppings have often angered city residents.

Racing or homing pigeons, also part of the Rock Pigeon family, have a long history in New York City; European immigrants brought the tradition with them in the nineteenth century, and residents have kept pigeons in rooftop coops since then. In 1880 a homing pigeon sold to someone in Waltham, Massachusetts, found its way back to the city, 185 miles (298 kilometers) away, a year later. Hoboken, New Jersey, just across the Hudson River, was the center of rooftop pigeon culture, as seen in Elia Kazan's 1954 film *On the Waterfront.* In the early twenty-first century, although pigeon keepers had greatly diminished in number, some continued to race their birds, especially in Brooklyn. Organizations like the Frank Viola Homing Pigeon Club in Coney Island organized competitions, driving hundreds of birds between 100 and 500 miles (161 to 805 kilometers) from the city and releasing them; pigeon keepers wait by their coops for the birds—equipped with electronic bracelets to clock their time—to return.

John Bull, Kate Lauber

Rockwell, Norman (*b* New York City, 3 Feb 1894; *d* Stockbridge, Mass., 9 Nov 1978). Painter and illustrator. He was born at Amsterdam Avenue and 103rd Street; his family later lived in apartments in Harlem, including one at St. Nicholas Avenue and 147th Street from 1896 to 1900. In 1908 he enrolled in art classes at the New York School of Art (formerly the Chase School of Art, 57 West 57th Street) and two years later transferred to the National Academy; he finally completed his formal art education at the Art Students League (215 West 57th Street). Rockwell won the affection of the public for his nostalgic portrayals of life in small towns and sought above all to provoke an emotional response in his audience, leading some to criticize him for avoiding the stark realities of his time. He is best known for 317 cover illustrations executed for the *Saturday Evening Post* between 1916 and 1963.

Andrew Wiese

Rodgers, Richard (*b* Queens, 28 June 1902; *d* New York City, 30 Dec 1979). Composer. He attended Columbia College and the Institute of Musical Art in New York City but learned music largely through his own study of the operettas of Victor Herbert and the musicals of Jerome Kern. He wrote the music for several successful Broadway shows to which Lorenz Hart contributed the lyrics: *Garrick Gaieties* (1925); *On Your Toes* (1936), well known for the dance sequence "Slaughter on Tenth Avenue" and the song "There's a Small Hotel"; and *Babes in Arms* (1937), which included the songs "The Lady Is a Tramp," "My Funny Valentine," and "Where or When." Their show *Pal Joey* (1940, book by John O'Hara) was considered bold for its time: it tells the story of an unprincipled protagonist in a trashy environment and features a ballad of troubled love, "Bewitched, Bothered and Bewildered." Many of the works of Rodgers and Hart celebrate life in New York City, among them their first hit song, "We'll Have Manhattan" (1925); the show *Fifth Avenue Follies* (1926); and the songs "Coney Island" (1930), "Harlemania" (1930), "I Gotta Get Back to New York" (1933), "Manhattan Melodrama" (1934), "The Circus Is on Parade" (1935), "Memories of Madison Square Garden" (1935), "There's a Boy in Harlem" (1938), "At the Roxy Music Hall" (1938), and "Give It Back to the Indians" (1939). After Hart's death Rodgers wrote a number of successful musicals with Oscar Hammerstein II, including *Oklahoma!* (1943), *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951), and *The Sound of Music* (1959).

Nicholas E. Tawa

Rodman, Henrietta (*b* Astoria [now in Queens], 1878; *d* New York City, 23 March 1923). Schoolteacher and activist. She was

instrumental in forming both the Feminist Alliance, a group based in Greenwich Village dedicated to abolishing sex discrimination, and the Liberal Club (1913), in which she caused a split by insisting on the admission of blacks. A socialist, suffragist, member of the Women's Trade Union League, and advocate of dress reform, she prevailed on the Board of Education to allow female teachers to marry, bear children, and retain their positions. She also fought to secure cooperative housing and child care for professional women. Rodman's apartment on Bank Street was a popular gathering place for bohemians and social reformers before World War I.

Jan Seidler Ramirez

Rodman's Neck. Section of Pelham Bay Park in the Bronx, jutting prominently into Eastchester Bay. After the late seventeenth century it was given several names, including Ann Hoeck and Ann's Neck (after Anne Hutchinson, who settled nearby in 1643). The land was acquired in 1888 with the intention of making it a park, but it was used for various purposes in the following century: as a naval training station between 1917 and 1919; as a park in the 1920s; as the site, between 1930 and 1936, of Camp Mulrooney, the summer home of the New York City Police Academy; and as a firing range for the police department between 1959 and 1989. In the early twenty-first century the area continues to be used as a firing range for the police department and a site for detonating unexploded bombs and seized illegal fireworks. In 2007 plans were announced to relocate the firing range to College Point in the borough of Queens over a multiyear period; it was unclear whether Rodman's Neck would remain the chief site for bomb destruction or whether it would pass necessary environmental tests for lead contamination so that it might again be used as a park.

Kenneth T. Jackson

Rodrigues, Jan [Juan]. Fur trader. In 1613, as a free black sailor from Santo Domingo (in what is now the Dominican Republic), he started a fur-trading business with Native Americans. He was left on Manhattan Island by his former Dutch employer, Adriaen Block (also a fur trader). Rodrigues was perhaps the first non–Native American inhabitant of Manhattan and is said to have played a role in the Dutch–Native American deal to execute the purchase of Manhattan.

Celedonia Jones

Roebling, Emily Warren (*b* Cold Spring, N.Y., 23 Sept 1843, *d* 28 Feb 1903). Engineer. The daughter of a building contractor, Emily excelled at math and science from an early age. She married Washington Roebling, son of John Roebling, the primary engineer of the Brooklyn Bridge. Washington took over the project after his father's death, but in 1872 he became immobilized by decompression sickness, so Emily directed the project until its completion in 1883. To accomplish this, she studied engineering. Although she kept her husband as the project's official chief engineer, she oversaw the day-to-day construction and managed the relationships with the bridge's trustees and other engineers, politicians, and the press. After the bridge's completion, she received a legal education from New York University and worked for women's rights. She is memorialized by plaques on both the Brooklyn and Manhattan towers of the bridge.

Ben Silk

Roebling, John Augustus (*b* Mühlhausen in Thüringen, Germany, 12 June 1806; *d* Brooklyn, 22 July 1869). Engineer, inventor, and designer of the Brooklyn Bridge. The son of a poor tobacconist, he studied in Berlin and immigrated to the United States in 1831, where he settled with other Thuringians in a farming colony near Pittsburgh. While working as an engineer in the canals of Pennsylvania, he developed wire cable as a sturdier substitute for rope made of hemp, which often caused accidents when boats were pulled uphill. He tested his invention on a series of suspended aqueducts over the Allegheny River and then formed a wire-cable works in Trenton, New Jersey (the firm remained in business until the 1980s). Roebling built iron suspension bridges in Ohio and upstate New York before designing the Brooklyn Bridge in 1867. He oversaw the beginning of its construction before dying of tetanus contracted during a building accident.

Ellen Fletcher

Roebling, Washington (Augustus) (*b* Saxonburg, Pa., 26 May 1837; *d* Trenton, N.J., 21 July 1926). Civil engineer, son of John Augustus Roebling. After studying engineering at Rensselaer Polytechnic Institute, he joined his father in the work of designing suspension bridges. He served as a bridge builder and soldier for the Union army during the Civil War and then moved to Brooklyn Heights (137 Hicks St.) to assist his father in building the Brooklyn Bridge. With the death of his father in 1869, Washington Roebling took charge of the bridge's construction; however, in the summer of 1872 he became ill with decompression sickness and thereafter depended on his wife, Emily Warren Roebling, who was also an engineer. She heavily aided her husband and oversaw the construction until the bridge's completion in 1883.

Ellen Fletcher

Rohatyn, Felix G(eorge) (*b* Vienna, 29 May 1928). Investment banker. After graduating from Middlebury College in 1948, he went to work for Lazard Frères, where he became a partner in 1960. During the 1970s he was a member of the board of governors of the New York Stock Exchange. In 1975 he was appointed chairman of the Municipal Assistance Corporation (MAC) by Governor Hugh L. Carey, and during the fiscal crisis of the following years he played a critical role in returning the city to solvency. He left the MAC in May 1993. In 2006 he was appointed as a chairman of the International Advisory Committee and as a senior adviser by Lehman Brothers.

Janet Frankston

Rolling Stone. Monthly magazine launched in 1967 in San Francisco by Jann Wenner, a 20-year-old former student at the University of California, Berkeley. It moved to New York City in 1977. Begun as a small alternative newsletter, it featured John Lennon on the cover of its first issue and sold 6000 copies. The magazine soon became a voice for the counterculture in the Haight–Ashbury district of San Francisco. In the early 1970s it turned to more serious topics such as the Vietnam War and corruption in U.S. politics. It also boosted the career of several journalists, including Greil Marcus, Tim Cahill, Joe Eszterhas, Hunter S. Thompson, and P. J. O'Rourke, as well as the photographer Annie Liebovitz. Articles on Charles Manson, the presidential campaign of 1972, and the abduction of Patricia Hearst attracted critical accolades and a broader audience. After Wenner moved the magazine to New York City, it developed a slicker, more commercial style and cultivated major advertisers. In the 1990s the magazine faced competition from the Internet and criticism that it favored the interests of the aging baby boomer generation over new genres of popular music. However, it maintained high circulation numbers by introducing several international editions and expanding onto the Internet with a popular site that has interactive message boards and streaming videos. In 2007 when *Rolling Stone* celebrated its 40th anniversary, it had received a total of 13 national magazine awards. Its offices are at 1290 Sixth Avenue.

Robert Sanger Steel

Rollins, Sonny [Theodore Walter] (b New York City, 7 Sept 1930). Saxophonist. He grew up in Harlem and attended public schools in New York City. Rollins's early recordings "Saxophone Colossus" (1956) and "Freedom Suite" (1958) made him known for his rich tone on the tenor saxophone and his ability to transcend the harmonic limitations of "hard bop." He took several leaves from his career as a performer. During one of these breaks in the early 1960s, Rollins and his wife, Lucille, were living on Grand Street in the Lower East Side of Manhattan near the Williamsburg Bridge. He discovered that practicing on the bridge meant that he could play as loudly as he wanted to without disturbing anyone. At times Rollins was spending 15 hours a day playing on Williamsburg, a period commemorated by his album *The Bridge* (1962). In 2004 he was presented with a Lifetime Achievement Grammy Award. On 18 September 2007 Rollins performed a special concert at Carnegie Hall commemorating the 50th anniversary of his first appearance on that stage.

Marc Ferris

Roma. See Gypsies.

Romanians. A Romanian community formed in New York City between 1900 and World War I. Most immigrated from Transylvania and Banat, regions under Austro-Hungarian rule, and a few were Macedo-Romanians from Greece and Albania. Most were factory workers, craftsmen, or innkeepers. The community was served by several general-interest publications: *Curierul Romano-American* (Romanian-American Courier, 1900), *Vremea Noua* (New Time, 1900), and *Ecoul Americei* (America's Echo, 1904), which provided cultural and political news. Some of the first organizations were cultural and mutual-aid societies, among them Dorul (1903–), Farsarotul (1903– ; Macedo-Romanian), Unirea (1909–), Perivolea (1909; Macedo-Romanian), and Avram Iancu (1909–). Specialized publications covered diverse topics: religious news was given in *The Romanul American* (1910–12), edited by a Roman Catholic (Eastern Rite) priest; *Desteapta-te Romane* (Awake Thee, Romanian, 1911–16) took a pro-Hungarian stand on the issue of Transylvania; *Steaua Noastra* (Our Star, 1911–24) promoted Romanian books sold in the bookstore of the editor, P. Axelrad, the compiler of a Romanian-English dictionary; and *Curierul Roman* (1923–24) provided news of the city's Macedo-Romanians. From the time of World War I Romanians in the city strongly supported Romanian sovereignty over Transylvania. Improving relations with Romania was the goal of the Society of Friends of Romania (1928–32), which published the periodical *Romania,* and of the Sons of Romania (1932–34), which issued a bulletin. The publications *Porunca Vremii* (Imperative of the Time, 1937–), *Fii Daciei* (Sons of Dacia, 1938–), and later the *Romanian Boian News* (1968–) opposed communism and sought to promote chauvinism; they had limited circulation.

Romanians in the city protested the fascist regime in Romania of Ion Antonescu (1940–44) and the communist regimes of Gheorghe Gheorghiu-Dej and Nicolae Ceausescu. The Free Romania Committee (1941–44) and the Democratic Union of Free Romania (1948–56) sought to revive the Romanian monarchy; the Romanian National Committee (1951–67) attacked the communist government; and the Romanian Welfare Organization (1948–74) helped refugees to settle in the United States. Formed to preserve Romanian heritage, the Iuliu Maniu Romanian American Foundation (1952–) amassed a library and a collection of Romanian costumes and set up a scholarship program. Refugees and political exiles moved to the city in the 1950s and late 1980s. In 1970 an association called Truth about Romania was formed to monitor violations of human rights and international treaties by the government of Romania. Devoted to local, national, and international news, the periodicals *Micro-Magazin* (1972–), *Lumea Libera* (Free World, 1987–), and *Epoca* (1987–) became popular; the political journals *Dreptatea* (Justice, 1973–) and *Spectatorul* (1975–) found smaller audiences. Through its newspaper *Actiunea Romaneasca* the Romanian National Council (1974–) sought to publicize Romanian achievements and help immigrants adjust to the United States. The Romanian Cultural Center (1980–) organized celebrations of Romanian national holidays and other cultural events. In December 1989 Romanians in the city celebrated the fall of the Romanian communist government.

In 2000 more than 19,000 people in New York City were of Romanian ancestry, and the majority lived in Queens. They were professionals, engineers, musicians, writers, teachers, office workers, small businesspeople, taxi drivers, and maintenance workers. About 80 percent of Romanian churchgoers were Eastern Orthodox and belonged to six churches: St. Dumitru in Manhattan; and St. Maria, Holy Trinity, Descending of the Holy Ghost, St. Nicholae, and Three Hierarchs in Queens. Other churches in Queens were the St. Mary Roman Catholic Church, two Baptist churches, a Pentecostal church, and a Seventh-Day Adventist church. Well-known Romanians in the city have included the soprano Stella Roman, the broadcaster Liviu Floda, the stage director Andrei Serban, and the graphic artist Eugen Mihaesco.

Vladimir Wertsman

Ronan, William J. (*b* Buffalo, N.Y., 8 Nov 1912). Public official. He attended public schools in Buffalo and graduated from Syracuse University in 1934; he earned his PhD from New York University (NYU) in 1940. He established the Graduate School of Public Administration at NYU (now the Wagner Graduate School of Public Service) as well as NYU'S School of Social Work. While at NYU, as executive director of New York State's Commission on Coordination, he produced a report on public authorities in the state. After working as a deputy city administrator for Mayor Robert F. Wagner, he became the chief strategist for Nelson A. Rockefeller in his successful gubernatorial campaigns from 1958 on. As secretary to Governor Rockefeller, Ronan helped set up the Tri-State Regional Transportation Commission and was a leader in dealing with the problems of the commuter railroads. A strong advocate for public transit, he helped set up the Metropolitan Commuter Transportation Authority (MCTA) in 1965, which purchased the Long Island Rail Road (LIRR) from the Pennsylvania Railroad. Under state legislation, in 1968 the MCTA was transformed into the Metropolitan Transportation Authority (MTA), which became responsible for the LIRR, the New York City Transit Authority, and the Triborough Bridge and Tunnel Authority. The MTA also became responsible for improving service on the New York Central and New Haven commuter rail systems serving areas north of Manhattan (which later became Metro-North Railroad) and for the bus system in Nassau County, as well as for Stewart and Republic airports. As chairman of the MTA from 1 March 1968, Ronan led the effort to upgrade and improve public transportation services in the region, which included new commuter rail cars serving new high-level platforms, and further electrification of commuter rail lines, as well as the rehabilitation of the existing transit network. He resigned as MTA chairman on 26 April 1974.

Peter Derrick

Ronson Ship. Vessel used in the trade between New York City and the Caribbean, sunk in the 1740s for use as landfill. It was recovered in 1982 during the archaeological excavation of 175 Water Street.

Nan A. Rothschild

Roosevelt, (Anna) Eleanor (*b* New York City, 11 Oct 1884; *d* New York City, 7 Nov 1962). First Lady. She was brought up at 11 West 37th Street by her maternal grandmother, who sent her to boarding school in England. A débutante in 1901, she married her cousin Franklin D. Roosevelt in 1905 and lived successively at 125 East 36th Street (1905–8) and in a townhouse at 47–49 East 65th Street. The family moved to Albany, New York, in 1910, to Washington, D.C., in 1913, and back to New York City in 1920 when she became involved with the League of Women Voters. In 1924 she was the head of the women's platform committee at the Democratic National Convention in Madison Square Garden. After her husband's death in 1945 she divided her time between Hyde Park (New York) and several addresses in the city, including 29 Washington Square West (from 1945), the Park Sheraton at 870 Seventh Avenue (1949–53, 1958), and 211 East 62nd Street (1953–59). In 1946–52 she was a delegate to the United Nations and a regular presence at its headquarters. In addition to her official duties she was embroiled in notable disputes with such figures as Francis Cardinal Spellman and Carmine DeSapio. In 1959 she moved to a townhouse at 55 East 74th Street, where she spent the rest of her life.

Eleanor Roosevelt reviews the Waves at the Naval Training School for Women's Reserves in the Bronx, 2 August 1943

Roosevelt, Franklin D(elano) (*b* Hyde Park, N.Y., 30 Jan 1882; *d* Warm Springs, Ga., 12 April 1945). Thirty-second president of the United States. Born in Dutchess County, he was educated at Groton Preparatory School and Harvard University. He moved to New York City and studied law at Columbia University. He married his cousin Eleanor in 1905 and lived with her at 125 East 36th Street (1905–8) before moving to a townhouse at 47–49 East 65th Street. As a state senator in Albany from 1910 he enraged Tammany Hall by leading party insurgents in blocking the legislative election of its candidate William P. Sheehan. The insurgents refused to attend the binding party caucus, which Tammany Hall dominated, and voted for the opposition, reform candidate; a stalemated state senate chose a third candidate in a compromise. Roosevelt served as an assistant secretary of the navy from 1913 and returned to New York City in 1920. Stricken with polio in 1921, he resumed his political career. He supported Alfred E. Smith's candidacy for the governorship in 1924 and for the presidency in 1929 but pointedly ignored him after becoming governor himself (elected 1928, reelected 1930). Nominated by the Democrats for the presidency in 1932, he defeated President Herbert Hoover by a wide margin. During the Depression he assisted the city through the Works Progress Administration and the Public Works Administration, which helped finance the construction of the Triborough Bridge in 1936, and built housing projects and schools. He also established the Securities and Exchange Commission.

Lois Scharf

Roosevelt, Isaac (*b* New York City, 8 Dec 1726; *d* New York City, 13 Oct 1794). Political and mercantile leader, great-great-grandfather of Franklin D. Roosevelt. He opened a wholesale sugar refinery on Wall Street in 1745, soon became one of the most successful businessmen in New York City, and helped to form the New York Chamber of Commerce and the Society of the New York Hospital (the first hospital in the city). A patriot during the American Revolution, he represented the city during the state constitutional convention of 1776. In his later years he was a close ally of Alexander Hamilton; he helped to form the Bank of New York in 1784 and was a strong supporter of Federalist causes.

Allen Churchill, *The Roosevelts: American Aristocrats* (New York: Harper and Row, 1965)

James Bradley

Roosevelt, Theodore(, Jr.) (*b* New York City, 27 Oct 1858; *d* Oyster Bay, N.Y., 6 Jan 1919). Twenty-sixth president of the United States. He was born at 28 East 20th Street. His grandfather Cornelius Van Schaanck Roosevelt (1794–1871) was a real estate investor, a founder of Chemical Bank, and one of the city's wealthiest citizens. His father, Theodore Roosevelt, Sr. (1831–78), was a leading philanthropist who supported many charitable and cultural institutions, notably the Metropolitan Museum of Art and the American Museum of Natural History. In his youth Roosevelt suffered from asthma, and in 1873 his family moved to a larger home at 6 West 57th Street so that he could practice his physical conditioning. His health gradually improved, and in 1876 he entered Harvard College. After he married Alice Lee, the couple moved to New York City to live with his widowed mother. Roosevelt enrolled at Columbia Law School, became involved in local politics, and joined the district Republican club; he won a seat in the state assembly in 1882, where he represented the relatively wealthy twenty-first district of midtown Manhattan. He became a member of the city affairs committee and received extensive publicity when he accused the financier Jay Gould of corrupting a state supreme court judge in an attempt to control the Manhattan Elevated Railroad; he persuaded the assembly's judiciary committee to hold investigative hearings, and although Gould was exonerated Roosevelt secured a reputation as a reformer and fighter of corruption. In February 1884 his political career was interrupted by the death of his mother and wife on the same day, and later that year he chose not to seek reelection.

Roosevelt returned to politics in 1886 as a candidate for the mayoralty against the Democrat Abram S. Hewitt and the Union Labor candidate Henry George, an economist who advocated a "single tax" on land, but Hewitt won the election and Roosevelt finished third. He was the city's civil service commissioner in 1889–95, and in 1895 he was appointed president of the police board in the reform administration of Mayor William L. Strong. Roosevelt's boundless energy and

Theodore Roosevelt statue, 2009

impromptu social visits to policemen made him popular with the press, but he faced clamorous opposition when he decided to enforce the Sunday closing law on saloons, and his imperious, determined nature made for troubled relationships with the mayor and other members of the police board. In 1897 he resigned his office to accept an appointment as the assistant secretary of the navy under President William McKinley. During the Spanish-American War he was one of the organizers of the Rough Riders and earned fame for his efforts in the Battle of San Juan Hill. In 1898 he was elected governor of New York, and in 1900 he was selected as McKinley's vice presidential candidate; he became president after McKinley was assassinated in 1901, serving for seven and a half controversial years. His mediation of the Russo–Japanese War in 1905 earned him the Nobel Peace Prize. In 1909 he left office and traveled extensively abroad. On his return to the United States in June 1910 his ship docked at New York City, and he was greeted with a thunderous reception and a ticker-tape parade of unprecedented size. Roosevelt became an editor at *Outlook,* with an office on Fourth (now Park) Avenue, and a contributor to *Metropolitan Magazine.* His remaining years were marked by an unsuccessful campaign as the presidential candidate of the Progressive Party in 1912 and his open criticism of President Woodrow Wilson. Roosevelt's birthplace was demolished in 1916 but replicated by Theodate Pope Riddle in 1923, and in 1962 it was named a National Historic Site and opened to the public. A memorial statue of Roosevelt designed by John Russell Pope and erected in 1940 stands 15 feet (4.5 meters) tall in front of the American Museum of Natural History. Roosevelt is the only native of New York City to have achieved the nation's highest office.

Richard Skolnick

Roosevelt Hospital. Private hospital incorporated in 1864 and funded by a bequest from James H. Roosevelt, an uncle of Theodore Roosevelt. It opened in 1871 at 58th Street and 10th Avenue, where it remains in the early twenty-first century, and became the site of many medical innovations: William Halstead in the 1880s was the first surgeon in the United States to use rubber gloves during surgery; the Syms Operating Pavilion, opened in 1891, was the first modern operating theater in New York City and is now a landmark; William McBurney developed the technique for performing an appendectomy during the 1890s (an operation performed on the Duchess of Windsor at the hospital in 1944); and Karl Connell developed the gas mask used by U.S. troops during World War I. The Smithers Alcoholism Treatment and Training Center opened in 1968; it is named for R. Brinkley Smithers, who donated more than $10 million to the center. The inpatient unit of Roosevelt Hospital is housed in a mansion in the East 90s formerly owned by the showman Billy Rose. The hospital merged with St. Luke's Hospital in 1979 to form St. Luke's–Roosevelt Hospital Center.

Andrea Balis

Roosevelt Island. Island in the East River (2000 pop. 9,250), equidistant between the Upper East Side of Manhattan (51st Street to 86th Street) and Long Island City in Queens. It is about 800 feet (240 meters) wide and 1.75 miles (2.8 kilometers) long. The Queensboro Bridge crosses overhead, carrying an aerial tramway that connects the island to Manhattan. The island was called Minnehanonck by the Indians and Varcken Eylandt by the Dutch. Its first European owner was Wouter van Twiller, who bought it from the Indians, as he had done with what are now known as Wards, Randalls, and Governors islands. In 1668 the island was bought by Captain John Manning, who retired to it in disgrace after having surrendered the colony of New York to the Dutch in 1673. By the early eighteenth century title to the property was taken by Robert Blackwell, who had married Manning's daughter Mary. He lived and farmed on the island, which came to bear his name; a farmhouse believed to have belonged to his descendants still stands just south of the Queensboro Bridge. Blackwell's Island, as it

Roosevelt Island, 2009

was known then, was acquired in 1828 by the city, which by 1860 built on it a prison, an almshouse, a workhouse, and three hospitals: Metropolitan Hospital (A. J. Davis, 1839), designed as a lunatic asylum with an octagonal tower (the Octagon) that survived into the twenty-first century (without its original wings); City Hospital (James Renwick, Jr., 1859), a charity hospital built of stone quarried on the island by convicts imprisoned there; and Smallpox Hospital (James Renwick, Jr., 1856), a small Gothic Revival structure that is now a gray, crenellated ruin. Later structures include the Chapel of the Good Shepherd (Frederick Clarke Withers, 1889), which served patients and staff, and the Blackwell Lighthouse (James Renwick, Jr., 1872) at the northern tip of the island. By 1921 the prison and the workhouse had achieved such a reputation for overcrowding, violence, and drug trafficking that the city renamed the island Welfare Island. A series of new hospitals was begun in the 1920s, of which the most important is Goldwater Memorial for the chronically ill (Isadore Rosenfield; Butler and Kohn; York and Sawyer, 1939). The prison was moved to Rikers Island in 1935, leaving Welfare Island to the aged and the sick.

The Urban Development Corporation (UDC) of New York State in 1971 undertook to transform Welfare Island into a densely developed residential community to be called Roosevelt Island, named for Franklin D. Roosevelt. A master plan by Philip Johnson and John Burgee called for a neighborhood free of automobiles, with apartment buildings and stores connected by a central street, restored historic buildings, river views, and a park at each end of the island. Because of changes to the plan, inflation, and the fiscal collapse of the UDC, only part of the plan was realized in the mid-1970s. Southtown (Sert, Jackson, and Associates; Johansen and Bhavnani, 1975–76), a complex of four large apartment buildings with both subsidized and market-rate apartments, was built around a quiet street paved with brick. Higher-priced apartments face the Upper East Side, lower-priced ones Long Island City. Roosevelt Island was slow to achieve popularity but by the 1980s had become sought after as a quiet neighborhood offering fine views of Manhattan. Automobiles can reach the island only from Queens and are allowed to go no farther than the Motorgate garage and entry complex; the tramway was the only means of access from Manhattan until a subway station opened on the island in 1989. Throughout the first decade of the twenty-first century, Southtown underwent much development, and the ruins of the former Smallpox Hospital, which lies on the southern tip of the island and is visible from FDR Drive, have been the center of much dispute among New York City preservationists. The Octagon was restored in 2006 and transformed into a high-end apartment community.

Institutions on Blackwell's Island

Roosevelt Island Tramway. First commuter aerial tramway in the United States. Spanning the East River, the tram connects Roosevelt Island with Manhattan, landing at 59th Street and Second Avenue. Built in 1976, it was meant as a temporary solution while a subway station for the F line was constructed, which opened in 1989. It was designed by Prentice and Chan, Ohlhausen and built by Vonroll at a cost of $5 million. Each tram holds 125 people (10 seats and 115 standing) and travels for 3100 feet (945 meters) alongside the Queensboro Bridge at an average speed of 16 miles (25.7 km) per hour, rising to a height of 250 feet (76.2 meters). The trip takes about four and a half minutes, and the trams run every seven and a half minutes during rush hour and every 15 minutes at other times, from 6:00 a.m. to 2:00 a.m. (3:30 a.m. on weekends). Before the tram was built, a trolley on the Queensboro Bridge stopped halfway across and let passengers off to catch an elevator to the ground on Roosevelt Island. On 18 April 2006 both trams lost power and remained suspended midair for over seven hours, stranding 68 passengers. The trams—which are managed by the Roosevelt Island Operating Corporation—were taken out of service and overhauled, reopening in September 2006. In the early twenty-first century Roosevelt Island residents continued to use the tram, many preferring it to the overcrowded F train station.

Kate Lauber

Roosevelt Island Tramway, 2009

Root, Elihu (*b* Clinton, N.Y., 15 Feb 1845; *d* New York City, 7 Feb 1937). Statesman. After graduating from Hamilton College he attended New York University Law School and became successful on Wall Street. From 1871 to 1878 he lived at 20 Irving Place. Theodore Roosevelt sought his legal advice while serving as the city's police commissioner and later as governor of New York. Under President William McKinley he was appointed secretary of war in 1899, a position he retained until Roosevelt, now president, made him secretary of state in 1905. Root was elected to the U.S. Senate from New York State in 1909 and won the Nobel Peace Prize in 1912. Root worked for the Allies during World War I and was active in the Carnegie benefactions; he returned to private life in 1915. His homes in New York City included a house that he built at 733 Park Avenue in 1903 and another at 998 Fifth Avenue, where he lived from about 1912 until the end of his life.

James E. Mooney

rope and cordage. The manufacture of rope and cordage is closely linked to the port economy and requires large amounts of land. In colonial Manhattan rope yards lined the northern fringes of Broadway and the banks of the Collect Pond. By 1824 eight rope factories in Brooklyn operated within 1 mile (1.5 kilometers) of the East River, employed 200 workers, and each year produced about 1130 tons (1025 metric tons) of cordage. John Good, a rope maker in Brooklyn, received the first American patent for spreaders and breakers in 1869, and within 10 years his inventions had revolutionized the manufacture of cordage. Large rope makers included Tucker, Carter, and Company, Elizabethport Steam Cordage, and William Wall and Sons in Brooklyn (1830). Increased output and fierce competition prompted four firms in Manhattan to organize a cartel in 1887 called the National Cordage Company, which lasted until 1893; a similar effort led to the formation of the United States Cordage Company, which passed into receivership in 1895. The shift from sailpower to steam, spiraling land costs in the city, and the nationwide railroad network drove rope factories from New York City, and few mechanized plants remained by the turn of the century. The largest was the Waterbury Rope Company, which operated a fortress-like factory in Brooklyn where it made several grades of cordage from Philippine manila and Yucatan sisal. The industry benefited from the building boom of the 1920s, but many firms, such as the American Manufacturing Company and the Chelsea Fibre Mills, nevertheless diversified into related products like twine, shoelaces, and wire rope. The Depression essentially ended rope making in the city.

Marc Ferris

Rorem, Ned (*b* Richmond, Ind., 23 Oct 1923). Composer and writer. He grew up in Chicago and studied music in New York City at the Juilliard School and with Virgil Thomson, who exerted a strong influence on his style. After living in Paris and Morocco he returned to the city in 1958. During the following decades he became known as a composer of emphatically tonal works, particularly art songs, and as an essayist who wrote provocatively about music and other topics in such collections as *New York Diary* (1966) and *Paris Diary* (1967). In 1976 he won a Pulitzer Prize for his orchestral composition *Air Music.* During the 1990s Rorem composed new works for Carnegie Hall and the New York Philharmonic. Rorem lived for almost 30 years at West 70th Street.

Janet Frankston

Rose, Alex [Royz, Olesh] (*b* Warsaw, 15 Oct 1898; *d* New York City, 28 Dec 1976). Labor leader. He arrived in New York City in 1913, became a millinery worker, and in 1914 joined the Millinery Workers' Union. A leading organizer in 1936 of the American Labor Party, he became increasingly concerned that the party was being infiltrated by communists, and after a leftist faction gained control in 1944 he left with David Dubinsky to form the Liberal Party. Despite a lack of mass support and funds, Rose used his political skills to make the party a powerful force in politics at both the city and state levels. In addition to leading the party he was president of the United Hatters, Cap and Millinery Workers' International Union from 1950 until his death.

Eileen K. Cheng

Rose, Billy [Rosenberg, Samuel Wolf] (*b* New York City, 6 Sept 1899; *d* New York City, 10 Feb 1966). Songwriter, theater and nightclub owner, and producer. He first worked in

Washington, D.C., as the head of the Reports Division of the War Industries Board, then led by Bernard Baruch. After World War I, he returned to New York City, where he lived at a church mission on 46th Street and studied popular songs at the New York Public Library. He published his first song in 1921 and over the years he took credit for nearly 400 more, although in many cases he was probably no more than a coauthor of the lyrics. In February 1929 he married the entertainer Fanny Brice, with whom he moved to an apartment at 15 East 69th Street (now the Westbury Hotel). During the same period he helped to form the Songwriter's Protective Agency (serving as its first president) and used his money from songwriting to purchase the Back Stage Club.

Rose's club was supported by organized crime and highly profitable. He had similar support at the Casino de Paree and the Billy Rose Music Hall, and when he eventually tried to break free from criminal influence he was forced to seek protection from the Federal Bureau of Investigation. In 1931 he had his first success as a producer with the show *Crazy Quilt,* a touring production that was able to make money during the Depression. He next joined with Jimmy Durante and an elephant in the Broadway spectacular *Jumbo* (1935) and produced shows in Cleveland and in Fort Worth, Texas, where he met Eleanor Holm, the star of an aquatic musical revue; she became his second wife in 1939 and was featured in New York City in his next "aquacade," at the World's Fair of 1939–40. From 1939 to 1952 he lived at 33 Beekman Place and managed the popular nightclub the Diamond Horseshoe. His Broadway productions during these years included *Carmen Jones* (1943), an all African American version of Bizet's opera set in a parachute factory during World War II, and *The Seven Lively Arts* (1944), produced in collaboration with Igor Stravinsky, Cole Porter, Benny Goodman, Bert Lahr, and Beatrice Lillie. Between 1947 and 1959 he wrote a newspaper column focusing on show business. From 1956 until his death Rose lived at 56 East 93rd Street. He bequeathed almost his entire estate of $54 million to the Billy Rose Foundation, which gave major support to the Billy Rose Theatre Collection at the New York Public Library for the Performing Arts, and to other causes in the arts and medicine.

Chad Ludington

Rosebank. Neighborhood in northeastern Staten Island, bounded to the east by Upper New York Bay, to the southwest by the Staten Island Expressway, and to the northwest by Clifton. Until 1880 the area was part of Peterstown, so named by the German settlers who lived in the northern part. In 1873 New York State purchased eight and a half acres (three and a half hectares) of waterfront for a maritime quarantine facility, which was the principal facility of its kind in the United States from the late 1930s until quarantine functions were transferred to Governors Island in 1971. The neighborhood is the site of Alice Austen's home, portions of which date to the eighteenth century; the house was extensively renovated in 1846 and opened to the public in 1985 as a place of exhibit for some of Austen's finest photographs. The Italian revolutionary Giuseppe Garibaldi lived in the area for several years during his exile from Italy, and a later resident, Antonio Meucci, is credited by some as the rightful inventor of the telephone; both are commemorated in the Garibaldi-Meucci Museum. In the late 1880s families that had lived in the area for many years were displaced from parts of Rosebank by immigrants from southern Italy who intended to farm the land but found that the small plots made even truck farming difficult; many soon sought other work. Rosebank retains a strong Italian American identity and has well-maintained small houses, gardens, grape arbors, and fig trees. Catholic and Italian festivals are important events in the neighborhood; St. Mary's School is a stable institution. The shrine of Our Lady of Carmel near St. Joseph's Roman Catholic Church reflects Italian vernacular architecture and was added to the National Register of Historic Places in 2002. The neighborhood is working class and has experienced some tensions as new Polish, African, Asian, and Mexican families have created a more diverse community. The shutdown of the 100-year-old Sun Chemical Factory may affect any redevelopment.

Howard R. Weiner

Rose Center for Earth and Space. Astrophysics center named for Frederick and Sandra Rose, located at West 81st Street between Columbus Avenue and Central Park West at the American Museum of Natural History. Opened in 2000, the center houses the new Hayden Planetarium, Cullman Hall of the Universe, Gottesman Hall of Planet Earth, and Space Theater. Rose exhibitions focus on the history and evolution of the phenomena of the universe, galaxies, stars, and planets through the innovations of modern astrophysics. Notable features include the customized Zeiss Mark IX Star Projector, an ecosphere, sulfide chimneys, and the Willamette Meteorite.

Dianna Ng

Rosedale. Neighborhood in southeastern Queens, bounded to the north by Merrick Boulevard, to the east and south by Hook Creek, and to the west by Brookfield Park; beyond the park is JFK Airport. The area was settled in 1647 by Thomas and Christopher Foster and became known as Foster's Meadow. A hamlet was built after a railroad station opened in 1870; developers changed the name to Rosedale in 1892. Most of the housing was erected in the 1920s, and until the 1930s the population was Irish and German. After World War II the neighborhood attracted a more diverse population, including Italians, Jews, and African Americans. Racial tension simmered in the 1970s, as Rosedale remained a white enclave pressed by adjacent black communities. In the 1980s a number of immigrants from the Caribbean moved to Rosedale and its environs, almost half from Jamaica and many others from Haiti and Guyana. Regardless of the demographic changes, Rosedale maintained a suburban character into the twenty-first century.

Vincent Seyfried

Rose Hill. Park located in the Bronx at the intersection of East Fordham Road and Webster Avenue. The name comes from the estate of Robert Watt, who owned the land that is now occupied by Fordham University. In 1787 John Watt purchased the land and gave it to his brother, Robert, who named it after the family seat in Scotland. In 1839 the land was sold to the Catholic Church for the construction of St. John's College, which eventually became Fordham University. The park underwent renovations in the 1960s, and in 1991 the cobblestone walkways and comfort station were rebuilt.

Nathan Morgante

Roseland Ballroom. Dance hall that opened on 1 January 1919 at 1658 Broadway, near 51st Street. It became a notable venue for jazz bands, including McKinney's Cotton Pickers and the bands of Sam Lanin, Fletcher Henderson, A. J. Piron, Claude Hopkins, Earl Hines, and Ella Fitzgerald. The hall was considered safer and more elegant than the taxi dance halls where patrons paid 10 cents for each dance; its location in the theater district, lavish decor, and national radio broadcasts made it especially prominent. The building that housed the ballroom was demolished in December 1956 and superseded by Roseland Dance City in 1957 on West 52nd Street. Disco nights were shut down in 1990 because of safety concerns. In the early twenty-first century this dance hall remained popular, entertaining a diverse clientele, presenting ballroom dancing on weeknights, occasional rock shows, and Latin dancing on weekends. After a multimillion-dollar renovation it became a concert and event space, showcasing major acts such as the Rolling Stones and Madonna (2008).

Kathy J. Ogren

Rosenberg case. The most celebrated court case of the cold war, in which a husband and

Rosenberg Complex, 2009

wife were convicted of spying for the Soviet Union and executed at Sing Sing Prison (Ossining, New York) on 19 June 1953. In 1950 the Federal Bureau of Investigation arrested Julius Rosenberg (1918–53), his wife, Ethel (1915–53), and his brother-in-law David Greenglass after revelations about a spy ring in New York City that included the atomic scientist Klaus Fuchs. The Rosenbergs, who lived at 10 Monroe Street on the Lower East Side, were accused of conveying atomic secrets to the Soviet Union while Julius Rosenberg, a devoted communist, was a civilian employee of the U.S. Signal Corps from 1940 to 1945; Greenglass had had access to classified information while working at atomic facilities in Los Alamos, New Mexico, in 1944. Greenglass became a federal witness, testified against the Rosenbergs, and received a prison sentence. The death sentence imposed on the Rosenbergs was widely regarded as severe.

Martin Ebon

Rosenfeld, Morris (*b* Boksze, near Suwalki, Poland, 28 Dec 1862; *d* New York City, 22 June 1923). Poet. After living in Warsaw he immigrated to the United States in 1886 and worked for a time in the garment industry in New York City. He wrote verses about the travails of the sweatshop, immigrant longings, and socialist ideals that were often published in the Yiddish press and sung at workers' meetings and rallies. He was regarded as the bard of the Jewish labor movement. Several collections of his work were issued. In 1898 Rosenfeld became the first American Yiddish writer to achieve fame beyond the immigrant community when Leo Weiner translated his verses in *Songs from the Ghetto.*

Jeffrey Shandler

Ross, Charles. Alias of Lucky Luciano when he lived in the Waldorf Towers.

Ross, Harold (Wallace) (*b* Aspen, Colo., 6 Nov 1892; *d* Boston, 6 Dec 1951). Legendary magazine editor. During World War I he worked in Paris with Alexander Woollcott as a member of the editorial board of the military newspaper *Stars and Stripes.* After settling in New York City he launched the *New Yorker* with his wife, Jane Grant, who had written for the *New York Times;* in this endeavor he drew on the literary talents of the members of the Algonquin Round Table and the financial resources of Raoul Fleischmann, who had earned his fortune in the baking business. As the editor of the magazine for the next 26 years, he acquired a reputation for intelligence, brusqueness, and fanatical dedication to good writing. Although he seldom was publicly outspoken, just before his death he successfully protested the broadcasting of advertisements over loudspeakers in Grand Central Terminal. Ross lived from 1919 to 1920 at 56 West 11th Street in Manhattan, from August 1920 to August 1922 at 231 West 58th Street (at the same time also living for about a year at 333 West 85th Street), from 1922 to 1928 at 412 West 47th Street, and in the early 1930s at the Ritz-Carlton Hotel, 374 Madison Avenue.

Brenda Wineapple

Rossville. Neighborhood in southwestern Staten Island (2009 pop. *ca* 5500), bounded on the north by the Arthur Kill, on the east by the South Shore Golf Course, on the south by Woodrow Road, and on the west by Bloomingdale Road. The main streets are Arthur Kill Road and Rossville Avenue. The West Shore Expressway, built in 1976, cuts through historic Rossville. The area was settled during the seventeenth century and was known before the American Revolution as Blazing Star (see Old Blazing Star) after a comet and the local tavern. It was linked to the region by the Blazing Star Ferry and later by coastal steamships. During the nineteenth century it became a prosperous farming community and the post office location for southwestern Staten Island. In 1836 it was renamed for Colonel William E. Ross, a wealthy gentleman who lived there in "Ross Castle" on the shore. Passed over by rapid transit in the early twentieth century, Rossville declined until the mid-1970s when the opening of the expressway stimulated development. Two enormous liquefied natural gas tanks were built on the shore around 1971. After lengthy community opposition they were never used for that purpose, and at the end of the first decade of the twenty-first century they still stood empty. The population is Italian, Jewish, Indian, Pakistani, Filipino, and Korean. On Arthur Kill Road are many nineteenth-century houses, two historic cemeteries, a large catering hall, several automobile repair shops, a power transformer, and a marine junkyard. The Arthur Kill Correctional Facility, operated by the New York State Department of Corrections, opened in 1976. Condominiums and large, one-family houses stand along Rossville Avenue and Bloomingdale Road.

Carol V. Wright, Barnett Shepherd

Roth, Henry (*b* Tysmenia, Galicia (now in Ukraine), 8 Feb 1906; *d* Albuquerque, N.M., 13 Oct 1995). Novelist and short-story writer. Roth immigrated to New York City in 1907 and grew up in Brownsville, the Lower East Side, and Harlem; he graduated from DeWitt Clinton High School in 1924 and from City College in 1928. In 1934 he published *Call It Sleep,* a novel in a documentary realist style set on the Lower East Side in the first decades of the twentieth century. After its publication Roth worked as a substitute teacher, laborer, and precision tool grinder in the city before moving to Maine with his wife, Muriel Parker. Decades of writer's block followed *Call It Sleep,* which was rediscovered and reissued in 1960 and 1964, and is considered by critics a literary masterpiece. His second book, *Shifting Landscape: A Composite (1925–1987)* (1987), was a collection of his short stories. In the 1970s he began a six-volume quasi-autobiographical work called *Mercy of a Rude Stream.* Only four volumes were completed before Roth's death: *A Star Shines over Mt. Morris Park* (1994), *A Diving Rock on the Hudson* (1995), *From Bondage* (1996), and *Requiem for Harlem* (1998).

B. Kimberly Taylor, Kate Lauber

Roth, Philip (Milton) (*b* Newark, N.J., 19 May 1933). Novelist and short-story writer. He attended Weequahic High School in Newark and studied at the University of Chicago (MA, 1955), gaining renown after the publication of

Goodbye, Columbus (1959) and the comic novel *Portnoy's Complaint* (1969), which portrays Alexander Portnoy, "Assistant Commissioner of Human Opportunity for the City of New York." After the runaway success of *Portnoy's Complaint,* Roth escaped celebrity by immersing himself in the Czech community of New York, attending classes with writer Antonin Liehm on Staten Island and eating in Czech restaurants in Yorkville. He taught at Hunter College from 1989 to 1992, returning to Weequahic in the Pulitzer Prize–winning *American Pastoral* (1997) and *The Plot against America* (2004). In *Exit Ghost* (2007) Roth's alter ego Nathan Zuckerman returns to post-9/11 New York. In the early twenty-first century Roth maintained a studio on the Upper West Side of Manhattan and lived in Connecticut.

Shan Jayakumar, Kate Lauber

Roth, Samuel (*b* Nustscha, Galicia, 17 Nov 1894; *d* New York City, 3 July 1974). Prolific New York publisher of racy literature; imprisoned four times for obscenity; best known as defendant in the first major obscenity case to reach the Supreme Court (in 1957). Roth published under numerous imprints, both his own work and the (often pirated) works of European authors including D. H. Lawrence and James Joyce.

Roth arrived on Manhattan's Lower East Side with his family at age four. As a child, he worked as an egg candler, a newsboy, and a baker; at age 16 he was a reporter for the *New York Globe.* He published poetry in little magazines; attended Columbia University for a year; started his first magazine, *The Lyric;* then opened a poetry bookstore in Greenwich Village with his wife Pauline. In 1925, he published portions of Joyce's work in progress, *Finnegans Wake,* in his magazine, *Two Worlds;* the next year, he began to serialize Joyce's *Ulysses,* a risky venture both because Joyce said he did not have permission (Roth contested the point), and because a Manhattan court five years before had ruled portions of the book obscene. Although attacked by prosecutors and many in the literary establishment as a pornographer and copyright pirate, Roth was a pioneer in publishing sexual classics, such as *Fanny Hill,* and a determined defender of free expression. Roth conducted his publishing enterprises at 110 Lafayette Street in Manhattan; during his jail terms, Pauline carried on the business. In 1932, Roth published a bizarre anti-Semitic tract, *Jews Must Live.*

In 1955, Roth was indicted on 26 counts of obscenity; he was convicted on four, one of which involved a glossy quarterly, *American Aphrodite,* which he had published since 1951. The issue in question contained the story of Venus and Tannhauser, as told in prose and illustrations by the artist Aubrey Beardsley. The Supreme Court affirmed Roth's conviction, but ruled that not all sexual material is obscene; works with even "slightest redeeming social importance" are protected by the First Amendment.

Roth served time at Lewisburg federal prison after this conviction, but soon returned to publishing. He retired to an apartment on Central Park West.

Leo Hamalian, "Nobody Knows My Names: Samuel Roth and the Underside of Modern Letters," *Journal of Modern Literature* 3, no. 4 (April 1974), 889; *Roth v. United States,* 354 U.S. 476 (1957).

Marjorie Heins

Rothko, Mark [Rothkowitz, Marcus] (*b* Dvinsk [now Daugavpils, Latvia], 25 Sept 1903; *d* New York City, 25 Feb 1970). Painter. After immigrating to Portland, Oregon, as a child, he moved permanently in 1925 to New York City, where he became a pupil of Max Weber at the Art Students League. He frequented Milton Avery's studio and in 1935 joined Adolph Gottlieb and other artists in a group called The Ten. With Gottlieb and Barnett Newman he wrote a letter on 7 June 1943 to Edward Alden Jewell, the art critic for the *New York Times,* that described their art as "the simple expression of the complex thought." His first solo exhibition was held in 1945 at Art of This Century, a gallery owned by Peggy Guggenheim. After the gallery closed, he was represented by the Betty Parsons Gallery, which from 1947 mounted five solo exhibitions of his works. By 1950 he had eliminated all vestiges of representational imagery from his art and developed the style, characterized by large rectangles of color hovering in the canvas field, for which he became known. Toward the end of the decade his work became progressively more somber, as evidenced by a series of large-scale canvases that he painted during 1958–59 for the restaurant the Four Seasons in the Seagram Building. Soon after completing his last series of paintings, which were limited in color to black, gray, and brown, he took his own life. Rothko's residences in New York City included 19 West 102nd Street (1924–29), 137 West 72nd Street (1932–36), 313 East Sixth Street (1936–40), 29 East 28th Street (1940–43), 22 West 52nd Street (from 1945), 1288 Sixth Avenue (from late 1946 to 1954), 102 West 54th Street (from 1954), 118 East 95th Street (1960–64), and his studio at 157 East 69th Street (where he worked from 1964 and lived from January 1969 until his death).

Mona Hadler

Rothstein, Arnold (*b* New York City, 1882; *d* New York City, 6 Nov 1928). Gambler and organized-crime figure. Born into a wealthy family, he hung out as a young man in the poolrooms and gambling parlors of the Lower East Side, where he met the gang leader Monk Eastman and Tammany Hall ward boss Big Tim Sullivan. Rothstein used his connections to Eastman, Sullivan, and others to become a leading gambler, bootlegger, drug dealer, and labor racketeer. Called the Big Bankroll, the Great Brain, and the Man Uptown, Rothstein was dapper and refined. He applied techniques of business to crime that were later perfected by Meyer Lansky, Lucky Luciano, and others. Rothstein did most of his work at Lindy's Restaurant in Times Square. He was accused of having engineered the outcome of the World Series of 1919, although he denied having done so. He almost certainly supplied strong-arm helpers and finances for communist unionists in the garment industry, in which he apparently mediated labor disputes. Rothstein was shot and mortally wounded in room 349 of the Park Central Hotel (Seventh Avenue and 56th Street), perhaps for refusing to pay a gambling debt. Although Mayor James J. Walker supervised the investigation, the assailant was never found, leading some to conclude that Tammany Hall had sabotaged the investigation to hide Rothstein's links to city government. He lived in the 1920s at 355 West 84th Street and at the Ritz-Carlton Hotel, 374 Madison Avenue, and in his final years at 912 Fifth Avenue. He served as the inspiration for Meyer Wolfsheim in F. Scott Fitzgerald's *The Great Gatsby* and Nathan Detroit in *Guys and Dolls.* Rothstein's life has been the subject of many books and movies, including *King of the Roaring 20s: The Story of Arnold Rothstein* (1961) starring David Janssen, which was rereleased in 2006.

rotisserie baseball. Game played by baseball enthusiasts, often called fantasy baseball. It was invented in 1979 by a group including the writer Daniel Okrent, the editor Cork Smith, and Robert Sklar, a professor of film at New York University, at La Rotisserie Française, a restaurant on 52nd Street between Third Avenue and Lexington Avenue. Participants in the game form fictitious teams that include real baseball players; by means of statistical formulas the performance of the teams is determined according to that of the players in the major leagues. The Fantasy Sports Trade Association estimated that 18 million adult Americans played fantasy-based games in 2008.

Joseph S. Lieber, Caleb Smith

row houses. Introduced in New Amsterdam by the Dutch in the mid-seventeenth century, the earliest row houses were simpler than those in the Netherlands: they were 20 feet (6 meters) wide, built of brick in Flemish bond with their gable end on the street (often pictured showing their distinctive Dutch stepped rooflines), and had a kitchen in the basement (the top of which extended above ground level), a parlor on the first story, and sleeping quarters on the upper story. Flush with either the left or right side of the building was a grand exterior staircase called the stoop (from a Dutch word for step or platform) that led from the street to the first story, with benches on either side of the landing; the family entered and left the building through a passage under the stoop and spent most of its time in the basement. Two-part Dutch doors allowed for ventilation while keeping children in and animals out; initially chimneys were made of wood with a clay lining and required frequent cleaning. Stepped gables were a convenience for chimney sweeps and for the fire brigade and were important for householders before fire-resistant brick and tile became readily available.

The Dutch row house offered a practical means of housing large families in a small space: it was sturdily built, cost little to maintain and heat, had separate family and reception areas, and was more comfortable than the English row house that was common in Boston and Philadelphia. In addition the design of the row house was adaptable: the building could be appointed lavishly for a wealthy family or sparely for a worker's family with as many as eight members; it could also be subdivided into several rental units and then converted back again into a one-family house, and the lower stories could be rented out to shops or restaurants. The parlor on the first story was used only for important occasions such as St. Nicholas Day, weddings, and funerals; Washington Irving wrote in *A History of New York* that the parlor was so inviolable that it was to be entered only for its weekly cleaning and that the brass lion's-head knocker on the front door was worn out from polishing more often than from use.

After the British took the city from the Dutch in 1664 the row house evolved into a simplified Georgian style characterized by brickwork in English bond, dormer windows, eaves parallel to the street, a low stoop of three or four steps, and railings and gates in wrought iron. The Federal style that took hold after independence was similar to the Georgian, except that the brickwork was now done in American running bond, and applied decoration often included an eagle.

The appearance of the row house changed again with the onset of the Greek Revival. Used first in churches, courthouses, and other public buildings, the new style became popular in private houses during the 1820s when the rising up of the Greek people against the Ottoman Empire in 1821–28 rekindled an interest in ancient Greece (during the same period a number of American cities were given Greek names). During the Greek Revival the row house acquired such classical features as egg-and-dart moldings, eaves featuring the beamlike triglyph and metope of the Greek pediment, lights atop and beside the main entrance, and balanced colonettes with capitals on either side. Pineapples, symbols of hospitality, were commonly used as finials on the newel posts. The windows had flat lintels, sometimes with a Greek key or other geometric fretwork, and the basement was visually separated from the rest of the house by a distinctive string course. The brickwork was frequently in American running bond. As in the Federal style the stoop was low, the railings were of wrought iron, and there was a high proportion of window space to wall.

The Gothic Revival enjoyed a brief popularity partly due to the writings of John Ruskin (1785–1864), who believed that people's actions were in part determined by their surroundings and that human simplicity and goodness were at their peak during the high Middle Ages. Although the Gothic Revival in the United States is associated principally with rectories and manses, a small number of private row houses were built in this highly decorative style, which is characterized by broken arches, trefoils and quatrefoils in railings and ballisters, crockets on finials, and the triescalon motif in frets. In New York City the windows of Gothic Revival buildings were surmounted by balanced, L-shaped drip moldings designed to keep rainwater away from the opening.

By the 1840s the first story was divided by sliding doors, which separated the parlor (often called the salon in wealthy families and the front room in working-class families) from the rooms to the rear. Behind the parlor and in front of the dining room was a music room, a space about 6 or 8 feet (2 to 2.5 meters) deep marked off by columns, demi-walls, or a scrollwork lattice. The room usually contained a piano and was the center of family entertainment. During this period architects exploited the easy reversibility of the floor plan of the row house: the stoops in a row would be on the right side between the left-hand cap house (a more substantial building at the end of the row) and the middle of the row, those in the other half of the row would be on the left, and a combined stoop would be formed in the middle.

The row houses built of soft, brownish sandstone and known as brownstones became popular during the Anglo-Italianate period that began in the late 1860s. The style was derived from that of English rows and crescents, which was in turn influenced by the style of Italian palazzi visited by young Britons during the eighteenth century. In New York City the Italianate buildings were distinguished by deep cornices over the windows; an impressive cornice over the main door (often supported by S-shaped console brackets); a heavy, imposing stoop with cast-iron baluster and newel posts; floor-to-ceiling windows on the parlor story; and arched windows in an elevated basement. Two new styles called Romanesque Revival and Queen Anne vied for popularity from the mid-1870s, at a time when architecture became established as a profession. Romanesque Revival was also known as Richardson Romanesque, after H. H. Richardson, one of the first Americans to study at the École des Beaux-Arts in Paris (with Eugène Viollet-le-Duc). The style was a late Victorian interpretation of the buildings of the later Roman Empire, particularly the fortified buildings. Its features included bases of heavy, rusticated stone; masonry arches (usually for the entrance); towerlike elements; engaged colonettes; elaborate floral panels of curved stone (called Byzantine scrollwork); and sometimes gargoyles. Buildings were generally constructed of Roman bricks (which were longer and slimmer than common bricks). The Queen Anne was an eclectic, Anglophile style that strove to use all the motifs associated in the popular imagination with historical England. Its buildings were constructed of such diverse materials as cast iron, terra-cotta, carved stone, force-molded concrete, and decorative burnt brick. Many were asymmetrical and combined antithetical elements; they could include Flemish gables and bulbous, Victorian towers. Both the Romanesque Revival and Queen Anne styles emphasized texture and the voluptuous use of materials (especially brick), as well as large buildings or at least the appearance of large buildings: a row of houses would often be designed with a unified front to make the final product resemble a palace. During these years the interior design of the row house underwent one of its few changes, as the affordability of furnaces and central heating from the 1870s made it practical to dig cellars.

Innovative builders in the late 1880s added to the grandeur of the row house by introducing the box stoop, which at first had two levels and eventually as many as three or (rarely) four. At the same time a new style of row house was imported from England, called variously the London Basement Plan and the American Basement Plan. Its main departure from earlier designs was the location of the grand ceremonial staircase inside the house, and of the entrance at ground level or at most two or three steps above it. Some of the row houses built according to the new plan were Georgian (a classic style filtered

through English sensibilities of the eighteenth century); others were neo-Classic (based on Greek and Roman styles as viewed by the École des Beaux-Arts).

The row house housed many Irish and Italian immigrants in Brooklyn and the Bronx in the early twentieth century. It continued to be used much as it had been by the Dutch: the family spent most of its waking hours near the kitchen in the basement, reserved the front room for Sunday dinner and other important events, and used the stoop as a meeting place. The parents usually slept in the quieter bedroom, at the rear of the second story; the front bedroom was used by children and other relatives. Over the years stories could be added and interior modifications made, but the floor plan and the use of the rooms remained essentially the same. Grander row houses often had two stories for receiving guests, the parlor story and the one above. On the parlor story the salon was in the front and the library in the rear. In imitation of the customs of grand English houses, the family ate its daytime meals in the library, served by a dumbwaiter from the basement kitchen. On the story above the front room might be a drawing room to which the women could withdraw after supper, or a billiard room for the men (in which case the women used the library). At the back of this story was the formal dining room, also served by dumbwaiter, with a butler's pantry next to it used for the final preparation and reheating of food. The latter Georgian and neo-Classic row houses were the grandest ever built in New York City: fine examples are on West 74th Street off Central Park West (1904).

The row house began its decline about 1916. Then the subways were reaching into the unsettled parts of Brooklyn and the Bronx, where there was sufficient space to build semidetached and free-standing houses with larger lawns and backyards. At the same time the automobile was becoming affordable to an upwardly mobile middle class, which was increasingly likely to buy a house with a driveway and a garage. To accommodate this new development the design of row houses sacrificed living space. The garden cottage, developed during the 1940s, had a garage built below ground level that was reached by an inclined driveway; the automobile occupied the basement, the family was forced upstairs, and the upper stories and separate reception area disappeared. By the 1950s the family automobile was so large and important that the garage was moved to street level and seemed to be the most important design element of the building.

John J. Gallagher

rowing. Before steam ferries and bridges, one of the few ways to cross the city's many waterways was by rowing gigs and larger pulling boats. When rowers were not making a living, they raced each other for wagers before crowds of spectators. In 1825 New York City was the site of the first known international rowing contest when a visiting British ship challenged the Whitehall Landing crew to a race from Bedloe's Island to Hoboken, New Jersey, and then to the finish at the Battery.

Rowing bloomed in the 1830s with the formation of new clubs, some for middle- or upper-class amateur rowers and others for professionals. In races run by the Castle Garden Amateur Boat Club Association and other organizations, one of the most successful crews was the Wave Club, which rowed boats built by Clarkson Crolius. The first recorded individual race by solo rowers occurred in 1837, and professional racing in single sculls was a popular spectator sport until it gained a seamy reputation for fixed races and ceased to exist by the early twentieth century. Amateur rowing thrived in New York City. The city's first collegiate crew was formed by Columbia College in 1859, and the National Association of Amateur Oarsmen was organized in the city in 1872, when it defined amateurism. In 1905 there were 31 boathouses for rowing clubs and college crews, many on "the Speedway" on the Harlem River's western bank or "Scullers' Row" on the Hudson between 125th and 135th streets. When most of Scullers' Row was demolished in 1928, some clubs moved uptown to near Dyckman Street. Races between ethnic rowing clubs continued into the 1950s in the five boroughs. The last wooden Victorian boathouse, owned by the Fordham Rowing Association, was lost to arson in 1978.

Bolstered by the revival of interest in club sports and community waterfront facilities, rowing revived in New York City during the 1990s and early 2000s. Among the active organizations were the New York Athletic Club (rowing on Orchard Beach Lagoon), the New York Rowing Association (NYRA, at the Peter Jay Sharp Boathouse on the Harlem River), the Power Ten crew (based at the fire department boathouse near Gracie Mansion on the East River), and the Empire State Rowing Association (based at Roberto Clemente State Park in the Bronx). Community rowing programs were organized in conjunction with the Police Athletic League. Local colleges with rowing programs included Columbia, Manhattan College, Fordham University, St. John's University, and the State University of New York Maritime College. Still, most New Yorkers were unaware that the city's waters were used by rowers until a fatal collision between a powerboat and a scull making a predawn training run on the Harlem River in 2005.

According to the NYRA, more than 1000 teenagers were active in youth rowing programs between 2004 and 2007. A "Head of the Harlem" regatta was held every September. Several New York City public high schools had rowing clubs, and two, the Bronx High School of Science and Beach Channel High School, had crews in competition. In 2005 Beach Channel (Rockaway Beach, Queens) won five medals at the Eastern States Interscholastic Championships.

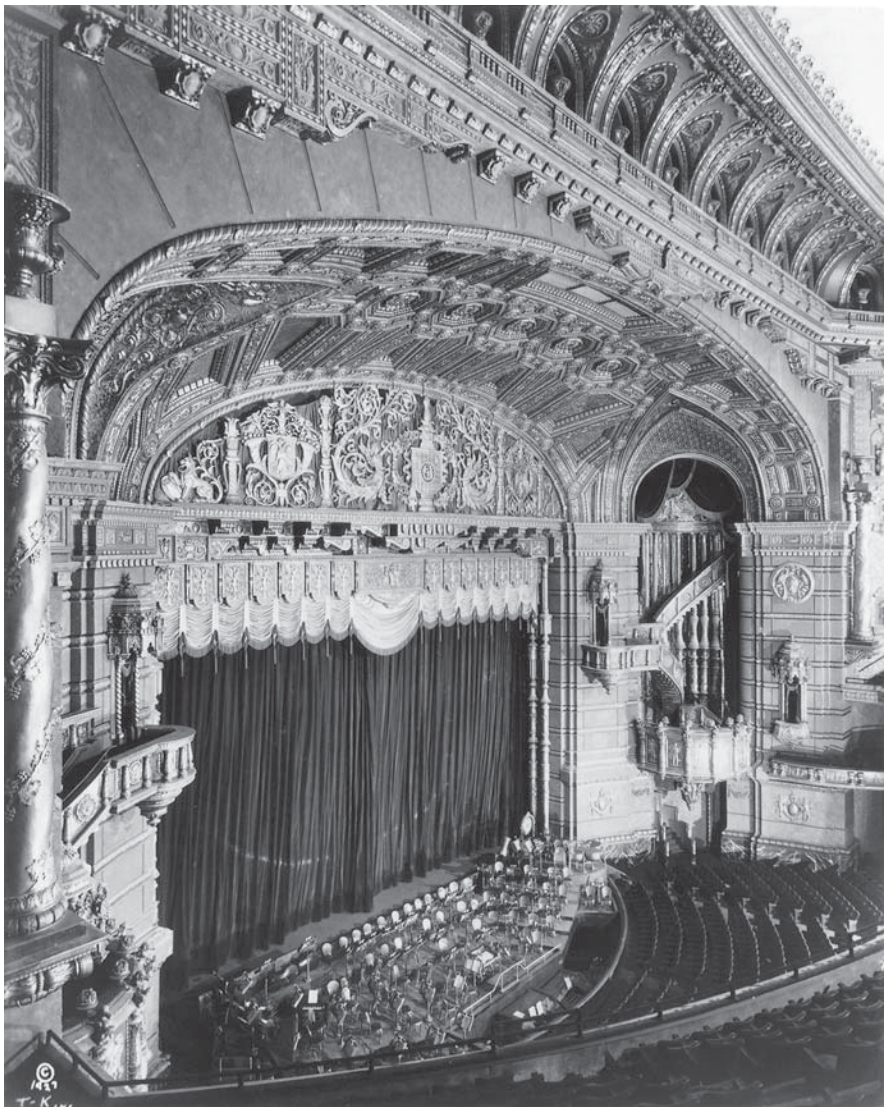
Joseph S. Lieber, John Rousmaniere

Roxbury. Neighborhood in southwestern Queens, lying near the western end of Rockaway Peninsula and bounded to the north by Rockaway Inlet, to the east by a station of the U.S. Coast Guard, to the south by State Road, and to the west by a section of the Gateway National Recreation Area. A summer colony grew in the early 1900s; in 1960 the Atlantic Improvement Company purchased the last vacant land and built homes and stores. Early in the twenty-first century most of the housing consisted of small bungalows, many of them winterized; the population remained largely Irish and middle class, and almost entirely white. With Breezy Point, Roxbury is part of the Breezy Point Cooperative, and the association approves all sales, rentals, and construction.

James Bradley



Roxy Theater. Movie theater opened in 1927 on 50th Street and Seventh Avenue at a cost of about $12 million. It was designed by the architect W. W. Ahlschlager and promoted and managed by Samuel Rothafel. Called the "cathedral of the motion picture," the theater seated more than 6000 and had the largest music library found in any theater, an advanced refrigeration and ventilation system, its own infirmary, and a power plant large enough to light a city of 250,000. The Roxy Theater was razed in 1961.

Roxy: A History (New York: Film Daily, 1927)

RPA. See Regional Plan Association of New York.

Rubenstein Associates. Public relations firm established in Brooklyn in 1954 by Howard Rubenstein. After Rubenstein managed the successful mayoral campaign of Abraham D. Beame in 1973, the firm gained several major clients in municipal government and business. In 1984 it moved to Manhattan, where it served about 200 clients, including many of the city's most powerful builders, trade associations, and labor unions. For 34

Interior of Roxy Theater

of these clients it worked as a registered lobbyist. By this time Rubenstein Associates was one of the largest and most influential public relations firms in the city. In the early twenty-first century it had more than 200 employees and approximately 450 clients. Its headquarters were at 1345 Sixth Avenue.

Alan R. Raucher

Rubin, I(sidor) C(linton) *b* Vienna, 8 Jan 1883; *d* London, 10 July 1958). Gynecologist. He settled in New York City as a child. In 1919 he developed a test for sterility in women for which he became internationally known; he also conducted important research in cervical cancer. Rubin taught at the College of Physicians and Surgeons (1937–47), was chief of gynecology at Mount Sinai Hospital (1937–46), and was also associated with Beth Israel Hospital, Montefiore Hospital, and Harlem Hospital.

Joseph S. Lieber

Rubinstein, Helena (*b* Kraków, Poland, *ca* 1871; *d* New York City, 1 April 1965). Leading cosmetics businesswoman. She moved to New York City in 1914 by way of London and in the following year opened the Maison de Beauté de Valaze at 14 East 49th Street, which featured her immediately popular Crème Valaze. Her factory-made but narrowly marketed products soon became successful, and she expanded her salons and product line to several American and European cities. Some of her products became the target of federal regulators after the passage of the Pure Food and Drug Act of 1936, but in the long run her profits were scarcely affected. Advertisements that showed her wearing a white laboratory coat and inspecting her products extolled a scientifically designed beauty program, a marketing strategy that became widely imitated. She also offered the first line of cosmetics for oily, dry, and normal skin, and introduced a mascara applicator that remained in use into the 1990s. Rubinstein was well known for her idiosyncrasies and for most of her career had a highly publicized rivalry with Elizabeth Arden. From her headquarters at 655 Fifth Avenue she oversaw a cosmetics empire that by the time of her death in 1965 included more than 500 products and employed about 26,000 persons in salons, factories, and laboratories in 14 countries. She also owned the apartment building at 625 Park Avenue, which was one of her many residences throughout the world.

Marc Ferris

Rucker Tournament. Playground basketball league. Founded by Holcombe Rucker, a Harlem English teacher and parks department recreation director credited with helping hundreds of youngsters go to college, the tournament began in the late 1940s. It was held in a number of parks before moving to its current location at 155th Street and Frederick Douglass Boulevard in 1965, named Rucker Park in 1969. At its peak from the 1950s to 1970s, Rucker Pro League teams featured National Basketball Association (NBA) legends like Wilt Chamberlain, Julius Erving, and Nate "Tiny" Archibald competing with talented playground legends like Earl "The Goat" Manigault, Joe Hammond, and Pee Wee Kirkland. The original Rucker Tournament collapsed in the early 1980s; since 1982 the Entertainers Basketball Classic (EBC) has run a tournament at Rucker Park that combines basketball with a sideline disc jockey and wisecracking announcer on the court calling the play-by-play. NBA stars Stephon Marbury and Ron Artest played on EBC teams owned by New York City rappers such as Sean Combs, Fat Joe, and Ja Rule. Rucker Park has appeared in Nike commercials, video games, and NBA television broadcasts. The Rucker Tournament was portrayed in the documentary film *Gunnin' for That #1 Spot* (2008).

Ben Silk

Ruder Finn. Public relations firm, formed in 1948 by Bill Ruder (*b* 1921) and David Finn (*b* 1921). Based in a small room at the Lombardy Hotel on East 56th Street, it began as an organization called Art in Industry that was intended to promote business sponsorship of the arts. The firm soon took its current name and became successful as a public relations firm for entertainers such as Perry Como, Dinah Shore, the Mills Brothers, and Jack Lemmon. It later acquired a more diverse list of clients, including large corporations, colleges and universities, and foreign governments. Ruder served as an assistant secretary of commerce under President John F. Kennedy. In 2010 Ruder Finn had headquarters at 301 East 57th Street in Manhattan and more than 100 offices worldwide.

James Bradley

Rudin, Lewis [Lew] (*b* Bronx, 4 April 1927; *d* New York City, 20 Sept 2001). Real estate mogul. He graduated from De Witt Clinton High School in the Bronx and the New York University School of Commerce. His father founded Rudin Management in 1924, when he built his first apartment house, a six-story tenement in the Bronx that still stands. Along with his brother Jack, Lewis Rudin became cochairman of a company that in 2001 included 40 buildings in the New York metropolitan area, including 16 office towers, valued at more than $2 billion (in 2001). In 1955 the Rudins built their first office building at 415 Madison Avenue. In the 1980s and 1990s the family continued building office towers. In 1993 Rudin's son, William, became president of Rudin Management Company and spearheaded the Reuters Tower in Times Square.

Committed to the health and vitality of New York City, Rudin rallied the real estate and business communities during the city's 1970s fiscal crisis to prepay their real estate taxes in a successful effort to help the city avoid bankruptcy. In the 1980s he lobbied Congress to protect the deductibility of state and local taxes. He was a recipient of the Bronze Medallion, New York City's highest civic award, and was named a "Living Landmark" by the New York Landmarks Conservancy. He also held the title of honorary police commissioner of New York City. Rudin was known for his philanthropic pursuits, especially his cofounding of the Association for a Better New York in 1971. He popularized the New York Marathon and played a key role in moving it out of Central Park and onto the streets of the city's five boroughs. Rudin and his brother sponsored the Samuel Rudin Trophy in honor of their father, a marathon runner.

Jessica Montesano

Rudin, Samuel (*b* 1896; *d* New York City, 22 Dec 1975). Real estate developer. He erected apartment buildings in New York City before World War II and then became known for modern apartment towers on the Upper East Side furnished with such conveniences as insulated plumbing, air-conditioned hallways, and street-level stores; he promoted the apartments as "walk-to-work" residences for executives. He also erected such office buildings as 1 Battery Park Plaza, the New York Merchandise Mart, and 345 Park Avenue, chosen by the firm of Bristol–Myers as its headquarters over properties outside the city. An active philanthropist, Rudin helped to form the Association for a Better New York and sponsored the New York City Marathon. His sons Lewis Rudin and Jack Rudin also became prominent developers.

Marc A. Weiss

Rugby. Neighborhood in central Brooklyn, encompassing the land north of Holy Cross Cemetery and that surrounding Kings County Hospital and bounded to the north by Church Avenue, to the east by 57th Street, to the south by Clarendon Road, and to the west by Albany Avenue; it is considered one of the four sections of East Flatbush. The area was once covered by potato farms and was renamed in the late 1890s by developers who thought Flatlands an unattractive name. In 1900 the real estate firm of Wood, Harmon bought many acres of farmland for development as suburban lots and contracted with Brooklyn Rapid Transit to build 50 houses within a year in return for the extension to the area of a trolley line along Reid Avenue. Growth increased after Interborough Rapid Transit extended the subway to Nostrand Avenue in 1912. The housing stock consists of one- and two-family detached and semi-detached houses built mostly in the 1920s and 1930s and a few apartment buildings dating from after World War II. The main retail shopping area developed along Utica Avenue and Church Avenue. From the 1920s to the 1960s many Italians and American-born Jews moved to the neighborhood, and the population became increasingly diverse after 1965, with a large number of blacks and immigrants from the Caribbean (especially Jamaica, Haiti, and Guyana). In the early twenty-first century the neighborhood was known as East Flatbush.

Ellen Marie Snyder-Grenier

Ruggles, David (*b* Norwich, Conn., 15 March 1810; *d* Florence, Mass., 26 Dec 1849). Writer, publisher, and abolitionist. He grew up in Norwich and in 1827 moved to New York City, where he operated a grocery. In 1834 he opened a bookshop at 67 Lispenard Street that served blacks and abolitionists until it was destroyed by a mob in the following year. He launched the first black magazine in the United States, the *Mirror of Liberty,* in 1838, and wrote numerous pamphlets satirizing American colonialism. In 1835 he became the leader of the New York Vigilance Committee, which helped fugitives from slavery such as Frederick Douglass to evade capture.

Graham Hodges

Ruggles, Samuel B(ulkley) (*b* New Milford, Conn., 11 April 1800; *d* Fire Island, N.Y., 28 Aug 1881). Real estate developer. He moved to New York City in 1821 and by 1831 had bought Gramercy Farm, occupying 22 acres (9 hectares) between Third and Fourth avenues and 20th and 22nd streets. He then subdivided the land into 108 lots, with 42 set aside for a private park to be held in perpetuity by the residents of the surrounding 66 lots. The result was Gramercy Park, a patch of green that became one of the most pleasant small spaces in Manhattan. Ruggles was active in promoting the creation of Union Square, one of the city's first public parks, and he was also a commissioner of the Croton Aqueduct and a longtime trustee of Columbia College.

Samuel B. Ruggles

Kenneth T. Jackson

rum. See Sugar.

Rumsey, Mary Harriman (*b* 17 Nov 1881; *d* 18 Dec 1934). Philanthropist and political adviser. The eldest of six children of the railroad magnate Edward H. Harriman, she graduated from Barnard College, for which she was a trustee from 1911 until her death. She founded the Junior League in 1901 and was its chairman until 1904. In 1910 she married the sculptor Charles Cary "Pad" Rumsey. In 1920 she formed the Welfare Council to bring together overlapping social agencies in New York City; this later became the Community Council of Greater New York. She persuaded her brother W. Averell Harriman to go to Washington, D.C., in 1933 to help restructure the National Recovery Administration. Later he largely attributed his having pursued a career in government to her influence. Although she usually lived with her three children in suburban Sands Point, Long Island, shortly before her death she lived with Frances Perkins in Washington, D.C., where the two worked to pass the Social Security Act.

Kenneth T. Jackson

running. Organized footraces were held in New York City in the early nineteenth century. The first cash prize was won in 1835 by Louis Bennett, who emphasized his half-Senecan background by competing under the name Deerfoot while wearing a loincloth and a feather headdress: he covered the distance of 10 miles (16 kilometers) in 56 minutes. By 1850 "pedestrianism" had become something of an obsession. Large prizes were offered to professional runners, who competed under

such colorful names as the American Deer, the Welsh Bantam, and the Yankee Clipper; one runner who called himself the Grand American Union ran in an outfit bearing the Stars and Stripes. A popular event was the six-day race, which was run continuously and usually indoors. Prizes were as high as $30,000 and competitors covered upwards of 400 miles (640 kilometers). At one six-day race in 1888 George Littlewood ran 623.75 miles (1003.6 kilometers), setting a record that lasted for nearly a century (it was broken in New York City in 1984, when Yannis Kouros covered 635 miles and 1023 yards, or 1022.8 kilometers, at a six-day race on Randalls Island). A race of about 35 miles (56 kilometers) from Stamford, Connecticut, to New York City in 1896 was won by John McDermott, who later that year won the Boston Marathon. Between November 1908 and April 1909 four professional and five amateur marathons were run in and around the city. The last of these was the Marathon Derby, run on a dirt track at the Polo Grounds, where in a steady rain the Frenchman Henri St. Yves handily defeated some of the greatest runners in the world in a time of 2:40:50. The Millrose Athletic Association, formed as the Wahna Athletic Association by employees of Wanamaker's department stores, held its first meet in Madison Square Garden in 1914.

The New York Road Runners Club was formed in 1958 by a small group of dedicated runners and grew into a large organization when running became widely popular during the 1970s. On 13 September 1970 it organized the first running of the New York City Marathon: 127 runners started the course, which was run entirely in Central Park. The president of the club, Fred Lebow, later persuaded the city to have the course of the marathon run through each of the five boroughs beginning in 1976, with the starting line in Staten Island at one end of the Verrazano–Narrows Bridge and the finish line in Central Park near Tavern on the Green. In the early twenty-first century the New York City Marathon, held annually on the first Sunday in November, is one of the largest marathons in the world, with more than 40,000 finishers and drawing on average more than two million spectators.

The 2002 creation of the Armory Track and Field Center and the National Track and Field Hall of Fame in the Fort Washington area of upper Manhattan provided the city with one of the best indoor track facilities in the world and made it a national center of high school and collegiate track. Central Park and Prospect Park remain important centers of recreational running in New York City. In Central Park many runners train at the reservoir, which is surrounded by a dirt track with a perimeter of 1.58 miles (2.54 kilometers); races are frequently run on the main paved road in the park, which has a perimeter of 6.03 miles (9.7 kilometers) and is closed to motor vehicles for much of the week during the summer. The New York Road Runners Club on East 89th Street sponsors group runs and meetings on athletic topics, as well as a race in Central Park almost every weekend throughout the year, drawing on average between 3000 and 6000 participants. The organization also puts on many races outside of Central Park, including the New York City Half Marathon, which runs each year from the park through Times Square and down the West Side Highway, as well as a half marathon in each of the five boroughs.

Robert Hillenbrand, David White

Runyon [Runyan]**, (Alfred) Damon** (*b* Manhattan, Kan., 3 Oct 1880; *d* New York City, 10 Dec 1946). Journalist and short-story writer. He worked for newspapers in Colorado before moving to New York City in 1910. In 1911 he began covering sports for the *New York American,* owned by William Randolph Hearst. Runyon took on a wide range of assignments, working as a foreign war correspondent, crime reporter, and feature writer for Hearst's syndicated news empire, accumulating a daily readership of over 10 million. Recognized at his peak as "America's Premier Journalist," Runyon became famous for short stories recounting the misadventures of petty criminals, gamblers, and the women who loved them. This "hard-boiled" writing style, with its use of slang and its depiction of sordid events, became known as Runyonesque. Many of Runyon's works were transformed into film and theater productions, including Frank Loesser's musical *Guys and Dolls* (1950), and Frank Capra's film *Lady for a Day* (1933). After his death in 1946, an airplane scattered Runyon's ashes over Broadway, and the Aqueduct Racetrack in Queens dedicated a horse race to his memory.

Russell Sage Foundation. Charitable organization formed in 1907 by Olivia Sage and named after her late husband, a prominent financier. Encouraged by her friend and adviser Robert de Forest, president of the Charity Organization Society, she gave the foundation a broad mandate to improve social and living conditions in the United States that allowed it to become a leader in the reforms of the Progressive era. Her original endowment of $10 million was increased by $5 million on her death in 1918. Among those who served the foundation during its early years were de Forest (first chairman of the board); John Glenn of the Charity Organization Society of Baltimore (general director); Louisa Lee Schuyler, founder of the New York State Charities Aid Association; and Gertrude Rice, a founder of the Charity Organization Society of New York (all original board members); Mary Richmond, a dominant figure in the Charity Organization Society (director of the Charity Organization Department); and Luther Gulick, organizer of the Camp Fire Girls (director of the Department of Child Hygiene). During its early years the foundation sought to promote the new profession of social work and to develop practical applications of social welfare theories. The foundation donated $1.2 million to the Committee on the Regional Plan between 1921 to 1932 to conduct a comprehensive survey of the metropolitan region and an additional $500,000 to promote adoption of the committee's recommendations. From 1913 the headquarters were at Lexington Avenue and 22nd Street. As part of a major reorganization the foundation in 1948 shifted its focus toward the funding of social science research and sold its main building to the Catholic archdiocese. The foundation continues to support research in fields ranging from the means of escaping poverty to the success rates of second-generation immigrants, and has an active publications program. In 2010 the offices of the foundation were at 112 East 64th Street, former headquarters of the Asia Society.

Russians. New York City was the principal point of entry at the time of the first large-scale immigration of Russians to the United States, which began in the 1880s and continued until the outbreak of World War I. About 60 percent of these immigrants were Jews who spoke Yiddish. Townspeople without specific trades, called *luftmenschen*, arrived soon after the assassination of Tsar Alexander II in 1881, which the Russian government and populace used as a pretext for subjecting Jews to persecution and pogroms. Many of the first immigrants were also fleeing poverty and seeking better economic conditions in the United States; a large number settled on the Lower East Side in Manhattan and across the East River in Williamsburg. They found employment in clothing factories, in the fur business, and in the building trades as bricklayers, carpenters, house painters, and house wreckers. A sense of Russian identity among Jews and non-Jews was sustained by the publication of *Novoe russkoe slovo* (1910–), the oldest and most widely read Russian-language newspaper outside the homeland. The Russian Social-Democratic Society was formed in the city in 1891 and became the basis for a Russian division of the American Socialist Party. Its aggressively leftist newspaper *Novyi mir* (1911–20, 1927–38) included on its editorial staff Leon Trotsky, who lived in the Bronx in early 1917 before returning to Russia to join Lenin in leading the Bolshevik Revolution. During the "Red Scare" of 1919–20 Russian immigrants were generally assumed to be communist agitators, and many were arrested and deported.

In the early decades of the twentieth century the city was a center of religious activity for Russians of various faiths. It became the headquarters of the Russian Orthodox Church in North America in 1905, and the headquarters of all three groups into which the church split as a result of political changes in Russia (the Metropolia, later the Orthodox Church in America; the Moscow Patriarchal Exarchate; and the Russian Orthodox Synod Abroad). Among the earliest and largest organizations was the Russian Orthodox Christian Immigrant Society of North America (1908), which for many years occupied a five-story building on East 14th Street and provided shelter and social services to immigrants. Basic and advanced adult education was available through the Russian Collegiate Institute (1919), the Russian Technical Institute (1920), and the Russian-American Technicum (1924). The Russian Student Fund (1921) provided assistance to students in American colleges and universities.

A second group of Russians settled in the city during the early 1920s and was largely made up of political exiles forced out of their country by the Bolshevik Revolution. Many of these immigrants were professionals (lawyers, doctors, engineers, professors), businesspeople, members of the clergy, performing artists, and wealthy aristocrats. While some of the professionals were able to retrain themselves and continue their work, others worked as taxi drivers, watchmen, and house painters and in retail sales; some became restaurant managers, shop owners, and hotel managers. The best-known existing landmark from this period of immigration is the Russian Tea Room on 57th Street in Manhattan. Russians who settled in New York City in the late 1940s and early 1950s included refugees from the Bolsheviks who had spent the interwar years in Europe, as well as "displaced persons" who had escaped from the Soviet Union during World War II. Although these immigrants were from social and economic backgrounds similar to those of earlier immigrants, they found it easier to secure skilled work. Their Russian-language skills were valued by U.S. and international government agencies during the cold war, and they entered professions such as interpreting, translating, and teach-

ing. This group of immigrants launched the first Russian literary and public affairs quarterly outside Russia, *Novyi zhurnal* (1942), and formed the Association of Russian-American Scholars (1947) to promote scholarly research and publications, as well as several organizations dedicated to political change in the Soviet Union and the United States.

The popular image of Russian Americans as communist prevailed even though many of the immigrants were fiercely anticommunist. Among the best-known Russian immigrants from these years was Alexander Kerensky, who settled in New York City in 1940; in 1949 he formed the League to Fight for National Freedom. In the 1970s and 1980s the Soviet Union allowed many Jews to emigrate, and of these the largest number settled in New York City, specifically in Brighton Beach. As Russian became the dominant language in the neighborhood and signs in the Cyrillic alphabet were hung from the facades of its shops and restaurants, Brighton Beach replaced the Lower East Side as the principal Russian neighborhood in the city. The Society of New Russian Immigrants, an educational and cultural organization, was formed in 1975. In the 1990s, after the breakup of the Soviet Union, another wave of immigration followed. In the early twenty-first century Russians constituted the 10th largest group of newcomers to New York City; in 2007 more than 72,000 New Yorkers had been born in Russia.

Of the prominent Russians who have lived in New York City many have been artists and musicians, including the composer Igor Stravinsky, the pianist Vladimir Horowitz, the choreographer and founder of the New York City Ballet George Balanchine, the sculptor Louise Nevelson, and the artistic director of the American Ballet Theatre Mikhail Baryshnikov.

Russian Tea Room. Restaurant at 150 West 57th Street next to Carnegie Hall in Manhattan, opened in 1927 by several former members of the Russian Imperial Ballet as a meeting place for Russian émigrés and later expanded to a full-size restaurant by its proprietor, Sammy Kaye. On Kaye's death in 1967 control of the restaurant passed to his widow, Faith Stewart-Gordon, who continued to operate it until 1996 when she sold it to businessman Warner LeRoy. After a $36 million, four-year renovation, the Russian Tea Room reopened, only to close in July 2002, after its owner declared bankruptcy. Its most recent incarnation opened under the direction of Gerald Lieblich in 2006. The decor of the restaurant is meant to evoke a Russian Christmas before the Bolshevik Revolution and includes dark green walls, samovars, and Christmas decorations. A number of films have been made there, among them Woody Allen's *Manhattan.* The restaurant's clientele has included such well-known figures as George Balanchine, Leonard Bernstein, Anita Loos, and Harold Clurman.

Rachel Sawyer

Russwurm, John B(rown) (*b* Port Antonio, Jamaica, 1 Oct 1799; *d* Liberia, 17 June 1851). Newspaper editor, abolitionist, and government official. After moving with his father to Maine he graduated from Bowdoin College in 1826. He moved to New York City in the following year and helped to found *Freedom's Journal*, the country's first black-owned newspaper, which he published first with Samuel E. Cornish and from late 1827 by himself. His despair over what he saw as the grim future of blacks in the United States led him to accept a position in the Liberian Department of Education in February 1829, a decision that caused a scandal among blacks in the city. Russwurm spent the rest of his life in Liberia.

Graham Hodges

Rustin, Bayard Taylor (*b* West Chester, Pa., 17 March 1912; *d* New York City, 24 Aug 1987). Civil rights activist. Brought up as a Quaker, he embraced communism during the 1930s before turning to socialism during the 1940s. After being imprisoned for refusing to serve in World War II he devoted himself to pacifism and was an aide to Martin Luther King, Jr., from 1955 to 1960. He helped to organize the March on Washington that drew 200,000 participants in 1963 and a school boycott in New York City on 3 February 1964 involving 464,000 students. Believing that racial oppression was due primarily to economic injustice, he sought to form a coalition led by blacks, white liberals, and workers. He favored cooperation with the federal government and supported the domestic and international policies of President Lyndon B. Johnson, including the Vietnam War. For his approach to these issues he was criticized by many black nationalists, whom he steadfastly opposed; he later maintained that their criticism was also due to his homosexuality. Rustin lived for many years in the Chelsea neighborhood in Manhattan. In 1983 Bayard Rustin High School for the Humanities opened at 351 West 18th Street.

Kevin Kenny

Rutgers, Henry (*b* near New York City, 7 Oct 1745; *d* New York City, 17 Feb 1830). Landholder and philanthropist. A descendant of Dutch immigrants who settled in New York City in 1636 and prospered as brewers, he graduated from King's College in 1766 and became active in politics, serving in the state assembly as a Jeffersonian Republican and political ally of Aaron Burr. He was a colonel during the American Revolution and in 1811 helped raise funds for the construction of Tammany Hall. He also gave land and funds to his own Dutch Reformed church, to Presbyterian and Baptist churches, and to schools for children of the poor. He became president of the Public School Society in 1828. At the time of his death Rutgers's estate in Chatham Square was one of the most valuable in Manhattan. Rutgers University in New Jersey is named in his honor.

Elaine Weber Pascu

Rutgers v. Waddington. Case decided in 1784 in which a state law called the Trespass Act of 1783 was overturned. The act allowed people whose premises had been occupied by the British during the American Revolution to recover damages, and Mrs. Elizabeth Rutgers invoked its provisions in filing suit for £8000 against Joshua Waddington, a British merchant who during the war had lived in her brewery in Maiden Lane. Alexander Hamilton successfully argued for the defendant before the mayor's court that the act was a violation of the Articles of Confederation and of international law. The case helped to establish the principle of judicial review.

Julius Goebel, ed., *The Law Practice of Alexander Hamilton,* vol. 1 (New York: Columbia University Press, 1964)

Peter Eisenstadt

Ruth, Babe [George Herman] (*b* Baltimore, 6 Feb 1895; *d* New York City, 16 Aug 1948). Baseball legend. The son of Kate and George Herman, Sr., Ruth was the first of eight children, but only he and his sister Mamie survived childhood. In 1902, unable to financially support their children, Ruth's parents gave over legal custody of their son to Catholic missionaries at the St. Mary's Industrial School for Boys in Baltimore. Ruth played on the St. Mary's baseball team, garnering the attention of professional scouts. The Baltimore Orioles, a Minor League subsidiary of the Boston Red Sox, signed Ruth to his first professional baseball contract at the age of 19. Teammates referred to Ruth as "the newest babe" of Jack Dunn, the Orioles owner who took over legal guardianship of his young acquisition. Over the next six years he developed into an ace pitcher and a feared hitter, leading Boston to three World Series titles. In the winter of 1919 Red Sox owner Harry Frazee sold the rights to Ruth to New York Yankees co-owner Jacob Ruppert for $150,000 and a $350,000 loan to jump-start Frazee's career as a Broadway producer. Ruth's sale to the Yankees marked a shift in the fortunes of the Red Sox and the Yankees that continued until 2004, when the Red Sox won their first World Series in over 85 years. The Yankees, previously of minor significance in professional baseball, became arguably the

most well-known sports franchise in the world and won 26 World Series titles during the Red Sox 86-year championship drought. The Red Sox and Yankees also developed a heated rivalry after the Ruth transaction that continued into the twenty-first century as the Yankees success and the Red Sox failures were attributed to the "Curse of the Bambino," one of Ruth's many nicknames. With the Yankees Ruth switched from being a pitcher to playing right field so he could focus on his hitting. The results were astounding as Ruth's popularity and home run–hitting ability, coupled with the team's newfound success, led to a dramatic increase in attendance that allowed the Yankees, which had previously shared a stadium with the New York Giants at the Polo Grounds, to build Yankee Stadium, nicknamed the "House That Ruth Built," in the Bronx in 1923. Ruth remained with the Yankees until 1935, leading the team to its first four World Series titles and setting the single-season home run record in 1929 with 60 home runs, a mark that stood until another Yankee, Roger Maris, topped it in 1961. Ruth's legend and popularity stemmed as much from his personality and activities off the field as from his home run prowess. Sportswriter Bill Broeg noted that "to try to capture Babe Ruth with cold statistics would be like trying to keep up with him on a night out." Ruth's annual income from endorsements was greater than his contract with the Yankees. Babe was also known for his hearty appetite, late-night partying, and love of children, to whom he frequently paid hospital visits. Less than a year after leaving the Yankees, Ruth retired from baseball following a brief stint with the Boston Braves. In the last year of his career Ruth had a falling-out with the Yankees and then the Braves as both franchises refused to hire him as their manager. Having finished his career with 714 home runs, 2217 runs batted in, a .342 batting average, and a 94–46 record as a pitcher, Ruth became one of five members of the inaugural class of the National Baseball Hall of Fame. In 1938, still hoping to manage a Major League Baseball team, Ruth joined the Brooklyn Dodgers as a first-base coach, but when a managerial opening the next season was given to Leo Durocher instead of Ruth, the Babe left the game for good. Ruth died of throat cancer in 1948 at Memorial Hospital in New York City. An estimated 100,000 mourners lined the streets around St. Patrick's Cathedral on the day of his funeral service. Ruth was survived by his second wife, Claire, and his daughter Dorothy, whom he had adopted with his first wife. He is buried at Gate of Heaven Cemetery in suburban Hawthorne in Westchester County. Ruth remains the single most revered athlete and personality in all of American sports to this day. His nicknames included the Babe, the Sultan of Swat, the Great Bambino, and the Home Run King.

Robert W. Creamer, *Babe* (New York: Simon and Schuster, 1974); Marshall Smelser, *The House That Ruth Built* (New York: Quadrangle, 1975); Lawrence S. Ritter and Mark Rucker, *The Babe: A Life in Pictures* (New York: Ticknor and Fields, 1988)

RWDSU. See Retail, Wholesale and Department Store Union.

Ryan, Thomas Fortune (*b* Lovingston, Va., 17 Oct 1851; *d* New York City, 23 Nov 1928). Businessman. Orphaned and impoverished as a youth, he arrived in New York City in 1870 and formed an investment syndicate that dominated the transportation franchises in the city through the Metropolitan Traction Company (formed in 1886, reorganized in 1902 as the Metropolitan Securities Company). Essentially he consolidated the city's various street railway firms into a single entity. He also controlled the State Trust Company, investigated in 1900 by banking authorities, and the Equitable Life Assurance Company, investigated in 1905 by the state legislature of New York. After withdrawing from the Metropolitan Traction Company in 1906 he became embroiled in many legal actions when it was placed under receivership in the following year; among these was an investigation by the Public Service Commission into charges of bribery, overcapitalization, and fraudulent accounting. He was also a founder of the American Tobacco Company, dissolved as a monopoly in 1911 by the U.S. Supreme Court. Ryan was best known during his life for his wealth and his questionable business practices. He lived at 60 Fifth Avenue and had a country house in Suffern, New York.

Theresa Collins

Ryan, William F(itts) (*b* Albion, N.Y., 28 July 1922; *d* New York City, 17 Sept 1972). Congressman. After working as a lawyer he was elected to the U.S. Congress in 1960 from the West Side, the first reform Democrat elected to public office from the city. Labeled a radical and a firebrand by opponents, he remained in office for six terms and consistently worked for civil rights, peace, social justice, and the environment. His first vote was to end funding for the House Un-American Activities Committee. Ryan was one of the first elected officials to speak out against the Vietnam War and in 1964 went to Mississippi to investigate the disappearance of three civil rights workers. In 1965 he was an unsuccessful mayoral candidate. Having won renomination in 1972 against Bella S. Abzug, whose own congressional seat had been eliminated by redistricting, he died before the general election.

Andrew Wiese

S

Sage [née Slocum]**, (Margaret) Olivia** (*b* Syracuse, N.Y., 8 Sept 1828; *d* New York City, 4 Nov 1918). Philanthropist. She worked as a schoolteacher in Syracuse, New York, and moved to New York City when she married the financier Russell Sage in 1869. On the death of her husband in 1906 she inherited $65 million but continued to live modestly on Fifth Avenue near what is now Rockefeller Center. At the age of 77 she embarked on a career in large-scale philanthropy; in 1907 she formed the Russell Sage Foundation. Her giving totaled more than $80 million, much of it going to New York City and the Northeast.

Ruth Crocker, *Mrs. Russell Sage: Activism and Philanthropy in Gilded Age and Progressive Era America* (Bloomington: Indiana University Press: 2006)

Melissa Smith Clayton

Sage, Russell (*b* Oneida, N.Y., 4 Aug 1816; *d* Lawrence, near Cedarhurst, N.Y., 22 July 1906). Financier. Successful in business as a young man, he was elected to Congress as a Whig in 1852 and later joined with Jay Gould in building the railroads. After moving to New York City he helped to make "puts" and "calls" popular on the stock market. Shrewd and conservative, he lent money on an immense scale and amassed a fortune worth $70 million; most of it was given by his wife, Olivia Sage, to such charities as the Young Men's Christian Association (YMCA), the Young Women's Christian Association (YWCA), Women's Hospital, the American Museum of Natural History, and the Metropolitan Museum of Art, and to the Russell Sage Foundation, which she organized in 1907 and which continues to operate in New York City in the early twenty-first century.

James E. Mooney

Said, Edward (*b* Jerusalem, 1 Nov 1935; *d* New York City, 25 Sept 2003). Literary critic and political activist. Perhaps best known for his book *Orientalism* (1978), he was an outspoken critic of Western conceptions about the East, particularly of Western attitudes toward Palestine. A professor of comparative literature at Columbia University, Said lived and worked in New York City for several decades. He never taught politics of the Middle East, but he was a vocal defender of the State of Palestine both at Columbia University and throughout the United States, speaking to many publications such as the *New York Times.*

Marlena Slowik

sailing. Although commercial and naval vessels regularly plied New York City's harbor from the time of the arrival of the Dutch until the end of the age of commercial sail, yachting and other forms of leisure sailing were not popular and organized in the city until the 1840s. The city's first and best-known yachters were the brothers John Cox, Robert, and Edwin Stevens, who as boys soon after 1800 began sailing small boats, including a catamaran called *Double Trouble.* John Cox Stevens founded the New York Yacht Club in 1844, and a year later the club ran the first yacht race in U.S. history under rules that its members drafted to prevent collisions and encourage a fair contest. The race course was close to a tour of the harbor. The 10 boats started from anchor 3 miles (4.8 kilometers) up the Hudson River, near the Stevens family's estate at Hoboken, New Jersey; sailed across the upper bay to a mark near Owl's Head, off Bay Ridge; and then sailed south through the Narrows to Southwest Spit, near Sandy Hook. There the boats reversed the course, with a last leg near the Battery before the finish at Hoboken. This 40-mile (64.4-kilometer) course was used in most of the club's races until after the Civil War. Another course took the boats out into the Atlantic and around Sandy Hook Lightship or Scotland Lightship. The ships sailed mostly within sight of thousands watching from the bluffs of Weehawken, Bay Ridge, or Staten Island or the promenades at the Battery.

Initially, most racing boats were about 60 feet (18.3 meters) in length and were polished-up versions of either the Sandy Hook pilot schooner or the typical Hudson River trading vessel, the North River sloop. They had two things in common: they were usually steered by their owners, most of whom were skilled sailors, and they had the traditional local features of shallow draft and retractable fins, called centerboards, that could be pulled up to avoid running aground on shoals and rocks. After the Civil War, however, the boats of the New York Yacht Club's racing fleet became much bigger and more extreme, with unstable hulls under large sails that were barely kept under control by 30 or more professional sailors. Few owners or other amateur sailors had the skill and strength needed to manage these boats. The notorious capsize in 1876 of the 141-foot (43-meter) schooner *Mohawk* with the loss of six lives stimulated a return to safer vessels.

Among small craft the most popular racing boat was the sandbagger, a thrilling 20- to 25-foot (6.1- to 7.6-meter) open boat kept upright by satchels of sand that the sailors carried from side to side. Where yacht club racing was governed by written rules and judicial-like procedures, sandbagger racing disputes were often settled by fistfights. A few of the New York Yacht Club's best racing sailors were sandbagger alumni. Although yacht racing was largely a male sport, women did sail and were eligible for associate membership in the New York Yacht Club beginning in 1894. As one indication of the growth of the sport of sailing in New York City, membership in the New York Yacht Club grew from nine in 1844, to 483 in 1860, to 2135 in 1901.

Staten Island became the sailing center in 1869 when the New York Yacht Club moved its headquarters from Hoboken to Clifton (the club later had a clubhouse at Stapleton). The club was known for rich owners who handed control of their expensive yachts over to professional captains. Nearby was a very different kind of organization, the first U.S. yacht club that required that boats be run entirely by amateur (corinthian) sailors. Founded in 1871, the Seawanhaka Corinthian Yacht Club had its clubhouse at Tompkinsville, Staten Island, and held its races in New York Harbor before it moved to Oyster Bay, Long Island, in 1892.

Another popular sailing center was across the Narrows in Brooklyn. The Brooklyn Yacht Club was founded on Gowanus Creek in 1857, and in 1866 it spun off the Atlantic Yacht Club, at Bay Ridge. Both clubs later moved south of the Narrows to the shores of Gowanus Bay, where they thrived for many years. The first ocean race to Bermuda was cosponsored and started by the Brooklyn Yacht Club in 1906. Brooklyn sailors also kept boats on Sheepshead Bay and Jamaica Bay, where the Canarsie Yacht Club was founded in 1887.

Serious yachting came relatively late to Manhattan when the Columbia Yacht Club was founded at 86th Street on the Hudson River in 1867. Later came the Harlem Yacht Club on the Harlem River (1883). In 1901 the New York Yacht Club built a new clubhouse well away from the water in midtown Manhattan. The needs of its members during the sailing season were served by the club's 11 waterside outposts, called stations, in ports between New Jersey and Nantucket Island. As an indication of how widely the sport had spread from its New York City origins, only four stations were within city limits: one at Whitestone, Queens; two on Manhattan on the Hudson and East rivers; and another that in some years was at Bay Ridge and other years at Stapleton, Staten Island.

As New York Harbor became more crowded with commercial traffic, many yacht clubs shut down or moved their clubhouses and races to Long Island Sound or New England. In 1899 the New York Yacht Club began to hold the eliminations to choose its representative in America's Cup races in Newport, Rhode Island, even though the races themselves continued to be sailed off New York City for 21 years.

After 1900 the city's most active sailing area was City Island, in the Bronx, where there

were anchorages, boatyards, sailing schools, and yacht clubs, including the City Island Yacht Club (founded in 1905) and its neighbor, the Harlem Yacht Club, which had moved up from Manhattan. Racing continued to be held at City Island and at Staten Island, Brooklyn, and Queens throughout the twentieth century. The sport returned to Manhattan in the 1960s with the opening of sailing schools, the arrival of charter boats, and the founding of South Street Seaport (which began the annual Mayor's Cup race). The city's first new yacht club in years was founded in 1987 when the Manhattan Yacht Club opened near South Street Seaport. Renamed the Manhattan Sailing Club and relocated to North Cove, in 2007 it continued to sponsor many training programs and races, leaving New York Harbor once again speckled with white sails.

Sailors' Snug Harbor. Retirement home in Livingston in Staten Island. It was created by a bequest of Robert Richard Randall (*d* 1801), a resident of Manhattan who made a fortune in the maritime industry, as a home to care for "aged, decrepit, and worn-out sailors." The trustees of the bequest, who included the rector of Trinity Church and the minister of the First Presbyterian Church, funded the project by leasing 20 acres (8 hectares) of farmland left by Randall at Washington Square North and Fifth Avenue. In 1833 the home opened with 27 residents, and by 1900 it housed 1000. It was one of the best-funded charitable institutions in the United States and an innovator in care for the aged. The years after World War II saw a gradual decline in enrollment, and legal battles with the New York City Landmarks Commission caused the property to be sold to New York City in 1975. The home was moved in 1976 to Sea Level, North Carolina, where in 2007 about 50 residents continued in the institution. The trustees began a new stipend program to sustain eligible sailors in their own environment. The former site in Snug Harbor was taken over by the Snug Harbor Cultural Center in 1976.

Barnett Shepherd, *Sailors' Snug Harbor, 1801–1976* (New York: Snug Harbor Cultural Center/Staten Island Institute of Arts and Sciences, 1979; repr. 1994); Gerald J. Barry, *The Sailors' Snug Harbor: A History, 1801–2001* (New York: Fordham University Press, 2000)

Barnett Shepherd

St. Albans. Neighborhood in southeastern Queens, bounded to the north by Hollis Avenue, to the east by Springfield Boulevard, to the south by Merrick Boulevard, and to the west by Farmers Boulevard. A syndicate of developers from Manhattan bought the Francis farm on Linden Boulevard in 1892 and laid out streets and building lots. A railroad station opened along Linden Boulevard on 1 July 1898, and a post office was built in April 1899, when the population stood at 600. The section of Linden Boulevard beyond the railroad station was paved in July 1912. The Lenox Development Company in 1916 promoted a tract now covering 35 blocks east of Farmer's Boulevard on 195th and 196th streets and 115th Road. The St. Albans Golf Club opened in 1919 along Merrick, Linden, and Baisley boulevards. Between 1924 and 1926 a few hundred small one-family houses were built by several firms, including Blattmacher–Porth, Richmond Homes, St. Albans Gardens Homes, and Mezik Homes. Addisleigh Park was developed overlooking the golf course in 1926 by the Burfrey Realty Company: its half-timbered and stucco houses stood on lots 40 by 100 feet (12 by 30 meters), and each sold for $13,000 or more. Development slowed during the 1930s as land was used up and the Depression worsened. The golf course closed during World War II and became the site of a large naval hospital that was eventually converted by the Veterans Administration into an extended care center. During the 1940s prominent black athletes and musicians moved to Addisleigh Park, notably Lena Horne, Count Basie, Fats Waller, Milt Hilton, Illinois Jacquet, Ella Fitzgerald, Roy Campanella, and Jackie Robinson. The neighborhood was racially integrated in the 1950s and 1960s, but in the early 1970s St. Albans became almost exclusively African American. Apartment buildings were built nearby, among them Merrick Park Gardens (1952) and the Addisleigh (1960). A large number of black immigrants settled in the neighborhood and its environs during the 1980s, almost half from Jamaica and the rest from Haiti, Guyana, Trinidad and Tobago, and the United Kingdom. The economic status of the neighborhood is middle class and the character proudly suburban. In 2008 the Addisleigh Park Civic Organization succeeded in having the neighborhood down-zoned and began pursuing designation as a historic district.

Vincent Seyfried

St. Anthony of Padua. Shrine church of the Roman Catholic Archdiocese of New York. It is located at 155 Sullivan Street in Manhattan. Established in 1859, it remains the oldest parish serving Italian American immigrants in the United States. Its first home was a former Methodist sanctuary at 149 Sullivan Street. The current building (designed by Arthur Crooks) was dedicated on 10 June 1888.

Joseph Ditta

St. Augustine's Episcopal Church. Formerly known as All Saints Free Church and completed in 1828, it was begun as a mission by students of the General Theology Seminary. Located at 290 Henry Street, it was once the parish of poet Edgar Allan Poe. Still intact are two small unventilated rooms above the nave's balcony in the rear of the church, referred to as the "slave gallery." This cramped space separated formerly enslaved Africans and indentured servants from other worshippers. The congregation, once predominantly white, is nearly all African American early in the twenty-first century.

Celedonia Jones

St. Bartholomew's Church. Name given to several Episcopal churches occupied successively by a congregation established in 1835 on Lafayette Place and Great Jones Street. The congregation was one of the wealthiest and most fashionable in New York City when it moved in 1872 to Madison Avenue and 44th Street. In the late nineteenth century and the early twentieth the pastors reshaped "St. Bart's" into a model "institutional church" supporting a wide range of educational and social services. In 1918 the congregation moved to a church in the Romanesque style designed by Bertram Grosvenor Goodhue on Park Avenue at 50th Street, which incorporated the portals designed by McKim, Mead and White for the church on Madison Avenue. Members of the church vestry proposed during the 1980s to raise money by replacing the Community House on 50th Street (1927) with a high-rise office tower. Their application was twice refused by the municipal Landmarks Preservation Commission, a decision that was upheld by the U.S. Supreme Court (1991). The low, spacious church of St. Bart's remains an anomaly in a neighborhood of skyscrapers.

Peter J. Wosh

St. Denis, Ruth (*b* Englewood, N.J., 20 Jan 1879; *d* Hollywood, 21 July 1968). Dancer. She received her professional training in New York City and worked as a "skirt dancer." Featured in 1904 by David Belasco in the revue *Madame DuBarry,* she developed an exotic dance that became known as the Radha, which she performed on a tour of Europe in 1906–7. From 1909 to 1914 she worked in New York City, where with Ted Shawn she formed Denishawn, the premier American dance company until the 1930s. Among the many dancers who trained with the company were Doris Humphrey, Martha Graham, and Charles Weidman.

Peter M. Rutkoff, William B. Scott

St. Elizabeth, Church of. Roman Catholic Church at 268 Wadsworth Avenue in northern Manhattan. Founded in 1869, it was originally housed at 4381 Broadway in a church designed by Napoleon Le Brun and funded by James Gordon Bennett. The church on Wadsworth Avenue, which sits atop a hill, was designed

by Robert J. Reiley in 1927 and in the early twenty-first century was central to the large Dominican population of upper Manhattan.

Kate Lauber

St. Francis College. Catholic school at 180 Remsen Street. Originally limited to boys, it was opened in 1859 at 300 Baltic Street in Brooklyn by the Franciscan Brothers and offered instruction on all levels from elementary school to college. By 1884, when it was authorized to grant degrees, it had expanded to Smith and Butler streets. In 1902 the lower divisions split off to form St. Francis Academy. The college became coeducational with the admission of nuns in 1953; lay women were admitted from 1969. It moved in 1963 to its present site, formerly the headquarters of the Brooklyn Union Gas Company. In 2008 the school had about 2400 students, including 2000 who attended full time. St. Francis College is the oldest Catholic school in Brooklyn.

Gilbert Tauber

Saint-Gaudens, Augustus (*b* Dublin, 1 March 1848; *d* Cornish, N.H., 3 Aug 1907). Sculptor. The son of a French shoemaker and a working-class Irishwoman, he lived from 1848 to 1860 in lower Manhattan. He moved to 22 Washington Place in 1880, remaining there until 1890. His first public commission, *Admiral David Glasgow Farragut* (1881, Madison Square Park), was a collaboration with Stanford White that set a standard for American sculptors: the first major public work in the country influenced by a French beaux-arts aesthetic, it strove for an ideal of integrating sculpture, architecture, and landscape to promote urban harmony. He had a studio at 148 West 36th Street from 1884 until his death and lived at 51 West 45th Street from 1890 to 1897. Among his municipal commissions were *Robert Randall* (1884, Sailors' Snug Harbor) and *Diana* for the tower of Madison Square Garden (1894, Philadelphia Museum of Art), both with White; *Peter Cooper* (unveiled 1897, Cooper Square); and *William Tecumseh Sherman* (1903, pedestal by Charles Follen McKim; Grand Army Plaza, Manhattan). Private commissions included angels for St. Thomas Church (1877, destroyed), decorations for the mansions of Cornelius Vanderbilt II (1883, Metropolitan Museum of Art) and the publisher Henry Villard (1883, 451 Madison Avenue), tomb reliefs for the importer David Stewart (1883, Green-Wood Cemetery, Brooklyn), and bronze bas-relief portraits of many prominent New Yorkers. Saint-Gaudens drew unprecedented international attention to American sculpture, especially through his public works.

Michele H. Bogart

St. George. Neighborhood on the northeastern shore of Staten Island (2009 pop. 7500) bounded on the north and east by the Upper New York Bay, on the south by Tompkinsville, and on the west by New Brighton. Richmond Terrace and Bay Street are main streets. St. George is the government center, the transportation hub, and the most densely populated neighborhood in Staten Island.

During the British occupation of Staten Island between 1776 and 1783 an earthwork fort was built at the top of today's Fort Hill. New York State built a quarantine station on the waterfront in 1799. In 1815 Governor Daniel D. Tompkins purchased farms in the area, laying out the streets of Tompkinsville and establishing steam ferry service to Manhattan. The western portion of early Tompkinsville is part of St. George. Tompkins enlarged the Van Buskirk farmhouse, which faced Fort Place, living in it until his death in 1825, at which time it was demolished. In 1835 portions of the Tompkins estate and other farms west of it were acquired by Thomas E. Davis, a New York City developer. Large lots were laid out along the shore and hillside to create the fashionable resort of New Brighton. The first Catholic church on Staten Island, St. Peter's, was organized in 1839; the present building was completed in 1903. The Brighton Heights Reformed Church was built in 1863 (destroyed by fire in 1996; new building constructed in 1997). In 1868 a portion of the former quarantine site was taken over by the U.S. Lighthouse Service. The neighborhood was considered part of New Brighton until 1886 when Erastus Wiman, a local entrepreneur, consolidated ferry lines and rail routes along the east and north shores and created a terminal where the two lines came together; he then named the community near the terminal St. George after George Law, an investor in the project. Between 1886 and 1888, near the ferry slips, Wiman's Staten Island Amusement Company offered athletic events, an illuminated fountain, and spectacular pageants.

After Staten Island's consolidation with New York City in 1898 St. George grew rapidly. Curtis High School, named after George William Curtis, opened in 1904. Municipal ferry service began in 1905. Carrère and Hastings designed a new ferry terminal (destroyed by fire in 1947), Borough Hall (1906), a branch of the New York Public Library (1907), and the Richmond County Courthouse (1919). The Staten Island Institute of Arts and Sciences moved into its new museum at 75 Stuyvesant Place in 1919. In 1936 the lighthouse service was taken over by the U.S. Coast Guard, which operated it until 1967.

The opening of the Verrazano–Narrows Bridge in 1964 and of the Staten Island Expressway led to development of the interior and the decline of the neighborhood. Commercial property remained vacant and important institutions moved out. In the mid-1990s, however, the waterfront, which commands fine views of Manhattan, was redeveloped and the community began to revive. A large ferry repair facility and a public esplanade were built on the former U.S. Coast Guard site, and St. George was designated a historic district in 1994. In the early twenty-first century building and renovation continue: the Richmond County Bank Ballpark opened in 2001; the Staten Island September 11 Memorial on the esplanade from the ferry terminal to Jersey Street was dedicated in 2004; the St. George Theatre, a 1929 movie and vaudeville palace, was restored in 2004; and major renovation of the Staten Island Ferry Terminal was completed in 2005. In the early twenty-first century the population of St. George was economically and racially diverse; many residents were young professionals who commuted by ferry to Manhattan.

Edna Holden, "The Cosmopolitan Period," *Staten Island: A Resource Manual for School and Community* (New York: Board of Education of the City of New York, 1964); "St. George Historic District," designation report (New York: New York City Landmarks Preservation Commission, 1994)

Barnett Shepherd, Carol V. Wright

St. George Hotel. Hotel erected in Brooklyn Heights in 1884 by William Tumbridge. By 1930 it comprised eight buildings bounded by Hicks, Henry, Clark, and Pineapple streets; contained 2632 rooms (the most of any hotel in New York City); and had a grand ballroom, an indoor saltwater swimming pool, and a rooftop for dining and dancing. The hotel's busiest years were during and just after World War II because of Brooklyn's role as the country's major port of embarkation for

soldiers en route to Europe. During the 1980s the St. George was in decline and the owners converted two wings into cooperative residential units. A 1995 fire destroyed the single building that was still operating as a hotel. By 2007 the remaining buildings had been converted to other uses, including a dormitory for local university students.

Stephen Weinstein

St. George's Episcopal Church (i). Episcopal church at 16th Street and Stuyvesant Square, formed as a chapel of Trinity Church in 1752 and made independent in 1811. From early on it emphasized the Protestant nature of the Episcopal Church. Under the leadership of William Rainsford (1850–1933) it was a leader at the end of the nineteenth century in the institutional church movement, which believed that institutions should help support community members, offering such services to the community as sewing classes, soup kitchens, and fitness and health programs. The financier J. P. Morgan was for decades its most influential parishioner. During the mid-1970s it formed a united parish with Calvary Church and the Church of the Holy Communion; the building continues to be used for worship services.

Robert Bruce Mullin

St. George's Episcopal Church (ii). Church built in 1746 in Flushing where Episcopal services were held from 1704. During the nineteenth century the parish established important educational institutions, including the Academy (1803) and the Flushing Institute (1828). Later St. George's moved to a Gothic Revival church known for its grand interior (1854, on Main Street between 38th and 39th avenues). Parishioners undertook ambitious missionary work and helped to establish Episcopal churches in Bayside, College Point, Whitestone, Queens Village, and Fresh Meadows. During the late 1980s they organized a ministry program for the growing Chinese community in Flushing.

Peter J. Wosh

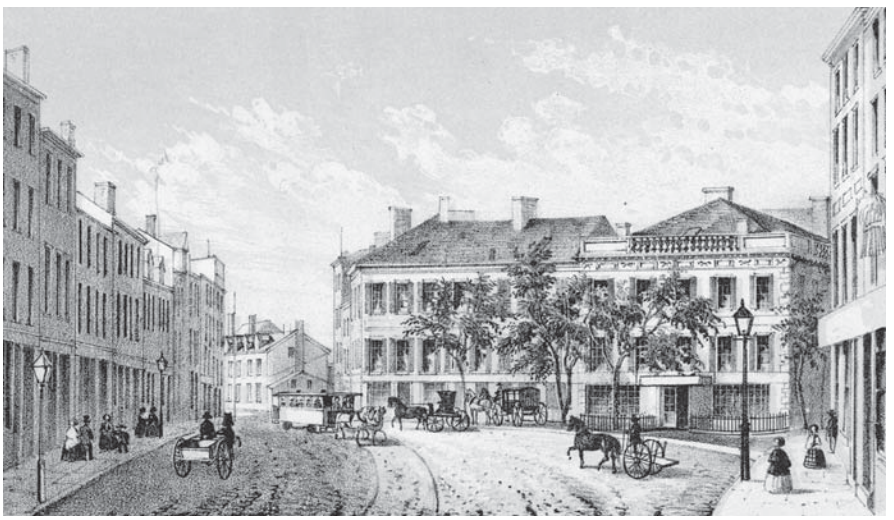
St. George's Square. Square located at the intersection of Pearl, Cherry, Frankfort, and Dover streets. In existence in the 1770s, it was extended in 1816 at the same time that new houses and lots at Pearl and Cherry streets were added. Improvements included one of the first iron gas lamps in the city. The name was changed to Franklin Square in 1817 in honor of Benjamin Franklin. The square ceased to exist when construction began on the approaches to the Brooklyn Bridge in the 1870s.

Lisa Keller

St. George Ukrainian Catholic Church. Church located at 30 East Seventh Street; it was designed by Apollinaire Osadca in the Historicist style and completed in 1977.

Sharon Wilkins

St. George's Episcopal Church (i) and Stuyvesant Square, 1905



St. Ignatius Loyola, Church of. Roman Catholic church at 980 Park Avenue, home to the largest mechanical action pipe organ in the city. Founded in 1851 as the St. Lawrence O'Toole Church, the parish was taken over by Jesuits in 1866; its lavish Baroque building, designed by Schickel and Ditmars, was dedicated in 1898. Jacqueline Kennedy Onassis was baptized at St. Ignatius Loyola and her funeral was held there in 1994; the funeral for the singer Aaliyah was held at the church in 2001. The following year, Edward M. Cardinal Egan halted a $3 million renovation that would have moved the altar closer to the pews, removed the communion rail, and expanded the sanctuary, all in accordance with reforms of the Second Vatican Council; Egan was concerned about maintaining the church's historical tradition. Minor renovations were completed in 2008.

Kate Lauber

St. James Cathedral. Roman Catholic cathedral church of the Diocese of Brooklyn, at 250 Cathedral Place, built in a neo-Gothic style under the leadership of Peter Turner and dedicated by Bishop John Connolly in 1823. It is the oldest church in the Diocese of Brooklyn, the third-oldest Catholic church in New York City, and the sixth-oldest Catholic church in New York State. When the Diocese of Brooklyn separated from the Archdiocese of New York in 1853 St. James became its procathedral. The first bishop to administer the cathedral was John Loughlin, who served from 1853 to 1891.

Margaret M. McGuinness

St. James Church. Prominent nineteenth-century Catholic parish at 32 James Street. Built in the Greek Revival style and dedicated in 1836, the architect is unknown; scholars have questioned its attribution to Minard Lafever. Also in 1836, the first branch of the Ancient Order of the Hibernians, an Irish Catholic fraternal group, was organized at St. James. Alfred E. Smith, who grew up on the Lower East Side and became governor of New

Franklin Square (formerly St. George's Square), 1856

York, was an altar boy at the church, which was restored by the Hibernians after major structural problems with its roof threatened its closure in 1983.

Kate Lauber

St. James Hotel. Hotel built during the 1860s at 26th Street and Broadway. It was one of several elegant hotels, including the Fifth Avenue Hotel, the Grand, and the Gilsey, that were clustered near Madison Square, then the city's most fashionable district. In 1864 Confederate conspirators set fire to the hotel and other buildings in the neighborhood; it sustained only minor damages. In the late nineteenth century the St. James catered mostly to personages of the local theaters; in 1897 it was replaced by the St. James Building, which was designed by Bruce Price and housed many architects' offices.

Andrew Wiese

St. John's Evangelical Lutheran Church. Church at 79–83 Christopher Street between Seventh Avenue and Bleecker Street; it is built of painted brownstone and metal in a Romanesque style and has a cupola in a Federal style. Completed in 1821 for the congregation of the Eighth Presbyterian Church, it was sold in 1857 to St. John's Evangelical Lutheran Church, a German Lutheran congregation organized in 1855.

Alana Erickson Coble

St. John's Park. See Hudson Square.

St. John's University. Roman Catholic institution opened in 1870 by the Vincentian Fathers at the request of the first bishop of Brooklyn, John Loughlin. Originally called St. John's College, under its first president, John T. Landry, it occupied a building on Willoughby Street and Lewis Avenue in Brooklyn. The college awarded its first baccalaureate degree in 1881 and opened a separate seminary at Lewis Avenue and Hart Street in 1891. After being chartered as a university in 1906 it added a law school (1925), a college of pharmacy (1929), and a downtown division on Schermerhorn Street (1929). In 1936 the school purchased the Hillcrest Golf Club in Jamaica (Queens), and in 1954 it began construction of a new campus there (completed in 1956). It assumed control of Notre Dame College of Staten Island in 1971 and closed the school on Schermerhorn Street. St. John's purchased the former College of Insurance in 2001 to reestablish a downtown Manhattan campus. In the early twenty-first century the school completed several major projects, including the 2003 addition of dormitories at its Queens, Manhattan, and Staten Island campuses. Its basketball team has one of the highest winning percentages in intercollegiate basketball history.

Frederick Ernst Hueppe, *"The Radiant Light": A History of Saint John's College* (New York: C. H. Helmken for St. John's University, 1956)

Matthew J. Brennan

St. John the Divine. See Cathedral of St. John the Divine.

St. Joseph's College. Four-year Catholic college, opened in 1916 at 286 Washington Avenue in Brooklyn as a women's college by the Sisters of St. Joseph. It moved to 245 Clinton Avenue in 1918 and became coeducational in 1970; a branch campus opened in Patchogue, New York, in 1979. In 2006 there were 1087 students enrolled at the main campus and 3798 at the branch. The college has a predominantly lay faculty and offers preprofessional programs in business, education, law, and health administration.

Gilbert Tauber

St. Luke's Hospital. Private hospital formed by Episcopalians in 1846. It stood at Fifth Avenue and 54th Street before moving in 1896 to 113th Street and Amsterdam Avenue, where it occupied five buildings. Additions to the hospital were built in 1906 and 1933. At the request of the U.S. Army in January 1942 it collaborated with Roosevelt Hospital in planning a field hospital with 750 beds called the Second Evacuation Hospital; this was deployed 5 miles (8 kilometers) from Omaha Beach in Normandy on 17 June 1944. The hospital became affiliated with the College of Physicians and Surgeons at Columbia University in the early 1950s, expanded in 1954 and 1957, and entered into an affiliation with Women's Hospital in 1965. Throughout the 1970s it responded to the changing needs of the community by expanding its clinic programs and its emergency room facilities. It also became well known for its research and for such medical innovations as the first open-heart surgery in New York City (1955). The hospital merged with Roosevelt Hospital in 1979 to form St. Luke's–Roosevelt Hospital Center, which had 1076 beds in 2010.

John Petit West, *Surgeons and Surgery: St. Luke's Hospital* (New York: Woodhaven, 1978)

Andrea Balis

St. Luke's–Roosevelt Hospital Center. Hospital formed in 1979 by the merger of two of the oldest and largest hospitals in New York City. It serves the West Side of Manhattan from 34th Street to 142nd Street. The merger of St. Luke's Hospital and Roosevelt Hospital made it possible to consolidate some services. At the time of the merger both institutions were teaching affiliates of the College of Physicians and Surgeons at Columbia University, and this function continued uninterrupted. Facilities added after the merger include the Kathryn and Gilbert Miller Health Care Institute for the Performing Arts at Roosevelt Hospital (the only full-service center for performing-arts medicine in New York City and the largest in the nation) and the largest center for AIDS at any private hospital in New York City. In 2010 the hospital had 1076 beds.

Andrea Balis

St. Mark's Church in the Bowery. Episcopal parish church at East 10th Street and Second Avenue in the East Village. Its site, formerly occupied by Peter Stuyvesant's family chapel, is reportedly the oldest in continuous use by any Christian congregation in the city. The building was completed in 1799; a steeple in a Greek Revival style was added in 1828, a Georgian interior in later years. During the mid-1960s the St. Mark's Poetry

St. Mark's Church in the Bowery, ca *1910*

Project was established to explore aesthetic and social concerns. The interior was restored after a serious fire in 1978, and stained-glass windows in a striking abstract design by Harold Edelman were installed in the balcony in 1982. St. Mark's in the Bowery is the second-oldest church in the city, after St. Paul's Chapel. The churchyard contains Stuyvesant's grave.

Memorials of St. Mark's Church in the Bowery (New York: Thomas Whittaker, 1899)

J. Robert Wright

St. Mark's German Lutheran Church. Church on East Sixth Street just east of Second Avenue. In 1904 the excursion vessel General Slocum, chartered by the congregation, burned; more than 1000 people died, most of them women and children and members of the church, which closed soon after the tragedy. In 1940 the church became the Sixth Street Community Synagogue.

St. Mary's Episcopal Church, Manhattanville. Church located in Harlem at 521 West 126th Street. After the Dutch Reformed church (erected in East Harlem in the eighteenth century), St. Mary's became the second church established in Harlem (circa 1823). T. E. Blake and the architectural firm of Carrère and Hastings completed the present stone structure in 1909. It was the first church in the Episcopal Diocese to abolish pew rentals. The porch of the church houses the vault of Jacob and Hannah Schieffelin, the church's land donors and Manhattanville's principal founders. Granted landmark status in 1998, St. Mary's remains Harlem's oldest congregation in continuous existence.

Sharon Wilkins

St. Michael's Church. Episcopal parish church at 99th Street and Amsterdam Avenue in Manhattan, founded in 1807. The present building, designed by Robert W. Gibson in a Byzantine Romanesque style and built of Indiana limestone with a square bell tower 160 feet (50 meters) high, opened in 1891 and became known for its interior and its stained-glass windows by Louis Comfort Tiffany (installed mostly between 1893 and 1900, restored 1989–90). The seven lancet windows in the chancel (1895), which depict the victory of St. Michael in Heaven, are widely considered Tiffany's ecclesiastical masterpiece in glass. St. Michael's grew under the direction of its ninth rector, Frederick Hill (1976–92), during a period of recovery on the Upper West Side that began about 1980.

J. Robert Wright

St. Moritz Hotel. Hotel at 50 Central Park South, on the east side of Sixth Avenue. Designed by Emery Roth and built by the Harper organization (representing Harris H. Uris and Percy Uris), it was completed in October 1930, standing 38 stories tall with 1000 rooms, and was named for the resort in the Swiss Alps. The Bowery Savings Bank took over the hotel in 1932 and then sold it to the Engadine Corporation, led by S. Gregory Taylor. In 1950 the hotel redecorated and redesigned its rooms, and from the following year it housed the Café de la Paix, said to be the first sidewalk restaurant in New York City. The hotel also housed Rumpelmayer's, a well-known tea and pastry shop decorated by the German American interior designer and artist Winold Reiss. Donald Trump bought the St. Moritz in 1985 only to sell it three years later to Alan Bond, an Australian entrepreneur. Bond gave the hotel up to his lender, F. A. I. Insurances, which ran it until 1998, when Ian Schrager bought it. Schrager in turn sold it in 1999 to Millennium Partners, which remodeled the old hotel and turned it into the flagship of the Ritz–Carlton chain. The top dozen floors were transformed (by Millennium Partners in conjunction with Schrager) into luxury condominiums. In 2002 the hotel reopened as the Ritz–Carlton New York, Central Park, with 259 rooms, including 47 suites.

Allen J. Share

St. Nicholas Greek Orthodox Church. Church formerly located at 155 Cedar Street under the shadow of the World Trade Center; it was destroyed in the terrorist attacks of 11 September 2001. Founded in 1916 at a hotel at Greenwich and Liberty Streets, the church moved into the Cedar House tavern in 1919 when five families raised $25,000 to buy and convert the building. Although it was promised a place in the redeveloped Ground Zero site, the church remained homeless in 2010 as planning and negotiations for Ground Zero stalled.

Kate Lauber

St. Nicholas Kirche. First German Catholic church in New York City, founded in 1833 on East Second Street by Johann Stephen Raffeiner, a wealthy Austrian priest. In 1842 he abandoned the parish because of disputes with the congregation; in the same year the church was formally recognized by the diocese. Raffeiner's successor, Gabriel Rumpler, appointed by Bishop John Hughes, left in 1844 after battling church members and trustees to form the Most Holy Redeemer Church on East Third Street, which became the leading German Catholic church in the city. St. Nicholas Kirche then declined in importance.

Stanley Nadel

St. Nicholas Magazine. Monthly children's magazine launched by Roswell Smith of the publishing house of Charles Scribner in November 1873. It became highly successful under its first editor, Mary Mapes Dodge, who assembled a staff of illustrators that included Palmer Cox, Arthur Rackham, Reginald Birch, and Thomas Nast and attracted contributions from leading writers, including stories by Louisa May Alcott and Rudyard Kipling (later published as *The Jungle Book*), as well as Mark Twain's *Tom Sawyer Abroad,* which it serialized. In 1880 Smith formed the Century Company to publish the most popular selections from the magazine as books; in 1884 Theodore Low De Vinne, one of the city's finest printers, was engaged to work for both the magazine and Century. At Dodge's death in 1905 William Fayal Clarke, a member of the staff for many years, was chosen to replace her. He successfully continued her policies, but the magazine declined after he resigned in 1927. *St. Nicholas Magazine* left the city after being sold in 1930 and ceased publication in June 1943.

Michael Joseph

St. Nicholas Russian Orthodox Cathedral. Church established on the Lower East Side in the early 1890s. The Reverend Alexander Hotovitzky traveled to Russia in 1900 and obtained 5000 rubles from Czar Nicholas II to build a church at 15 East 97th Street; designed by John Bergesen and built in 1901–2, the Muscovite Baroque structure featured five impressive domes and became a cathedral in 1905 when the seat of the American diocese was transferred to New York City from San Francisco. The 1917 Russian Revolution resulted in a conflict over the cathedral's leadership; during the 1920s the noncommunist Russian Orthodox Church Outside Russia, housed at 75 East 93rd Street, was founded. In 1952 the Supreme Court overruled a state law requiring the cathedral to be run by the American separatist movement, and in 2007 the two churches were reunited. The church was designated a landmark in 1973.

Kate Lauber

St. Nicholas Hotel. Hotel built in 1853 at Spring Street and Broadway. Constructed of white marble, containing 600 rooms, and employing more than 300 staff, it was one of the world's largest hotels and eclipsed the Astor House as the most luxurious hotel in New York City. Even as the wealthy gradually moved north of Houston Street, the hotel continued to attract exclusive guests and residents, largely because of the 1853–54 world's fair and the increasing cost of private homes and servants. During the draft riots of

1863 Mayor George Opdyke abandoned City Hall for more commodious headquarters in the hotel.

Andrew Wiese

St. Patrick's Cathedral. Roman Catholic cathedral church of the Archdiocese of New York, on 50th Street and Fifth Avenue in Manhattan. It was built by the architect James Renwick during the administration of Archbishop John Hughes. Although it was estimated that building the cathedral would take eight years when work began in 1859, the project took longer because of its interruption by the Civil War. During construction St. Patrick's Old Cathedral on Prince and Mott streets was destroyed by fire (1866) and then rebuilt and rededicated by John Cardinal McCloskey (1868), who also dedicated the new cathedral on its completion on 25 May 1879; the final cost of construction was $1.9 million. McCloskey appointed William Quinn, vicar of the archdiocese, as the first pastor of the new cathedral. The archbishop's house and the rectory were added from 1882 to 1884, and the school opened in 1882. Major additions to St. Patrick's were completed under Archbishop Michael Corrigan. The building of the spires began in 1885 at a cost of $200,000. Funds for building the Chapel of St. John were donated to the cathedral by Corrigan, who also began construction of the Lady Chapel in 1901, completed during the tenure of John Cardinal Farley. In 1945 the exterior of the cathedral was renovated extensively at a cost of more than $3 million. Later improvements included the great rose window, bronze doors on the Fifth Avenue side of the cathedral, and an elevator to the choir loft. The cathedral was visited by Popes Paul VI (1964) and John Paul II (1979). Funeral masses held there of notable people include those for Governor Alfred E. Smith (1920), baseball player Babe Ruth (1948), and Senator Robert F. Kennedy (1968). St. Patrick's Gothic exterior is 400 feet (120 meters) long and 174 (53 meters) wide and seats about 2400. The church is visited each year by hundreds of thousands of tourists.

St. Patrick's Cathedral, 1923

Margaret M. McGuinness

St. Patrick's Day Parade. The first St. Patrick's Day parade in New York City was held in 1762 by Irishmen in a military unit recruited to serve in the American colonies. Military units continued to organize the parade each year until after the War of 1812, when local Irish fraternal and beneficial societies began sponsoring the event. In the early nineteenth century the parade was a relatively simple affair in which the members of individual Irish societies joined together at their meeting rooms and moved in a procession toward St. Patrick's Old Cathedral, St. James Church, or one of the many other Roman Catholic churches in the city. The size of the parade increased after 1851, as individual societies merged under a single grand marshal. In keeping with the parade's military origins, soldiers marched at the head, followed by the Irish societies of the city. In the 1850s the Irish 69th Regiment (now the 165th Infantry) became the parade's primary escort unit and the Ancient Order of Hibernians its chief sponsor. Other major participants in the parade have included the 30 Irish county societies and various Emerald, Irish-language, and Irish nationalist societies. Floats, automobiles, and exhibits are not permitted in the parade, in which more than 150,000 marchers take part each year. Attendance at the St. Patrick's Day Parade has become a tradition among politicians of various ethnic backgrounds and political leanings. The route is designated on Fifth Avenue from 44th Street to 86th Street.

John T. Ridge

St. Paul's Chapel. A "chapel of ease" completed in 1766 at Broadway and Fulton Street for Anglicans living beyond convenient walking distance of Trinity Church. It was designed by Thomas McBean in the Georgian style and was often used for extraordinary ceremonies, including a thanksgiving service for George Washington on 30 April 1789 after his inauguration as president; his customary pew in the north aisle remains a popular tourist attraction. The chapel is the oldest public building in continuous use in Manhattan and its last remaining colonial church. St. Paul's was directly across the street from the World Trade Center, but when the twin towers collapsed during the terrorist attacks of 11 September 2001, the church did not suffer any structural damage. For almost a year after the attacks, St. Paul's served as the primary center for recovery operations, and the sanctuary was filled 24 hours a day with exhausted firefighters, police officers, and construction workers. It now houses a permanent exhibition about the recovery efforts; it also holds regular services, weekday concerts, and occasional lectures and provides shelter for the homeless.

Peter J. Wosh

St. Paul's Chapel, Columbia University. Chapel of Columbia University in Morningside Heights. Built during 1904–7, the chapel was a part of McKim, Mead and White's master plan for the university. Philanthropists Olivia Egleston Phelps Stokes and Caroline Phelps Stokes funded the project in 1903 on the condition that their nephew, architect Isaac Newton Phelps Stokes, be given the commission. The church's Northern Italian Renaissance exterior is redbrick and limestone to match the rest of the campus; the interior is Byzantine in style. The central dome rises 91 feet (27.7 meters). The chapel was designated a landmark in 1966. In the early twenty-first century it hosted services for faiths ranging from Baptists to Buddhists, as well as the concert series Music at St. Paul's.

Kate Lauber

St. Paul the Apostle, Church of. Victorian Gothic church at 405 West 59th Street, dedicated in the mid-1890s. In addition to an impressive exterior with 114-foot (34.7-meter) towers, this sanctuary is known for its interior, including ecclesiastic art and mosaic floors designed by Bertram Goodhue. Rev. Isaac Thomas Hecker helped to lay the foundation for the parish in the late 1850s when he organized the Paulist Fathers, or the Missionary Society of St. Paul the Apostle. Hecker is also credited with developing the first national Catholic magazine, *Catholic World.* Subsequently, this publishing enterprise became the Paulist Press.

Sharon Wilkins

St. Peter's Church. Episcopal church in the Bronx. Its beginnings may be traced to 1693 when Episcopalians in what is now the Bronx began meeting for worship. They erected a church in 1700 and received a minister from the Society for the Propagation of the Gospel in 1702. Generally St. Peter's chose to follow the rites of the High Church, retaining the Anglo-Catholic sacraments and liturgical traditions. Several of its rectors became bishops, notably Samuel Seabury (1729–96). By the mid-nineteenth century its wealthy congregation was concentrated in Throgs Neck. A new church in the Gothic Revival style at

2500 Westchester Avenue was designed by Leopold Eidlitz and opened in 1855. St. Peter's continued to occupy this structure into the early twenty-first century.

Peter J. Wosh

St. Peter's Church [Lutheran]. Church of the Evangelical Lutheran Church in America completed in 1977 and erected in the Citigroup Center (619 Lexington Avenue). Designed by Stubbins and Associates, the modern interior incorporates furnishings by Vignelli Associates as well as sculpture commissioned from Louise Nevelson. Long recognized for its substantial music ministry, a tradition established by the Reverend John Garcia Gensel, St. Peter's continues to be a sanctuary for musicians and the general public. Music association meetings, lectures, concerts, and jazz were among St. Peter's outreach and programs in the early twenty-first century.

Sharon Wilkins

St. Peter's Church [Roman Catholic]. Oldest Roman Catholic church in the state and city of New York, located at 22 Barclay Street. The cornerstone for the first St. Peter's was laid in 1785. Early parishioners included Elizabeth Ann Seton (1774–1821), who converted to Catholicism and was the first American to be canonized a saint (1975); and Pierre Toussaint (1766–1853), a black slave from Haiti and a major financial supporter of St. Peter's. Because of the rapidly growing parish, a larger church was needed, and in 1836 the cornerstone was laid on the same site for the current St. Peter's, designed by John R. Haggerty and Thomas Thomas in Greek Revival style. From 1800 to 1940 it operated the nation's first free parochial school. The congregation was largely Irish in the 1880s and Polish and Ruthenian in the 1920s; eventually many parishioners worked in the area but did not live there. The congregation was small in the 1960s but attracted many new members among residents of Battery Park City after 1990. The building was designated a landmark in 1965.

Located just north of Ground Zero, St. Peter's was greatly affected by the terrorist attacks on the World Trade Center on 11 September 2001: the roof was damaged when the landing gear from one of the planes fell on it; after Father Mychal Judge, the firefighters' chaplain, was killed in the North Tower, his body was carried into St. Peter's and placed before the altar; and the church became one of the major staging areas after the disaster, being used to house workers and volunteers and to store bandages, gas masks, boots, hoses, and cans of food.

St. Peter's Church: The Oldest Catholic Parish in New York State (New York: Parish of St. Peter, n.d.); Leo Raymond Ryan, *Old Saint Peter's: The Mother Church of Catholic New York (1785–1935)* (New York: United States Catholic Historical Society, 1935); Ellen Tarry, *The Other Toussaint: A Post Revolutionary Black* (Boston: Daughters of St. Paul, 1985)

Mary Elizabeth Brown, Ernest L. Osborne

St. Philip's Episcopal Church. Church formed in 1809 by a group of black parishioners who withdrew from Trinity Church on Wall Street because of its discriminatory practices. Located in Manhattan's Tenderloin District, its first rector (1812) was Peter J. Williams, Jr., an abolitionist and activist. Over several years, rising racism and neighborhood tensions resulted in periodic vandalism and destruction of church property. These conditions caused progressive black churches like St. Philip's to seek safer spiritual spaces in less contentious areas. In 1910 the congregation relocated to Harlem at 204 West 134th Street. Under the leadership of Rector Hutchins Chew Bishop, St. Philip's Church was rededicated on 25 March 1911. The design team included Vertner W. Tandy, the first registered black architect in New York State. During this time, St. Philip's purchased 10 apartment buildings on 135th Street that were previously restricted to whites. The presence of a major black congregation that owned property helped to pave the way for black migration from downtown to Harlem. In 1940 structural improvements were required, and Tandy was again called upon to coordinate the design. The church was granted New York City landmark status in 1993.

Sharon Wilkins

St. Raphael's Catholic Church. See Sts. Cyril and Methodius Church and St. Raphael's Church.

St. Raymond's Cemetery. Roman Catholic cemetery laid out in 1856 beside the Church of St. Raymond at Castle Hill and East Tremont avenues in the Bronx. In 1877 a noncontiguous parcel of more than 60 acres (24 hectares), with its main gate at Whittemore and East Tremont avenues, was added; this became known as Old St. Raymond's when another noncontiguous parcel of roughly the same size, with its main gate at Lafayette Avenue and East 177th Street, was added in 1954. Among the well-known figures buried at St. Raymond's are Francis P. Duffy, Billie Holiday, and "Typhoid Mary" (Mary Mallon). The cemetery was where the ransom was delivered in connection with the kidnapping of the son of Charles Lindbergh in 1932.

Howard Kaplan

St. Regis. Hotel erected in 1904 at 2 East 55th Street. Designed in a beaux-arts style by Trowbridge and Livingston and containing 316 rooms in 19 stories, it was intended to replace the Waldorf–Astoria as the city's most elegant hotel. The hotel was one of the first in the city that was a skyscraper, a structure that until that time had been used primarily for offices; it was also one of the first hotels in its neighborhood, in which mansions were soon displaced by fashionable shops and businesses. The hotel was designated a landmark in 1988. The St. Regis is among the most elegant and costly hotels in New York City, with prices beginning at more than $800 a night in 2010. It also has floors dedicated to condominium residency. Among the well-known residents have been Salvador Dalí, John Lennon, and Yoko Ono.

Andrew Wiese

Sts. Cyril and Methodius Church and St. Raphael's Church. Croatian Roman Catholic church formed in 1913 by Irenej Petricak, a Franciscan priest, at 552 West 50th Street in Manhattan. It was bought, renovated, and sustained with funds donated by parishioners. Missionary sisters joined the parish in 1922 to prepare children for the sacraments and teach them folksongs, the Croatian language, and the kolo dance, and a church hall opened as a religious, educational, and national center. During World War II the church became a center of opposition to the communist government in Yugoslavia and a staunch supporter of the Croatian independence movement. The church in 1971 set up a Croatian center at 40th Street and 10th Avenue; in 1974 the congregation moved to larger quarters near the center, at St. Raphael's Catholic Church at 502 West 41st Street. The former parish of St. Raphael's was organized in 1886; its redbrick church was designed in Gothic style by George H. Streeton and built in 1902. It served the Irish population of Hell's Kitchen and during World War II was home to many Italians who lived in the community. New York City political figure Daniel Patrick Moynihan was a member of St. Raphael's. When the Archdiocese of New York authorized Sts. Cyril and Methodius to relocate to St. Raphael's, three names were adopted to honor the church's past and its present (symbols of the rise of Christianity, Cyril and Methodius are considered to be patrons and protectors of Eastern Europe). The church served as a center of relief efforts during the Bosnian War, and in the early twenty-first century it oversaw the Cardinal Stepinac Croatian School.

Frances Kraljic, Sharon Wilkins

St. Stanislaus Bishop and Martyr Parish. Roman Catholic church founded in 1872 at St. Mark's Place and Third Avenue on the Lower East Side. It was the mother church of later Polish congregations in New York

City. In the early 1950s the parish began a steady decline as young Polish Americans left the neighborhood. It is located at 101 East Seventh Street.

James S. Pula

St. Stanislaus Kostka Vincentian Fathers Church. Polish Catholic church at 607 Humboldt Street in Greenpoint, Brooklyn. Built circa 1890, the church features two asymmetrical spires and accommodates the largest Polish Catholic congregation in the borough. In the early twenty-first century the Polish character of the neighborhood was reflected in the church's cross streets, Humboldt Street and Driggs Avenue, which were renamed Lech Walesa Place and Pope John Paul II Plaza.

Kate Lauber

St. Thomas Church. Episcopal parish church at Fifth Avenue and 53rd Street in Manhattan, formed in 1823. During the late nineteenth century parishioners first carried flowers used in the Easter service to St. Luke's Hospital (then at Fifth Avenue and 54th Street), thus beginning the tradition of an Easter parade along Fifth Avenue. The current building, designed in a French Gothic Revival style by the firm of Cram, Goodhue and Ferguson, is built of Kentucky limestone and was consecrated in 1916. A boarding school to train choirboys was added in 1919 and in 1989 moved to a 14-story building for 50 students at 202 West 58th Street; in the early twenty-first century this was the only school of its kind affiliated with a church in the United States. Under John Andrew, the rector from 1972 until 1996, attendance on Sundays rose to about 1450. The church has many notable features, including the statues on the facade completed in 1963; the 21-bell chime in the great tower; and the statue of Our Lady of Fifth Avenue, which was dedicated in a joint service by many of the city's church leaders on 17 January 1991. Also notable is the ornate reredos, which stands 80 feet (24 meters) tall, is pierced by three stained-glass windows, and features rows of statues that center on an empty cross, a symbol of the Resurrection.

George E. Demille, *Saint Thomas Church in the City and County of New York,* 1823–1954 (Austin, Tex.: Church Historical Society, 1958); J. Robert Wright, *Saint Thomas Church Fifth Avenue* (Grand Rapids, Mich.: William B. Eerdmans/New York: Saint Thomas Church Fifth Avenue, 2001)

J. Robert Wright

St. Stanislaus Kostka, 2009

St. Thomas More, Church of. English-style Country Gothic church at 65 East 89th Street, originally established in 1870 as Blessed Disciple Episcopal Church. In 1950 ownership was transferred to the Roman Catholic Church of St. Thomas More. The parish serves Manhattan's Carnegie Hill neighborhood on the Upper East Side. In the early twenty-first century its sanctuary remained one of the oldest church properties on the East Side of Manhattan. The church gained national recognition as the site of the memorial mass for John Fitzgerald Kennedy, Jr., in 1999.

Sharon Wilkins

St. Vincent de Paul Society. Charity organization. On 23 April 1833 six laymen gathered in Paris, France, to follow Saint Vincent de Paul's example of personal charity. St. Louis, Missouri, organized the first U.S. "conference," or local unit, in 1845; one formed in the Archdiocese of New York in 1847 and in the Diocese of Brooklyn in 1855. New York Vincentian Henry J. Anderson, M.D., collaborated with Levi Silliman Ives to establish the Catholic Protectory, an institution for youth, in 1863. New York created the first U.S. district council (1857) and hosted the first general assembly (1864). Vincentian Thomas M. Mulry reached out to the National Conference of Charities and Corrections, speaking before that group in 1884, and served as the first president of the society's U.S. Supreme Council (1915). National President T. Raber Taylor (1969–75) brought women into the organization. Both dioceses have

offices to coordinate Vincentian activities, New York City's at 1011 First Avenue and Brooklyn's at 191 Joralemon Street. The 2006 national annual report counted 16 conferences with 556 members in New York City and 61 conferences with 422 members in Brooklyn raising money and performing personal service, their work's value estimated at $1.5 million and $3.2 million, respectively.

Mary Elizabeth Brown

St. Vincent's Home for Homeless Newsboys. Forerunner of Mount Loretto–Mission of the Immaculate Virgin.

St. Vincent's Hospital and Medical Center of New York. Roman Catholic hospital in Manhattan, located on the corner of West 11th Street and Seventh Avenue. Opened by the Sisters of Charity of New York in 1849 on 13th Street between Third and Fourth avenues, it housed 30 patients at the outset and 70 by 1852. The first administrator was Mary Angela Hughes, who left when elected superior general of the Sisters of Charity in 1855; she returned to the hospital as its head administrator in 1861. In 1856 the hospital moved into a building at its current site that had earlier housed St. Joseph's Half Orphan Asylum. Costs were defrayed through private contributions, patient fees, and public appropriations. Catholic laywomen organized one of the most successful fund-raising efforts at the Crystal Palace in 1856. In 1880 a group of prominent Catholic laymen organized St. Vincent's Advisory Board; its first chairman was Eugene Kelly, nephew of Mary Angela Hughes and Archbishop John Hughes. Katherine Sanborne, a New York Hospital School of Nursing graduate, opened a school of nursing in 1892 with eight students. Additions were continually made in Manhattan: the Cardinal Spellman Pavilion (1941), the Alfred E. Smith Memorial Building (1950), the John J. Rascob Building (1952), the John A. Coleman Pavilion (1983), and the George Link, Jr., Pavilion (1988).

In 1975 St. Vincent's fell under the joint sponsorship of the Archdiocese of New York and the Sisters of Charity, and in 1977 it became a teaching affiliate of the New York Medical College. In 2000 St. Vincent's merged with Brooklyn's Catholic Medical Center to form Saint Vincent Catholic Medical Centers (SVCMC); this organization filed for bankruptcy in 2005. In order to regain solvency, SVCMC sold off several hospital locations under its umbrella in 2006. The hospital's specialties include cardiac surgery, oncology, and obstetrics, and it is the designated provider for the U.S. Family Health Plan (an option within TRICARE, which provides medical benefits for military personnel and their families) in New York State and New Jersey. The hospital is designated a "level one" trauma center, a "level three" neonatal intensive care unit, and an AIDS center by New York State. It is also noted for its cystic fibrosis, cardiovascular, and cancer centers, as well as its Chinatown outreach program. St. Vincent's emergency room served as the primary admitting station for those injured in the terrorist attacks of 11 September 2001.

Matthew J. Brennan

Saks Fifth Avenue. Firm of clothing retailers. It began in 1902 as a store on 34th Street near Herald Square opened by Andrew Saks (1847–1912), who had been born in Baltimore, worked as a newsboy and peddler in Washington, D.C., and operated men's stores in several cities. With Bernard Gimbel, a grandson of the founder of Gimbel's, his son Horace Saks agreed to a merger arrangement in 1923 under which Gimbel's bought out Saks's store; this enabled Horace Saks in 1924 to open a lavish store on Fifth Avenue catering to the wealthy. On the death of Saks in 1925 Adam Gimbel became the president of the business, which he expanded according to Saks's plans. After changing hands several times and going public in 1996, the firm was bought in 1997 by the department store consolidator Proffitt's, based in Birmingham, Alabama. Despite an investigation of the company's accounting practices in early 2005 by the Securities and Exchange Commission, Saks Fifth Avenue has set a standard for elegance for generations of shoppers and remains one of the best-known retailers in the world.

Leslie Gourse

salad-oil swindle. Notorious incident that occurred in 1963, involving the securities firm Ira Haupt and Company. After accepting warehouse receipts as collateral, the firm approved loans to a salad-oil company in New Jersey for which it traded commodities futures. When futures prices for soybean and cottonseed oil declined, the firm discovered that the receipts had been forged; the salad-oil company declared bankruptcy. Ira Haupt could not repay millions of dollars in loans taken to cover the declining futures prices and was liquidated in late November by the New York Stock Exchange, which covered the losses of the firm's 20,700 customers and set up a trust fund to pay for similar liquidations in the future.

Norman C. Miller, *The Great Salad Oil Swindle* (New York: Coward–McCann, 1965)

Mary E. Curry

Salisbury, Harrison E(vans) (*b* Minneapolis, Minn., 14 Nov 1908; *d* near Providence, R.I., 5 July 1993). Newspaper editor, reporter, and essayist. He began his career in 1930 at the United Press in Minneapolis, became head of its bureau in London during World War II, and worked after the war as a foreign editor. He joined the *New York Times* in 1949 and reported from the Soviet Union for five years. In 1955 he won a Pulitzer Prize for a series of stories about the country written after his return to New York City. He was promoted to national news editor of the *Times* in 1962 and assistant managing editor in 1964;

Andrew Saks's department store on Herald Square, forerunner of Saks Fifth Avenue

in 1966 he became the first U.S. journalist to report from North Vietnam, outraging the administration of Lyndon B. Johnson by reporting that contrary to official claims, Vietnamese civilians had been bombed. In 1970 he became the first editor of the "op-ed" page, and after retiring from the newspaper he retraced Mao Zedong's "long march" of 1934, which became the subject of *The Long March* (1985), one of his more than two dozen books.

Michael Green

Salmagundi Club. Club formed in 1871 by a group of artists and their patrons, incorporated in 1880 as the Salmagundi Sketch Club. Its members rented a brownstone at 14 West 12th Street from 1895 until 1917, when they bought a brownstone at 47 Fifth Avenue (designated a national landmark in 1974). Women were first admitted in 1973. In 2007 there were more than 600 members. The club holds a number of events open to the public, including exhibitions of members' work and competitions for nonmembers; it also sponsors lectures, demonstrations, and sketch classes and has a reference library. The building reputedly has the only remaining stoop on Fifth Avenue.

James E. Mooney

Salomon, Haym (*b* Leszno, Poland, *ca* 1740; *d* Philadelphia, 6 Jan 1785). Patriot and financier. After moving to New York City he opened a brokerage and became a patriot. Imprisoned during the British occupation as a spy, he was released on parole to serve as an interpreter for Hessian troops, whom he encouraged to desert; after being freed he was arrested again, confined to the Provost prison, and condemned to death. He escaped to the American lines and traveled to Philadelphia, where he gave large sums to finance the patriot cause and died nearly penniless.

Laurence R. Schwartz, *Jews and the American Revolution: Haym Salomon and Others* (Jefferson, N.C.: McFarland, 1987)

James E. Mooney

Salomon Brothers. Firm of investment bankers. Its forerunner was a small brokerage opened on Exchange Place in the 1880s by Ferdinand Salomon, a German immigrant. The firm of Salomon Brothers and Hutzler, formed at 80 Broadway in 1910 by his sons Arthur Salomon, Percy Salomon, and Herbert Salomon and by Morton Hutzler, began after World War I to trade securities of the U.S. government, which remained its chief source of income for the next half century. The headquarters moved to 60 Wall Street in 1922, and by the mid-1920s Arthur Salomon was a leading financier on Wall Street, one of few who did not need an appointment to meet with J. P. Morgan. By underwriting bonds for Swift and Company in 1935 the firm was the first to break the "Wall Street strike" (the refusal of investment bankers to underwrite securities to protest regulations of the New Deal). Among those who led the firm during the 1940s and 1950s were Benjamin Levy (1888–1966) and Rudolph Smutny (1897–1974), whose aggressive style of management led to his replacement in 1957 by William Salomon (*b* 1914).

The firm was reshaped by several men who joined it as partners during the 1950s, including Sidney Homer, Gedale B. Horowitz, Henry Kaufman (1927–2000), John Gutfreund (*b* 1929), and William Simon (*b* 1927; later secretary of the treasury under President Gerald R. Ford). William "Billy" Salomon became the first managing partner of the firm in 1963. By the late 1960s the firm made "block trades" involving unprecedentedly large amounts of stock. In 1970 it moved its headquarters to 1 New York Plaza (near Battery Park City) and became known as Salomon Brothers. The firm helped to end a fiscal crisis in the city in 1975 by underwriting more than $1 billion in bonds of the Municipal Assistance Corporation. After William Salomon retired, he was succeeded in 1978 by Gutfreund, who in 1981 oversaw a $550 million merger with the Phibro Corporation (a commodities firm formed in the city in 1892 by Julius and Oscar Philipp): this provided the capital that allowed Salomon Brothers to become the largest firm of securities underwriters by the mid-1980s. Its prosperity was imperiled in August 1987 by revelations that illegal bids had been made for Treasury securities, leading to the resignation of some of the firm's most important officials, including Gutfreund. Salomon Brothers employed many people who later managed or founded other leading financial companies, including Mayor Michael Bloomberg, who worked at Salomon until 1981. In 1997 Smith Barney, a subsidiary of Travelers Group, merged with Salomon Brothers to form Salomon Smith Barney. In 1998 Travelers and Citicorp combined to become Citigroup Inc., with headquarters at 399 Park Avenue. The name Salomon Smith Barney was dropped after what was known as the 2003 global settlement agreement and several stock fraud claims against the bank.

James Bradley, Meryl Cates

saloons. On saloons generally, see BARS, TAVERNS, AND SALOONS; the type of saloon offering entertainment in the nineteenth century is discussed in the entry CONCERT SALOONS.

Salvadorans. Few Salvadorans lived in New York City until the mass migration occasioned by the 1979 civil war in El Salvador. In the following two decades the number of Salvadorans in the city increased from 7260 to more than 100,000, many living in Far Rockaway, Jamaica, Flushing, and upper Manhattan. Newer immigrants tended to be urban working class, employed as factory workers, domestic workers, carpenters, and gardeners. A few were granted political asylum, though under a 1990 law they were given "temporary protected status" from deportation. In the early 1990s fewer than 15,000 Salvadorans had acquired legal residency, and most remained fearful of deportation. Because of their long workdays Salvadorans enjoy few voluntary associations. Soccer clubs and Salvadoran restaurants called *pupuserias* offer a place for social gatherings. In the early twenty-first century four of the top 10 cities with the most residents born in El Salvador were in the Greater New York area.

Sarah Mahler

Salvation Army. Charitable organization formed in 1878 in England by William Booth (1829–1912). It began as an evangelical Christian movement for the urban working class and poor and had titles, ranks, brass bands, and uniforms modeled on those of the British military. A small corps was set up in Philadelphia in 1879, but the first authorized missionary to the United States was George Scott Railton, who disembarked at Battery Park in March 1880 with seven women "soldiers." From this time to 1905, New York City was the national headquarters of the organization. The corps sought spiritual salvation of the "fallen, degraded, and forsaken" at meetings held outdoors and in rented halls, where large crowds were drawn by popular tunes and hymns, parades, bands, and the testimony of the repentant. The organization focused almost exclusively on evangelism during its early years and met with some opposition. By the late 1880s it sponsored several charitable endeavors, including shelters for "fallen women" and homeless men and assistance by women members to families in slums. In 1890 large cities in 35 states had 410 corps. During the same year Booth published *In Darkest England and the Way Out,* which described how the organization's doctrines could be applied practically and marked the shift of the organization almost entirely toward social work.

During the next 25 years the Salvation Army became widely known and respected in the United States for its efficient administration of many services. At its workingmen's hotels (temporary shelters opened in the 1890s in New York City; Chicago; San Francisco; Buffalo, New York; and Newark, New Jersey) a bed, a wash, and a meal were made available to men for 11 cents or two hours' work at the shelter or at a woodyard. These hotels inspired industrial homes, where homeless or unemployed men (often alcoholic) were employed to salvage and repair used clothing, which

was resold at low prices to the poor. Rescue homes helped prostitutes and desperate women, and prison brigades helped prisoners and former prisoners. By 1895 the American branch of the organization was the largest and most successful overseas mission and had its own national headquarters at 120 West 14th Street. Booth named several of his children and their spouses national commanders in the United States. He and his son Bramwell were sometimes considered rigid and autocratic for dictating from London without understanding the needs of the army in the United States. A schism occurred in 1896, when Booth's son Ballington, national commander from 1887 to 1896, and his wife resigned to form the Volunteers of America. Booth's son-in-law Frederick Booth–Tucker became the national commander in 1896 and held the post until 1904, when Booth's daughter Evangeline took over; her tenure ended in 1934.

World War I marked the heyday of the Salvation Army in the United States. Its "lassies" baked doughnuts, wrote letters, sewed, and provided other services for U.S. troops in Europe. Public contributions to its welfare projects increased greatly, and eventually the organization became a beneficiary of fund drives by the Community Chest and the United Way. By the 1920s it operated 26 homes for unwed mothers that provided prenatal care, delivery and recovery services, infant care, and an adoption service. As the organization grew it became decentralized, and in 1920 the United States was divided into four independent territories. The tremendous extent of homelessness and unemployment during the Depression put a severe strain on resources, and the organization gradually declined in importance as its mix of services and evangelizing came to be perceived as outmoded and as the government assumed a greater role in social welfare. During World War II it joined with the Red Cross, the Young Men's and Young Women's Christian Associations, and other groups to form the United Service Organizations, which provided a range of personal services to U.S. troops. After the war the industrial homes were superseded by adult rehabilitation centers, which provided both men and women with shelter, food, clothing, medical care, psychiatric counseling, meaningful work, and vocational training, as well as practicing Christian evangelism. Rescue homes disappeared as the stigma attached to unwed mothers diminished, and the Salvation Army opened maternity and general hospitals, day-care centers, and residences for young working women. A rescue home opened in 1892 on the Lower East Side eventually became Booth Memorial Hospital and Medical Center.

In the 1990s the Salvation Army was the single largest charitable organization in the country. In 2007 it had 46 social programs, which provided aid to children and adults in more than 35 halls in the New York City metropolitan area, which is part of its Eastern Territory. Among its services are emergency disaster relief, aid to poor families and teenagers, housing for the elderly, and unemployment and missing persons bureaus. Because of its widely recognized social services, the Salvation Army is often thought to be primarily an agency for social welfare, but it is also a Christian denomination with 1.5 million adherents in 90 nations.

Jane Allen

Sampson, William (*b* Londonderry [now in Northern Ireland], 17 Jan 1764; *d* New York City, 28 Dec 1836). Lawyer. Exiled as an Irish nationalist, he settled in New York City in 1806, where, as a Protestant, he remained active in promoting the welfare of Irish Catholic immigrants and articulating his nonsectarian vision. In his law practice he championed individual rights: among his cases was one establishing the principle that Catholic priests should not have to divulge information revealed in confession. Sampson ridiculed excessive reliance on English common law and promoted reform and codification of the law to meet American needs. He unsuccessfully argued against English precedents in defending the Journeymen Cordwainers, a trade union indicted for conspiracy. He was also a skilled stenographer who published reports of the city's more engrossing trials. His flamboyant eloquence and whimsy in argument furthered public interest in the law.

See also Irish Republicanism.

Mariam Touba

Sanborn fire insurance maps. Maps designed to show insurance agents potential fire hazards in more than 12,000 U.S. cities and towns. D. A. Sanborn opened the National Insurance Diagram Bureau in New York City in 1867; it took the name Sanborn Map Company in 1902, and the company headquarters moved to Pelham, in Westchester County, in 1907. The maps, produced until the late 1960s, detailed the size, use, and materials of individual buildings and are an important tool for researchers such as historians, architects, geographers, and environmentalists. In the early twenty-first century the company is based in Colorado and is a leader in the GIS and photographic survey fields.

sandhogs. Slang term that refers to the underground miners and construction workers responsible for excavating and building the foundations of most of New York City's bridges and skyscrapers as well as all its tunnels—including the subways, sewer system, and freshwater supply tunnels. Their earliest work in New York City was doing caisson excavation for the Brooklyn Bridge, beginning in 1870. During that project, the rate of decompression sickness ("the bends") among sandhogs was so high that excavation for the construction of the tower on the Manhattan side stopped 30 feet (9 meters) above the bedrock, leaving the tower to rest on sand. In 1916 a 28-year-old sandhog named Marshall Mabey was working on a subway tunnel under the East River when the pressure differential sucked him through a hole in the side of the tunnel and through 12 feet (3.7 meters) of riverbed, shooting him above the East River on a geyser four stories high, an accident he survived without major injury. The advent of more sophisticated technology, such as air compression systems and tunnel boring machines, helped to make the work of sandhogs safer, but it remains dangerous, a factor that contributes to sandhogs' high wages. Because the urban mining projects in which sandhogs are involved often span decades, it is not uncommon for several generations of a family to work together as sandhogs, passing the occupation's extensive folklore from parent to child. Since 1969 hundreds of sandhogs have been at work on the largest capital construction project in city and state history, water tunnel no. 3, which will stretch 60 miles (96.5 kilometers) into the Catskills and deliver up to 1.5 billion gallons of water to New York City daily.

Rowan Moore Gerety

Sandy Ground. Neighborhood in southwestern Staten Island, centered at Bloomingdale Road between Rossville and Charleston. Settled in 1830s as the first free black community in New York State and perhaps the nation, it was known as Harrisville and then as Little Africa before being given its current name because of the poor quality of its soil. Only a few descendants still live in the area. The early settlers included a few local families along with oystermen from New Jersey, Delaware, Virginia, and Maryland, who were attracted by the rich oyster beds in the area and by business opportunities not available in the South. The area was served by the Underground Railroad, and the Zion African Methodist Episcopal Church (1850) at Bloomingdale and Woodrow roads became a community center. Food crops and farm animals were kept near well-maintained homes on large plots, and relations with white neighbors were cordial. As the oyster beds of Raritan Bay became overworked many oystermen moved their operations to the Arthur Kill; when these

oyster beds were condemned in 1916 some residents turned to well digging, ironworking, smithing, and midwifery. Homes fell into disrepair and a fire in 1964 destroyed many dwellings. New housing developments stand near the church; the small museum run by the Sandy Ground Historical Society, which was formed in 1979, is visited by thousands of schoolchildren every year. The neighborhood was listed on the National Register of Historic Places as an archaeological site in 1982. Most blacks moved as real estate prices rose but return to attend church services and to affirm their historical connection.

Howard R. Weiner

Sandy Hook. Narrow sandspit 5 miles (8 kilometers) long just off the New Jersey shore at the entrance to Lower New York Bay, regarded as the outer limit of the Port of New York. It resembles a fishhook curving inward from the sea and pointing toward Lower Manhattan, which is 17 miles (27 kilometers) to the north. Between Sandy Hook and Coney Island lies a broad sandbar, in some places perilously close to the surface, and large vessels must stay within the few hundred yards of the Main–Gedney Ship Channel. Only experienced harbor pilots who know the location of every sandbar may navigate large ships past Sandy Hook and into the Narrows and Upper New York Bay.

Kenneth T. Jackson

Sandy Hook Pilots. Organization whose members board arriving ships to guide them safely through the Lower Bay and the Narrows or the waterways around the west side of Staten Island. It was created in 1895 by the legislatures of New York and New Jersey to end open competition among the fleet of individually owned schooners then in use. The legislation was in part brought about by the disastrous blizzard of 1888 that caught vessels offshore, destroying 12 of the 17 schooners then active, with heavy loss of life. The pilots operate out of a base in the Rosebank section of Staten Island. Modern pilot vessels are stationed 7 miles (11.3 kilometers) off Rockaway and Sandy Hook in the vicinity of the Ambrose Channel Light. The pilots are transferred to ships by smaller motor launches; they guide the ships into the Upper Bay where docking pilots employed by the tugboat companies take over. Pilots stationed at City Island bring ships through the East River from Long Island Sound, and Hudson River pilots board ships at Yonkers to take them up the river as far as the Port of Albany.

Norman J. Brouwer

San Gennaro Festival. Annual festival held in mid-September along Mulberry Street in Manhattan, organized from 1926 and perhaps earlier by a men's club and mutual benefit society of immigrants from southern Italy. The food offered at the festival has become more international as immigrants from many countries have settled in New York City and taken up the vending trade. The festival is not primarily a religious one, but a statue of San Gennaro (Januarius), the patron saint of Naples, is still enshrined on an outdoor altar to preside over the affair. In 1997, after years of rumors about Mafia involvement, several members of the Genovese crime family were convicted of extortion in connection with the festival. Allegations of Mafia involvement have continued into the twenty-first century, and gentrification in Little Italy has led to further conflict concerning the festival, with many residents complaining about noise and litter.

Mary Elizabeth Brown

Sanger [née Higgins]**, Margaret (Louise)** (*b* Corning, N.Y., 14 Sept 1879; *d* Tucson, Ariz., 6 Sept 1966). Activist and birth control advocate. She trained as a nurse before marrying architect William Sanger in 1902, and in 1910 she moved with her family to Manhattan, where she embraced radical politics and bohemian culture and lived successively at 135th Street in Hamilton Heights, Post Avenue near Dyckman Street (from 1914), and 236 West 14th Street (from 1917). While working as a visiting nurse and midwife for poor families in the Lower East Side she saw the suffering inflicted on women by unwanted pregnancies and became convinced that it would be alleviated only by making contraceptives widely available. Defying state and federal "Comstock laws," she advocated contraception in her journal the *Woman Rebel* (1914) and published explicit information on contraceptive methods and sexuality in her pamphlets *Family Limitation* (1914) and *What Every Girl Should Know* (1916). She helped to coin the phrase "birth control" and with her sister Ethel Byrne opened the first birth control clinic in the country at 46 Amboy Street in Brownsville in Brooklyn on 16 October 1916. It printed advertisements in English, Italian, and Yiddish and served more than 400 women before being closed by the police on 25 October. The two sisters were arrested and convicted of violating state laws prohibiting the distribution of contraceptives and information about them. Byrne was sentenced to 30 days in the workhouse in Blackwell's Island, and Sanger to 30 days in the Queens County Penitentiary, where she gave lectures on birth control to her fellow inmates. In 1918 the New York State Court of Appeals upheld Sanger's conviction but allowed physicians to prescribe contraceptives to women to cure or prevent disease.

In 1921 Sanger formed the American Birth Control League at 104 Fifth Avenue. On 13 November a riot nearly broke out after police removed her from the stage of Town Hall. In seeking the support of physicians, she fought for legislation giving them the exclusive right to dispense contraceptives. Divorced in 1920, Sanger then married J. Noah Slee, a millionaire who supported her work, and on 2 January 1923 opened the Birth Control Clinical Research Bureau (later renamed the Margaret Sanger Bureau) at 17 West 16th Street, a facility staffed by such women physicians as Hannah Stone (1893–1941), who provided gynecological services as well as contraceptives. For some time Sanger lived in an apartment above the bureau, which gathered detailed statistics on the effects of contraceptives on women's health. At the urging of Catholic leaders the bureau was raided on 15 April 1929 by the police, who seized its medical records. Outraged at this violation of the confidentiality of patients' records, the medical establishment rushed to Sanger's defense, and charges against her were dropped. In 1939 the American Birth Control League combined with the Clinical Research Bureau to become the Birth Control Federation of America, renamed the Planned Parenthood Federation of America in 1942.

By 1938, the year in which she wrote an autobiography, Sanger was dismayed with the increasingly conservative male leadership of the birth control movement, which shifted its focus from female empowerment toward "child spacing" and infertility. She remained an active supporter of Planned Parenthood but retired to Tucson. In 1952 concerns about overpopulation and global stability led her to help form the International Planned Parenthood Federation. She also encouraged the research that led to the development of the first birth control pill in the early 1960s.

Esther Katz

Sanitary Commission. See U.S. Sanitary Commission.

Sanitary Report of 1866. The *Report on the Sanitary Condition of the City* was published in 1866 by the Citizens' Association of New York. It led to the establishment of the Metropolitan Board of Health, which later became the New York City Department of Health. The report presented the high costs of disease through a detailed inspection of the city's health districts. Organized by a committee of the city's political and commercial elites, such as Hamilton Fish, John Jacob Astor, Jr., August Belmont, and Robert Roosevelt, the report brought to public attention the horrifying conditions of life in the rapidly

expanding city. Its medical committee was also composed of some of the leading physicians in the city, including Valentine Mott, Austin Flint, Stephen Smith, and Willard Parker.

The "introductory statement" to the report noted that "when pestilential diseases visit this city, the impotence of the existing sanitary system" is exposed. "The people are panic-stricken, while the interests of commerce suffer by the *insensible loss of millions.*" Underlying the report was a belief that "Public Health is Public Wealth." In general, the tone of the report was patronizing toward the poor, the most obvious victims of disease, explaining their suffering as a result of personal habits such as ignorance and lack of cleanliness. However, the report also said that diseases can be stopped "if the laws of public hygiene have sway . . . and sanitary regulation" is practiced. The report marked a milestone in public health for it laid out the proposition that the city had no more important responsibility than the protection of the well-being of its citizens.

John Duffy, *A History of Public Health in New York,* vol. 2 (New York: Russell Sage, 1974); Charles E. Rosenberg, *The Cholera Years: The United States in 1832, 1849, and 1866* (Chicago: University of Chicago Press, 1987)

Molly Rosner

sanitation. Colonists were responsible for disposing of their own waste in New Amsterdam. In 1657 the Common Council forbade the disposal of offensive materials in the streets (including dirt and animal carcasses), established proper dumping sites, and required residents to clean the streets in front of their homes. Efforts to ban the emptying of privies in the streets were made as early as 1658 but for years remained unsuccessful. Most sewers were simply open or closed ditches for draining surface water; they often overflowed after becoming clogged with solid wastes and the contents of illegally connected privies, cesspools, and sinks. During the 1670s cartmen were granted a monopoly over their trade in exchange for hauling away household refuse, which residents set out once a week. The city's sanitation code was often ignored, and waste ranging from garbage to sewage was disposed of in the streets, attracting pigs, dogs, and rats. Slaughterhouses were banned within the city limits by the Common Council in 1676, but those on the outskirts were soon engulfed by the growing city. Rotting carcasses and entrails continued to be dumped in the streets. The first public sewer, built in 1703, emptied into the waterways around the city.

During 1784–85 the city appointed three street commissioners to oversee the work of cartmen and also so-called scavengers who picked through solid wastes for reusable materials. For the next century responsibility for street cleaning and waste collection was assumed by a succession of public and private ventures. Political ties figured in the awarding of contracts, and the city often took over for contractors who performed inadequately. The thoroughness of disposal depended on a fluctuating market for different kinds of refuse (ash, street sweepings, manure, garbage, and rubbish). Unsalvageable materials were loaded onto scows and dumped at sea, a practice that from the 1850s drew criticism as waste clogged sections of the harbor and washed ashore in resort communities. A large, decentralized network of sewers was haphazard; disposal for the entire city became possible only when a constant supply of water was provided by the Croton Aqueduct after 1842. Campaigns for sanitary reform, bolstered by the widespread belief that decaying garbage and filth released poisonous vapors that caused disease, led to the formation of the Metropolitan Board of Health in 1866. The board assumed control of street cleaning and waste collection and also won the cooperation of the courts and the police in enforcing an ordinance prohibiting slaughterhouses south of 40th Street. In 1870 the board was replaced by the Department of Health, which in the same year banned all slaughterhouses between Second and 10th avenues and by 1877 had largely confined 52 of these establishments to two areas, one bounded by 41st Street, 10th Avenue, 40th Street, and the Hudson River, the other by 47th Street, the East River, 43rd Street, and First Avenue. In 1877 the first chemically treated wastewater facility in the United States opened at Coney Island.

Waste collection and street cleaning were handled by the Metropolitan Board of Police from 1872 until the Department of Street Cleaning was formed in 1881. Political patronage remained an obstacle to effective service until 1895, when George E. Waring, Jr., was appointed commissioner. He reorganized the department along military lines, minimized political influence in employing workers, stressed sweeping by hand rather than with machines, and dressed street sweepers in white uniforms, earning them the nickname "white-wings." Waring also revolutionized waste disposal and temporarily suspended ocean dumping. Although experiments with incineration and the landfilling of garbage had been conducted as early as 1870, only in 1896 did Waring implement a system of salvaging solid wastes: garbage was boiled down for greases and fertilizers by a private firm on Barren Island, ash and street sweepings were used as fill in dumps and low-lying areas, and rubbish (wood, paper, rags, bottles, and metals) was reclaimed by scavengers for a fee paid to the city.

Sanitary conditions improved steadily. Manure and dead horses disappeared from the streets as automobiles became popular, and public education campaigns helped to make littering socially unacceptable. After World War I salvaging became less profitable as inflation rose and synthetic materials were introduced. Garbage reduction and rubbish reclamation companies defaulted on their contracts, leading the city to resume ocean dumping. The Department of Street Cleaning

"Street Arabs Taking a Foot-bath," Harper's Weekly, *3 August 1872*

was renamed the Department of Sanitation in 1929 and given new jurisdiction over sewers (until 1938) and centralized control over all street cleaning and solid waste disposal functions throughout the city. This centralization brought about the first significant improvements in sewage treatment in the 1930s; federal aid was used during the New Deal to build an enormous sewage treatment plant on Wards Island and upgrade existing plants.

When ocean dumping of garbage was outlawed by the U.S. Supreme Court in 1934, the city had 22 incinerators and more than 80 inland dumps, but most of these were expensive to operate and soon became inadequate. The Uniformed Sanitationmen's Association was formed in 1935. In 1938 the sanitation commissioner William F. Carey launched a vigorous campaign to reduce costs by using vast sanitary landfills, which he argued were cheaper than incinerators and created usable property out of wetlands. His plan met with opposition, and between 1938 and 1940 he was engaged in a debate with citizens' groups and the parks commissioner, Robert Moses, over plans to fill in parts of Jamaica Bay. He agreed to limit operations there but extended landfills elsewhere, which soon became the city's principal disposal method. Beginning in 1946 plans were made to build more incinerators; few were completed owing to high construction costs and opposition from neighborhoods near proposed sites, and a landfill opened at Fresh Kills in Staten Island as a temporary facility in 1948. The sewage system was also expanded.

To ensure that streets were kept clean, several measures were adopted in the 1950s: alternate-side-of-the-street parking, mechanical sweepers, monitoring of service in each block, and collection of household waste two to five days a week. In 1975 the "Scorecard Cleanliness Program" was implemented to grade the condition of streets and sidewalks on a scale from "filth" to "acceptably clean." That year, 71.3 percent of all streets and sidewalks earned an "acceptably clean" rating. The city's physical appearance declined in part because of public service cutbacks stemming from the fiscal crisis of the 1970s. In 1980 street and sidewalk conditions reached an all-time low, with only 53 percent qualifying as "acceptably clean."

In March 1986 the North River Wastewater Treatment Plant began advanced preliminary treatment of wastewater that eliminated, for the first time in the city's history, the daily discharge of raw sewage into the Hudson River. Located on a 28-acre (11.3-hectare) reinforced concrete platform between 137th and 145th streets west of the West Side Highway, the plant initially suffered from design flaws and emitted higher-than-permitted levels of hydrogen sulfate. Concerned neighbors organized West Harlem Environmental Action and joined forces with the Natural Resources Defense Council in suing the city to mitigate odors and address related environmental and social justice concerns.

In 1987 a barge named *Mobro 4000* traveled roughly 6000 miles (9656 kilometers) from Islip, Long Island, to Central America and back to Brooklyn, New York, in search of a disposal location for 3100 tons (2812 metric tons) of residential trash, commonly called municipal solid waste. The barge received sensationalized media coverage and was turned away by officials in dozens of countries who feared that it contained hazardous material. The New York City Department of Sanitation agreed to burn the barge's contents at its Southwest Brooklyn incinerator. In 1989 the city mandated municipal recycling to extend the lifecycle of Fresh Kills, then the largest sanitary landfill in the world at approximately 2200 acres (890 hectares).

In 1992 Mayor David N. Dinkins appointed Emily Lloyd as the city's first female sanitation commissioner. Incineration of municipal solid waste within city limits ended after a 1994 U.S. Supreme Court ruling, which mandated the testing of ash for the presence of hazardous materials, proved too costly. In 1996 Mayor Rudolph W. Giuliani announced that the city would close Fresh Kills, its last remaining landfill, by the end of his term in December 2001. To replace Fresh Kills, the city hired national solid waste management firms to export, for the first time ever, all of its trash to disposal facilities outside of the five boroughs.

The shift from municipal to corporate disposal was one of the most dramatic and costliest public works infrastructure realignments in the city's history. Within six years (1996–2001) the century-old trend toward the centralization of disposal under one municipal agency was reversed. City trash became interstate commerce and was shipped by tractor trailer, rail, and barge to dozens of landfills and incinerators in states all over New England, the South, and the Midwest. Privatization also effectively doubled the annual operating budget of the Department of Sanitation from $590 million in 1997 to more than $1 billion in 2002.

The disproportionate clustering of commercial waste transfer stations (WTS) needed to export trash in the South Bronx and the Brooklyn neighborhoods of Red Hook, Greenpoint, and Williamsburg resulted in a wave of environmental justice activism. Roughly 40 percent of the city's WTS in the late 1990s were located in Brooklyn, with most located north of the Williamsburg Bridge near the Newtown Creek Wastewater Treatment Plant, the largest on the East Coast. The South Bronx contained a high concentration of WTS plus dozens of private recycling and salvage yards that, when combined with the city's mammoth meat, fruit, and vegetable market, resulted in millions of tractor trailer trips each year through densely populated streets. Community coalitions such as Neighbors against Garbage (NAG), Groups against Garbage (GAGS), and Organization of Waterfront Neighborhoods (OWN) formed to fight the placement of WTS in low-income, immigrant, white ethnic, Latino, and African American communities. Pressure from activists forced the city to adopt a policy of borough equity in the placement of WTS and the reduction of trash transport by diesel trucks.

Although Fresh Kills stopped receiving municipal solid waste ahead of schedule in March

Street sweeper with handcab

Sanitation dump on the East River, ca *1937*

2001, it reopened the day after the terrorist attacks on the World Trade Center of 11 September 2001 to receive debris from Ground Zero. Fresh Kills became a staging ground for recovery efforts with 132 acres (53.4 hectares) set aside for government officials to sort through material brought from lower Manhattan and another 48 acres (19.4 hectares) for burial. Mayor Michael Bloomberg announced in 2003 that Fresh Kills would be transformed into a park twice the size of Central Park, complete with a memorial for victims of 9/11.

In 2006 the Department of Sanitation collected 12,000 tons (10,886 metric tons) of municipal solid waste and swept 6000 miles (9656 kilometers) of roads, the equivalent distance from New York City to Los Angeles and back, daily. That same year the department had 9701 employees, 2230 collection trucks, 450 mechanical sweepers, and 200 operational facilities that ranged from section stations and repair shops to marine transfer stations. In 2007 the department achieved a recycling diversion rate of 32 percent and the highest level of cleanliness in history, with a 94.3 percent "acceptably clean" rating. The department's operating budget for 2007 was just under $1.2 billion. In addition to street cleaning, waste collection, and recycling, the department is also responsible for removing snow and enforcing the city's health and administrative code to deter littering and illegal dumping.

In 2008 the Department of Environmental Protection (DEP) maintained more than 6000 miles (9656 kilometers) of sewer pipes and operated 14 wastewater treatment plants throughout the five boroughs that handled a total of 1.4 billion gallons (5.3 billion liters) of sewage each day. That same year the DEP's Bureau of Wastewater Treatment had 1900 employees, an annual operating budget of $262 million, and an annual capital budget of $114 million.

San Juan Hill. Former neighborhood on the Upper West Side of Manhattan, bounded to the north by 64th Street, to the east by Amsterdam Avenue, to the south by 57th Street, and to the west by the Hudson River. Dutch settlers named the area Bloemendael or Bloomendal, which was changed to Bloomingdale by the English after 1664. Shantytowns built by Irish immigrants covered some parts by the middle of the nineteenth century. The name San Juan Hill may refer to the black veterans who moved to the area after the Spanish–American War, or to the street brawls that often erupted there, many of them interracial. In the early twentieth century the neighborhood became the center of black life in New York City, and its theaters and clubs played an important role in the development of ragtime and early jazz. Several musicians lived there, including the bandleader Benny Carter and the pianist Thelonious Monk, after whom the intersection of 63rd Street and West End Avenue is named. The neighborhood was also the setting for Leonard Bernstein's musical *West Side Story* (1957). In 1956 it was designated as the site of Lincoln Center for the Performing Arts. Construction of the complex displaced more than 1500 families, most of them black and Puerto Rican, and other tenements were demolished to make way for a branch of Fordham University, expensive new housing near Broadway, and new housing for the elderly farther west. The area attracted a number of immigrants from the Dominican Republic, the United Kingdom, China, Israel, and France in the 1980s, by which time the southern reaches were considered part of Clinton and the name San Juan Hill became obsolete.

Mario A. Charles

San Remo. Cooperative apartment building at 145–146 Central Park West completed in 1930 on the site of a hotel with the same name. The 1929 Multiple Dwelling Law allowed architect Emery Roth to design a 27-story twin-towered Italian Baroque skyscraper that has appealed to the rich and famous throughout its history.

Eric Robinson

Santería. Religion incorporating Roman Catholicism and the religion of the West African Yoruba people, developed in Cuba by slaves under Spanish rule. Leaders, or *babalawos*, make divinations through seashell readings; prescribe herbal medicine, baths, and potions; and call for sacrifices to appease deities known as *orishas*. Candles, beads, oils, and plaster statues of Catholic saints are sold in botánicas in the Bronx, Brooklyn, and East Harlem. Followers had conflicts with the American Society for the Prevention of Cruelty to Animals over the practice of sacrifice: during a raid on 23 May 1980 three goats and 18 chickens were retrieved from an apartment on East 146th Street in the Bronx. Among the leaders of Santería was Oba Ifa Morote, who founded Santería in the city. A babalawo born in Cuba in 1903, he moved to New York City in 1946 and became known as Padrino.

Walter Friedman, Marjorie Harrison

Sardi's. Restaurant opened in 1921 in a brownstone at 246 West 44th Street by Vincent Sardi and his wife, Eugenia Sardi; its first customers included prominent figures in the silent-film industry. In 1926 the restaurant moved to the Shubert Building at 234 West 44th Street, next to the *New York Times.* Vincent Sardi, Jr., son of the original owner, took over the restaurant in 1946. In 1950 a practice began for which

Sardi's became famous: its patrons gave a standing ovation to the cast of a show that had just opened, and the members of the cast dined late into the evening while awaiting the arrival of reviews in the next morning's newspapers. In 1985 Vincent Sardi, Jr., sold the restaurant to three partners who encountered financial troubles and closed it on 30 June 1990. The restaurant was then reacquired by Sardi and reopened on 1 November. Sardi's is frequented by actors, producers, theatergoers, and tourists and offers a low-cost "actor's menu" available to members of Actors' Equity. Many who enjoyed the discount when they were young and struggling have returned the favor by visiting Sardi's after they have achieved success. The walls of the restaurant are adorned with hundreds of caricatures of well-known customers.

Marjorie Harrison

Sarnoff, David (*b* Minsk [now in Belarus], 27 Feb 1891; *d* New York City, 12 Dec 1971). Entrepreneur. He worked as a telegraph operator for Marconi Wireless Telegraph Company and claimed for many years that from his station atop Wanamaker's department store in 1912 he was one of several radio operators who received and transmitted information about the sinking of the *Titanic* and its survivors. This story has been contested, however. In 1926 at the Radio Corporation of America (RCA) he formed the National Broadcasting Company (NBC), the first centralized broadcasting network. He bought a house in 1937 at 44 East 71st Street. After introducing the first American public television broadcast in New York City at the World's Fair in 1939 he led a team of scientists that developed color television. He is buried in Kensico Cemetery in Westchester County.

JillEllyn Riley

Sarony, Napoleon (*b* Quebec, 9 March 1821; *d* New York City, 9 Nov 1896). Photographer and lithographer. Sarony moved to New York in the early 1830s, working as a lithographer for Currier and Ives before starting his own business with Henry Major in 1846. Sarony opened his first photography studio in 1865 and quickly gained notoriety for his portraits of public figures like Mark Twain, Oscar Wilde, and Sarah Bernhardt. Sarony pioneered the practice of paying his subjects to sit for pictures and then selling the reproductions; Sarony's session with Bernhardt cost him $1500. In 1883 Sarony sued the Burrow-Giles Lithographic Company for copyright infringement following its unlicensed use of his Oscar Wilde portrait in an advertisement for Ehrich Brothers department store. Following an appeal, in 1884 the Supreme Court ruled in favor of Sarony, thereby upholding the power of Congress to extend copyright protection to photography. In his later years Sarony would found the Kit Kat Club with a group of notable artists including Charles Yardley Turner and Edward Moran. He is buried in Brooklyn's Green-Wood Cemetery.

Ben Silk

Satmars. Members of a Hasidic sect founded in Hungary. After the Holocaust many of them emigrated from Eastern Europe and settled in Brooklyn, chiefly around Bedford Avenue in Williamsburg; their rebbe, Joel Teitelbaum (1887–1979), settled in the city after emigrating to the United States in 1946. Most members speak Yiddish and are strongly oriented toward their community. The men dress in broad-brimmed black fur hats and wear beards and often *peyes* (long sidelocks), married women shave their heads, and children are segregated by sex from an early age. The Satmars form the largest Hasidic group in New York City, and one of the most religiously uncompromising. With an estimated following of 120,000 members in the early twenty-first century, they set themselves apart from other Hasidim and are vehemently opposed to Zionism.

Lisa Gitelman

Saturday Review. Literary journal launched in August 1924 as the *Saturday Review of Literature* by Henry Seidel Canby, a former literary editor of the *Saturday Evening Post;* the name was shortened to *Saturday Review* in 1951. The magazine attracted such distinguished writers as Ezra Pound and remained under Canby's direction until 1936. Under Norman Cousins (from 1940) circulation increased from 20,000 to nearly 660,000; he resigned in 1971 after the magazine was sold to a group of investors. The *Saturday Review* was briefly issued as four separate magazines called the *Saturday Review of Society,* the *Saturday Review of Science,* the *Saturday Review of the Arts,* and the *Saturday Review of Education;* these foundered and in 1973 were bought by Cousins, who merged them with his own magazine, the *World,* to form the *Saturday Review of the World.* Circulation continued to decline and in 1983 the magazine was bought by a firm in Columbia, Missouri, which changed the format and added interviews with celebrities. After circulation dwindled to less than 150,000 the magazine was bought by General Media in 1987. As of 2003, it had ceased to exist.

Eric Wm. Allison

Savage [Fells]**, Augusta (Christine)** (*b* Green Cove Springs, Fla., 1892/1900; *d* New York City, 27 March 1962). Sculptor. After moving to New York City in 1921 she studied with George Brewster at Cooper Union. She went to Europe in 1930 on a grant from the Julius Rosenwald Fund and produced such works as *Gamin,* a bust of her young nephew that captured the youthful energy of the Harlem Renaissance. On her return in 1932 she opened the Savage Studio of Arts and Crafts at 163 West 143rd Street, aimed at younger artists. Her heroic sculpture *The Harp* adorned the entrance to the Contemporary Arts Building at the World's Fair of 1939–40. She later retired to Saugerties in the Catskill Mountains, where she became an assistant to a commercial mushroom grower. Savage is considered the most important sculptor of the Harlem Renaissance and one of the earliest African American artists to depict black physiognomy sympathetically.

Augusta Savage and the Art Schools of Harlem (New York: Schomburg Center for Research in Black Culture, 1989)

Edmund Gaither

Savannah. First steamship to cross the Atlantic Ocean. Designed by Moses Rogers and built in 1819 in New York City, it weighed 300 tons and had sails in addition to a steam engine. Known as the "elegant steam ship" for its luxurious passenger accommodations, it was nonetheless unable to attract passengers or cargo on transatlantic voyages: potential customers were alarmed that a fire burned continuously onboard to generate power. The ship sailed on 22 May 1819 from Savannah, Georgia, and went as far as Saint Petersburg, Russia, before returning home. The owners declared bankruptcy; the vessel was converted into a sailing ship and sank off Fire Island in 1821.

Frank O. Braynard

savings and loan associations. The precursors of modern savings and loan associations were the English building societies of the 1780s, which were cooperative ventures of limited duration: they existed only long enough to provide sufficient credit for each member to build or buy a home. In 1836 the Brooklyn Building and Mutual Loan Association was organized to provide credit to home buyers. In the 1850s, however, savings and loan associations were restructured as permanent institutions. New ones were formed, but their rate of failure was so high that a bill was introduced in the New York state legislature in 1856 to revoke all their charters. In 1875, New York State took responsibility for auditing the performance of savings and loan associations and issuing annual reports of their condition; scrutiny was tightened in the 1890s after the collapse of the "nationals" (associations with offices in many areas of the country). The Land Bank of the State of New York was formed in 1915 to provide a central credit facility for savings and loans, issuing bonds to raise funds that could be borrowed by its members.

During the Depression falling real-estate values and the inability of home owners to meet their mortgage payments damaged the system and led to passage of the Federal Home Loan Bank Act (1932) and the National Housing Act (1934). By the end of World War II, savings and loan associations had been revitalized, making substantial contributions to the postwar building boom through the provision of long-term, fully amortized residential mortgages.

Congressional legislation to deregulate banking in 1980 and 1982 freed savings and loans from restrictions on the interest rates they could pay and expanded the kinds of loans and investments they could make. Among other things, it allowed them to provide checking accounts and to make commercial loans. It also imposed Federal Reserve System reserve requirements.

A legacy of long-term mortgage loans funded by short-term deposits proved, however, too heavy a burden for most associations when they were exposed to the unprecedented levels and high volatility of interest rates in the early 1980s. Through the 1980s, many associations supported by federal deposit insurance engaged in excessive risk-taking. By the end of the decade, Congress found it necessary to close large numbers of insolvent associations and to restructure the regulatory framework. Associations with little or no capital were closed or acquired by other institutions, and their depositors bailed out. The number of savings and loan associations declined at the national level from about 4000 in 1980 to fewer than 900 in the first decade of the twenty-first century. In New York City, there had been 39 in 1980; only two remained in the early twenty-first century.

Bernard Shull

Greenwich Savings Bank, Sixth Avenue and 16th Street, 1899

savings banks. In 1816, a group of businessmen led by John Pintard and Thomas Eddy made a proposal to the state legislature of New York that would have established the Bank for Savings as the first savings bank in the United States. They envisioned the bank as encouraging "provident habits" among workers. Strong opposition in the legislature to banks of any kind delayed chartering until 1819, by which time savings banks had been formed elsewhere. The New York bank was finally incorporated with sponsorship by the Society for the Prevention of Pauperism in the City of New York and was modeled after English banks that were established for similar reasons. Managed by a self-perpetuating board of trustees, the bank adhered to its founding principles by encouraging the establishment of other savings banks. The Greenwich Savings Bank opened in 1833. Savings banks became the fastest-growing financial intermediaries of the first half of the nineteenth century. However, between 1825 and the Civil War, savings banks shifted their focus from philanthropy to profit, and their portfolios from low-risk investments such as government securities to corporate stock, mortgages, and other types of loans. Some commercial banks formed savings banks as profit-making ventures; among those that did was the bank of Butchers and Drovers which opened the Bowery Savings Bank and immediately took possession of all of its deposits. By 1860 there were 19 savings banks in New York City, with total deposits in excess of $40 million. The number of savings banks in New York State grew at a slower rate after the Civil War. A peak of 140 was reached in 1910. From the Civil War to the Depression, savings bank deposits grew with the population and workers' incomes. During the 1930s, savings banks proved more stable than commercial banks and gained a reputation for conservative management and stability; they benefited from inclusion in the new system of federal deposit insurance. Also to their advantage was the formation of the Savings Bank Trust Company in New York City in the early 1930s as a cooperative organization to provide liquidity and other financial assistance to its members.

Congressional legislation to deregulate banking in 1980 and 1982 freed savings banks, as it did other depository institutions, from restrictions on the interest rates they could pay and on the investments they could make. Among other things, it gave federal sanction to the provision of checking accounts and commercial loans by savings banks. It also imposed Federal Reserve System reserve requirements.

Deregulation measures continued through the end of the twentieth century, and facilitated the emergence of savings banks as full-service banking institutions. These reforms sparked organizational changes, including conversions from mutual to stock organization and from state to federal charter; they also generated a series of mergers. In early 2006, only 53 savings banks remained in New York State, of which 27 were in New York City. Few, like Emigrant Savings Bank and Dime Savings Bank, retained the names that reflected their original purpose and clientele.

Bernard Shull

Savoy Ballroom. Dance hall. It opened at 596 Lenox Avenue (between 140th and 141st streets) on 12 March 1926 and was advertised as the "world's most beautiful ballroom." Because it also sponsored dog races it was sometimes known as "the track." In the 1930s and 1940s the managers of the hall promoted band battles and dance contests in which many popular dance steps evolved, among them the Lindy hop. The ornate ballroom could accommodate as many as 1000 people, and patrons of all races were admitted. By the time the hall closed in 1958, nearly 250 big bands had played there, including those of Duke Ellington, Benny Goodman, Fletcher Henderson, and Chick Webb. The mood of competition and

innovation at the Savoy is evoked by Edgar Sampson's composition *Stompin' at the Savoy* (1934).

Kathy J. Ogren

Scalamandré. Firm of textile manufacturers formed in New York City in 1929 by Franco and Flora Scalamandré. In the mid-1990s its factory in Long Island City was the only family-run mill operating in the city and one of the few left in the United States. It housed dye vats, equipment used in wallpaper manufacturing, hand-operated looms, and extensive archives. Best known for its reproductions and classical designs, the company produced three-quarters of its textiles in the city. Scalamandré has undertaken projects for the White House, the World Trade Center, the Old Merchant's House, and the Metropolitan Opera.

Christina Plattner

scandals and corruption. Cycles of corruption, scandal, and reform have occurred throughout the history of New York City. One of the earliest scandals involved the collector of the Port of New York, Samuel Swartwout, who during the administration of President Andrew Jackson stole $1 million in customs receipts from the U.S. Customs House and fled the country, embarrassing the Democratic Party. The biggest scandal of the nineteenth century involved William M. "Boss" Tweed, the superintendent of public works in New York City and the dominant figure in Tammany Hall. In 1871, after the county auditor had died, an official hostile to Tweed became the new auditor and turned over to the *New York Times* documents revealing that Tweed had collected bribes from contractors and shared them with the other three members of what came to be known as the Tweed Ring: Mayor A. Oakey Hall, Comptroller Richard B. Connolly, and Parks Commissioner Peter Barr Sweeny. These and other revelations encouraged prominent merchants and bankers in the city to organize the Committee of Seventy, which undertook to elect officials committed to "reform." In 1872 a slate of reform candidates swept the municipal elections and William F. Havemeyer became mayor. Tweed was tried, convicted, and imprisoned; he died in the Ludlow Street jail.

At the turn of the century, Reverend Charles H. Parkhurst and state legislative investigating committees led by J. S. Fassett, Clarence Lexow, and Robert Mazet alleged that under Tammany Hall the police were corrupt and offered protection to prostitution. These allegations helped the reform candidates William L. Strong and Seth Low to win the mayoral elections of 1894 and 1901, respectively. In 1907 John Ahearn, borough president of Manhattan, was embroiled in a paving scandal and removed from office by Governor Charles Evans Hughes.

During the administration of Mayor James ("Jimmy") Walker in the early 1930s, investigations led by Samuel Seabury revealed widespread corruption in the municipal and county governments, ultimately leading Walker to resign. After Fiorello H. La Guardia won the mayoralty on a reform platform in 1933, regulatory procedures were tightened and municipal corruption declined. Although Tammany Hall was weakened, in the 1940s it served as a base for the "Ahearn crowd," a group that allegedly controlled rackets on the Lower East Side. During the mayoralty of William O'Dwyer in the 1940s, the organized-crime figure Frank Costello exerted great influence on local politics. To avoid having his career destroyed, O'Dwyer resigned and accepted an appointment as the U.S. ambassador to Mexico. James Marcus, water commissioner under Mayor John V. Lindsay (1966–73), was accused of corruption in connection with a contract to clean and repair the Jerome Park Reservoir. In the late 1980s, a highly publicized scandal in the Parking Violations Bureau implicated the borough president of Queens, Donald Manes, who took his own life. In the early twenty-first century the most notable case of public corruption concerned Bernard Kerik, police commissioner under Rudolph W. Giuliani.

Martin Shefter

Schaefer Brewing. See F and M Schaefer Brewing.

Schapiro, Meyer (*b* Siauliai, Lithuania, 23 Sept 1904; *d* New York City, 3 Mar 1996). Art historian. After immigrating to New York City at age three, he became immersed in the world of art, as a frequent visitor to the Brooklyn Museum and as the only child in Ashcan painter Johan Sloane's class at the Hebrew Settlement House in Brownsville, where he lived. He graduated from Columbia University in 1924 with a degree in philosophy and art history, the two fields that would coalesce in his many theories on art. Four years later Schapiro began teaching at Columbia and continued to do so long after his official retirement in 1973. In 1954 he, along with Irving Howe, Milton Kramer, and several other New York intellectuals, founded *Dissent* magazine, targeting liberal social democrats unhappy with the presidential administration. In 1974, for his 70th birthday, 12 leading artists (including Jasper Johns, Roy Lichtenstein, Robert Rauschenberg, and Andy Warhol) made lithographs, silk-screen prints, and etchings to sell and fund the endowment of a chair in Schapiro's name at Columbia, which was established in 1978. His teaching captured all genres of art, mingling an American approach with a European intellectual (often Marxist) foundation and an emphasis on psychoanalysis. Schapiro, whose former students and friends included Robert Motherwell, Jacques Lipchitz, and Willem de Kooning, was known for bringing to the United States an intellectual understanding of European works by the likes of Picasso, Braque, and Miró. Columbia University erected a hall in his memory and the Brooklyn Museum dedicated a wing to him. He and his wife lived in Greenwich Village for almost 60 years.

Cecilia Magnusson

Schechter, Solomon (*b* Focşani, Romania, 7 Dec 1850; *d* New York City, 15 Nov 1915). Educator. He studied in Vienna and Berlin, taught at Cambridge University and the University of London, and traveled to Cairo, where he discovered 50,000 Hebrew and Arabic manuscripts. At the age of 50 he moved to New York City; there he became president of the Jewish Theological Seminary and helped to establish the Conservative branch of Judaism, and he was soon widely considered the country's leading Jewish scholar. He lived at 512 West 122nd Street.

James E. Mooney

Schechter Poultry Corp. v. United States. Case decided by the U.S. Supreme Court on 27 May 1935, in which the court struck down the National Industrial Recovery Act (NIRA), a cornerstone of the New Deal. Known as the "sick chicken" case, it was brought by the A. L. A. Schechter Poultry Corporation and the Schechter Live Poultry Market in Brooklyn, slaughterhouses operated by the Schechter brothers, who had been convicted in 1934 of selling diseased chickens and violating the wages and hours stipulated in NIRA's live poultry code. The ruling was overturned when the court ruled that the statute had unconstitutionally delegated legislative powers to the executive and that the Schechters' business, as intrastate commerce, was not subject to federal regulation.

Walter Friedman

Schick, Béla (*b* Boglár, Hungary, 16 July 1877; *d* New York City, 6 Dec 1967). Pediatrician. He received a medical degree in 1900 from Karl Franz University in Graz, Austria, where he also studied the principles of immunity with Clemens von Pirquet; in 1905 the two published *Serum Sickness,* which began the medical field of allergy. Schick later proved that diseases following bouts of scarlet fever are allergic in nature, and in 1913 he developed the Schick test for diphtheria. He moved to New York City in 1923 to become the chief pediatrician for Mount Sinai Hospital and

later was the director of pediatrics at Seaview Hospital (Staten Island) and Beth El Hospital (Brooklyn). He married Catherine Fries in 1925 and in 1927 was elected a fellow of the New York Academy of Medicine. For many years Schick lived and maintained an office at 17 East 84th Street; toward the end of his life he lived in an apartment building at 1045 Park Avenue.

Antoni Gronowicz, *Béla Schick and the World of Children* (New York: Abelard–Schuman, 1954)

Anthony Gronowicz

Schieffelin, William (Jay) (*b* New York City, 14 April 1866; *d* New York City, 29 April 1955). Reformer. A great-great-grandson of John Jay, he earned a PhD in chemistry from the University of Munich in 1889 and entered his family's pharmaceutical business. He served on the Committee of Seventy that nominated William L. Strong and helped him to defeat Tammany Hall in the mayoral election of 1894, and on the Fusion Committee that elected John Purroy Mitchel to the mayoralty in 1913. As the chairman of Citizens Union from 1909 to 1941 he advocated reforms such as a short ballot, nonpartisan elections, a judiciary free from political interference, the abolition of unnecessary county offices, proportional representation, and equitable reapportionment of the state legislature. In 1931 he organized the Committee of One Thousand, which prevailed on the state legislature to investigate the administration of Mayor James J. Walker.

Bernard Hirschhorn

Schiff, Dorothy (*b* New York City, 11 March 1903; *d* New York City, 30 Aug 1989). Newspaper publisher, granddaughter of Jacob Schiff. With little business experience she became vice president of the *New York Post* in 1939 when George Backer, second of her four husbands, bought the newspaper. After they divorced she eventually became the publisher, named James A. Wechsler as the editor, and transformed the newspaper into a liberal tabloid that crusaded against McCarthyism. During a printers' strike in the winter of 1962–63 her anger at being shut out of negotiations led her to break with the New York City Publishers Association and resume publication. After losing money for many years she sold the *Post* to Rupert Murdoch in 1977. Her ashes lie in a mausoleum at Salem Fields in Brooklyn.

Jeffrey Potter, *Men, Money and Magic: The Story of Dorothy Schiff* (New York: Coward, McCann and Geoghegan, 1976); Marilyn Nissenson, *The Lady Upstairs: Dorothy Schiff and* The New York Post (New York: St. Martin's, 2007)

Michael Green

Schiff, Jacob (Henry) (*b* Frankfurt am Main, 10 Jan 1847; *d* New York City, 25 Sept 1920). Banker and philanthropist, grandfather of Dorothy Schiff. The son of Moses and Clara Schiff, he emigrated to the United States from Germany in 1865, became wealthy on Wall Street, and was a partner in the firm of Budge, Schiff from 1867 to 1872. In 1870 he took U.S. citizenship. He revisited Germany but returned to New York City in 1875 after accepting an offer from Abraham Kuhn to join the banking firm of Kuhn, Loeb; on 6 May he married Solomon Loeb's daughter Theresa Loeb. He helped the firm to become one of the most respected on Wall Street and was its senior partner by 1885. An expert in railroad reorganizations and industrial underwriting, he acted as an adviser during the reorganization of the Union Pacific Railroad in the 1890s and later advised its chairman, Edward H. Harriman, during a struggle with James J. Hill for control of the Northern Pacific Railroad (1901). Schiff was a vice president of the city's chamber of commerce; he also helped to form Montefiore Hospital (of which he was president) and the Jewish Theological Seminary, established the department of Semitic literature at the New York Public Library, and supported the Henry Street Settlement, Columbia University, Barnard College, and Jewish charities and schools around the world. He lived at 965 Fifth Avenue.

Mary E. Curry

schist. See MANHATTAN SCHIST.

Schlesinger, Arthur M., Jr. (*b* Columbus, Ohio, 15 Oct 1917; *d* New York City, 28 Feb 2007). Historian and intellectual. A prolific writer, scholar, unapologetic liberal, and Democratic activist, Schlesinger also served in the administration of John F. Kennedy as a special assistant and intellectual mentor to the Kennedy family. He was the author of more than 20 books and was twice the recipient of both the Pulitzer Prize and the National Book Award. Although Schlesinger was long associated with Harvard University, from which he graduated in 1938 and where he taught history from 1946 until 1961, in 1966 he became the Albert Schweitzer Professor of Humanities at the City University of New York, a post he held until 1994, when he retired from teaching. Upon settling in Manhattan in the 1960s, he lived in a town house at 171 East 64th Street, later moving to a building in the East 50s where he housed an estimated 13,000 books that filled the apartment that he shared with his wife as well as another one that he used as his study.

Valerie Paley

Schlesinger, Benjamin (*b* Kriukai, Lithuania, 25 Dec 1876; *d* Colorado Springs, 6 June 1932). Labor leader. He immigrated to the United States in 1891 and settled in Chicago, where he took up cloakmaking. As a representative of the cloakmakers' union he traveled to New York City in 1900 to attend the first convention of the International Ladies' Garment Workers' Union (ILGWU), of which he was elected president in 1903. Defeated for reelection in 1904, he became the manager of the cloakmakers' union in New York City. In 1907 Schlesinger became the business manager of the *Jewish Daily Forward;* he also served again as president of the ILGWU (1914–23, 1928–32).

Robert D. Parmet

Schneerson, Menachem (Mendel) (*b* Nikolaev, Ukraine, 14 April 1902; *d* New York City, 12 June 1994). Seventh rebbe (leader) of the Chabad–Lubavitch branch of Hasidim. After studying mathematics and engineering at the University of Berlin and the Sorbonne, Schneerson, with his wife Chaya Mushka—daughter of the sixth Lubavitch rebbe Yosef Yitzchak Schneersohn—moved to New York City in 1941 when the Nazis invaded France. They settled with his father-in-law in Crown Heights, Brooklyn, where the world headquarters of the LUBAVITCHERS became located at 770 Eastern Parkway. Schneerson developed outreach programs for the Lubavitch movement, and upon his father-in-law's death in 1950 he became the seventh rebbe. Under his leadership the Lubavitch movement expanded exponentially. During the 1980s many Lubavitchers began to identify Schneerson as the messiah. Lubavitchers were divided on the question of Schneerson's identity, and other orthodox Jewish groups criticized him for messianic behavior. During his weekly drive to Queens to visit his father-in-law's grave in Montefiore Cemetery, a car in his motorcade struck and killed a Guyanese child. Violence and rioting erupted in Crown Heights, fueled by preexisting racial tensions between Lubavitchers and Afro-Caribbean residents. A group of black men killed a visiting Hasidic student in retaliation. Schneerson suffered a stroke in March 1992; as his health declined, debate on his messianic identity raged. Schneerson, who was childless and left no successor, is buried in Montefiore Cemetery in Queens.

Kate Lauber

Schneiderman, Rose (*b* Saven, near Chelm, Poland, 6 April 1882; *d* New York City, 11 Aug 1972). Labor activist. Her family moved to New York City in 1890, and she joined the labor movement while still in her teens. In 1906 she became vice president of the New York Women's Trade Union League and in 1917 she was elected its president, a position she held until her retirement in 1949; from 1926 to 1950 she also led the National Parent Organization. During her long tenure she both organized many of the lowest-paid and most severely exploited workers in New York City and trained a new generation of working-class organizers. She spent much of the second

decade of the twentieth century helping to organize unions for immigrant women who worked at manufacturing garments, paper boxes, gloves, hats, and artificial flowers. Famed for her power as a speaker, she won national attention for a speech in 1911 chastising wealthy New Yorkers for their indifference after the Triangle Shirtwaist fire, in which 146 women lost their lives. In the 1920s she turned to organizing laundry workers, beauty parlor workers, and hotel chambermaids, many of whom were black and Puerto Rican. An ardent suffragist, she led the industrial section of the state's Woman Suffrage Party in 1916–17 and was nominated for the U.S. Senate by the American Labor Party in 1920. She also fought throughout her career for legislation to improve wages, hours, and working conditions. In 1933 she was the only woman named by President Franklin D. Roosevelt to the labor advisory board of the National Recovery Administration; in this capacity she wrote the regulatory codes for every industry in which women workers predominated. In 1937 she was named secretary of labor of New York State, remaining until 1943. After her retirement in 1949 Schneiderman continued to attend union functions and annual memorials for the victims of the Triangle Shirtwaist fire.

See also American Federation of Labor.

Annelise Orleck

Schoenfeld, Gerald (*b* New York City, 22 Sept 1924; *d* Manhattan, 25 Nov 2008). Theater executive. After serving in World War II, he graduated from New York University law school. In 1957 Schoenfeld and his high school friend Bernard B. Jacobs became the primary lawyers for the Shubert Organization. By the early 1970s Jacobs and Schoenfeld ran the organization at 225 West 44th Street, and in 1972 Schoenfeld became chairman and head of the nonprofit Shubert Foundation. At a time when the organization and Broadway were suffering, the two men were credited with reviving commercial theater in New York City by producing the major hit shows of *Pippin* (1972), *Equus* (1974), and *A Chorus Line* (1975) and cleaning up the Times Square area. In 2005 the Plymouth Theater at 236 West 45th Street was renamed the Gerald Schoenfeld Theater.

Jessica Montesano

Schomburg, Arthur [Arturo] **(Alfonso)** (*b* San Juan, 24 Jan 1874; *d* Brooklyn, 10 June 1938). Bibliophile. Schomburg, educated in Santurce (Puerto Rico) and St. Croix, moved to New York City in April 1891, where he became active in the Puerto Rican and Cuban independence movements. He developed friendships with John Edward Bruce, James Weldon Johnson, and W. E. B. Du Bois, and settled in Harlem. He was recognized as a bibliophile and a historian of Africa and its people: elected secretary and treasurer of the Negro Society for Historical Research in 1911, he amassed a large collection of books, pamphlets, prints, paintings, and photographs in the following years; he also helped to form the Negro Book Exchange and became acquainted with the civil rights activist Joel E. Spingarn. He eventually moved to Brooklyn, but he maintained close ties to Harlem and was active in the Harlem Renaissance. He kept his collection in his home before selling it in May 1926 to the New York Public Library for $10,000. He was then curator-in-chief of the collection from January 1932 until his death and continued to buy material for it, often with his own funds. Most of the collection later became the nucleus of the Schomburg Center for Research in Black Culture. Toward the end of his life he also helped Fisk University to form a black history collection.

Arthur A. Schomburg

Schomburg residence, 2009

Schomburg Center for Research in Black Culture. National research center of the New York Public Library at 515 Malcolm X Boulevard in Manhattan. It originated as the collection of Arthur Alfonso Schomburg, a Puerto Rican of African descent who built a collection of black history. He sold his collection to the library in 1926 and worked as its curator at the 135th Street branch from 1932 until his death in 1938. Although it lacked an endowment and funding from the city was sparse, the collection gradually attracted wide interest. In 1972 it was designated as a Research Library of the New York Public Library system and received an infusion of federal, state, municipal, and private funds to enlarge and catalogue its collections. It opened a new building in 1980 and added space for public programming. In 2009 it housed more than 10 million items including books, newspapers, photographs, prints, music, and manuscripts. The center also offers public lectures and mounts exhibitions.

Robert Sink

Schomburg Library, 2009

School for Cartoonists and Illustrators. Original name of the School of Visual Arts.

School for Democracy. Precursor to the Jefferson School of Social Science.

School of American Ballet [SAB]. Official school of New York City Ballet (NYCB). In 1933 Lincoln Kirstein asked choreographer George Balanchine to establish a ballet school and company where American dancers would be instructed by the world's best teachers to perform new repertory. Balanchine agreed and developed the School of American Ballet, which served as the training ground for his dancers and was the first step toward creating the new company. On 2 January 1934 the school opened in Midtown East with 32 students. Through the 1930s and 1940s its students performed in the early incarnations of what would become NYCB; in the mid-1950s the school relocated to Manhattan's Upper West Side. In 1963 SAB received a Ford Foundation grant that helped it become a national organization and allowed its dancers and faculty to travel around the country recruiting and distributing scholarships. Stanley Williams, former dancer of the Royal Danish Ballet, joined the faculty in 1964 and received much recognition as an instructor of male dancers, attracting the likes of Rudolf Nureyev, Peter Martins, and Mikhail Baryshnikov to his classes. In that same year Alexandra Danilova, leading ballerina of the Ballets Russes de Monte Carlo, also became a faculty member. She taught variation classes for women and established the school's annual year-end Workshop Performance, in which the most advanced students performed publicly in professionally staged ballet works. In the twenty-first century, the Workshop Performance is attended by the heads of many ballet companies, including NYCB, to choose several students to join their companies. In 1969 SAB moved to rented studios at the Julliard School's new Lincoln Center headquarters, close to the New York State Theater, home of NYCB. Upon Balanchine's death in 1983 Martins became the school's chairman of faculty and the company's co–ballet master in chief. SAB and NYCB share the same artistic leadership in order to guarantee that the school's students develop into the dancers that the company needs to maintain Balanchine's aesthetic, style, and vision. In 1987 SAB became the 11th constituent of Lincoln Center for the Performing Arts, and in 1991 it moved to Lincoln Center's Samuel B. and David Rose Building. The custom-built facility has dance studios and a residence hall that allows SAB to house the majority of its nonlocal advanced students for the first time in its history. Martins then began a tuition-free boys program to increase male enrollment in the school's Children's Division, where students are as young as six years old. In 1997 Kay Mazzo, alumnus of SAB and NYCB, became co-chair of faculty at the school. With each year, current dancers and alumni of NYCB form a larger number of the SAB's faculty, many of whom worked with Balanchine. Alumni of the school and the company, including Maria Tallchief, Suzanne Farrell, and Jock Soto, often instruct, choreograph new works, or begin other schools and companies. In the twenty-first century about 90 percent of the NYCB's roster trained at SAB; other students have become members of leading national and international dance companies.

Frank Nestor

School of Interior Decoration. Original name of the New York School of Interior Design.

School of Visual Arts. Private art school at 209 East 23rd Street in Manhattan. It was opened in 1947 as the School for Cartoonists and Illustrators by Silas H. Rhodes, who remained as the school's chairman of the board until his death in 2007, and illustrator Burne Hogarth. From the outset the school sought to assemble a faculty consisting entirely of working artists, art directors, photographers, designers, and filmmakers. In 1956 it took its current name, added programs in art history and the humanities, and expanded its vocational curriculum. The school, which in the twenty-first century has an enrollment of 3500 students, awards the bachelor of fine arts degree in advertising, animation, cartooning, computer art, film and video, fine arts, graphic design, illustration, interior design, photography, and visual and critical studies. The graduate program, begun in 1983, offers a master of fine arts degree in painting, drawing, sculpture, art criticism and writing, art education, art therapy, computer art, design, digital photography, illustration as visual essay, photography, and video and related media. The School of Visual Arts operates six student galleries as well as a professional gallery in Chelsea and also offers international programs.

Linda Elsroad

schools. New York City has one of the most complicated educational systems in the nation.

Its public schools enroll more than one million students and include institutions of every size and type, from giant high schools to elite secondary facilities to which admission is by standardized test scores. The city also boasts the largest parochial system in the United States, mostly Catholic but including many Orthodox and Hasidic Jewish institutions as well. Furthermore, it has more private schools than any other U.S. city. Many are small, expensive, and overwhelmingly white, but their availability and variety enables the city to retain a higher percentage of affluent families than is the case in other U.S. municipalities. Mayor Michael Bloomberg, who took office in 2002, made education the issue on which he expected ultimately to be judged. He took over the Department of Education and moved its headquarters to the old Tweed Courthouse just behind City Hall. Test scores improved over the next half dozen years, but schooling remained unequal throughout the region early in the twenty-first century.

See also Catholic schools, Independent schools, and Public schools.

Kenneth T. Jackson

Schrafft's. Chain of restaurants that began in 1898 as a candy and ice cream shop opened by Frank Garrett Shattuck on the site now occupied by Macy's; the candy and ice cream were supplied by William Schrafft and Sons of Boston. By 1910 Shattuck owned a number of shops and had added a luncheon menu. Schrafft's became known as a genteel meeting place where ladies ate before attending a matinee or after shopping. The restaurants continued to operate after Shattuck's death in 1937, and by 1950 they numbered more than 50 in New York City. Schrafft's began to decline in the 1960s, and its last branch closed in the 1980s.

Howard Kaplan

Schuetzen Park. Popular amusement park in Queens, opened on 16 May 1870 on 7 acres (3 hectares) at the southeast corner of Broadway and Steinway Street in Long Island City. The area was heavily German; the name refers to target shooting, a favorite attraction in amusement parks of the period. The park also had a hotel, picnic grounds, bowling alleys, dancing pavilions, taverns, and eventually movie theaters; it became a popular venue for outings by churches, labor unions, and political groups. It was irreparably damaged by Prohibition and the advent of the automobile and closed in 1924. The land was sold for residential and retail development.

Vincent Seyfried

Schultz, Dutch [Flegenheimer, Arthur] (*b* Bronx, 6 Aug 1902; *d* Newark, N.J., 24 Oct 1935). Racketeer and extortionist. By the mid-1920s, he was a bartender and took advantage of Prohibition to become a major figure in organized crime in New York City. He formed a gang, cornered the beer market in the Bronx, and seized control of numbers rackets in Harlem. Violent and erratic, he was fond of reading about himself in the newspapers. He also exploited a connection to Tammany Hall: his patron was James Hines, the Democratic district leader for lower western Harlem and Morningside Heights. Hines was later convicted of protecting Schultz. In 1935, Schultz proposed to several associates in Murder Incorporated, including Lucky Luciano and Meyer Lansky, that they assassinate the federal prosecutor Thomas E. Dewey, who was preparing a case against him. After his plan was rejected he declared his intention of carrying out the assassination himself. He was shot and mortally wounded soon after, on the orders of crime figures from Murder Incorporated who disapproved of his plans. He survived for nearly two days in the hospital where his wife staged a deathbed conversion to Catholicism for the purpose of establishing a proprietary claim over his two other undivorced wives. Schultz is buried in Gate of Heaven Cemetery in Westchester County.

Robert W. Snyder

Schuman, William (Howard) (*b* New York City, 4 Aug 1910; *d* New York City, 15 Feb 1992). Composer. In high school he formed a jazz ensemble in which he played the piano, the violin, the clarinet, the saxophone, and the banjo and occasionally sang. In 1933 he entered Teachers College (BS 1935); he then joined the faculty at Sarah Lawrence College (1935) and earned an MA from Columbia University (1937). His Symphony no. 3, which had its world premiere on 17 October 1941, won the first New York Music Critics Circle Award and made him a national figure. *A Free Song,* a cantata to a text by Walt Whitman, was given its premiere on 26 March 1943 and later won the first Pulitzer Prize in music. In 1945 he resigned from Sarah Lawrence to become director of publications for G. Schirmer; within the year he became president of the Juilliard School of Music. At Juilliard he merged the Institute of Musical Art with the Juilliard Graduate School, while remaining active as a composer of works such as the score for Martha Graham's *Judith.* In January 1962 he became president of Lincoln Center for the Performing Arts. His tenure was marked by the introduction of concerts in the city's schools and of the Young People's Concerts by the New York Philharmonic. He resigned in 1969 to return to composing. Schuman was honored in 1985 with a special Pulitzer Prize for the entire body of his work, which includes the frequently performed orchestral work *New England Triptych* (1956), *George Washington Bridge* for concert band (1950), concertos for violin, viola, cello, and piano, choral works, and music for the theater and films.

Allen J. Share

Schurz, Carl (*b* Liblar [now in Germany], 2 March 1829; *d* New York City, 14 May 1906). Statesman, writer, and newspaper editor. He moved to New York City in 1852 as an exiled student leader of the abortive revolution of 1848, then settled in Wisconsin and rose to national prominence within the Republican Party. He gave two speeches at Cooper Union that became well known: one attacking Stephen A. Douglas, Abraham Lincoln's opponent for the presidency (1860), the other seeking public support for emancipating the slaves (1863). He served in the U.S. Senate from Missouri and in President Rutherford B. Hayes's cabinet before returning in 1881 to New York City, where he lived successively in Washington Heights, on East 68th Street, and from 1887 at 175 West 58th Street. He was the editor of the *Evening Post* until 1883 and the chief editorial writer for *Harper's Weekly* from 1892 to 1898. In 1902 he bought a home at 24 East 91st Street from his friend Andrew Carnegie. He led the Civil Service Reform Association of New York from 1893 to 1906 and played a vital part in mayoral elections. To the end of his life he remained active in local and national politics. The park in which Gracie Mansion is situated is named for him.

Carl Schurz

Schuyler, George (Samuel) (*b* Providence, R.I., 25 Feb 1895; *d* New York City, 31 Aug 1977). Journalist and social commentator. Known as the Sage of Sugar Hill, he was one of the most influential intellectuals of the Harlem Renaissance. Despite an early interest in socialism, he drifted to the political right. He later gained notoriety as a congressional candidate of the Conservative Party against Adam Clayton Powell, Jr.

Kenneth T. Jackson

Schuyler, Louisa Lee (*b* New York City, 26 Oct 1837; *d* Highland Falls, N.Y., 10 Oct 1926). Philanthropist and reformer. As the corresponding secretary of the Women's Central Association of Relief (1861–65) she worked closely with the U.S. Sanitary Commission to care for Union soldiers and recruited the assistance of Gertrude Stevens Rice, Grace Hoadley Dodge, and Josephine Shaw Lowell. She formed the State Charities Aid Association (1872), of which she was a leader until her death, and the Bellevue Training School for Nurses (1873), the first institution of its kind in the United States. In 1907 she became a director of the Russell Sage Foundation, and in 1915 she launched the National Committee for the Prevention of Blindness.

Sarah Henry Lederman

Schuyler, Montgomery (*b* Ithaca, N.Y., 19 Aug 1843; *d* New Rochelle, N.Y., 16 July 1914). Journalist, editor, and architectural critic. He began at the *World* in the 1860s and then moved to the *New York Times* where he remained an editorial writer and critic until 1907. He was also an editor at *Harper's Weekly* and wrote for numerous magazines, including *Architectural Record,* where he promoted the advancement of American architecture, especially in the new form of the skyscraper.

Peter L. Donhauser

Schuylerville. Neighborhood in the eastern Bronx, bounded to the north by the intersection of East Tremont Avenue and the Bruckner Expressway, to the east by East Tremont Avenue, to the south by Route 95 and St. Raymond's Cemetery, and to the west by the Hutchinson River Parkway. The area was settled about 1840 by Irish stonemasons, gardeners, and laborers who worked on estates in Throgs Neck. In the early twenty-first century it consists mostly of one-family houses and remains largely unchanged since 1920. Many who live in the neighborhood consider themselves residents of Throgs Neck.

Gary D. Hermalyn

Schwartz, Delmore (David) (*b* New York City, 8 Dec 1913; *d* New York City, 11 July 1966). Poet and short-story writer. Of Romanian background, he lived in Brooklyn until his family moved in 1921 to an apartment building on 179th Street in Washington Heights. He attended George Washington High School and then New York University (BA in philosophy 1935). His modernistic, largely autobiographical poems include "Shenandoah" (1941) and "Genesis, Book 1" (1943), which capture the life and customs of Jewish immigrants in New York City. *The World Is a Wedding* (1948) is a collection of stories portraying the Jewish middle class in New York City during the Depression.

Robert Morrow

science. During the eighteenth century science in New York City was largely derivative of European traditions, ideas, and institutions. Scientific books and instruments were lacking, local scientific institutions were inadequate, and the popular attitude toward science was on the whole one of indifference. The indebtedness to Europe was exemplified by the career of the New York scientist Cadwallader Colden, who received his medical education in London and sent most of his scientific papers there for publication by the Royal Society. After 1750 conditions in the city gradually began to improve with the formation of the Society for the Promotion of Arts, Agriculture, and Economy (1764) and the King's College Medical School (1767), and the launching of a campaign for the New-York Hospital (1771), but science and medicine suffered during the seven years of British occupation occasioned by the American Revolution.

The King's College Medical School was the only place in New York City where science was taught and where any research was taking place until the Society for Promoting Agriculture, Arts, and Manufactures was formed in 1791 by Samuel Latham Mitchill, a professor of natural history, chemistry, and agriculture at Columbia College and a central figure in the scientific community in the city for many years: he was the editor of the first medical journal in the United States (the *Medical Repository,* 1797), a member of the U.S. House of Representatives (from 1801), the first occupant of the chair of chemistry at the College of Physicians and Surgeons (1807), and a founder of the New-York Literary and Philosophical Society (with DeWitt Clinton and David Hosack, 1814) and the Lyceum of Natural History (1817, serving as president until 1823). In the early decades of the nineteenth century scientific and medical societies in the city continued to enjoy little general support. The New-York Literary and Philosophical Society was ineffective (dissolved in 1834), and the medical profession was crippled by internal feuding. The Lyceum of Natural History was the only institution to achieve even modest success; it published a journal from 1823 and moved into its own building in 1835, which it was forced to sell in 1844. On the whole science and learning were far healthier in Philadelphia, notwithstanding its economic and political decline after 1800.

In the years after the Civil War the condition of science in New York City improved. After the natural history collections of the Lyceum were destroyed by fire in May 1866, a campaign to raise funds for a museum of natural history was begun by a small group of patricians working in conjunction with the city. In 1871 the state legislature agreed to provide $30,000 a year to maintain the new museum, and the city provided land to the west of Central Park between 77th and 81st Streets; President Ulysses S. Grant formally opened the American Museum of Natural History in June 1874. During the same period Columbia experienced rapid growth, and by 1900 it was the center of academic scientific research in the United States. Under the leadership of Frederick Barnard (1809–89) it added a school of mines and formed an affiliation with the College of Physicians and Surgeons. The faculty of the School of Mines included Thomas Egleston (1832–1900), John Strong Newberry (1822–92), and Charles F. Chandler (1836–1925), who was largely responsible for the rapid growth of the school into a center of scientific research (he was also a president of the city's Board of Health and a founder in 1876 of the American Chemical Society).

Although science in New York City in the final decades of the nineteenth century was increasingly controlled by professionals, avocational scientists were catered to by such groups as the Torrey Botanical Club, the Linnaean Society of New York, the West Side Natural History Society, the New-York Microscopical Society, the Hulst Botanical Club of Brooklyn, the New York Mineralogical Club, the Bronx Society of Arts and Sciences, and the New York Mathematical Society. The New York Botanical Garden, formed by Nathaniel Lord Britton (1859–1934) under the auspices of the Torrey Botanical Club, opened in 1896 on 500 acres (200 hectares) of land in the Bronx and soon began a sustained program of scientific research. The New York Zoological Society was organized with public and private support in 1895 by George B. Grinnell (1849–1938), a prominent explorer and conservationist who as secretary of the society ensured that the New York Zoological Park would serve an educational function and adhere to principles of wildlife conservation.

Science in the city was eventually dominated by Columbia and the American Museum of Natural History. Academic PSYCHOLOGY developed largely through the efforts of James McKeen Cattell, professor of psychology at Columbia from 1891 to 1917 and editor of *Science* and *Popular Science Monthly.* At Columbia he was responsible for the appointment to the faculty of the philosopher John Dewey and had many students who became influential psychologists (among them, Edward L. Thorndike, whose later work at Teachers College emphasized the connections in learning between stimulus and response); his influence also extended to the New School for Social Research, where John B. Watson taught during the 1920s, and his interest in statistics gave American psychology a bias toward quantification. Other prominent psychologists in the city included Harry Stack Sullivan (1892–1949), founder of the journal *Psychiatry,* and Karen Horney (1885–1952), who taught at the New School and in 1941 helped form the Association for the Advancement of Psychoanalysis.

About the turn of the twentieth century Columbia and the American Museum of Natural History reached an agreement that proved particularly fruitful for ANTHROPOLOGY and the related fields of ethnology and folklore. Franz Boas joined the museum in 1896 as an assistant curator of ethnology; appointed professor of anthropology at Columbia in 1899, he reoriented the discipline in the United States from an evolutionary perspective to a relativistic and contextual one emphasizing empirical fieldwork. At Barnard College Ruth Benedict studied Zuni culture and as a result of studies undertaken as part of the war effort published *The Chrysanthemum and the Sword: Patterns of Japanese Culture* (1946), which became widely influential. Margaret Mead (1901–78), who like Boas and Benedict saw anthropology as the comprehensive study of culture, focused in such earlier works as *Coming of Age in Samoa* (1928) on the importance of adolescence, child rearing, and sex roles in the cultural patterning of human behavior; in her later studies on enculturation she adopted photography as a methodological tool, introduced biological processes in the analysis of culture, and stressed the importance of interactions between mother and infant. For 45 years she was a central figure at the American Museum of Natural History, where her work resulted in 44 books and more than 1000 articles and monographs. Ashley Montagu (1905–99), who received his doctorate in anthropology from Columbia in 1937, reached a large audience with his writings, in which he argued against the usefulness of race as an anthropological concept and tied together the cultural and biological branches of anthropology. The influence of Boas and the adherents of the brand of anthropology associated with Columbia and Barnard College was furthered through such organizations as the American Anthropological Association, the American Ethnological Society (formed in New York City in 1842 by Albert Gallatin), and the American Folklore Society and through such publications as the *Journal of American Folklore,* edited by both Boas (1908–24) and Benedict (1925–40).

In the late nineteenth century natural history became transformed into academic BIOLOGY. There was also a growing perception that medical therapeutics depended on advanced scientific research. Against this background the Rockefeller Institute for Medical Research was founded in 1901 by John D. Rockefeller, whose desire to establish a medical research institute had been made more immediate by the sudden death from scarlet fever of his grandson. To enable the scientific staff to pursue original research untrammeled by teaching demands, the institute remained independent from the university medical schools in the city. By 1910 there were 30 laboratory scientists at Rockefeller and eight physicians at its associated hospital; the scientific staff edited the *Journal of General Physiology* and the *Journal of Experimental Medicine* and played a leading role in opposing an antivivisection campaign being waged at the time. The director of the institute from 1901 to 1935 was Simon Flexner, professor of pathology at the University of Pennsylvania, during whose tenure many important scientific discoveries were made, including the application of physical chemistry to living tissues by Jacques Loeb, studies of blood antigens by Karl Landsteiner, and the crystallization of the tobacco mosaic virus by Wendell Stanley (1904–71).

The American Museum of Natural History continued to flourish. Carl Akeley (1864–1926) went to Africa in 1909 and 1921 on behalf of the museum and returned with the elephants and gorillas that became the centerpieces for its African Hall. Roy Chapman Andrews (1884–1960), an expert on cetaceans who joined the museum in 1906, studied whales and whaling in the Dutch East Indies in 1909. In 1916 he became interested in the theory advanced by Henry Fairfield Osborn that Asia was the origin of reptilian and mammalian life, and after raising funds from John D. Rockefeller and J. P. Morgan he led five major expeditions to central Asia, where he uncovered many fossil specimens of early mammals and dinosaurs, demonstrated that Outer Mongolia was the oldest area of continuously dry land, and found implements dating back 20,000 years. His spectacular discovery of dinosaur eggs in the Gobi Desert in 1928 gave the museum an international reputation in the popular press. Andrews was later a vice director (1931–34) and director (1935–42) of the museum.

At the Rockefeller Institute studies were reoriented toward the investigation of life at the cytological level by Flexner's successor Herbert S. Gasser (1888–1963), a professor of physiology at Cornell University who won the Nobel Prize in 1944 for his studies of the electrophysiology of nerve impulses. He was himself succeeded in 1953 by Detlev W. Bronk, who in 1956 announced that the institute would become a graduate university with doctoral programs in the biological sciences. During these years many scientists at Rockefeller received the Nobel Prize: John Northrop (1891–1987) and Wendell Stanley in 1946 for research on the crystallization of enzymes, Fritz Lipmann (1899–1986) in 1953 for his discovery of coenzyme A, Joshua Lederberg in 1958 for work on the genetic material in bacteria, Gerald Edelman (*b* 1929) in 1972 for determining the chemical structure of immunoglobulins, David Baltimore in 1975 for research on the interaction between tumor viruses and the genetic material of the cell, and R. Bruce Merrifield (1921–2006) in 1984 for synthesizing peptides.

Columbia played a prominent role in the development of PHYSICS as an academic discipline. By 2009, 24 Nobel Prizes in physics had been awarded to its faculty and former students. Among these were prizes to Enrico Fermi in 1938 for work on neutron bombardment, I. I. Rabi in 1944 for his studies of molecular beams, Tsung-Dao Lee (*b* 1926) in 1957 for his demonstration that the conservation of parity was not applicable to weak interactions, James Rainwater (1917–86) and Aage Bohr (1922–2009) in 1975 for their research into the structure of the atomic nucleus, and Jack Steinberger, Melvin Schwartz, and Leon Lederman in 1988 for their discovery of muon neutrinos and electron neutrinos.

New York City early became a center for applied science and technology, and especially for electrical engineering. Thomas Edison worked in the city from April 1869, where he effected improvements to stock tickers and devised methods of sending multiple messages over a single wire. Elmer Sperry, an entrepreneur who worked in Brooklyn and formed the Sperry Gyroscope Company, concentrated on innovations to the electric streetcar and the automobile. Nikola Tesla moved to New York City in 1884 and worked on alternating-current dynamos, transformers, and motors; he gave remarkable demonstrations of electrical phenomena that impressed local audiences, and made and lost several fortunes. Edwin H. Armstrong and Lee De Forest, two pioneers in radio transmission, fought each other for many years over patent infringement. De Forest invented the triode in 1906 and Armstrong, who had studied with Michael Pupin at Columbia, soon after invented the triode feedback (regenerative) circuit and later was an innovator in frequency-modulation (FM) radio transmission. Chester F. Carlson perfected a dry copying process in his laboratory in a rented room in Astoria,

where the first successfully photocopied image was made in October 1938. At Bell Telephone Laboratories (which was based in New York City before moving to New Jersey in 1947) the scientists William Shockley (1910–89), Walter Brattain (1902–87), and John Bardeen (1908–91) discovered that germanium crystals containing impurities were highly efficient rectifiers of alternating current. In 1948 Shockley invented the transistor by combining solid-state rectifiers to amplify electrical current, effecting a revolution in electronics by allowing for the miniaturization of radios and computers. Shockley, Brattain, and Bardeen received the Nobel Prize in 1956. Charles Townes (*b* 1915), who was associated with Columbia from 1948 after working at Bell Laboratories, used Shockley's work in solid-state physics to develop the maser in 1953. Theodore Maiman developed a maser using visible light; the first laser was constructed in 1960. Research proceeded rapidly during the 1980s: at a meeting in the city in 1987 of the American Physical Society scientists described superconductors effective at 90 kelvin (–183 degrees Celsius, –362 degrees Fahrenheit), thus presaging the practical application of superconductivity.

In the twenty-first century New York City continues to be a center for science research, studies, and employment, especially at New York University, Columbia University, City College of New York, New York–Presbyterian Hospital, and Memorial Sloan-Kettering Cancer Center. These institutions and others focus on topics such as global warming, stem cell research, and robotics. Columbia University researchers, for instance, developed models for predicting the city's future through the years 2030 and 2100 showing possible increases in sea level due to global warming. The nonprofit New York Stem Cell Foundation on Amsterdam Avenue works to further stem cell research, inform the public about developments, and build better facilities for equipment and resources. Honeybee Robotics Spacecraft Mechanisms Corporation is based in New York City and is responsible for creating and supplying robotic mechanisms for industrial and exploration purposes, and Mount Sinai School of Medicine has an entire department dedicated to robotic oncology.

Simon Baatz, *Knowledge, Culture, and Science in the Metropolis: The New York Academy of Sciences, 1817–1970* (New York: New York Academy of Sciences, 1990)

Simon Baatz, Danielle Molinski

Science and Society. Quarterly journal of Marxist thought and analysis launched in New York City in the fall of 1936 by left-wing intellectuals. It had no official affiliation with or funding from any political party. Its early readership included many in the nonacademic political left, and the initial editorial board included scholars from New York University, the Massachusetts Institute of Technology, and Harvard University, along with an associated group of British scientists who wrote critically on such subjects as Lysenkoism. Columbia University professor Bernhard J. Stern was the journal's mainstay for its first two decades. The journal's main subject matter was Marxism in all of its ramifications: in art, education, literature, science, linguistics, political economy, mathematics, and in such aspects of history as slavery, the Reconstruction era, and the American and French Revolutions. The cold war directly affected the magazine, as several of its editors were forced out of their teaching positions. Subscriptions declined, and many former writers abandoned Marxism or were fearful of connections with a left-wing magazine. Nikita Khrushchev's disclosure of Stalin's crimes in 1956 prompted contributors to recognize the greater complexity of Marxist concepts. The English translation of Marx's 1844 *Economic and Philosophical Manuscripts* in the mid-1960s also encouraged new left academics to submit a wider range of essays and reviews. Articles on the ideological and political concerns of the Third World appeared in the journal, along with such issues as feminism, ecology, civil rights and liberation struggles, often contributed by younger scholars. In the twenty-first century its offices were at 451 West Street.

Marvin E. Gettleman

Scorsese, Martin (Marcantonio Luciano) (*b* Queens, 17 Nov 1942). Filmmaker. He grew up in Little Italy in Manhattan and during the early 1960s attended New York University, where he earned a graduate degree in the film school (MFA 1969). His first major film was *Mean Streets* (1972), a tale of petty gangsters on the Lower East Side. He earned national renown for *Taxi Driver* (1976), a violent, haunting study of a tormented taxicab driver's search for redemption in a deteriorating New York City. His later films offer an unusual, fascinating, and often controversial picture of the city. They include *New York, New York* (1977), a nostalgic story of a jazz musician; *Raging Bull* (1980), based on the life of the prizefighter Jake La Motta; the eccentric comedy *After Hours* (1985); the short film "Life's Lessons," part of the triptych *New York Stories* (1989); *Goodfellas* (1990), an epic of organized crime; an adaptation of Edith Wharton's *The Age of Innocence* (1993); and *Gangs of New York* (2002).

James Bradley

Scots. Until the 1760s most Scottish settlers in colonial New York were Lowlanders. One of the first to achieve prominence was Richard Nicolls, a member of the Scottish gentry appointed by James, Duke of York, to seize New Netherland and set up English colonial headquarters there. Scots played an important role in a rebellion led by Jacob Leisler in 1689 (suppressed in 1691 by Captain Kidd, a native of Greenock). After the Act of Union in 1707 Scotland was allowed to trade with the American colonies. Archibald Kennedy (1685–1763), a British colonial official, moved to the city in 1710 and later served on the city's council (1721–32), and a number of Scots were New York colonial governors: Robert Hunter of Ayrshire took office in 1710, followed by William Burnet in September 1720 and John Montgomerie in April 1728. James Alexander of Stirling, an exile of the Jacobite rebellion of 1715, attacked Governor William Cosby in pamphlets published by John Peter Zenger; this helped lead to Zenger's trial, in which Alexander briefly served as a counsel for the defense until he was removed from the roll of attorneys. A charity organization known as the Scots Society, formed in 1744, became a forerunner of the St. Andrew's Society (1756), later the most important organization of its kind in the city.

Intellectual life in colonial New York City was enriched by graduates of the University of Edinburgh who moved to the city to teach and continue their studies in theology, medicine, and philosophy. Philip Livingston and William Alexander helped to form King's College (now Columbia University) in 1754. Founders of its medical school (1767) included James Smith and John van Brugh Tennent (graduates of Edinburgh) and Peter Middleton. Cadwallader Colden of Dunse was lieutenant governor from August 1760 to June 1775, his tenure interrupted by the brief terms of several governors. Scots were largely responsible for introducing Presbyterianism to the city. In 1761 John Mason (1734–92) of Linlithgowshire moved to the city to lead the Scottish Presbyterian Church on Cedar Street. He and his son John Mitchell Mason were among the most important ministers of the time. Archibald Laidlie gave the first sermon in English to a Dutch Reformed congregation, and Charles Inglis became a prominent figure in the Episcopal Church. Highlanders settled in the city increasingly after the end of the Seven Years' War in 1763. Some were exiles of the Jacobite rebellions, but most sought relief from poverty and high rents in Scotland. They often faced discrimination in the colony, as many were Catholic and spoke Gaelic.

During the American Revolution Scots were suspected of remaining loyal to the Crown. Those in the city were more evenly divided in their allegiances than those in other parts of the colonies. The Presbyterian clergy supported the Revolution; Highlanders who had settled recently in the city were usually Loyalists, as were merchants, many of whom continued to do business throughout the war. A number of Highlanders joined the patriot cause: under Donald McLeod in June 1775 they presented a petition to the state legislature promising to serve the colonies if they were allowed to wear their traditional dress, which had been outlawed in Scotland in 1745. Of the 21 members of the St. Andrew's Society, 11 were Loyalists. The merchant Robert Bruce remained loyal; his brother Peter Bruce, also a merchant, became a revolutionary. Alexander MacDougall helped to organize the Sons of Liberty in the city, was a general in the Continental army, and served in the Continental Congress. Alexander McDonald, a Highlander who had fought in the Seven Years' War, secretly recruited 100 men on Staten Island to fight for the British.

There were 22,006 people of Scottish birth or descent in the city in 1790. Scottish gardeners and landscapers were well known, among them Grant Thorburn, who moved to the city in 1794 from Dalkieth and later wrote his memoirs under the pseudonym Laurie Todd. During the same year Jane (Jeffrey) Renwick, the subject of Robert Burns's poems "I Gead a Waefu' Gate Yestreen" and "When First I Sae Jeannie's Face," made her way to the city, where Renwick Street was named for her (her grandson was the architect James Renwick). Scots were active in financial affairs and several helped to form the Bank of New York. Archibald Gracie of Dumfries led the Chamber of Commerce from 1800 to 1825, and Isabella Graham and her daughter Joanna Bethune organized the Sunday school movement in the city. Scottish national holidays were celebrated, among them Hogmanay (New Year's Eve) and St. Andrew's Day (30 November), and as early as 1820 the St. Andrew's Society held a banquet on 25 January to honor Burns's birth. By the 1820s a number of taverns and boarding houses were popular among Scots, including the Caledonian House on Gold Street, John O'Groat's House on Essex Street, the Waverly House on Fulton Street, the Burns House on Liberty Street, and the Weaver's Arms and Tavern on Hudson Street. At the first meeting of the Highland Society of New York in 1836 such traditional games as throwing the heavy hammer, putting the heavy stone, and caber tossing were held; quoits and curling also were popular.

The Scottish population grew especially after the English lifted their ban on the emigration of craftspeople in 1825. Many skilled laborers, especially textile workers and stonecutters, moved to the city, where at midcentury stonemasons' wages were two to three times higher than in Britain. Nearly a fifth of Scottish workers were in the building trades at this time, and many of them became active in such labor organizations as the New York Union Society of Journeymen House Carpenters. In 1835 James Gordon Bennett, Sr., produced the first issue of the *New York Herald* in his apartment on Wall Street. A number of Scottish publications were also launched, among them the *Scottish-Patriot* (1840–42; later renamed the *Scottish Journal of Intelligence and Literature*), the *Scottish American,* a journal published from 1857 to 1925, and the *Scotsman and Caledonian Advertiser* (1874–76). The Caledonian Club (1861) sponsored traditional games. Many Scottish business leaders became philanthropists, among them James Lenox, who donated the Lenox Library to the city in 1870; Archibald Russell, who formed the Five Points Mission; John M. Kennedy, who donated the Public Charities Building; Alexander Robertson, who built a school for poor children that bears his name; and Andrew Carnegie, a native of Dunfermline, who gave away most of his fortune. A statue of the novelist Sir Walter Scott was installed on the Central Park Mall in 1872, the 100th anniversary of his birth; a statue of Burns facing this was added in 1880 (both were the work of John Steel of Edinburgh). The first golf course in the metropolitan area, St. Andrew's, was laid out in suburban Yonkers, New York, in 1887 by John Reid of Dunfermline and Robert Scott.

During six weeks in the spring of 1887, an especially difficult year in Scotland, 2000 Scots sailed to the city seeking work. The number of Scottish immigrants increased again in the 1930s and 1940s, but Scots accounted for an ever declining share of the city's population. One native of Scotland who achieved renown as a baseball player was Bobby Thomson, who hit a memorable home run to win the National League pennant for the New York Giants in 1951. Helen MacInnes, a resident of the city, wrote many spy novels. James B. "Scotty" Reston (*b* Scotland, 1909; *d* 1995) joined the *New York Times* in 1940 and twice won the Pulitzer Prize. Early in the twenty-first century Scottish organizations in the city included the St. Andrew's Society and the American–Scottish Foundation, with offices at Lenox Hill, and the New York Caledonian Society, which operated from the Second Presbyterian Church at 96th Street and Central Park West.

Walter Friedman

Scott, Winfield (*b* Laurel Branch, Va., 13 July 1786; *d* West Point, N.Y., 29 May 1866). General. A hero of the War of 1812, he became known as "Old Fuss and Feathers." On his return from the Mexican War in 1848 he was given a rousing reception in New York City. He settled in Manhattan in 1852 when a group of friends led by Senator Hamilton Fish bought him a four-story brownstone at 24 West 12th Street (now the Scott House National Historic Landmark). During the same year he sought the presidency as a Whig but was soundly defeated by Franklin Pierce, the Democratic candidate. Scott maintained his home on 12th Street until his death.

James Bradley

sculpture. Sculpture in colonial New York City was limited to ornaments of various kinds until a number of commissions were given for public statues in the late eighteenth century. Beaux-arts sculptures treating civic themes remained popular until World War I, when changing attitudes and increasing numbers of private commissions allowed sculptors to develop new styles and treat a greater range of subjects.

1. To 1920

In New Amsterdam and colonial New York gravestones, architectural ornaments, shop signs, and figureheads were typical sculptural forms. The first public sculptures in the city were executed by Joseph Wilton (1722–1803), sculptor for George III. One depicted the king (1770, formerly at Bowling Green) and the other William Pitt the Elder, commemorating his role in repealing the Stamp Act (1770, formerly at Wall and William streets). A mob toppled the statue of George III after the Declaration of Independence was read in July 1776, and British soldiers retaliated by decapitating the statue of Pitt in November.

After the Revolutionary War a bronze statue of the lawyer James Watt (1830, Metropolitan Museum of Art) was commissioned from Robert Ball Hughes (1806–68), who in April 1835 made the first marble statue in the United States, a portrait of Alexander Hamilton for the New York Merchants' Exchange (destroyed during the Great Fire in December). A larger marble monument to John Wells was commissioned from John Frazee (1790–1852) for St. Paul's Chapel (1824). A gallery of busts modeled on masks of Thomas Jefferson and other leaders was executed by John Henri Isaac Browere (1790–1834). A group of merchants led by the shipping magnate James Lee raised subscriptions for an equestrian statue of George Washington in 1852. Cast in bronze by Henry Kirke Brown (1814–86) and John Quincy Adams Ward, it was raised in Union Square in 1856.

Soldiers from the city who were killed in the Civil War were commemorated by monuments such as Ward's Seventh Regiment Memorial (1869, Central Park at West 69th Street). Other war memorials include the bronzes *Army* and *Navy* (1901) by Frederick MacMonnies for the Soldiers' and Sailors' Arch (designed by John Duncan) at Grand Army Plaza in Brooklyn; the Soldiers' and Sailors' Monument (1902,

Equestrian statue of Washington by John Quincy Adams Ward, east side of Union Square at Fourth Avenue, ca *1870*

89th Street and Riverside Drive) by Charles W. Stoughton (1860–1944), Arthur A. Stoughton (1867–1955), and Paul M. DuBoy; and *Admiral David Glasgow Farragut* (1881, Madison Square Park) and *William Tecumseh Sherman* (1902, Grand Army Plaza) by Augustus Saint-Gaudens with Stanford White. Only a few memorials depicted black soldiers. Ward's *Freedman* (1863, Metropolitan Museum), a bronze statue of a stern, powerful black man who has broken his shackles, was never made into a public monument. Bronze statues depicting critics of slavery include *William H. Seward* (1876, Madison Square), by Randolph Rogers (1825–92); *William Earl Dodge* (1885, Bryant Park), *Horace Greeley* (1890, City Hall Park), and *Henry Ward Beecher* (1891, Columbus Park, Brooklyn) by Ward; and *Horace Greeley* (1892, 32nd Street between Broadway and Sixth Avenue) by Alexander Doyle (1857–1922). The small plaster statuettes by John Rogers (1829–1904) helped to interest a large middle-class audience in American sculpture; his sometimes controversial subjects include *Fugitive's Story* (1869, New-York Historical Society) and *Slave Auction* (1879, New-York Historical Society).

Civic and ethnic pride inspired Irish, Italian, and German groups in the 1870s and 1880s to donate statues of well-known figures from their native countries. In Central Park this included *Giuseppe Mazzini* (1876, West Drive at 68th Street) by Giovanni Turini (1841–99), *Ludwig von Beethoven* (1884, the Mall) by Henry Baerer (1837–1908), and *Robert Burns* (1880, the Mall) by Sir John Steel (1804–91). During these years sculptors became well respected, and better training became available in the city at Cooper Union, the National Academy of Design, and the Art Students League, and in Paris at the École des Beaux-Arts and in ateliers. Typical of the era were MacMonnies's *Nathan Hale* (1890, City Hall Park, bronze), Saint-Gaudens's *Richard Randall* (1884, Sailors' Snug Harbor, bronze) and *Admiral David Glasgow Farragut.* Sculptors often collaborated with such architects as White and Richard Morris Hunt, whose ideal of a beautiful city required monuments and architectural sculpture and influenced public sculpture for the next quarter century. Inspired by the gift from France of Frédéric-Auguste Bartholdi's *Statue of Liberty* (1886) and by a sculptural program celebrating cultural unity at the World's Columbian Exposition of 1893 in Chicago, the city's elite sponsored programs of public art expressing the ideals of civic harmony, patriotism, civilization, and good government.

The National Sculpture Society (NSS) was formed in May 1893 and became associated with the Municipal Art Society and the Fine Arts Federation (FAF), organizations dedicated to beautifying New York City. Members of the NSS took part in public sculpture projects such as the temporary Dewey Arch at the intersection of Broadway, Fifth Avenue, and 24th Street (1899). With their supporters they also sought to ensure that prime locations were used only for works that met with their approval, and they worked to prevent citizens' groups from placing what they believed were poorly executed portraits of well-known Italians, Irish, and Germans on various sites in Manhattan. Controversy attended the raising of the Columbus Monument (1892, Columbus Circle) by Gaetano Russo, and in 1898 the NSS and the FAF prevented the city from placing the Heine Memorial Fountain (1900,

Lorelei Fountain in Joyce Kilmer Park in the Bronx, commemorating Heinrich Heine's "Die Lorelei," 1899

Judith Weller, The Garment Worker *(1984), 2009*

Joyce Kilmer Park) by Ernst Herter (1846–1917), a gift from the Arion Society, on a site at 58th Street and Fifth Avenue (now occupied by Pulitzer Fountain [1916] by Thomas Hastings [1860–1929] and Karl Bitter). Republican politicians were especially eager to sponsor sculpture for public buildings: their commissions included *Four Continents* (1907) by Daniel Chester French and 12 limestone statues of ancient and contemporary commercial seafaring powers for the cornices of the U.S. Custom House. The government also commissioned allegorical sculptures as an important tool for educating the public, especially immigrants. Complex sculptural programs like those of the Brooklyn Institute of Arts and Sciences and the New York City Hall of Records (1907) were aimed at hastening assimilation.

During the second decade of the twentieth century, some sculptors, including Abastenia St. Leger Eberle and Saul Baizerman, depicted workers and common people. The only public works by women were Anna Hyatt Huntington's *Joan of Arc* (1915, Riverside Drive and 93rd Street), the only statue of a woman erected in the city at the time; and Gertrude Vanderbilt Whitney's Washington Heights–Inwood War Memorial (1922, Broadway between 167th and 168th streets). Disputes over public sculpture remained heated: there were conflicts over the Maine Memorial (1913, Columbus Circle) and the Firemen's Memorial (1913, Riverside Drive and 100th Street) by H. Van Buren Magonigle (1867–1935) and Attilio Piccirilli (1868–1945), and a fierce controversy over MacMonnies's *Civic Virtue* (1922, Queens Boulevard at Union Turnpike), which signaled the breakdown of public support for large sculptures funded by the government.

During the 1920s the number of commissions increased for sculptures of children and animals for private gardens. Sculpture of a far more irreverent sort was produced by Marcel Duchamp, who settled in New York City in June 1915 and became a leader of the dadaist movement. One of his particularly notorious pieces was a urinal that he titled *Fountain* and signed with the name "R. Mutt"; it was rejected by the Society of Independent Artists for its inaugural exhibition in 1917.

2. After 1920

After World War I works still emphasized the beaux-arts ideals of civic virtue and public heroism, but to some critics they appeared increasingly ponderous, cluttered, and outmoded, and modernism gradually influenced change. The first welded metal sculptures were produced in the 1930s, and Chaim Gross became a well-known proponent of direct carving. Little public sculpture was created in the city during the Depression. From 1925 to 1950 a group of private developers led by John D. Rockefeller, Jr., commissioned major figurative and decorative sculptures for Rockefeller Center. The first phase of building was during 1931–40: two oversized, free-standing, figural sculptures of mythic Greek figures were erected, the streamlined and elegant *Prometheus* by Paul Manship (1934, gilded bronze, lower level of plaza) and the geometric and overpowering *Atlas* by Lee Lawrie (1937, bronze, 630 Fifth Avenue); Isamu Noguchi's sculpture *News* (1939–40, stainless steel casting, 50 Rockefeller Center Plaza) was installed over the entrance of the Associated Press Building. After 1945 there were several attempts to erect a major war memorial; although widely supported, all failed because of insufficient funds. A number of peace memorials were erected at the United Nations headquarters (1947–53), and a small number of traditional, heroic memorial sculptures were constructed with private funds, as at Central Park South and Seventh Avenue, where a group of statues depicts Latin American heroes; among the best-known is Huntington's *José Martí* (1959, bronze).

Apart from public memorials, sculpture after World War II was highly diverse. Among the first sculptors to incorporate surrealist elements was Joseph Cornell, who became internationally known for his assemblages of varied objects such as news clippings, toys, and maps contained in small boxes. In 1941 Jacques Lipchitz settled in the city and concentrated on autobiographical subjects in such works as *Mother and Child II* (1941–45, bronze). Duchamp returned to the city in 1942, and between 1945 and 1950 Herbert Ferber launched his career as a surrealist. During the 1950s abstract expressionists were influential. The most important was David Smith, whose works of welded steel expressed a concern with universal themes common to the art of the postwar era. In the 1960s minimalism became popular; Carl Andre, Donald Judd, Robert Morris, and Tony Smith created work that consisted chiefly of geometric elements that could be manufactured on the basis of the artist's instructions.

During the 1960s and 1970s abstract styles dominated public art. A zoning ordinance known as the "plaza law" (1961) required that developers of new buildings provide an open forecourt at street level, a particularly appropriate place for sculpture. At the Chase Manhattan Bank Plaza, Noguchi executed *Sunken Garden* (1961–64, granite and basalt rocks in a glass enclosure). After a decade Jean Dubuffet's whimsical piece *Group of Four Trees* (1972, fiberglass over aluminum) was added to the plaza. Modern abstract sculpture by already famous artists was also chosen for Lincoln Center (1962–68), a part of the urban redevelopment of the Upper West Side. Alexander Calder's *Le Guichet* (1963, steel painted black) marks the entrance to the New York Public Library for the Performing Arts, and Henry Moore's *Reclining Figure* (1965, bronze) rests in the reflecting pool between Avery Fisher Hall and the Vivian Beaumont Theater.

In 1967, 29 contemporary sculptures were placed throughout Manhattan in an exhibition titled *Sculpture in Environment*. Bernard (Tony) Rosenthal's *Alamo* (1966–67, Astor Place, Corten steel painted black) remained permanently installed on city property. In 1968 Noguchi's rhombohedral sculpture *Red Cube* (1968, welded steel and aluminum) was installed in front of 140 Broadway. Pablo Picasso's *Bust of Sylvette* (1968, sandblasted concrete and basalt), enlarged from a small maquette by the artist, stands 36 feet (11 meters) high in the open area between the three towers of a residential complex at New York University Plaza designed by I. M. Pei (1966, north of Houston Street between Mercer Street and La Guardia Place). In 1971 Doris Freedman formed and directed the Public Arts Council (later known as the Public Art Fund), a private organization that continues to provide temporary displays of public sculpture in a variety of locations.

The World Trade Center (1962–77, Minoru Yamasaki) commissioned Masayuki Nagare's abstract work *World Trade Center Plaza Sculpture* (1967–72, Swedish granite over a steel armature) and Fritz Koenig's *Sphere* for the Plaza Fountain (1968–72, bronze), a work intended to symbolize the idea of peace through trade. Calder's *World Trade Center Stabile* (1969–71, installed 1974, steel painted red) was placed at the entrance to the center on West Street but was moved several times because of construction. James Rosati's *Ideogram* (1967–73, stainless steel), commissioned from a model executed in 1962, was the most successful of the exterior pieces. A notable interior relief by Louise Nevelson, *Sky Gate New York* (1977–78, lobby of 1 World Trade Center, wood painted black), was intended to convey the experience of seeing the city at night. All were destroyed in the terrorist attacks of 11 September 2001 except the Koenig. Its crushed remains served as one of the first memorials to the attack. Louise Nevelson Plaza (1977, Maiden Lane, William Street, and Liberty Street) was also altered after 9/11, with the site redesigned to accommodate security concerns and the seven Nevelson sculptures rearranged accordingly. Alan Sonfist's *Time Landscape* (1965–78, La Guardia Place, plantings) is a garden of flora indigenous to Manhattan before colonization.

By the end of the 1970s contemporary public sculptors addressed function as well as aesthetics. Postmodern buildings became more colorful and ornamental and less dependent on public sculpture to enliven their spaces. A zoning ordinance in 1981 rewarded developers for including interior spaces with public amenities other than art. The same year Richard Serra's *Tilted Arc* (1981, Corten steel), a large, curved wall-like sculpture commissioned by the U.S. General Services Administration, was installed at Federal Plaza. In 1989 after a bitter controversy and questionable procedures, federal officials replaced the sculpture with benches and planters.

Fritz Koenig's Sphere *(1971), recovered from the World Trade Center site, 2009*

The developers of the Equitable Life Assurance Center (787 Seventh Avenue) also took a functional approach to public sculpture when they commissioned Scott Burton to redesign the building's public spaces (1985–86) with marble benches, tables, and planters. Battery Park City (1987–89) in lower Manhattan commissioned individual projects by Richard Artschwager, R. M. Fischer, and Ned Smyth along the esplanade that provided an amalgam of street furniture and art. Open areas at the southern and northern coves were developed by artists, architects, and landscape architects such as Stanton Ekstut, Mary Miss, Susan Child, Cesar Pelli, Scott Burton, Siah Armajani, and M. Paul Friedberg. In 1983 a new law allocated 1 percent of the city's construction budgets to art. Among the early works commissioned under the program was Donna Dennis's *Dreaming of Far Away Places: The Ships Come to Washington Market* (1988, Public School 234, 300 Greenwich Avenue, steel), a fence depicting ships in the harbor that appear to sail around the schoolyard. Since 1986 the Metropolitan Transit Authority has commissioned a variety of pieces of contemporary art for the city's subways and railroad lines. Tom Otterness's *Life Underground* (2001, 14th Street and Eighth Avenue) is one of the most notable and popular sculpture projects.

Michele H. Bogart (§1), Harriet F. Senie (§2)

Seabury, Samuel (*b* New York City, 22 Feb 1873; *d* East Hampton, N.Y., 7 May 1958). Jurist and reformer. He graduated from New York Law School in 1893 and was admitted to the New York State Bar Association in 1894. He was elected to a municipal court judgeship at age 28 as a candidate of Citizens Union. He then served on the New York Supreme Court from the age of 33 as a supporter of William Randolph Hearst and was elected to the court of appeals as a Progressive in 1914. He made an unsuccessful run for governor in 1916 and went into private practice after his defeat, becoming a wealthy trusts and estate lawyer. He reentered public life in 1930 to investigate the magistrates' courts. During the following year he uncovered evidence of illegal private business activity by magistrates, the alteration of court records, the sale of judgeships, and the harassment of innocent women by police vice squads allied with dishonest bail bondsmen and lawyers. In May 1930 Governor Franklin D. Roosevelt called on Seabury to investigate charges of incompetence against Manhattan district attorney Thomas T. C. Crain; he wrote a critical report but nonetheless recommended that Crain be retained. The state legislature then appointed him counsel to a joint committee formed to investigate the city's government. His staff assembled more than 60,000 pages of evidence, most of which was later shredded on Seabury's orders. The most spectacular testimonies were made public, including Sheriff Thomas Farley's description of his "wonderful tin box" of cash and Mayor James J. Walker's admission that he had received large "beneficences" from friends; Walker resigned in late 1932 while his dismissal hearing was in progress. In 1933 Seabury pushed for the fusion committee to nominate mayoral candidate Fiorello H. La Guardia, a staunch opponent of Tammany Hall. On 1 January 1934 La Guardia took the oath of office in Seabury's town house. Seabury is buried in Trinity Church Cemetery at 153rd Street and Amsterdam Avenue.

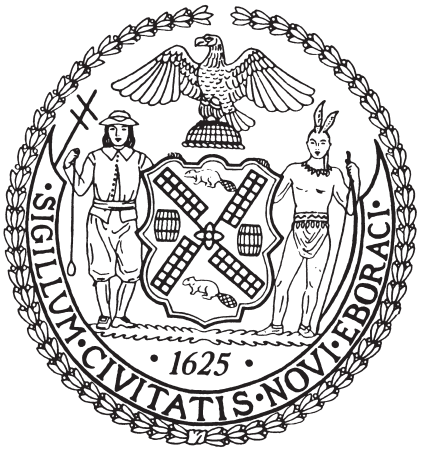
and bounded to the north by Coney Island Creek, to the east by West 37th Street, to the south by the Atlantic Ocean, and to the west by Norton's Point. Also known as West End and located in the town of Gravesend (1654–1894); Norton's Point was named after Mike Norton, a Coney Island landowner and state senator. Soon after ferry service from the Battery in Manhattan was introduced in the 1850s, Norton's Point became popular, especially among sports enthusiasts hoping to escape the censure of religious reformers and the restrictions of the police. After the Civil War a colony of misfits, criminals, and disgruntled veterans camped out there amusing themselves with illegal prizefights and dogfights. The area was placed under the control of the land commissioners of Gravesend and remained largely uninhabited until it was bought in 1888 by William K. Ziegler, president of the Royal Baking Powder Company. The Sea Gate Association, formed in 1892, was modeled on a plan for a restricted upper-class neighborhood proposed by Alrick Man, president of the Sea Beach Railroad; it retained control of future development and installed gates at Surf and Mermaid avenues and a fence 12 feet (3.7 meters) high to keep out intruders and visitors to Coney Island. The Atlantic Yacht Club clubhouse (1866), a destination for prestigious yachting races, was designed by Frank Cornell but burned in 1934. From 1909 until 1915, the Brooklyn Marathon ran on February 12 from Prospect Park to Sea Gate and returned. In 2009 there were about 900 houses in the 43 blocks of the neighborhood, which remained entirely separate from Coney Island. Since World War II, the population has been primarily Orthodox Jewish, mostly Hasidic. Only a few small stores can be found in Sea Gate, with most shopping outside its fence; the association has provided its own police protection since 1940. Well-known buildings include a chapel and two houses designed by Stanford White and a lighthouse (1890) 85 feet (26 meters) high at Norton's Point. Until his death in 1997 Frank Schubert was the official lighthouse keeper appointed by the U.S. Coast Guard. Among the unusual homes in Sea Gate is an all steel house designed by William van Alen and owned by Peter Spanakos, a former Golden Gloves champion. Other famous former residents have been Governor Al Smith, opera singer Beverly Sills, and authors Joseph Heller and Isaac Bashevis Singer.



Norman Blacher, *Sea Gate: A Private Community within the Confines of New York City* (New York: Sea Gate Association, 1955); Stephen Weinstein, "The Nickel Empire: Coney Island and the Creation of Urban Seaside Resorts in the United States" (diss., Columbia University, 1984); Kenneth Jackson and John Manbeck, eds., *The Neighborhoods of Brooklyn* (New Haven: Yale University Press, 2nd edn 2004)

Stephen Weinstein

Seagram Building. Landmarked office building at 375 Park Avenue, designed by Ludwig Mies van der Rohe and erected from 1954 to 1958; it is the headquarters of the firm of Joseph E. Seagram and Sons. Mies van der Rohe used only a quarter of the site to avoid having to comply with a zoning requirement (1916) that a tall building occupying its entire lot must have a setback design: his plan called for a slab-shaped building with a bronze exterior standing on a public plaza. Although the building had less space for rent than was usual, investors were attracted by the beauty of the exterior, the plaza, and the Four Seasons, a restaurant on the ground floor designed by Philip Johnson. The international acclaim that the building received prompted the city to pass a resolution in 1961 encouraging the construction of office buildings with amenities such as public plazas.

Mary Beth Betts

Seal of the City of New York. The Seal of the City of New York is affixed to official documents, publications, and stationery and depicted on buildings and other structures, vehicles, and the city flag. The first seal was granted by the duke of York to the Corporation of New York in 1664, to be used for the sealing of warrants, writs, executions, patents, grants, and other public acts. The symbol of the Imperial Crown was removed from the seal in 1783 and replaced by a federal eagle soaring over the northern hemisphere. By the early twentieth century the seal had suffered many variations and historical inaccuracies. To mark the 250th anniversary in 1915 of the English capture of New Amsterdam from the Dutch, the Associates of the Art Commission designed an official flag and conducted research for a historically correct seal to be executed by the sculptor Paul Manship. The new seal was blazoned on a flag of blue, white, and orange (the historic colors of the Netherlands) that was first raised at City Hall on 14 June 1915. In 1977 the City Council changed the date on the seal from 1664 to 1625, the year the Dutch founded New Amsterdam—though the first Dutch settlers arrived in 1624 and the town was incorporated as New Amsterdam in 1653. The seal depicts a shield crossed with the vanes of a windmill (representing the first source of energy in Manhattan); on the shield are a beaver (the chief commodity of the fur trade) and barrels of flour (recalling the milling industry). On one side of the shield stands a sailor named Dexter (representing the port and shipping), dressed in knee breeches and holding a lead plummet for sounding channels, with a cross-staff (a navigating instrument used to measure latitude) draped across his right shoulder; opposite the shield to his left an Algonquin Indian named Sinister, a member of the Lenape tribe, holds a single curved bow, the weapon of the coastal tribes. Both figures stand on a laurel branch. The border of the seal consists of a laurel wreath, the heraldic symbol of triumph, and the legend "Sigillum Civitatis Novi Eboraci" (sometimes omitted). The seal is maintained by the office of the city clerk; the Municipal Archives hold previously used designs along with the seals of the five boroughs and other variations used by municipal departments. Unofficial use of the seal

Seal of the City of New York (revised in 1977)

on any vehicle is subject to a fine of $25 or imprisonment not exceeding 10 days.

Gordon Hyatt

Seamen's Church Institute. Church for seafarers formed in 1834 and affiliated with the Episcopal Church. It began as a floating chapel in the Gothic Revival style and became known among seamen as the "doghouse on a raft" and later simply as the "doghouse." From 1907 to 1968 it occupied a large facility at 25 South Street. The most durable of the many organizations formed during the mid-nineteenth century to promote the welfare of men and women of the sea, it operates a facility on Water Street in lower Manhattan, as well as a large clubhouse at Port Newark in New Jersey.

Norman J. Brouwer

Seaside. Neighborhood in southern Queens, lying on the Rockaway Peninsula and centered on Beach 103rd Street; it is part of Rockaway Beach. The area became a resort after the New York, Woodhaven and Rockaway Railroad opened a station in 1880 at Beach 102nd and Beach 103rd Streets. Seasonal bungalows lined the side streets. Thousands of visitors frequented local bathhouses and amusements, including the Wainwright and Smith bathhouses and the Ferris wheel at 103rd Street; a large amusement complex called Steeplechase and bathhouses between 98th and 100th streets; the iron pier and bathhouses at 105th Street; and the scenic railway, carousel, and hotel between 103rd and 104th streets. The resorts largely disappeared after World War II. Rockaways Playland, opened in 1901 as the L. A. Thompson Amusement Park, closed after the 1985 season. Playland's roller coaster was featured in *This Is Cinerama* (1952). Two publicly assisted middle-income projects opened between 102nd and 108th streets in the 1960s: Surfside Park and Dayton Towers West. The Queens Library began serving the summer visitors in the 1920s and opened a new building in 1979.

Vincent Seyfried

Sea View Hospital. See New York City Farm Colony–Seaview Hospital Historic District.

SEBCO. See South East Bronx Community Organization.

Second Avenue subway. The two-track Second Avenue subway (SAS) will ultimately link 125th Street with Hanover Square. First proposed in 1929 and again in 1951, it was not built despite the demolition of the Second and Third Avenue elevated lines (1942 and 1955, respectively), which caused overcrowded conditions on the East Side's remaining rapid transit route, the Lexington Avenue subway (4/5/6 trains). In 1968 the initial capital plan of the Metropolitan Transportation Authority (MTA) included the SAS. Construction began in 1972; portions were constructed in East Harlem and near the Manhattan Bridge, but work was stopped in 1975 because of New York City's fiscal crisis. MTA resurrected the SAS project in 1996 after analyses of alternatives clearly demonstrated its need. After required environmental and design work was performed, construction of the first of four phases began again in April 2007.

Andrew Sparberg

Second Bank of the United States. Federal bank formed in 1816 in Philadelphia to alleviate difficulties in financing the War of 1812. A branch in New York City opened in October 1817 at 65 Broadway in Manhattan (later moved to Wall Street) and had capital assets of $2.5 million, more than any other bank in the city. The constitutionality of the bank was affirmed by the U.S. Supreme Court in *McCulloch v. Maryland* (1819). A requirement that state and local banks redeem their notes at the Second Bank, imposed by Nicholas Biddle (1786–1844), its president from 1823, was strongly opposed; there was also resentment that the bank attracted a disproportionate share of deposits by the federal government. The bank was entangled more thoroughly in politics than the First Bank of the United States had been, and after the "bank war" of the early 1830s its charter was allowed to expire in 1836. Its dissolution freed commercial banks from competition and enabled the city to become the undisputed capital of commercial banking.

Ralph H. Catterall, *Second Bank of the United States* (Chicago: University of Chicago Press, 1903)

James Bradley

Secor, John. Alias of William M. "Boss" Tweed while he was a fugitive.

Seeger, Alan (*b* New York City, 22 June 1888; *d* Belloy-en-Santerre, France, 4 July 1916). Poet. He grew up in Staten Island and lived in Mexico City for several years after his father's import-export business failed; in 1902 he and his brother returned to New York City to attend the Hackley School in suburban Tarrytown. Seeger attended Harvard University 1906 to 1910, where he befriended journalist John Reed. After graduation he returned to New York City, did odd jobs, and wrote poetry. He moved to Paris in 1912 and joined the French Foreign Legion. During World War I his poetry was published in the Atlantic Monthly and he was a war correspondent for the New Republic and the New York Sun. In 1916 his poem "I Have a Rendezvous with Death" appeared in the *New Republic;* that summer Seeger was killed in action during the bloody Somme offensive. He was awarded the Croix de Guerre and Medaille Militaire after his death; *Poems by Alan Seeger* (1916) and *Letters and Diary of Alan Seeger* (1917) were published posthumously. Folksinger Pete Seeger is Seeger's nephew.

Kate Lauber

Seeger, Pete (Peter) (*b* Patterson, N.Y., 3 May 1919). Folksinger and political activist. Although he was born in Putnam County, traveled widely, and settled permanently upstate, he is intimately identified with New York City. A banjo and guitar player and singer since youth, after dropping out of Harvard University in 1938 he usually lived in the city until he and his wife moved to near Beacon, New York, in the 1950s. He taught folk singing at the Dalton School, regularly performed at Town Hall and Lewisohn Stadium and on New York radio stations, and led hootenannies at Carnegie Hall. Seeger was a member of the Almanac Singers, a New York City–based group that, after changing its name to the Weavers, recorded with Folkways Records (founded in the city by Moses Asch and Marian Distler), won international fame, founded the folk music revival, and inspired opponents to the Vietnam War. "Where Have All the Flowers Gone?" "Turn, Turn, Turn," and his other well-known songs have both memorable melodies and often political messages. Seeger's career was all but ended in 1955 by a controversy over his ties to the Communist Party. Although a media blacklist ended his national prominence as a performer, he continued to sing at folk concerts and festivals until he was in his 80s. A pioneer environmentalist, in the late 1960s he spearheaded the effort to build the replica Hudson River sloop *Clearwater,* which often sailed off the city with crews of youngsters learning marine biology. In 2008 a television show on public broadcasting

emphasized Seeger's New York City roots, and a year later he was a featured singer alongside Bruce Springsteen at a show in Washington, D.C., preceding the inauguration of President Barack Obama.

John Rousmaniere

Segal, George (*b* New York City, 26 Nov 1924; *d* South Brunswick, N.J., 9 June 2000). Sculptor. Born to Russian immigrants, he spent his childhood in the Bronx, and attended Stuyvesant High School. His family later moved to South Brunswick, New Jersey, where they farmed chickens. Segal's first medium was painting. He exhibited at the Hansa Gallery in New York City, an artist cooperative where abstract expressionism flourished. Segal cemented his reputation when he began to swathe people in plaster-infused bandages and freeze these forms amid quotidian objects to create minimalist tableaux. He salvaged objects from Manhattan and New Jersey for his tableaux. Though linked to the pop art movement, Segal's sculptures defied classification. In 1980 he cast *Gay Liberation,* a bronze of two same-sex couples commissioned by the Mildred Andrews Fund to commemorate the Stonewall Rebellion. Homosexual residents of Greenwich Village resented the homogeneity of the white, youthful figures, while heterosexuals resented the presence of a gay rights monument in their neighborhood. Such outrage halted installation in Christopher Park until 1992. Segal was represented by the Sidney Janis Gallery for most of his career. His work appears in the collections of the Metropolitan Museum of Art, the Guggenheim, the Whitney, and the Museum of Modern Art.

Clare Richfield

Seixas, Gershom Mendes (*b* New York City, 15 Jan 1746; *d* New York City, 2 July 1816). Rabbi. He became the rabbi of Shearith Israel in 1768 and extended his ministry to Jews in outlying areas. During the American Revolution he settled briefly in Philadelphia, returning to New York City in 1784. A strict observer of Orthodox traditions, he promoted the Hebrew language; he was also the first rabbi to use English for services and took part in religious exchanges, giving sermons to Christian congregations and inviting Christian ministers to his congregation. One of his Thanksgiving sermons at St. Paul's was published as a pamphlet that the *Daily Gazette* recommended to "every pious reader, whether Jew or Christian" (23 December 1789). Seixas formed the charitable organization Hebra Hasad Va-Amet and was a trustee of Columbia College. He is buried at New Bowery Cemetery of Shearith Israel.

James E. Mooney

Seligman. See J. and W. Seligman.

Seligman, Joseph (*b* Baiersdorf, Bavaria, 22 Nov 1819; *d* New Orleans, La., 28 April 1880). Banker, father of E. R. A. Seligman. With two of his brothers, Jesse Seligman (1827–94) and William Seligman (1822–1910), he formed a clothing firm in 1846 with headquarters at 5 William Street, which supplied uniforms for the Union army. He also negotiated more than $200 million in foreign loans to support the Union cause and was a financial adviser to Presidents Abraham Lincoln, Ulysses S. Grant, and Rutherford B. Hayes. He worked in the family's banking firm of J. and W. Seligman and Company, was a founder with Felix Adler of the New York Society for Ethical Culture, and was active in politics. In addition to working in business he supported the Hebrew Orphan Society and Mount Sinai Hospital, served on the Board of Education, and helped to plan the city's first elevated rapid transit. His son Isaac Newton Seligman (1855–1917) became the head of J. and W. Seligman in 1894.

Ross L. Muir and Carl J. White, *Over the Long Term: The Story of J. and W. Seligman and Company* (New York: J. and W. Seligman, 1964)

Joyce Mendelsohn

seltzer. Artificially carbonated water. After effervescent mineral water was discovered in upstate New York in the 1780s, samples were taken to New York City for experiment to re-create the effervescence by such prominent scientists as Samuel Latham Mitchill and Valentine Seaman (1770–1817). Artificially carbonated water, then called soda water, was made at the City Hotel by Noyes Darling and first served in the city at the Tontine Coffee House in 1809. With George Usher and Joseph Boston, Darling became a leading manufacturer of soda water. The soda-water industry developed mostly in the city, where the Englishman John Matthews (1808–70) made many innovations; he learned the trade in England, moved to the United States in 1832, and a few years later bought a factory at First Avenue and 26th Street where he formed the John Matthews Apparatus Company. During the following decades the business became tremendously successful in selling soda water, bottles, glasses, tubes, pumps, generators, and hundreds of Matthews's designs for soda fountains. When he retired in 1865 the firm was the undisputed national leader in the industry and renowned worldwide (it merged with the American Soda Fountain Company in 1891, became independent again in 1914, and closed in the 1920s). Soda water became known mostly as seltzer and was popular among Jews because it complemented rich foods included in kosher diets; it was often called *Belchwasser* or Jewish champagne.

During the 1870s soda fountains became popular attractions in drugstores and department stores, and such establishments as Hudnut's in the Herald Building were known for their marble soda fountains; the price of a glass of seltzer gave rise to the expression "two cents plain." Egg creams, a confection sold at candy stores, were made with seltzer, chocolate syrup, and milk (but neither eggs nor cream). During the first half of the twentieth century seltzer became widely popular and its production became an important business in the city. The most prosperous firm was for many years the Good Health Seltzer Company on the Lower East Side. Companies in Brooklyn included Bensonhurst Seltzer and Jacob Goldberg and Sons. Seltzer was distributed in glass siphon bottles by "seltzer men," who made seltzer that they delivered to homes by wagon and truck. When carbonated water and mineral water became popular again in the 1970s, such soft drink companies as Canada Dry, White Rock, and Schweppes began making seltzer. Home delivery was reintroduced in the 1980s by such manufacturers as Gimme Seltzer in Long Island City and Havana Dry in the Bronx. The Canada Dry Bottling Company in Queens distributed seltzer under the brand names of Cott, Hoffman's, Kirsch, and Good Old Times Seltzer. In the early twenty-first century New York City is the largest seltzer and mineral-water market in the country.

James Bradley

Sendak, Maurice (Bernard) (*b* Brooklyn, 10 June 1928). Illustrator and writer. He grew up in Brooklyn, where at age nine he wrote and illustrated his first stories; he later worked for the toy store F. A. O. Schwarz. After producing the illustrations for Ruth Krauss's book *A Hole Is to Dig,* he left the store in 1952 to concentrate on writing and illustrating children's books. In 1963 his book *Where the Wild Things Are* won the Caldecott Medal, the highest award for children's literature, and became an instant classic; it was made into a movie in 2009. In his book *In the Night Kitchen* (1970) he recast the city's skyline as a row of kitchen utensils and containers dating from the 1930s, drawn in a homey style. He lived in Greenwich Village until 1972, when he moved to Connecticut. Sendak has illustrated more than 70 books, written and illustrated 17, and won many awards for excellence in children's book illustration.

Selma G. Lanes, *The Art of Maurice Sendak* (New York: Harry N. Abrams, 1980)

Michael Joseph

Seneca Village. Manhattan's first known community of African American real property owners, settled in 1825. Located between 82nd and 89th streets and Seventh and Eighth avenues, Seneca Village was a community numbering more than 250 people, with three

churches, several cemeteries, and a school. African Americans owned more than half the households. An early example of racial harmony, this multiethnic community, which also included Irish and German immigrants and possibly some Native Americans, lived peaceably. Seneca Village was razed in 1857 to make way for Central Park.

Kathleen Benson, Celedonia Jones, Diane Jones Randall, Sharon Wilkins

Senegalese. In the late 1970s and 1980s severe droughts and economic crises in Senegal brought immigrants to New York City. Most spoke only Wolof, the principal language of Senegal. They were from the peanut farming region of Diourbel and belonged to a Muslim sect called the *mourids* known for its work ethic. Many drew on their experience as street vendors in Senegal to set up successful peddling businesses on city streets, buying scarves, sunglasses, watches, handbags, and T-shirts by the case in Chinatown and selling them in midtown and Greenwich Village. In the mid-1980s it was estimated that some Senegalese vendors earned $100 a week (compared with an annual per capita income in Senegal of $460), spent about $60 a week on inexpensive hotel rooms in Manhattan or apartments in the outer boroughs, and sent home as much as $45 a month. In the early twenty-first century Senegalese remained active street traders.

B. Kimberly Taylor

Sensation show. Controversial art exhibit at the Brooklyn Museum. Fully entitled *Sensation: Young British Artists from the Saatchi Collection,* the show ran from 2 October 1999 through 9 January 2000 and was previously shown in London and Berlin. When the show arrived in Brooklyn, animal-rights groups protested works by Damien Hirst that incorporated animal carcasses, while Catholic groups were outraged by Chris Ofili's painting *The Holy Virgin Mary,* which depicted a black Madonna with one breast made from resin-covered elephant dung surrounded by pictures of female genitalia cut from pornographic magazines. Mayor Rudolph Giuliani fought to have the show closed and threatened to withhold the museum's municipal funding, and the U.S. House of Representatives passed a resolution to end federal funding for the museum. The New York Civil Liberties Union, along with Hillary Rodham Clinton, then Giuliani's opponent in the New York senate race, defended the museum. A federal judge ultimately ordered all funding to be restored, and the exhibit was shown as planned.

Kate Lauber

September 11 [9/11]. Day in 2001 on which two jet aircraft purposefully flew into the World Trade Center (WTC) twin towers, destroying them and killing thousands of people. It is the worst terrorist attack ever committed on U.S. soil.

At 8:00 a.m. on Tuesday, 11 September 2001, American Airlines Flight 11 took off from Boston's Logan Airport, bound for Los Angeles; at 8:29 it turned sharply to the left, followed the Hudson River toward New York City, and at 8:46 a.m. flew into 1 WTC, the North Tower, at 470 miles per hour. United Flight 175 left Boston at 7:58, also headed to Los Angeles, crossed into New Jersey, and then turned nearly 180 degrees and crashed into the South Tower (2 WTC) at 9:02 at 560 miles per hour. Each plane had been hijacked by several men carrying knives and box cutters; wounding or killing the crews, they took control of the planes using skills they had learned in part at flying schools in the United States. Together with a third team, which sent a plane crashing into the Pentagon that day, and a fourth, whose mission was thwarted when passengers crashed the plane in the countryside near Pittsburgh, the hijackers were members of Al-Qaeda, a network of Islamic radicals who sought vengeance for American and other Western incursions into Muslim lands. It is believed they chose the WTC as a target because it symbolizes Western capitalism and secularism and American worldwide economic influence.

When the planes hit, about 12,000 people were in or near their offices or preparing for meetings in the North and South Towers. The first plane—a Boeing 767 loaded with fuel for a transcontinental flight—hit the north face of that tower between the 92nd and 98th floors, sending engine parts into structural columns in the core. Jet fuel caught fire and burned through the insulation protecting the horizontal floor trusses, generating heat that softened the trusses and the vertical supports in the core and in the building's perimeter. These held for more than an hour and a half, permitting thousands of people who worked on the 90th floor and below to rush down stairways and escape.

The South Tower, which was the first to collapse, was also hit by a fully fueled 767, but at a higher speed, piercing the building between the 78th and 84th floors. Rubble and fire blocked everyone above the 77th floor from escaping via the stairwells. By 9:45 fires had spread through at least five floors, and the horizontal trusses began to sag. Firefighters were headed up the stairs to rescue survivors when the structure collapsed at 9:59 a.m.; the descending floors cascaded downward to the concourse level and below. The 17 minutes between attacks on the buildings had given people the opportunity to escape; the death toll was 700. Then at 10:28 the North Tower collapsed, killing 1344 people, mostly on the floors above the impact.

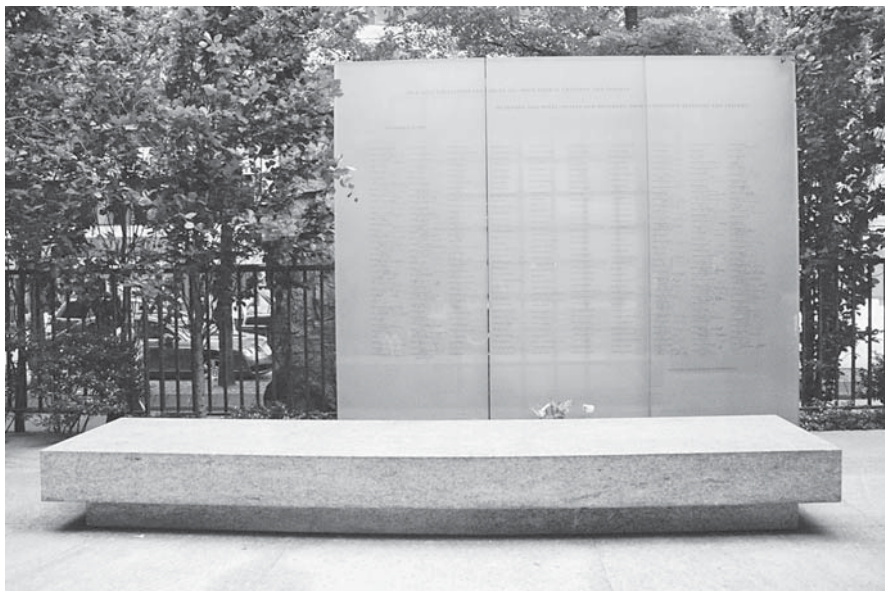
The force of the collapse was devastating. Ten stories of the South Tower were later found in the lower basement; they had compacted into a dense pancake 6 feet (2 meters) high. Twenty floors of the North Tower were found in a basement area, compressed to 10 feet (3 meters) in height. As the two towers fell, pieces smashed into nearby buildings, including 4, 5, 6, and 7 WTC and the Marriott Hotel; a dozen structures beyond the WTC super block were badly damaged, including St. Nicholas Greek Orthodox Church, a block away, which was smashed to the ground, and 90 West Street, a 23-story structure that burned for a day and a half.

Twin towers from the Brooklyn Promenade, 11 September 2001

World Trade Center site from the roof of the World Financial Center, November 2001

It was originally feared that as many as 6000 had died in the attack, but the final tally was estimated at 2749 (the exact number has never been determined), including 343 firefighters and 70 police killed in both towers, and the 92 passengers and crew on Flight 11 and the 65 on Flight 175. In addition, several thousand survivors, rescuers, and others suffered significant long-term health damage caused by inhaling the air around the site, which was contaminated with smoke from fires, toxic dust and suspended debris from the buildings' collapse, and exhaust from cleanup equipment.

Cleanup proceeded slowly, in part in the hope that survivors would be found in the rubble, but only 21 were finally rescued. All debris was not removed from the 16-acre (6.5-hectare) site—called Ground Zero—until June 2002. The cleanup effort was also complicated by the need to protect the WTC "bathtub"—the 70-foot-deep (21.3-meter) hole in which the buildings had been constructed that was surrounded by a 3000-foot-long (914-meter-long) waterproof "slurry" wall that prevented water from the nearby Hudson River from seeping into the foundation.



It was difficult to determine why the towers fell, in part because the various investigations were not well organized and were poorly funded. Investigations that were completed indicated that thicker fireproofing on the floor trusses would have delayed their buckling, and if the trusses had been stronger, they might have held the outside structure and the core longer. However, because of the intense heat of the fire from burning jet fuel, most studies concluded that the collapse could not have been prevented.

The 9/11 attacks had a profound effect on the New York metropolitan region. In addition to the human toll, which included thousands of people exhibiting symptoms of posttraumatic stress disorder five to six years after the attacks, the city lost more than 15 million square feet (1.4 million square meters) of office space and 100,000 jobs. For months, the streets of lower Manhattan were quiet and had a heavy police and military presence; a distinctive smell pervaded everyplace south of Chambers Street.

At the same time the attack resurrected the career of Mayor Rudolph Giuliani, who was then in the last months of his second term and whose popularity had been declining. In the immediate aftermath of 9/11, he became a national hero—calm in the face of disaster, reassuring to those who thought the city was doomed, and compassionate in his evocation of loss. He was particularly sympathetic to the families of the more than 400 firefighters and police officers who died in the performance of their duties.

But the effects went beyond the loss of lives, buildings, and jobs. Soon after the attack, tighter airport security systems were established, improved building codes for tall buildings were created, and additional efforts to monitor people entering the United States were undertaken. Concluding that Al-Qaeda leader Osama bin Laden had orchestrated the events of 9/11 and that he was hiding in Taliban-controlled Afghanistan, the United States and Britain invaded Afghanistan in the fall of 2001. Congress passed the USA PATRIOT Act of 2001 and other legislation that expanded the president's powers to "fight terrorism." The administration of George W. Bush then asserted that Iraq was part of the "terrorist network" and invaded that country in 2003. In November 2002 Congress created the semi-independent 9/11 Commission, which issued a final report in July 2004 that criticized the Central Intelligence Agency, the Federal Bureau of Investigation, and other federal agencies for failing to take actions that could have averted the disaster.

New York City eventually recovered from the attack, with its economy and popularity as a business and tourist site, and its real estate market, rebounding. Plans for rebuilding the World Trade Center site include a memorial

After 9/11, memorials like this one, the Marsh and McLennan Memorial at 1166 Avenue of the Americas, were created to remember victims of the attacks

in honor of those who died, as well as five new skyscrapers and a museum (see World Trade Center and National September 11 Memorial and Museum).

Serbs. Economic refugees from Serbia immigrated to the United States in the late nineteenth century to work in factories, steel mills, and mines in the Midwest, but a number settled in New York City. A small Serb, Croat, and Slovenian colony took shape along Ninth and 10th avenues between 21st and 40th streets, and in 1914 the famed physicist Michael Pupin formed the central committee of Srpska Narodna Odbrana (Serbian national defense). Although small in number the city's Serbian community supported a daily newspaper, *Srbski Dnevnik,* between 1911 and 1932. The quota system imposed in 1924 suspended Serbian immigration until the communist takeover of Yugoslavia in 1946 led to an influx to the United States of war prisoners, refugees, Serbian nationalists, and German collaborators. After the Yugoslavian dictator Marshal Josip Broz Tito opened his country's borders in 1963, many Serb professionals, including physicians, architects, and engineers, as well as students, immigrated to the United States and settled in New York City. Many Serbs also worked in real estate and construction. The most vital Serbian institution in the city was the Serbian Cathedral of St. Sava, built by Richard Upjohn in 1855 at 20 West 26th Street and bought from the Episcopalians in 1942. Nikola Tesla, the scientist and inventor, lived in New York City for 40 years and died at the New Yorker Hotel. In the early twenty-first century an estimated 40,000 people of Serbian ancestry lived in the city, with large communities in Ridgewood and Astoria.

Marc Ferris

Serpico, (Francesco Vincent) Frank (*b* Brooklyn, 14 April 1936). New York City police officer. He was the most feared, hated, and controversial policeman in New York City in the late 1960s. Working as a plainclothes detective, he went public about police corruption, revealing bribery and kickbacks that eventually led to the formation in 1970 of the Knapp Commission, which investigated and exposed the corruption. Serpico became the first police officer in history to testify openly about systemic police corruption and payoffs and received numerous death threats after testifying. A year after appearing before the commission, Serpico was shot in the face during a raid on a suspected drug deal in Brooklyn. The bullet entered his cheek and lodged at the top of his jaw. Fellow officers did not come to his aid, nor did they call headquarters to report that an officer had been shot. One month after receiving the New York City Police Department's highest honor, the Medal of Honor, he retired in 1972. He lived in Europe for many years, and his story was turned into a best-selling book, which in turn became the movie *Serpico* (1973) starring Al Pacino.

Sesame Workshop. Nonprofit corporation formed in 1968 by Joan Ganz Cooney and Lloyd Morrisett to develop educational television programs for children. It was a pioneer in educational programming techniques and an outgrowth of a research project by Cooney called "The Potential Uses of Television in Preschool Education" for the Carnegie Corporation. Formerly known as the Children's Television Workshop, it changed its name in 2000. It became especially well known for *Sesame Street,* a program for two- to five-year-olds that eventually won more than 50 Emmy Awards and a Peabody Award and was shown in 90 countries. *Sesame Street* proved so successful that it funded many of the other projects by the Sesame Workshop. Other television series that the workshop created include *3-2-1 Contact, Square One, Ghostwriter,* and *The Electric Company*. It also developed *Sesame Street Magazine* and expanded into print and electronic educational materials, home video, and software. Its programming and other media are designed to teach basic reading and writing, mathematics, and science to a young audience. The programming has also addressed children with learning disabilities and bilingual education. The offices are at 1 Lincoln Plaza in Manhattan.

Gladys Chen

Seton [née Bayley]**, Elizabeth Ann** (*b* Staten Island, 28 Aug 1774; *d* Emmitsburg, Md., 4 Jan 1821). First American-born saint. The daughter of the physician Richard Bayley, as a child she spent her summers at Cragdon, her grandparents' home in Edenwald (now Seton Falls Park in the Bronx). She married the successful merchant William Magee Seton in 1794. Her involvement with social work led her to form the Society for the Relief of Poor Widows and Children in 1797. After the premature death of her husband (1803) she converted to Roman Catholicism (1805) and was baptized at St. Peter's Church (Barclay Street). Ostracized by her Protestant family and friends, she moved with her five children to Baltimore in 1808 to open a school for girls. After taking her vows before the bishop, she formed in 1809 in Emmitsburg, Maryland, the American Sisters of Charity, the first Roman Catholic religious order in the United States; it was modeled after the Daughters of Charity, formed by St. Vincent de Paul in Paris during the sixteenth century to assist the poor. Although Seton did not return to New York City, the Sisters of Charity opened the Roman Catholic Orphan Asylum there in 1817. Seton was beatified in 1963 and canonized on 14 September 1975. The rectory of the Shrine of St. Elizabeth Bayley Seton is at 7 State Street in lower Manhattan, the site where Seton's family once lived. Among the other entities that bear her name are Seton Falls Park at West 233rd Street and Baychester Avenue in the Bronx, Bayley Seton Hospital at 75 Vanderbilt Avenue in Staten Island, and the Elizabeth Seton Campus of Iona College in the Bronx.

Bernadette McCauley

settlement houses. Houses that provided social services for the poor in urban areas. What is believed to be the first settlement house, Toynbee Hall, was formed in a slum in East London in 1884 by the vicar Samuel A. Barnett, who hoped to bridge class lines by having men with university education live and work in poor neighborhoods to improve the health, education, housing, and living conditions of working people. Stanton Coit (1857–1944), an American, lived briefly at Toynbee and in August 1886 set up the first settlement house in the United States in a tenement at 146 Forsyth Street on the Lower East Side. Originally open only to men and called the Lily Pleasure Club, it was renamed the Neighborhood Guild in 1887. It was soon followed by a women's settlement across the street when Jean Fine and the medical student Jane Robbins rented an apartment and invited girls' clubs to meet there during the winter of 1888–89. Later in 1889 the College Settlement opened nearby on Rivington Street and in its charter announced that it would provide a setting where "educated women" could live among "working people" for their "mutual benefit and education." Coit's settlement was renamed University Settlement in 1891 and from that time accepted both men and women as workers or residents; this became the common pattern, although women predominated among both residents and leaders. University

Settlement continued to function at 184 Eldridge Street.

Settlement houses in the United States retained many of the characteristics of their British counterparts: they were situated in poor neighborhoods and sought to improve the community as a whole; they often cooperated with charitable organizations but set themselves apart from them by stressing betterment through individual effort rather than philanthropy; and they helped primarily the working poor rather than the destitute. In other ways American settlement houses developed differently in response to unique conditions. The large number of immigrants to the United States produced a more heterogeneous and mobile population in New York City than in London, as well as a greater strain on the supply of housing and on educational, medical, and recreational resources. Settlement workers typically lived in neighborhoods where the local population had diverse religious and cultural backgrounds and seldom spoke English. Most American settlements came to be staffed by women who held college degrees but found the professions closed to them. Influenced by the Social Gospel movement, a Protestant effort to establish "the kingdom of God on earth through social reform," they saw settlement work as a socially acceptable way to apply their skills. But although some settlements drew financial support from religious groups and resembled missions, the importance of the religious element declined over time.

The settlement was an institution marked by adaptability and change. Programs constantly shifted to reflect the interests of residents, large organizations opened branches and smaller ones were absorbed, and their addresses were only temporary. The number of settlements in the city was 18 in 1897 and 89 in 1911 (of which 23 were in Brooklyn and 66 in Manhattan), not all providing living accommodations for those who worked there or offering a full range of programs. Four were umbrella organizations that coordinated neighborhood work; three were instruction centers offering classes in a single area such as music or housekeeping. About half gave religious instruction, and one of these had the stated objective of "winning children to its clubs and classes and to Christ." The typical settlement in the city offered meeting rooms for clubs, recreation and summer camp programs, kindergartens, health clinics, dramatic presentations, concerts, exhibits, debates on important issues, milk stations for infants, and classes in housekeeping, English, citizenship, carpentry, needlework, art, and music. At their peak the largest settlements had a few dozen residents and several times that number of part-time volunteers.

The College Settlement and University Settlement were among the best-known institutions of their kind. The Henry Street Settlement, formed by Lillian Wald and Mary Brewster, had 46 residents by 1911, of whom 41 were women. Incorporated in 1903 for the "usual settlement purposes," it was the first settlement to have a visiting nurse service. By 2008 it had expanded to eight buildings. Greenwich House, incorporated in 1902 as the Cooperative Social Settlement Society, was formed in a tenement on Jones Street and moved during World War I to permanent quarters at 27 Barrow Street. One of the first settlements in Greenwich Village, it reflected the interests of Mary Simkhovitch, its head resident from 1902 to 1946, by placing a special emphasis on music and the improvement of housing. It ultimately had 10 locations and offered drug and alcohol treatment and counseling services in addition to pottery and music programs. Hartley House was formed in 1897 at 413 West 46th Street in Manhattan under the auspices of the Association for Improving the Condition of the Poor and incorporated in 1903. It emphasized free baths and workrooms for women and a large playground for their children. The settlement continued into the twenty-first century to run a family day-care program. Hudson Guild, incorporated in 1895 at 441 West 26th Street by John L(ovejoy) Elliott (1868–1942) to "teach the ethics of social organization," benefited from the support of the New York Society for Ethical Culture. It was known for the well-regarded work of its affiliate the Hudson Guild Theatre, at 441 West 26th Street in Manhattan. Union Settlement, opened by the Alumni Club of Union Theological Seminary at 202 East 96th Street in the summer of 1895, moved frequently and operated out of several different apartments on East 104th and 105th streets.

Some reform-minded artists used the settlement as an instruction center. The violinist David Mannes and his wife, the pianist Clara Damrosch Mannes, taught at the Music School Settlement on the Lower East Side and then formed the Music School Settlement for Colored People in 1911. They soon devoted their energies to the David Mannes Music School, which they formed in 1916. Few settlements worked hard at racial integration. Branches set up in African American neighborhoods included the Lincoln Settlement (1908), at 105 Fleet Place in the 11th ward of Brooklyn, and the Stillman Branch for Colored People (1906), a branch of the Henry Street Settlement formed in an apartment in the West 60s in Manhattan. Greenwich House on the Lower West Side helped to conduct and publish several studies of African Americans living in New York City, including those of Mary White Ovington, but it did not set up a separate facility for them.

Settlements offering religious instruction were typically run by individual churches, with which they identified themselves openly. One of the largest, Amity Baptist Church and Settlement House, was formed in 1896 on West 54th Street to illustrate "true Christian living and to work for the religious and social well-being of the neighborhood." By 1911 it had 16 resident workers and 24 volunteers. Nondenominational Protestant religious instruction was offered by Christodora House, formed in 1897 by C. I. MacColl and Sara Carson on the Lower East Side "for the physical, social, intellectual, and spiritual development of the people in the crowded portions of the city." Through the efforts of Anna Hempstead Branch (1875–1937) the Poet's Guild was formed there in 1920 to sponsor readings and issue publications. From 1928 to 1948 the settlement occupied its own building on Tompkins Square (145 Avenue B at Ninth Street). It assumed the status of a foundation in 1981 and became known as Christodora Inc.

Settlements in New York City provided the basis for many national reform movements. Lillian Wald worked with Robert Hunter and J. G. Phelps Stokes of University Settlement to form a state child labor committee in 1902, and all three joined with other settlement workers to support the establishment in 1912 of a children's bureau in the U.S. Department of Labor. Mary Simkhovitch helped to form the Women's Trade Union League in 1903 and in the 1930s fought for a program of federally subsidized housing. Henry Moskowitz, a protégé of Wald and the head resident of the Down Town Ethical Society Settlement, worked for many municipal reforms, was a founder in 1909 of the National Association for the Advancement of Colored People (NAACP), and ran for Congress in 1912.

By World War I the impulse underlying the establishment of settlements had begun to weaken. Immigration had declined and women found more careers open to them. As social work became professionalized and the state and federal governments offered more social services, settlement houses lost their distinctiveness and became simply one part of a large network. Nonetheless, they continued to flourish. A 1935 survey counted 80 settlements operating in New York City, with 55 of them in Manhattan (of which half were on the Lower East Side) and 15 in Brooklyn. Of these 80 settlements, four had begun operation in the 1880s, 25 in the 1890s, 18 between 1900 and 1909, 22 between 1910 and 1919, and eight in the 1920s. By 1942 settlements no longer merited a separate entry in the city's Directory of Social Agencies and were included as part of "Recreation, Group Work and Neighborhood Centers." Only about one-fifth of those listed retained the word "settlement" in their name, and most had converted their residents' housing quarters

to other uses. By the early twenty-first century the settlement had been redefined; now a neighborhood center staffed by professional social workers, it continued to provide meeting spaces for clubs and offered a variety of services in child care, recreation, drug and alcohol counseling, music and art education, and employment training.

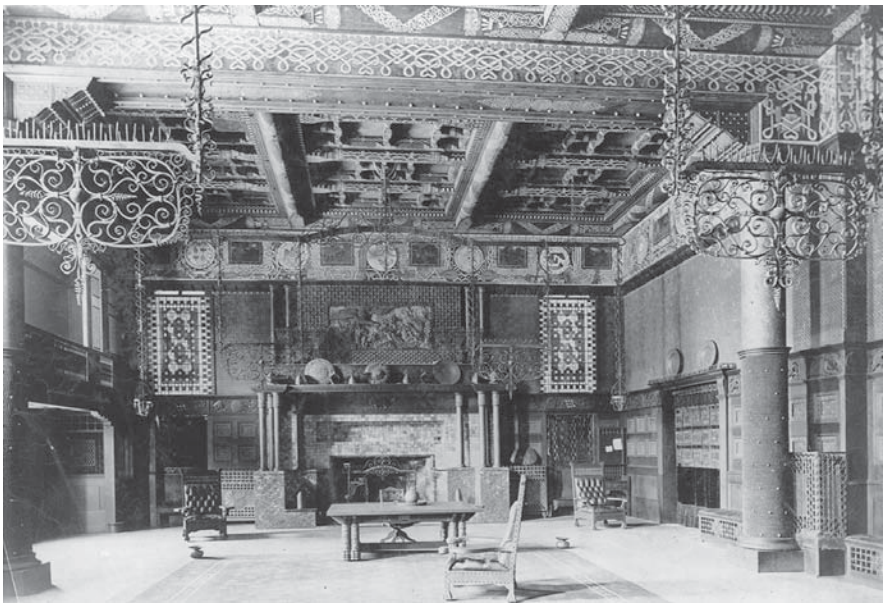
Betty Boyd Caroli



Seven Arts. Monthly magazine of literature and opinion launched in 1917 by James Oppenheim (1882–1932), who engaged Waldo Frank and Van Wyck Brooks as his associate editors and benefited from the patronage of Mrs. A. K. Rankine. The magazine promoted art as a regenerative social force and dwelled on topics of interest to the intelligentsia of Greenwich Village, especially cultural criticism, pacifism, and psychoanalysis. Its emphatic opposition to American participation in World War I led to the financial collapse of *Seven Arts* after one year in print.

Jan Seidler Ramirez

Seventh-day Adventists. Christian denomination born from the Millerite movement of the 1840s and formally organized in 1863. One of the fastest-growing religions in the world, in 2008 the church had more than 150 congregations in the five boroughs, almost half of them in Brooklyn. Adventist churches in New York City served a vast number of ethnic groups, including Asians, Latinos, West Indians, West Africans, Hungarians, and Ukrainians. Black members had a presence in the city as early as 1904; in 2008 the largest congregation in Manhattan, Ephesus Seventh-day Adventist Church at 101 West 123rd Street, was largely African American and had more than 1000 members. The Gothic building was designed by John Rochester Thomas and constructed in 1887 as the Second Collegiate Church of Harlem; after Ephesus moved there in 1930 the church's interior and its distinctive 37-foot (11.3-meter) spire were partially destroyed by fire in 1969; the steeple was not rebuilt until 2006. The Boys Choir of Harlem was founded at Ephesus in 1968. In the early twenty-first century Spanish-language churches in upper Manhattan and the Bronx served the city's Latino Adventist population; West Indian congregations met in South Brooklyn, including the Eglise Adventiste Gethsemane on Empire Boulevard, which served French-speaking Haitians; and the Queens Ghanaian Church in Ozone Park and the Staten Island Korean Seventh-day Adventist Church furthered the church's diversity and breadth in New York City.

Kate Lauber

Veterans' Room (designed by Louis Comfort Tiffany), Seventh Regiment Armory, ca *1890*

Seventh Regiment. Regiment formed in 1847, known as the "silk stocking regiment." Its forerunner was a volunteer militia of four companies formed in 1806 to safeguard New York Harbor from attacks by British frigates. The members developed their own rules, elected their own officers, supplied their own arms, and designed and bought their own uniforms. The regiment was chosen to serve as the Marquis de Lafayette's honor guard during his visit to New York City in 1824–25 and took the name National Guard in honor of Lafayette's Garde Nationale in Paris. It won many honors during the War of 1812 and played a vital role in defending the city during riots of the nineteenth century. In 1847 the regiment was reorganized and took its current name. By the 1860s it had more than 1000 members and had outgrown its armory at Tompkins Square. The city provided a square block at Park Avenue and 66th Street. The regiment established the New Armory Fund, which received private contributions from members and from individuals, banks, and insurance companies. One of its veterans, Charles W. Clinton, designed the three-story administration building containing the regimental and company rooms. A one-story drill shed stretching 300 feet (90 meters) to Lexington Avenue was added at the rear, its massive truss system designed by the Delaware Bridge Company and modeled after the train shed of

Drill hall of the Seventh Regiment Armory, 1885

Thomas Nast's depiction of the departure of the Seventh Regiment for the Civil War, 19 April 1861

the first Grand Central Depot. The cornerstone was laid on 13 October 1877, and on completion of the building in 1879 a fair was held inside to raise money for the interior decoration; President Rutherford B. Hayes presided over the opening ceremonies, and during three weeks $140,000 was raised, bringing the construction budget of the armory to $600,000. The regiment engaged the leading decorating firms to design the public rooms on the first story and the individual company rooms on the second. The best-known of these firms, Louis C. Tiffany and Associated Artists, designed the Veterans' Room and the library; other work was executed by the firms of Alexander Roux, Herter Brothers, Pottier and Stymus, Kimbel and Cabus, and Leon Marcotte. The interiors were completed by 1881 and remain some of the finest surviving examples of American interior design of the time.

Designated a National Historic Landmark in 1986, the armory remains privately owned and is a military facility for the 107th Support Group of the New York National Guard. It also houses other military organizations, a tennis club, a rifle club, and a public restaurant; presents exhibitions of art and antiques; and serves as a shelter for homeless women. In late 2001 the armory became the 9/11 National Guard Center, providing support for those affected by the terrorist attacks on the World Trade Center. As of 2008 the building was undergoing a massive renovation after having been the only New York venue named on the World Monuments Fund's list of the 100 most endangered sites in the world.

sewers. Most cities historically had little or no underground sewage systems until the nineteenth century, and New York City was no different. In the seventeenth century and for most of the eighteenth kitchen slops were generally poured on the ground or emptied into cesspools, and sewage was collected in pails and dumped into the river. What is now Broad Street in Manhattan was originally a brook that the Dutch widened into a canal and then paved over for a road to create the city's first "common sewer," primarily designed to carry off storm water. As the city grew during the late eighteenth century, a network of sewer pipes made first of wood and later of stone and brick expanded, but without a coherent plan. Criticism of the system increased during the early nineteenth century, when the city's population neared 300,000, real estate development disrupted the island's natural drainage, backyard privies overflowed, and riverbanks became reeking cesspools. The completion of the Croton Aqueduct in 1842 aggravated the problem by increasing the flow of water in the already overburdened sewers. Wealthy householders further contributed by installing the city's first water closets and flushing their effluent into the storm sewers.

Although some thought was given to converting sewage into fertilizer, the abundant water carried through the Croton Aqueduct made it easier to float away the city's wastes through underground pipes. Following a cholera epidemic in the mid-1800s, the Croton Aqueduct Department (1849) was given responsibility for building a comprehensive sewer system. Seventy miles (112 kilometers) of sewers were constructed from 1850 to 1855, yet the Association for Improving the Condition of the Poor estimated that three-quarters of the city's 500 miles (800 kilometers) of streets lacked sewers. The Metropolitan Health Board (1866) greatly expanded the system and by the early 1890s New York City had 464 miles (747 kilometers) of sewers, more than any U.S. or European city except Chicago. In 1894 half the residents of the city's tenements lived in houses with flush toilets, and by 1902 the city had more than 1400 miles (2240 kilometers) of sewers, and most newly constructed tenements had private flush toilets.

After an elaborate system of sewer lines was constructed in the city, the Metropolitan Sewerage Commission (1910–14) turned its attention to the problem of sewage disposal. Each day a flood of sewage from six million residents flowed directly into New York Harbor. Recommendations by the commission for a sophisticated system of collection and purification were often reiterated, but in 1930 the city was still pouring 1.3 million gallons (4.9 million liters) of raw sewage into the harbor every day. The growing urgency of the problem and the availability of public works funds during the New Deal finally led to the construction of seven sewage treatment plants, the first opening on Coney Island in 1935. When it was discovered in 1942 that seven facilities could treat only about half of the city's sewage, a master plan was drawn up that recommended a system of 14 plants. The Interstate Sanitation Commission ordered the city in 1948 to hasten the pace at which the plants were being constructed. Three more plants opened in 1952, but by 1962 one-quarter of the city's sewage still went untreated. The last two of the 14 plants, North River (on the Hudson at 137th Street in Manhattan) and Red Hook (in Brooklyn), did not open until 1986 and 1987. With all its plants operating the system was able to handle the nearly 1.7 billion gallons (6.4 billion liters) of sewage carried every day through 6200 miles (9975 kilometers) of pipe, but it did not end the pollution of the waters surrounding the city. Six of the largest plants operated at or above capacity in 1991, and odors emanating from the Newtown Creek plant in Brooklyn and the North River plant in Manhattan caused resentment among local residents, who argued that the facilities had been deliberately placed in poor neighborhoods. Plants with purification processes that met specific requirements continued to dump final-stage sewage precipitate at sea until 1992, when the practice was banned. In the early twenty-first century the New York City Water Board oversees sewers.

Sandra Opdycke

sewing machines. New York City played a role in developing the sewing machine when Walter Hunt, a resident of the city, invented a mechanized device in 1834 that made a lock stitch with sewing thread. The region became a leading center for the manufacture of sewing machines soon after the sewing machine itself was invented in 1846 by Elias Howe of Boston. Isaac M. Singer formed I. M. Singer and Company in 1851 with Edward Clark, a lawyer who took charge of finances, and opened his main office in Manhattan, where production facilities were moved in the following year. Singer took out 20 patents between 1851 and 1863; with his competitors (among them several firms in the city such as Grove and Baker, and Wheeler and Wilson) he set up the Sewing Machine Combination in 1856, the first patent pool in the country, which lasted until 1877. Although his machines were the only ones that could stitch continuously, they sold poorly at first, prompting Clark to launch a marketing system that was one of the most innovative in the country. The firm was one of the first to have its own distribution network and developed techniques for promoting, repairing, and financing durable goods. It both responded to the demand of the rapidly growing apparel industry in the city and persistently developed the household market: during the mid-1850s the company headquarters featured lavish showrooms where young women demonstrated the use of sewing machines. In 1863 the firm was renamed the Singer Manufacturing Company. The sewing machine and the availability of textiles allowed the average family to own more clothing than even the wealthy had been able to own just one generation earlier. The primary manufacturing operation was moved to a factory complex opened in 1873 in Elizabethport, New Jersey. By 1875 the firm was the largest manufacturer of sewing machines in the world. It moved into a building designed by Ernest Flagg and completed at 561 Broadway in lower Manhattan in 1904; the Singer Tower (also designed by Flagg) was completed at 149 Broadway in 1908.

From the 1880s New York City solidified its position as the center of the garment industry in the United States. Specialized devices such as the buttonhole machine made manufacturing more efficient by allowing for an increased division of labor and a reduction in the skills that each worker required. Because the sewing machine was compact and had low power requirements, it was often operated by women both in sweatshops and in the home (where work was paid for by the piece, often at exploitative rates). From the 1950s the use of the household machine declined, largely as a result of the increasing numbers of women who worked outside their homes. The garment industry itself had declined sharply in the area by 2008.

Darwin H. Stapleton

Shaarey Zedek. Conservative synagogue opened in 1839 by Polish Jews who seceded from B'nai Jeshurun. The congregation prospered during the nineteenth and early twentieth centuries and had two branches, one in a remodeled Quaker meetinghouse on Henry Street on the Lower East Side and the other in a building in an exuberant Moorish style on 118th Street in Harlem. Shaarey Zedek moved to the Upper West Side during the 1920s.

Jenna Weissman Joselit

Shahn, Ben(jamin) (*b* Kaunas, Lithuania, 12 Sept 1898; *d* New York City, 14 March 1969). Painter and illustrator. After settling in Brooklyn with his family in 1906 he worked for a lithographer and attended New York University and the City College of New York. He left school to study at the National Academy of Design and the Art Students League, then traveled in Europe during the 1920s and returned to New York City in 1929. His series of 25 gouache paintings depicting the trial of Sacco and Vanzetti was exhibited at the Downtown Gallery in 1932. In the same year he assisted Diego Rivera in painting a mural at Rockefeller Center (later destroyed). During the 1930s he worked as a photographer for the Resettlement Administration and as a muralist for projects sponsored by the federal government in New York and New Jersey; during World War II he designed posters for the Office of War Information. Although his graphic depictions of socially relevant subjects angered many conservative politicians and critics, he was chosen to represent the United States (along with Willem de Kooning) at the Venice Biennale in 1954.

Shakespeare in the Park. Ongoing seasonal theater company (also known as Shakespeare in Central Park; New York Shakespeare Festival). Since 1962 the Public Theater has staged productions of Shakespeare plays each summer in the Delacorte Theater in Central Park, typically two or three plays with runs of several weeks each. The performances are free and open to the public, and they bring about 80,000 New Yorkers and tourists to the open-air theater every summer. An outgrowth of Public Theater, the Shakespeare Workshop was founded by Joseph Papp and produced free outdoor performances of Shakespeare's works starting in 1954. The workshop productions were staged all over the city at first, moving to a lawn adjacent to Central Park's Turtle Pond in 1957. The company then moved to the Delacorte Theater, where it has remained. The inaugural production there

Shalom Aleichem Houses. Cooperative housing project at Sedgwick Avenue and 238th Street in the Bronx, organized in 1927 by the Yiddishe Cooperative Heim Gesellshaft (an offshoot of the Workmen's Circle). Named for the prominent Yiddish writer, the building contained artists' studios, an auditorium, meeting rooms, and housing for 240 families; many of the residents were artists, performers, and writers. The cooperative failed financially in 1929, but its members maintained the organization after the property was taken over, and they defeated the landlord's attempts to evict unemployed tenants in 1932. The residents continued to operate the meeting rooms, auditorium, cooperative kindergarten, and Yiddish schools until the 1960s.

Stanley Nadel

Shanker, Albert (*b* Queens, 14 Sept 1928; *d* New York City, 22 Feb 1997). Labor leader. He grew up in New York City, attended Stuyvesant High School and the University of Illinois, and did graduate work at Columbia University. After becoming a substitute teacher in 1952 he took an interest in the Teachers' Guild and after 1959 worked as a union official full time. He helped to form the United Federation of Teachers (UFT) in 1960, played an important role in securing its collective bargaining election, and was elected its president in 1964. He consistently argued that as professionals teachers deserve adequate pay and the authority to make decisions, and during the 1960s and 1970s he led several strikes to secure higher wages and an effective grievance procedure. In 1968 he led the UFT in a bitter strike after 19 school employees, including 13 teachers, were transferred involuntarily by the Ocean Hill–Brownsville School Board, which sought greater control over its staff. Charges of racism and anti-Semitism were traded, and Shanker was sentenced to 15 days in prison for defying a court order; his position was strengthened after the teachers were reinstated, and during the 1970s he made the UFT a powerful force in politics and extended membership in it to a group of assistants to classroom teachers known as paraprofessionals. He became president of the American Federation of Teachers in 1974 and served in this position until his death. Shanker also continued to lead the UFT until January 1986. In 1975 he led the UFT in a plan to save the city from bankruptcy by using pension funds to buy bonds of the Municipal Assistance Corporation.

shantytowns. There were many shantytowns during the 1870s and 1890s throughout New York City. More than 20 were built during the Depression, and these attracted a great deal of attention. Named Hoovervilles after President Herbert Hoover, they had about 2000 residents, most of them men, during the 1930s. The largest was the Hard Luck Town at Ninth Street and the East River, which housed about 450 men in 1933. The best-known Hooverville, set up after the Lower Reservoir was drained to make way for the Great Lawn, was variously called Hoover Valley, Shanty Village, Shack Town, Squatters Village, and Forgotten Man's Gulch. Twenty-two men were arrested for vagrancy in July 1931 after residents of Fifth Avenue complained about the "hobos" sleeping in Central Park; a sympathetic judge suspended their sentences and sent the men back to the park after giving $2 of his own money to each one. By the autumn of 1932 there were 17 shacks in the area, each furnished with chairs, beds, and a chimney. There was also a shack known as the Rockside Inn, built by unemployed bricklayers of brick with an inlaid roof. One well-known resident was Ralph Redfield, an unemployed vaudeville performer who charged visitors a fee to watch him walk a tightrope stretched across the shantytown. His act inspired Robert Nathan's novel *One More Spring,* which was made into a motion picture in 1935 and became the basis for Al Jolson's successful musical *Hallelujah I'm a Bum.* After World War II public intolerance of shantytowns increased. Between the late 1980s and mid-1990s those near Columbus Circle, Tompkins Square Park, the Port Authority Bus Terminal, the United Nations, and the base of the Manhattan Bridge were razed, forcing many of the city's 25,000 homeless to seek shelter elsewhere.

Chad Ludington

Sharpton, Al(fred Charles, Jr.) (*b* Brooklyn, 3 Oct 1954). Minister and civil rights activist. He began preaching at the age of four and soon was touring as the "wonder boy preacher." He attended Samuel J. Tilden High School in Brooklyn and attended Brooklyn College from 1973 to 1975. In 1964 he was ordained, preached at the World's Fair, and toured with the gospel singer Mahalia Jackson. In the late 1960s he became a follower of Adam Clayton Powell, Jr., and in 1969 he was appointed youth director of Operation Breadbasket, a group led by Jesse Jackson for which he spent two years organizing boycotts and demonstrations to force businesses to employ blacks. In 1971 he formed an offshoot of the organization called the National Youth Movement. He met the singer James Brown in 1973, and for the next eight years he worked variously as the manager of Brown's singing tours and for the National Youth Movement, at the same time forging political connections in the black community of New York City. In 1978 he was an unsuccessful candidate for the state senate. He worked as a community activist in the early 1980s and first became widely known in 1987, when he led protests after the racially motivated murder of a black man in Howard Beach and served as an adviser to Tawana Brawley, a young black woman whose allegations that she had been raped by white men in upstate New York became a cause célèbre. Sharpton's reputation suffered when an investigation found that Brawley's charges were baseless; he was later ordered to pay $65,000 in damages to Steven A. Pagones, who was accused in the case. Sharpton's image was further damaged when he was accused of financial impropriety in the National Youth Movement (for which he was later acquitted), and it was revealed that he had worked with the Federal Bureau of Investigation to avoid being prosecuted for his connections with boxing promoter Don King. He regained notoriety in 1991 when he was stabbed in Bensonhurst while protesting the 1989 murder of a 16-year-old black boy; he also led protests in Crown Heights after the 1991 riots there. In 1992 Sharpton mounted a campaign for the Democratic nomination for the U.S. Senate in which he cultivated a moderate image, avoided an acrimonious debate indulged in by his three opponents, and won about 15 percent of the vote. He was again a candidate for the Senate in 1994, losing the Democratic primary to Senator Daniel Patrick Moynihan; he ran unsuccessfully for mayor in 1997 and for president in 2004. Sharpton organized effective large-scale protests after the 1999 police killing of unarmed West African immigrant Amadou Diallo in the Bronx and the 2006 police killing of Sean Bell in Queens; in the early twenty-first century he remains an active figure in politics and civil rights, in the city and nationally.

Greg Robinson

"A Scene in Shantytown, New York," from the New York Daily Graphic, *4 March 1880, the first halftone photograph printed in a newspaper*

Shea, William A(lfred) (*b* New York City, 21 June 1907; *d* New York City, 2 Oct 1991). Lawyer. He grew up in Washington Heights and graduated from New York University. After several years of work for the Democratic Party in Brooklyn and for insurance companies, he entered private law practice in 1941. He was founding partner of the Shea and Gould law firm. He is best known for having restored National League baseball to New York City after the departure of the Dodgers and the Giants in 1957. His efforts led to the formation of the New York Mets in 1962, and the team's new ballpark in Flushing was named Shea Stadium in his honor in 1964.

James Bradley

Shearith Israel. First Jewish congregation in North America, formed in 1654 in New Amsterdam by a small group of Sephardim from Recife, Brazil, seeking refuge from the Inquisition. The congregation was initially denied permission by both the Dutch and the British to build a house of worship; legal impediments were gradually removed and by 1729 it built its first synagogue on Mill Street, which remained

Shearith Israel graveyard, 2009

in continuous use for almost a century. Shearith Israel was for many years the most important institution in the Jewish community: it supervised the preparation of kosher food, educated Jewish children, provided charity for the poor, adjudicated internal disputes, and supervised all Jewish marriages and burials. It ceased to be the city's only synagogue in 1825, when several Ashkenazim seceded to form B'nai Jeshurun after becoming disgruntled by what they considered an undemocratic system for distributing communal honors; this schism inspired the formation of 27 other congregations before the Civil War. By 1833 the city's Jewish population moved northward, and the synagogue moved to Crosby Street and then to 19th Street. In 1897 it moved to Central Park West and 70th Street. Designed by Arnold Brunner, the new building was said to be inspired by Greco-Roman synagogues discovered in the Mediterranean basin during the late nineteenth century. In the early twenty-first century Shearith Israel remained a vital center of Jewish religious life in New York City.

Jenna Weissman Joselit

Shea Stadium. Municipally owned stadium at Flushing Meadows–Corona Park in Queens, opened 17 April 1964 as the new home of the New York Mets baseball team. Named for William A. Shea, a lawyer instrumental in helping New York City to regain a National League baseball team in 1962, it seated 55,101. It was also home to the New York Jets from 1964 until 1983. It was designed by Praeger–Kavanagh–Waterbury as one of the largest stadiums at the time. The Mets inaugurated Shea Stadium with a 4–3 loss to the Pittsburgh Pirates. In 1975 Shea was the home field for the New York Mets and the New York Yankees as well as the New York Jets and the New York Giants—the first and only time to date that a single stadium has hosted two baseball and two football teams. Shea has hosted college football, soccer, boxing, and wrestling events, as well as concerts and mass gatherings. In 1965 the Beatles played the first large-scale outdoor stadium concert in the United States at Shea, with 55,000 fans attending the half-hour-long performance; in 1982 The Who drew a crowd of 70,346. Pope John Paul II held a Mass at the stadium in 1979 for nearly 60,000 people. After the terrorist attacks of 11 September 2001, Shea Stadium was used as a relief center where rescue workers provided food, supplies, and shelter for people in need. In 2006 city officials announced that a new municipal stadium would be built, and on 28 September 2008 the Mets played their final game in Shea. It was dismantled by February 2009, and the site is now part of the parking lot of the new Citi Field.

Steven A. Riess, Anne Epstein

Sheen, Fulton (John) (*b* El Paso, Ill., 8 May 1895; *d* New York City, 9 Dec 1979). Catholic bishop and radio and television personality. Ordained a priest of the diocese of Peoria, Illinois, on 20 September 1919, he joined the faculty of the Catholic University of America in 1926 but found his true vocation a few years later as a preacher. His weekly broadcasts on NBC Radio's "The Catholic Hour" (1930–52) and later his television program *Life Is Worth Living* (1952–57), which reached 30 million people, made him the best-known Catholic priest in the United States. The author of 93 books, Sheen received into the Catholic Church such notable converts as the journalists Heywood Broun and Louis Budenz, Congresswoman Clare Boothe Luce, and Henry Ford II. In 1950 he moved to New York City when he was appointed the national director of the Society for the Propagation of the Faith (an international fund-raising organization for Catholic missionaries), eventually raising more than $200 million. The following year he was appointed an auxiliary bishop of New York, but he later clashed with Cardinal Francis Spellman over the financial management of the Society for the Propagation of the Faith. Although Rome sided with Sheen, Spellman banned him from the pulpit of St. Patrick's Cathedral and ended his television career. In 1966 Sheen was named the bishop of Rochester, New York, but resigned after three unhappy years. He returned to New York City, was appointed a titular archbishop, and spent the remaining 10 years preaching throughout the world. He wrote *Treasure of Clay: The Autobiography of Fulton J. Sheen* (1980).

Thomas J. Shelley

Sheep Meadow. Clearing in Central Park between 66th and 69th streets, occupying 15 acres (6 hectares) of relatively flat land. It was set aside as a parade ground (named the Green) by the principal designer of the park, Frederick Law Olmsted, to meet a requirement imposed in 1857 that proposed designs for the park must include an area for military exercises. Although the National Guard used the grounds for this purpose in 1864, a state law passed later that year banned military drills in the park. The way was then clear for the introduction of a flock of 150 sheep, a crook-carrying shepherd, and a Victorian sheepfold. During the next six decades the area was also the site of such recreational activities as dancing, baseball, and lawn tennis. In 1934 Parks Commissioner Robert Moses exiled the sheep to Prospect Park in Brooklyn and converted the sheepfold into the restaurant Tavern on the Green. During the 1960s and 1970s a succession of rallies and concerts destroyed much of the grass, reducing the area to a dustbowl. Part of the field was then fenced in, replenished with new topsoil and sod, and installed with drainage systems. Loud noise and team sports were prohibited in 1986. The meadow was renovated yet again starting in November 2000 when the Central Park Conservancy installed a new irrigation system; it reopened in April 2001. The lush lawn and skyline views of Sheep Meadow make it one of the park's most popular and picturesque attractions.

Robert Sanger Steel

Sheepshead Bay. Neighborhood in southeastern Brooklyn (2000 pop. circa 63,000), overlooking an ocean inlet of the same name to its south and bordered to the north by Marine Park, to the east by Shell Bank Creek, to the south by Manhattan Beach, and to the west by Gravesend. The area was the site of a large Canarsee Indian village and remained undeveloped for more than a century and a half after the English settled Gravesend in 1645 only a short distance to the northwest. The Wyckoff–Bennett residence (1766) is one of the most striking of the extant Dutch farmhouses in Brooklyn. In the early nineteenth century a cluster of wooden shacks took shape around the inlet, which provided a sheltered anchorage for small boats. Shortly after the Civil War the village began to attract visitors from the city during the summer, who were drawn by the cool sea breezes and the seafood that had become a local specialty. Although two hotels were built, there was no permanent growth until 1877 when a farm of 50 acres (20 hectares) by the bay was subdivided and developed. The same fate soon befell other farms, and by the end of the century the village had some 400 houses served by stores, churches, and a post office. During the 1870s John Y. McKane, the notorious political "boss" of Gravesend, facilitated the extension of several railroads and boulevards to Coney Island, making the whole southern shore more accessible than it had been before. Meanwhile, the Coney Island Jockey Club opened the Sheepshead Bay Race Track on a site of 2200 acres (1000 hectares). This was replaced in 1915 by the Sheepshead Speedway, which was demolished in 1923; the site was then subdivided into small building lots and developed.

Sheepshead Bay, 1992

Greenlawn Colony in Sheepshead Bay, 1992

In 1931 the city took title to the area around the basin as the first step toward revitalizing it. Aging structures on stilts above the water were restored, and Emmons Avenue was widened. When work was completed in the summer of 1937 the *Brooklyn Eagle* characterized the renovated neighborhood as "clean, tidy and practically odorless." The character of the neighborhood changed again after 1954 as wooden houses were replaced by six- and seven-story redbrick apartment buildings for middle-income residents. By 1960 Sheepshead Bay was the fastest-growing community in Brooklyn. It became widely known as the center of recreational fishing in New York City, and a number of private boats moored at its 10 piers and used it as a port from which to launch cruises for bluefish, snappers, and striped bass. In the 1980s the city announced new development plans for Sheepshead Bay that provided for the improvement of the piers, private residential and retail construction, an esplanade along Emmons Avenue, and a park and ferry landing at the foot of Knapp Street; these plans remained unrealized several years later. The population of the neighborhood in the early twenty-first century was mostly Italian and Jewish, though there were increasing numbers of people from Asia and the Caribbean Islands. In the neighborhood and its environs there was considerable settlement by immigrants from the former Soviet Union, China, India, Pakistan, Vietnam, Israel, the Philippines, Poland, and Guyana.

Ellen Fletcher

shellfish. A great variety of shellfish inhabit the varied estuarine environments around New York City, especially the glacially created outwash plain of Jamaica Bay and the terminal moraine landscape of the northern shore of Queens and Staten Island. The many species of bivalves include the American Oyster (*Crassostrea virginica*), the Hard-Shelled Clam (*Mya arenaria*), the Surf Clam (*Spisula solidissima*), the Razor Clam (*Ensis directus*), the Blue Mussel (*Mytilus edulis*), the Periwinkle (*Littorina littorea*), and the Channeled Whelk (*Busycon canaliculatum*). Other common invertebrates are the Blue Crab (*Callinectes sapidus*), the Common Spider Crab (*Libinia emarginata*), the American Lobster (*Homarus americanus*), young Sand Shrimp (*Crangon septemspinoa*), and the Fiddler Crab (*Uca pugnax*), which is usually found in salt marshes. New Yorkers during the eighteenth and nineteenth centuries were great shellfish-eaters, but by the early twenty-first century the waters had been overharvested and polluted by industrial and residential development, and shellfish remained unsafe to eat.

John T. Tanacredi

Sheridan, Martin (Joseph) (*b* Bohola, County Mayo, Ireland, 28 March 1881; *d* New York City, 27 March 1918). Track and field athlete. After emigrating to the United States in 1900 he joined the New York Police Department and became a detective. He trained at the New York Athletic Club and competed in the Olympic Games of 1904 (St. Louis) and 1908 (London), winning two gold medals, one silver medal, and one bronze; in unofficial games at Athens in 1906 he won three gold medals and two silver medals, a performance exceeding that of any national team. He competed in nine events and excelled in the shot put, discus, broad jump, long jump, pole vault, and stone and javelin throws. During a career lasting 16 years he set 16 world

records and won 12 national championships in the United States and 30 in Canada. In 1918 the Police Department named for him its highest award for valor. Sheridan is buried in Calvary Cemetery in Queens.

John J. Concannon

Sheridan Square. Triangular park in Greenwich Village bounded by West Fourth Street, Washington Place, and Barrow Street and named for the legendary Civil War cavalry general Philip Henry Sheridan. Originally part of an Indian settlement called Sappokanican, the triangle was created when two estates were divided and was paved as part of a public road in 1830. During the late twentieth century the triangle served as a traffic safety island and was often filled with illegally parked cars and trucks. In 1981 a community group led by Vera Schneider formed the Sheridan Square Triangle Association to create a garden on the site, which it succeeded in doing the following year. The site was officially transformed from street to parkland in 1989 when it was added to New York City Department of Parks and Recreation oversight. The Sheridan Square Triangle Association, however, fully funds the park and maintains it with volunteer gardeners.

Kate Lauber

sheriff. Chief civil law enforcement office of New York City. Until 1943 positions as volunteer and paid county sheriffs were awarded to political supporters. Mayor Fiorello H. La Guardia consolidated the offices and created the first salaried sheriff's office in the United States subject to civil service. On 12 July 1990 the sheriff became a mayoral appointee. The sheriff executes mandates issued by city courts and is authorized to make civil arrests under court orders; the office is within the Department of Finance.

Neal C. Garelik

Sherry Netherland Hotel. Hotel built in 1927 at 59th Street and Fifth Avenue. Designed by the firm of Schultze and Weaver and containing 525 rooms in 40 stories, it was erected at one of the country's most distinguished addresses as the first graceful skyscraper hotel in the area. It was largely a residential hotel, advertised as "more than a place to live . . . a new way of living." Like other hotels of the time the Sherry Netherland became known for its opulent interiors and elegant appointments and helped to make luxury high-rise apartments fashionable.

Andrew Wiese

Sherry's. Restaurant and apartment hotel opened in 1890 at Fifth Avenue and 37th Street by Louis Sherry, the owner of a confectionery shop near the Metropolitan Opera House that expanded into a home catering service for the wealthy. A competitor of Delmonico's, the restaurant was the site of many elaborate parties, including a breakfast that followed the wedding of Consuelo Vanderbilt to the duke of Marlborough in 1895, and a dinner given by Herbert Barnum Seeley for men only that was raided by the police because of the presence of a nude female dancer. Delmonico's soon moved uptown and Sherry followed on 10 October 1898, opening diagonally across the street from it a 12-story restaurant and apartment hotel designed by Stanford White at the southwest corner of Fifth Avenue and 45th Street. At its new site it continued to stage outlandish events, including a dinner for the New York Riding Club at which diners ate on horseback. Sherry's closed on 17 May 1919. The building survived for a time as the Guaranty Trust Company of New York.

Rohit T. Aggarwala

Shinn, Everett (*b* Woodstown, N.J., 7 Nov 1876; *d* New York City, 1 May 1953). Painter. After beginning his career as an artist and reporter in Philadelphia, he moved in 1897 to New York City where he worked for the *New York World* and later for *Harper's Weekly.* He initially painted urban street scenes, but after a trip to Paris in 1900 he turned his attention to the theater and society in New York City. Eventually he came to prefer a realist style, which he used to depict the life of the working class. In 1908 he took part in an exhibition of The Eight at the Macbeth Gallery. He also executed murals for the Stuyvesant Theatre (1907) and the Plaza Hotel (1945) and was active as a playwright, a costume designer, and an art director for motion pictures. In 1912 he formed the Waverly Street Players, a theatrical group that performed out of his home at 112 Waverly Place in Greenwich Village. The life of Eugene Witla, the central character in Theodore Dreiser's novel *The Genius* (1915), was purportedly based on Shinn's early career.

Carol Lowrey

shipbuilding. The first ship built in New York City probably was Adriaen Block's *Onrust* in 1614, and as the city developed to become the busiest port in the world early in the nineteenth century, it supported a vibrant shipbuilding and repair industry. The normalization of commerce after the American Revolution led Forman Cheeseman, Samuel Ackerly, Thomas Vail, and other shipbuilders to operate yards along the East River in lower Manhattan. The New York Navy Yard (later the New York Naval Shipyard, popularly called the Brooklyn Navy Yard) opened in 1806. The navy's first steam warship, the *Demologos,* was built there in 1814 by Adam and Noah Brown with machinery provided by Robert Fulton. As trade expanded after the War of 1812, a mile of new shipyards opened on the East River. By the 1850s, considered the golden age of wooden shipbuilding, there were 31 yards in Manhattan and Brooklyn, with a total of 2313 employees. Robert Greenhalgh Albion's *The Rise of New York Port* (1939) estimated that in 1855 a total of 96 companies (including builders, sailmakers, riggers, and rope works) depended on ship construction on the East River.

The East River yards were famous for the quality of their work, called "the standard for nearly all ports in the commercial world" by the naval architect John W. Griffiths in 1851. The most renowned shipbuilder was William H. Webb, who in 1840 took over a yard founded by his father, Isaac, extending from East Fifth Street to East Seventh Street. Webb is best remembered for the clipper ship *Young America,* the ironclad *Dunderberg,* and the packet *Charles H. Marshall,* which was the last square-rigged sailing ship built in New York City when it was launched in 1869. William H. Brown started out building crude canal boats for the Erie Canal and moved on to more complex vessels, including the yacht *America,* pilot boats, Hudson River passenger boats, and oceangoing steamers for the Collins line. Of the 55 large ships built in New York City in 1850, Brown built seven at his yard at the foot of 12th Street on the Manhattan side of the East River. In 1855 his name was on a list of New Yorkers worth more than $100,000.

Sailing ships in the mid-nineteenth century were usually designed by carving or laying up small models using principles based largely on experience and known as rules of thumb. More scientific theories developed by John W. Griffiths, John Scott Russell, and other thinkers were known but not widely applied. The most important innovation was the sharp, hollow bow that appeared during the 1840s and 1850s on such vessels as the clipper ship *Rainbow,* designed by Griffiths, and pilot boats designed by George L. Steers, who in 1851 placed such a bow (among other innovations) on the racing yacht *America,* built under his supervision at William H. Brown's yard. As an example of increasing specialization, John Ericsson's ironclad *Monitor* was outfitted at the Continental Iron Works in Greenpoint, Brooklyn, in 1862, with machinery from another company and a rotating gun turret constructed by Novelty Iron Works in Manhattan.

The *Monitor* was one of relatively few iron hulls built in New York City, which declined as a shipbuilding center after the Civil War largely because it was located some distance from ironworks. Iron shipbuilding was more common along the Delaware River. The yard of John Englis in Greenpoint built the last large wooden hulls in the area. The steamship *City of Vera Cruz* in 1874 was the last for oceangoing

service, and the Hudson River steamboat *Adirondack* in 1896 was the last for inland waters. By the end of the nineteenth century shipbuilders in New York City either turned to steel or specialized in wooden construction of yachts. Propulsion machinery was provided locally. Fletcher, Harrison (later W. and A. Fletcher), the city's most renowned engine builder, was first situated on West Street and later moved to suburban Hoboken, New Jersey, which became a shipbuilding center. Many of these firms also built steam engines, boilers, and other machinery for use ashore.

As the East River yards declined after the Civil War, shipyards were opened in New Jersey, on Staten Island and nearby Shooter's Island, and on the banks of the Harlem River. After the turn of the twentieth century several builders of relatively small vessels set up shop on City Island, off the Bronx, many of them specializing in high-quality yacht construction. Henry B. Nevins founded a yard on City Island in 1907. From the 1920s through the 1950s the Nevins Yacht Yard, working closely with the naval architecture firm Sparkman and Stephens, built hundreds of wooden yachts, including the yawl *Bolero* and the America's Cup winner *Columbia*. The yachts built by Nevins and other City Island yards (including Jacobs and Minneford) were more expensive than yachts built in New England and elsewhere and were the most advanced. Because of their experience with wooden construction long after most large shipyards moved to steel and iron, Nevins and other yacht yards were chosen by the U.S. Navy and other navies to build minesweepers during World War II and the cold war. When most yachts began to be built of fiberglass and aluminum, Nevins and similar yards closed down or were converted to service operations.

The Staten Island Shipbuilding Yard, later owned by Bethlehem Steel, was the only important shipbuilding firm in the city to survive the 1930s and was a major builder of destroyers during World War II. Other shipyards on the Harlem River and in Brooklyn turned out patrol crafts, tugs, and barges, while battleships, aircraft carriers, and cruisers were built in the Brooklyn Navy Yard (both the battleship *Arizona,* which sank with 1100 sailors at Pearl Harbor, and the battleship *Missouri,* on whose deck the Japanese formally surrendered on 2 September 1945, were built at the Brooklyn Navy Yard). But the long history of New York City shipbuilding was coming to an end. The Navy Yard closed in 1966, and Todd Shipyards and Bethlehem Steel closed 20 years later.

shoes, boots, and leather. The tanning pits used to cure leather in New York City were concentrated as early as 1680 in the Swamp, a section of lower Manhattan near the East River and the Brooklyn Bridge. The pits were considered a nuisance and were moved to Maiden Lane and William and Gold streets, names later used in the marketing of leather goods. Tanneries were small operations that relied mostly on local hides and skins; leather for shoe and boot soles was imported from Britain. By 1813 these stocks were no longer adequate for the demands of shoe, saddlery, and harness manufacturers, and as a result tanners, especially those in the Catskill Mountains, sought out Latin American hides. According to the federal census of 1810 there were nine tanneries in Manhattan and six in Brooklyn; they used lighter skins for shoe and boot uppers and darker, hemlock-tanned ones for soles. By the 1840s and 1850s the brokers who bought and sold this sole leather were clustered in the Swamp under such names as Gideon Lee, Charles M. Leupp, and Thorne, Watson, Corse and Company. Shoe factories in the city before the Civil War were small and were not mechanized and usually stood near the leather brokers, who also provided sole leather to firms in New Jersey, Philadelphia, and Massachusetts. In 1860 about 70 percent of the firms in the metropolitan area were in Manhattan, and the 5500 workers in the leather industry accounted for 5 percent of the city's labor force in manufacturing. Leather manufacture was transformed during the war by new technology and an increased demand for leather goods.

Between 1860 and World War I the city's leather industry expanded. It employed 20,000 workers, about 3 percent of those in manufacturing, and in 1913 footwear accounted for 53 percent of employment in the leather industry in New York City, ranking the city among the five largest shoe centers in the country; it was known especially for its fine women's shoes. Although the factories in Brooklyn were fewer in number than those in Manhattan, they were larger and employed about two-thirds of the city's shoe workers. Several firms in the city came to dominate the national market. Shoes of higher quality were made possible by the Goodyear welt machine, which was invented by Charles Goodyear, Jr. (1833–96) and improved the method of attaching uppers to soles. The shoe firm of John H. Hannan (*b* 1849) in Brooklyn, one of the largest in the country, was among the first to use trademarks, national advertising, and its own retail stores to increase sales. Hannan also helped to organize the United Shoe Machinery Company in 1899, of which he was vice president until 1907, and became the first president of the National Boot and Shoe Manufacturers Association in 1904. Mark Hoyt (1834–96), the youngest child in a well-known family of tanners, helped in 1893 to form the United States Leather Company, a firm known as the "leather trust" and based in the city.

Bolstered by the presence of the fashion industry in Manhattan, leather manufacturers remained strong and employed more than 31,000 workers in the decade after World War II; a third of these produced footwear, another third produced such items as handbags, and more were employed in Manhattan than in Brooklyn. From the mid-1960s the leather industry declined as the number of imported shoes increased and consumers turned to less expensive canvas and rubber footwear. The number of leather workers fell from 19,000 in 1967 to 5800 in 1988, representing about 2.5 percent of the city's manufacturing sector. Handbags and other small leather goods accounted for almost 60 percent of the labor force; there were fewer than 1000 shoe workers, and only one firm employed more than 100. In the early twenty-first century the number of leather workers

Advertisement for Donaldson Brothers' cable screw wire boots and shoes, ca *1875*

continued to decline; as a capital of fashion the city nonetheless remained an important center for products requiring skilled labor and fresh ideas.

Sholem Aleichem [Rabinowitz, Sholem] (*b* Pereyaslavl, Russia [now Pereyaslav–Khmelnitski, Ukraine], 3 March 1859; *d* New York City, 13 May 1916). Writer, sometimes called "the Jewish Mark Twain." The pen name that he used—Sholem Aleichem—is a Hebrew greeting meaning "peace be with you." His stories of Jewish life in eastern Europe were popular in the United States, though his attempts to write for an American immigrant audience were largely unsuccessful when he lived in New York City (1906–7, 1914–16). His funeral, which took place in the city, was attended by more than 100,000 mourners, and after his death he was venerated as an icon of European Yiddish culture. Sholem Aleichem's works have been extensively translated into English, and the Broadway musical *Fiddler on the Roof* was based on his stories about Tevye and Dairyman. A system of secular Yiddish schools and a cooperative apartment complex in the Bronx are named after him.

Joseph and Frances Butwin, *Sholom Aleichem* (Boston: Twayne, 1977)

Jeffrey Shandler

Shooters Island. Island off the northwestern shore of Staten Island in the Kill van Kull. It has a land area of 51 acres (21 hectares), of which one-third lies in New Jersey and the rest in New York State. The island was popular for duck hunting during colonial times, and during the American Revolution it was a haven for spies. In the late nineteenth century it became a shipbuilding center: the Townsend Downey Shipyard launched Kaiser Wilhelm's yacht *Meteor* from the island in 1907. The industry declined after World War I and, after a brief revival during World War II, the island was abandoned. In the early twenty-first century it was covered with derelict piers, dry docks, and rotting debris. Five species of heron and other sea birds are found on Shooters Island, which is protected as a wildlife sanctuary. The New York Audubon Society is in charge of wildlife research on the island.

Gerard R. Wolfe

shopping malls. Regional shopping malls were developed throughout Greater New York after 1970. The three largest malls in the five boroughs are the Queens Center at Queens and Woodhaven boulevards, King's Plaza in Mill Basin in Brooklyn, and the Staten Island Mall in Heartland Village. There are smaller malls in Manhattan, which lack the large parking lots of their counterparts in the outer boroughs: A&S Plaza at Sixth Avenue and 33rd Street, the World Financial Center at Battery Park City, Manhattan Mall at 34th Street and Broadway, Trump Tower at Fifth Avenue and 56th Street, Citicorp Center at 53rd Street and Lexington Avenue, and the Time Warner Center at Columbus Circle. The largest malls in the region tend to be in the suburbs, especially Paramus and Jersey Gardens in New Jersey, White Plains and Palisades in New York, and Stamford in Connecticut.

Richard Kobliner

Shop Rite. Name used from the 1950s by several supermarkets in New York City and its environs belonging to the Wakefern Cooperative, a group formed by several small grocers in New Jersey to counter the proliferation of large grocery chains. The supermarkets grew rapidly during the 1950s and 1960s by using such innovative techniques as maintaining butcher departments and stocking frozen foods and nonfood items. In 1968 a group within the Wakefern Cooperative broke away to form the chain known as Pathmark. As of 2008 Shop Rite and the Wakefern Corporation had a revenue of more than $7.5 billion.

Chad Ludington

Shor, Toots [Bernard] (*b* Philadelphia, 6 May 1903; *d* New York City, 23 Jan 1977). Restaurateur. He attended the Drexel Institute and the Wharton School of Business, worked as a salesman, and in 1930 moved to New York City. In 1940 he opened the first of several restaurants named Toots Shor's Restaurant at 51 West 51st Street. The establishment, which featured a circular bar, became popular with tourists and celebrities such as Joe DiMaggio, Mickey Mantle, Red Smith, Jack Dempsey, Frank Gifford, Frank Sinatra, and Jackie Gleason. Shor was big, social, loud, and brash and often insulted customers, notably the football player Joe Namath and the film producer Louis B. Mayer. In 1959 he sold the lease on the original restaurant, and in the following year he opened a new one with virtually identical decor at 33 West 52nd Street; he later opened a restaurant at 5 East 54th Street that was less successful than the two earlier ones had been. At the time of his death Shor operated three restaurants, at 1 Penn Plaza, 64 West 52nd Street, and 44 East 43rd Street.

Eric Wm. Allison

Shore Acres. Neighborhood in northeastern Staten Island lying on a bluff overlooking the Verrazano–Narrows Bridge and bounded to the north by Harborview Place, to the east by Upper New York Bay, to the south by Von Briesen Park, and to the west by Bay Street; it is near Fort Wadsworth. The land belonged to the estate of Henry Alexandre during the nineteenth century and was developed in the 1930s by Cornelius G. Kolff, an entrepreneur who lived at 15 Harbor View Place South. Known for its views inland and toward the Narrows, Shore Acres is an exclusive residential neighborhood. The principal street is Sea Gate Road.

Barnett Shepherd

Short, Bobby [Short, Robert Waltrip] (*b* Danville, Ill., 9 Sept 1915; *d* New York City, 21 March 2005). Cabaret singer and pianist. He was already an experienced child singer and pianist by the time he first broached the New York jazz scene at the age of 12; but not until 1968, following a busy career performing in nightclubs throughout the United States and in Europe, did he begin appearing at the intimate Café Carlyle (Madison Avenue at 76th Street), which would remain his principal venue for 37 years. He spent half of each year performing there, sometimes backed by a swing band but more often seated at the piano (assisted by a drummer and bass player) accompanying his own gravelly baritone in rhythmically precise, perfectly enunciated song interpretations. His repertoire focused on classic popular songs by Cole Porter, George Gershwin, and their ilk, but he also quietly championed works by underappreciated African American songwriters such as composer James P. Johnson and lyricist Andy Razaf, whose "Guess Who's in Town?" served as his virtual theme song. Short became a fixture of high-society entertainment that connected the Harlem style of Cab Calloway to the hyperrefined elegance of modern nightclub culture.

James M. Keller

Shrine of St. Elizabeth Ann Seton. Roman Catholic complex at 7–8 State Street, Manhattan. Seton lived at number 8 from 1801 to 1803. Number 7 (the James Watson House, built 1793–1806) became the Church of Our Lady of the Rosary in 1883. In 1964 a new church incorporating a shrine to Seton replaced number 8, and number 7 became its rectory.

Joseph Ditta

Shubert Organization. Theater syndicate formed in the late nineteenth century in Syracuse, New York, by Sam S. Shubert (?1877–1905), Lee Shubert (?1875–1953), and J(acob) J. Shubert (?1879–1963), the sons of immigrants from East Prussia. After operating theaters in upstate New York for several years they began in 1900 to work in New York City

and to present light theatrical entertainment. Soon they controlled the Herald Square Theatre on Broadway and 35th Street, the Casino Theatre on Broadway and 39th Street, and the Lyric Theatre on 42nd Street. Sam Shubert was generally considered the head of the firm, which came into conflict with the Theatrical Syndicate, a powerful organization operated by Marc Klaw and Abraham Erlanger. After Sam Shubert was killed in a railroad accident, most expected his brothers to sell their business to Klaw and Erlanger; instead, they expanded it, and by the late 1920s they owned more than 100 theaters around the country. Among those in the city were the Shubert Theatre (1913) and the Broadhurst Theatre (1917), both on 44th Street; the Booth Theatre (1913) on 45th Street; and the Ethel Barrymore Theatre (1928) on 47th Street (all of which the organization retained into the early twenty-first century). Some of their most successful presentations included the summer revue *The Passing Show* (1912–22), *Artists and Models* (1923), and *The Student Prince* (1924). Performers who were associated with the organization included Alla Nazimova, Al Jolson, Ethel Barrymore, the team of Olsen and Johnson, and Carmen Miranda. Jacob Shubert's son John Shubert (1908–62) ran the company during the 1950s, followed by a great-nephew of the Shubert brothers, Lawrence Shubert Lawrence, Jr. (1916–92). In the 1970s the company produced plays under the direction of its chairman Gerald Schoenfeld (1924–2008) and its president Bernard Jacobs (1916–96). Productions during the 1970s and 1980s included *Ain't Misbehavin'* (1978), *Cats* (1982), and *Jerome Robbins' Broadway* (1989). As of 2004 the Shuberts owned and operated 16 Broadway theaters and had produced more than 500 comedies, melodramas, musicals, operettas, and revues. They had offices at 234 West 44th Street above the Sam H. Shubert Theatre in what had once been Lee Shubert's living quarters, the entrance to which was on Shubert Alley (which runs west of Broadway from 44th Street to 45th Street next to the Shubert and Booth theaters).

Brooks McNamara

"sick chicken case." See Schechter Poultry Corp. v. United States.

Sickles, Daniel E(dgar) (*b* New York City, 20 Oct 1819; *d* New York City, 3 May 1914). Legislator and Civil War general. As a state senator from New York City he sponsored legislation in 1855 authorizing the acquisition of the land that became Central Park. From 1856 to 1861 he represented the city in the U.S. House of Representatives as a Democrat. His most notable act during his tenure was killing Philip Barton Key (a son of Francis Scott Key) for allegedly having an affair with Sickles's wife; in a bizarre trial Sickles became the first defendant in the United States acquitted on grounds of temporary insanity. At the request of the governor of New York he raised a volunteer brigade during the Civil War. Promoted to major-general, he played an important role at the Battle of Gettysburg in 1863 when his controversial moves on 2 July resulted in many casualties, as well as the loss of his own leg. In later positions in the United States and abroad he was often accused of incompetence and impropriety. After returning to the city he was elected to another term in Congress (1893–95). Bankrupt and separated from his family, Sickles spent the rest of his life in Manhattan where he died in his home at Fifth Avenue and 19th Street.

James Bradley

sidewalks. New York City's first official pedestrian way was established in 1672, when the Mayor's Court ordered that "a Strooke or foot path" be laid on Pearl Street. Before long, slightly elevated walkways to the sides of streets were constructed to allow citizens to proceed unhindered by the hogs, sewage, wagons, and rough cobblestones that made the city's streets dangerous to pedestrians. After the American Revolution, the Common Council passed several acts regarding walking spaces. By 1817 sidewalks were required to be paved with flat stones or bricks, and newly paved streets were required to have footpaths of specified width (streets 40 and 60 feet [12 and 18 meters] wide were required to have footpaths 10 and 16 feet [3 and 5 meters] wide, respectively). Although a sidewalk was the city's property, maintenance was the duty of the owners of adjacent property.

The law barred carriages, wheelbarrows, horses, and obstructive wood piles and coal bins from sidewalks. The accidents receiving the most attention were caused by falling building materials. "Brickbats, rafters, and slates are showering down in every direction," Philip Hone wrote in his diary in 1839, during one of the city's first construction booms. "There is no safety in the sidewalks, and the head must be saved at the expense of soiling the boots." By 1894 the city had enough safe sidewalks for James W. Blake and Charles B. Lawlor to write the song that became New York City's anthem, promising that, "East Side, West Side, all around the town," even a child could "trip the light fantastic on the sidewalks of New York." But pedestrians continued to be harmed. The death of a Barnard College student in 1979 due to falling building materials caused the Buildings Department to launch periodic crackdowns on inadequate sidewalk scaffolding.

As the length of New York City sidewalks approached 13,000 miles (20,921 kilometers), ultimate responsibility for sidewalks remained unsettled until 2003, when three amendments to Section 7 of the New York City Administrative Code unequivocally charged property owners with the responsibility of keeping sidewalks abutting their properties "in a reasonably safe condition" and requiring them to carry liability insurance. Even as sidewalks were covered, other dangers appeared. In 2008 there were 592,130 trees in city streets, enough to cause damage to an estimated 22,229 sidewalks. The city paid $321.2 million in legal settlements during 2003–8 for accidents.

John Rousmaniere

Siegel–Cooper. Firm of retailers, based in Chicago, occupying a store on Sixth Avenue between 18th and 19th streets in New York City. Known as the "big store," it had 18 acres (7 hectares) of floor space and was the largest department store in the city at its opening in 1896; it stood in the heart of the Ladies' Mile. In addition to a vast selection of merchandise the store provided such amenities as a post office, a dental parlor, a theater, an art gallery, and a nursery. In 1903 the management published one of the first newspapers for employees, *Thought and Work.* The store relied on elaborate advertising gimmicks and high-volume sales but also promoted its elegance and fashionable address with the slogan "Meet Me at the Fountain," referring to its huge centerpiece fountain with a replica of Daniel Chester French's statue *Republic.* Siegel–Cooper declared bankruptcy in 1915.

Elaine S. Abelson

Sigel, Franz (*b* Sinsheim, Baden, 18 Nov 1824; *d* New York City, 22 Aug 1902). Soldier, editor, and public official. He moved to the United States after the German Revolution of 1848 and in May 1852 settled in New York City where he worked as a tobacconist, surveyor, draftsman, and musician. With his father-in-law, Rudolph Dulon, he formed the German-American Institute in 1855; he also taught in the city's public schools and at the German Turner Society, belonged to the Fifth New York Militia, and wrote for the *New Yorker Staats-Zeitung* and the *New York Times.* In August 1857 he moved to St. Louis to teach at the German–American Institute. When the Civil War broke out he joined the Union army

and became a major-general after fighting in several campaigns. He returned to New York City after the war and in 1869 worked for the Brooklyn Steamship and Emigration Company and the Metropolitan Railway Company. In June 1870 he was appointed internal revenue collector for the ninth New York district by President Ulysses S. Grant. Elected to one term as register of the city in 1871, he served during Grover Cleveland's presidency as chief clerk in the county clerk's office (May 1885 to June 1886) and pension agent for the New York district (March 1886 to May 1889). After retiring from politics Sigel published the *New Yorker Deutsches Volksblatt* and edited the *New York Monthly* from 1897 to 1904. An equestrian statue of him was dedicated at 106th Street and Riverside Drive in 1907, and a park bounded by 158th Street, the Grand Concourse, 153rd Street, and Walton Avenue in the Bronx was named for him.

Stephen D. Engle, *Yankee Dutchman: The Life of Franz Sigel* (Fayetteville: University of Arkansas Press, 1993)

Stephen D. Engle

Silicon Alley. A takeoff on California's Silicon Valley area that refers to high-technology, multimedia, and Internet companies located in Manhattan. Initially, the term referred to areas of Chelsea, the garment district, So-Ho, Flatiron, and parts of lower Manhattan where high-tech firms began to congregate in the early 1990s. Attracted by lower rents, the city's pool of creative talent, and the proximity to major media, advertising, and publishing firms, those firms expanded rapidly as the Internet boom took off from 1995 to 2001. New York City technology firms became the country's third largest recipient of venture capital, and employment in the newer media hit 140,000 according to a 2000 estimate. The collapse of Internet and tech stocks after March 2001 and the terrorist attacks of 11 September 2001 produced massive layoffs. The sector began to recover in 2005, thanks to nearly ubiquitous Internet usage, a booming Internet advertising market, and massive investments by major media, telecommunications, and advertising companies in newer media. Estimates of the industry's employment vary widely, as government statistics lump many new media jobs into other industries and media sectors, but in 2006 the *City Journal* estimated that Internet and high-tech firms employed about 80,000 to 100,000 people in New York City, producing an annual payroll of $8 billion.

George Winslow

silk stocking district. Loose term usually applied to the congressional district that includes the Upper East Side of Manhattan and sometimes to state and local legislative districts in the same area. First recorded in 1897, the name arose because of the concentration of wealthy residents along Fifth and Park Avenues and nearby streets, making the district the wealthiest in the United States. The richest people in the world, such as Andrew Carnegie, Cornelius Vanderbilt, and John D. Rockefeller, built homes there in the early twentieth century. Gracie Mansion is the last of many grand homes in the area. Because of decennial redistricting the boundaries of the congressional district have changed repeatedly, as has the number by which the district is designated (successively eighteen, seventeen, fifteen, and fourteen). Representatives from the district have exerted a disproportionately large influence in Washington, D.C., because of their prominent constituents. In general they have exemplified the liberal, patrician brand of Republicanism with which the district has long been associated. John V. Lindsay represented the district from 1959 to 1965 before his election as mayor; Edward I. Koch, who also later was mayor, became in 1968 the first Democrat to represent the district in 34 years. After Koch was elected mayor in 1977 the district was represented by Bill Green, a liberal Republican. Redistricting brought about by the federal census of 1990 enlarged the district and diluted its liberal Republican character, and in 1992 Green was defeated by a Democrat, Carolyn B. Maloney.

Andrew Sparberg

Silk Stocking Regiment. See Seventh Regiment.

Sills, Beverly [Silverman, Belle] (*b* Brooklyn, 25 May 1929, *d* Manhattan, 2 June 2007). Opera singer and administrator. At the age of three she was named Brooklyn's "Miss Beautiful Baby 1932." As a child she performed in the first radio advertisement to include singing, and in 1947 she made her debut as a soprano with the Philadelphia Civic Opera. With the New York City Opera she sang the role of Rosalinde in Johann Strauss's *Die Fledermaus* in 1955, Baby Doe in the Douglas Moore opera *The Ballad of Baby Doe* in 1959, and Cleopatra in Handel's *Giulio Cesare* in 1966, which was considered her break-out role. Nicknamed "Bubbles" for her effervescent personality, in 1975 she also began performing at the Metropolitan Opera. In 1979 she became the general director of the New York City Opera and devoted herself to the position full time after retiring from the stage in the following year. She became a managing director of the Metropolitan Opera in 1991. In 1994 she became chairwoman of the Lincoln Center for the Performing Arts, a position she held for eight years. In 2002 she became chairwoman for the Metropolitan Opera, and she retired in 2005.

B. Kimberly Taylor

silver. The first goldsmith recorded in New Amsterdam was Jeuriaen Blanck, Sr., in 1643, but he may not have practiced his craft in the colony. Only after the 1664 English conquest, when silver coin, bullion, and outmoded plate became widely available, was there enough wealth to support several smiths. The first silversmith who was not from the Netherlands was Bartholomew LeRoux (1663–1713), a Huguenot refugee who settled in the city in 1687. He trained his son John, another son, Charles (1689–1745), who was the silversmith for the Common Council from 1720 to 1743, and Peter Van Dyck (1684–1750). Charles LeRoux in turn trained succeeding generations of apprentices. Between 1723 and 1745 the city supported as many as 23 silversmiths. By 1750 about 60 silversmiths worked in the city, of whom 32 were of Dutch heritage, 10 French Huguenot, and seven English. They produced a wide range of objects, usually in the prevailing English fashion; they also developed distinctive forms like the brandywine bowl, as well as an ornamental vocabulary encompassing meander wire, cut-card work, and cast appliqués. Silversmiths in New York City used distinctive marks, such as the trefoil of Gerrit Onckelbag, the stylized initials of Peter Van Dyck, and the conjoined initials of Cornelius Vander Burch. During the mid-eighteenth century silversmiths in the city kept abreast of

Brandywine bowl by Gerrit Onckelbag, ca *1710*

international fashions by importing silver and plated wares and engraved designs and by employing British and European silver workers who had settled in the city, among them Daniel Christian Fueter, a Swiss Moravian, who worked from 1754 to 1769, and his chaser John Anthony Beau of Geneva, Switzerland. British designs predominated in the products of such mid-century silversmiths as Myer Myers, who won commissions from churches, synagogues, and prominent families.

The production of silver declined during the American Revolution as patriots including Myers sought safety in Philadelphia, New Jersey, and Connecticut. After the Revolution international neoclassicism was quickly adopted by the city's silver workers, among them Daniel Van Voorhis (1751–1824) and Ephraim Brasher (1744–1810), who seamed sleek surfaces from rolled or "flatted" sheet silver and decorated them with bright-cut engraving and beading. During the early decades of the nineteenth century the silver trade reorganized, as smaller manufacturers stopped selling their wares directly to customers, instead supplying them to retailers who often advanced capital to buy bullion and also shared in any profits. Large firms dominated by mid-century. In 1855 the firm of William Gale and Son employed 65 men and 10 boys; its competitors, Charles Wood and Jasper W. Hughes, employed 60 men, 20 women, 10 boys, and 15 girls. Products were distributed throughout the Midwest and the South. In 1851 the firm of Tiffany and Company made an exclusive arrangement with a leading silversmith, John Chandler Moore, to make hollowware pieces. Moore's son Edward C. Moore directed the manufactory. After the Civil War Tiffany and Company secured much of the luxury trade, particularly for objects in the "testimonial ostentatious" style. During the late nineteenth and the early twentieth centuries the industry consolidated and many plants left Manhattan. Silver continued to be hand wrought in the studios of such silver workers as the German-born Peter Müller-Munk (1904–67) and the jeweler Marie Zimmermann (1878–1972) and in classes at the Craft Students League.

Deborah Dependahl Waters

Silver Beach. Neighborhood in the eastern Bronx, lying on a bluff near the tip of Throgs Neck overlooking the East River. The land was used as a lookout during the American Revolution. A farm in the area owned by the Stephenson family was sold in 1795 to Abijah Hammond, who built a mansion (later the offices of the Silver Beach Garden Corporation). In the 1920s the Peters and Sorgenfrei families formed Silver Beach Garden (named for the color of the beach at low tide), a summer colony of bungalows that were later adapted for year-round use; most of the streets were named for flowers and trees found on the Hammond estate. Residents owned their houses but rented the land until 1972 when they joined together to buy it. In the early twenty-first century there are 350 small houses lying along narrow lanes. The neighborhood is not easily accessible, and its policy of requiring any prospective owners to have three current residents as references has insulated the area from change.

Gary Hermalyn and Robert Kornfeld, *Landmarks of the Bronx* (New York: Bronx County Historical Society, 1990)

Gary D. Hermalyn

Silver Lake. Neighborhood in northeastern Staten Island, comprising the area around Silver Lake Park. In the late nineteenth century the area now occupied by the park was a popular resort for boating, fishing, picnics, and ice skating and the site of a hotel. The lake once supported a thriving ice-harvesting business. The main thoroughfare is Victory Boulevard, where there are several attractive one-family houses. All of the neighborhood is at high elevation, giving sweeping views to the north. The recreation area is maintained by the parks department and has a golf course, tennis courts, and walking trails; it is also the site of summer concerts. Beneath the lake in giant tanks is the main reservoir for Staten Island's water supply from the Catskills.

Marjorie Johnson

Silverstein, Larry A. (*b* New York City, 30 May 1931). Real estate developer and investor. He became involved in real estate with his father, Harry G. Silverstein, and then brother-in-law, Bernard Mendik, establishing Silverstein Properties and buying their first building in 1957. After splitting with Mendik in 1977 Silverstein bought several Manhattan buildings throughout the 1970s and 1980s, and also made a winning bid to construct 7 World Trade Center, to the north of the World Trade Center, for the Port Authority of New York. In January 2001 Silverstein, via Silverstein Properties and Westfield America, made a $3.2 billion bid for the lease to the World Trade Center. His bid was accepted on 24 July 2001, the first time in the building's 31-year history that it had changed management. Less than two months later the terrorist attacks of 11 September decimated the area. Silverstein declared his intent to rebuild but ran into several disputes with insurers over whether the attack constituted one or two occurrences. A settlement was made in 2004 for $4.55 billion. An agreement was reached in April 2006 with the port authority, and Silverstein retained the rights to build three office towers.

Benjamin Yakas

Simkhovitch [née Kingsbury]**, Mary (Melinda)** (*b* near Boston, 8 Sept 1867; *d* New York City, 15 Nov 1951). Famed settlement house founder. She was educated in Massachusetts and Berlin and in 1899 married Vladimir G. Simkhovitch. In 1902 she formed the Cooperative Social Settlement Society on Jones Street, later known as Greenwich House; she was its head resident until 1946. By the 1930s she concentrated on national housing reform; she led the Public Housing Conference from 1932 to 1943 and was vice chairman of the New York City Housing Authority from 1934 to 1947.

Betty Boyd Caroli

Simon, Kate [Grobsmith, Kaila] (*b* Warsaw, 5 Dec 1912; *d* New York City, 4 Feb 1990). Writer. In 1917 she moved to New York City with her mother and younger brother to join her father, who had settled there in 1914. After growing up near 178th Street and Lafontaine Avenue in the Bronx she earned a bachelor's degree from Hunter College. She wrote a number of books about the city, including *New York Places and Pleasures: An Uncommon Guidebook* (1959), which became a best seller; *New York* (1964, illustrated with photographs of the city by Andreas Feininger); and *Fifth Avenue: A Very Social History* (1978). Among her autobiographical works are *Bronx Primitive: Portraits in a Childhood* (1982), *A Wider World: Portraits in an Adolescence* (1986), and *Etchings in an Hourglass* (1990).

Allen J. Share

Simon, (Marvin) Neil (*b* New York City, 4 July 1927). Playwright. He was born in the Bronx and attended DeWitt Clinton High School and New York University. In 1948 he quit his job as a mailroom clerk at the Warner Brothers offices in Manhattan to become a sketch writer for the *Phil Silvers Arrow Show* (1948), contributed sketches to the Broadway revue *Catch a Star* (1955), and collaborated with his brother Daniel on the revue *New Faces of 1956.* His first full-length play was *Come Blow Your Horn* (1961). During the following decades he wrote more than a dozen comedies set in New York City, including *Barefoot in the Park* (1963), *The Odd Couple* (1965), and *Prisoner of Second Avenue* (1971), all of which were adapted for film, television, or both. Simon is known for writing about growing up in working-class New York City neighborhoods, especially in his autobiographical trilogy, *Brighton Beach Memoirs* (1983), *Biloxi Blues* (1985), and *Broadway Bound* (1986). The follow-up to these plays, *Lost in Yonkers* (1991), received a Tony Award for best play as well as a Pulitzer Prize. He won the Mark Twain Prize for American Humor in 2006.

Sara J. Steen

Simon, Paul (*b* Newark, N.J., 13 Oct 1941). Singer and songwriter. He grew up in Forest Hills in Queens, graduated from Queens College, and briefly attended Brooklyn Law School. From 1964 to 1971 he belonged with

Art Garfunkel to a duo known as Simon and Garfunkel that forged a distinctive genre known as folk-rock: among their well-known songs is "The 59th Street Bridge Song (Feelin' Groovy)" (1966). After embarking on a career as a soloist he continued to maintain a residence in New York City and gave several concerts there, including one at Radio City Music Hall in April 1987 and another in Central Park on 15 August 1991 before an audience of 750,000. He also performed with Garfunkel in Central Park in September 1981. In February 2009 Simon and Garfunkel performed in New York City at the recently renovated Beacon Theatre, and in October of that year they sang together again at Madison Square Garden for the 25th anniversary of the Rock and Roll Hall of Fame, into which they were inducted in 1990.

Simon and Schuster. Firm of book publishers, formed in 1924 by Richard L. Simon (1899–1960) and Max Lincoln Schuster (1897–1970) in a three-room office at 37 West 57th Street. Its first title was a crossword puzzle book that became a best seller. A paperback division called Pocket Books began operations in 1939. Over the years the firm published such writers as William Shirer, Joseph Heller, Joan Didion, Margaret Atwood, John Gregory Dunne, Larry McMurtry, and Anthony Burgess. It also became noted for its aggressive advertising. In 1975 the firm was acquired by Gulf and Western Industries, which later became Paramount Communications. After Paramount was in turn acquired by Viacom, Simon and Schuster in 1994 took over all the publishing operations of Viacom worldwide. In 2009 Simon and Schuster maintained its headquarters at 1230 Sixth Avenue in Rockefeller Center.

James Bradley

Simplicity Pattern Company. Firm of pattern makers formed in New York City in 1927 by James J. Shapiro. Specializing in simple designs sold at low prices, it opened a foreign subsidiary in 1928 and a large manufacturing plant in Michigan in 1931 and soon became the largest pattern company in the world. In 1998 the company was acquired by Conso Products Company. In 2009 the firm's executive offices were at 2 Park Avenue in Manhattan.

Marc Ferris

Sinatra, Frank [Francis Albert] (*b* Hoboken N.J., 12 Dec 1915; *d* Los Angeles, 14 May 1988). Singer and actor. His first big break came in 1935 when he won first prize on the popular radio show *Major Bowes Amateur Hour* at the Capitol Theater (1645 Broadway) with the Hoboken Four. In 1942 Sinatra opened at the Paramount Theater (1501 Broadway) to an enthusiastic crowd of teenaged "bobbysoxers," ushering in the era of "Sinatramania." Throughout his career Sinatra performed at theaters throughout New York City, including the Paramount Theater and Madison Square Garden. He played the role of Chip in the 1949 film *On the Town,* which featured the song "New York, New York" and was filmed partly on location in the city. His version of the theme from the Martin Scorsese film *New York, New York* (1980) became one of his signature songs, as well as an unofficial anthem for the city. Patsy's Italian Restaurant in Manhattan, a well-known favorite of Sinatra's, commemorates his birthday by offering a menu of his favorite dishes, and in 2009 on the anniversary of his death they displayed 15 never before exhibited photos of Sinatra.

Caleb Smith, Meryl Cates

Sinclair, Upton (*b* Baltimore, 20 Sept 1878; *d* Bound Brook, N.J., 25 Nov 1968). Novelist and social activist. The son of southern gentry whose fortunes suffered during the Civil War, he moved with his family to New York City at age 10. Before graduating from City College of New York (1897) and Columbia University (1901) he supported himself by churning out dime novels for the Manhattan firm Street and Smith and short stories for New York pulp magazines and newspapers. A founding member of the Intercollegiate Socialist Society in New York, Sinclair often addressed class inequality and corporate corruption in his writings. His first novel, *Springtime and Harvest,* was published in 1901, but he did not achieve commercial success until the publication of his renowned work *The Jungle* in 1906. A "muckraking" investigative novel, it exposed the labor practices and unsanitary conditions of the U.S. meatpacking industry, greatly affecting many Americans, including President Theodore Roosevelt, who pushed the passage of the Pure Food and Drug Act and Meat Inspection Act through Congress in 1906. Another of his novels, *The Metropolis* (1908), examined the economic extremes in New York City society. Sinclair continued to write novels such as *King Coal* (1917), *The Profits of Religion* (1918), and *Oil!* (1927), fortifying his status in American literature as an investigative activist who inspired change. Sinclair's last work was an autobiography published in 1962.

Singer, Isaac Bashevis [Zinger, Yitskhok] (*b* Leoncin, near Warsaw, Poland, 14 July 1904; *d* New York City, 24 July 1991). Novelist and short-story writer. The son of a Hasidic Orthodox rabbi, he immigrated to New York City in 1935 to flee anti-Semitism. Already a published author, Singer began his career in the city working for the Yiddish-language newspaper *Forverts.* He is most well known for his mythical and gothic short stories and novels, written almost exclusively in Yiddish and primarily focused on the Eastern European Jewish tradition. He won the Nobel Prize for literature in 1978. Among the more than three dozen books he wrote are *The Family Moskat* (1950), *The Magician of Lublin* (1960), *The Golem* (1969), *Enemies, A Love Story* (1972), and *Yentl the Yeshiva Boy* (1983), which was made into the movie *Yentl*. Singer was a longtime resident of the Upper West Side of Manhattan where he lived in the Belnord Apartments located at 225 West 86th Street.

Sarah Brafman

Singer, Isaac M(erritt) (*b* Pittstown, N.Y., 27 Oct 1811; *d* Torquay, England, 23 July 1875). Sewing machine inventor. After several years in upstate New York, where he trained as a machinist and cabinetmaker in Oswego, he moved first to New York City and then to Boston. There he unsuccessfully promoted a device to carve wooden printer's type and became aware of Elias Howe's sewing machine. In 1851 he returned to New York City where his firm I. M. Singer and Company opened an office and facilities to manufacture sewing machines. Howe sued for patent infringement, and even though Singer was ordered to pay royalties, his firm quickly became the leader in its field in the United States and prospered. The business made Singer a wealthy man, and he lived in a mansion on Fifth Avenue. He had many children with several women–some of whom he never married. Singer remained active in the business until he moved to Europe in 1863 after he was arrested for bigamy. When he died his estate was worth about $13 million, and his many wives and close to two dozen children battled for years in court over its settlement.

Darwin H. Stapleton

Singer Building. The architect Ernest Flagg built three structures for the Singer Manufacturing Company, all on Broadway in lower Manhattan. The first was a 10-story beaux-arts office building, completed in 1896 at 149 Broadway. The second structure, the Singer Loft Building (also known as the Little Singer Building) was completed in 1904 at 561–3 Broadway. The ornate, French-inspired design featured an innovative use of materials, especially steel, recessed glass, and terra-cotta. The facade was suspended from the structural elements, foretelling the curtain walls found in many postwar skyscrapers. The third structure, the Singer Tower, was completed in 1908. It was an ornate skyscraper 612 feet (186.5

meters) tall, which was added to the original Singer Building at 149 Broadway. It was the first tower designed after zoning laws were passed limiting the height of new buildings relative to the area that they covered and to their frontage along the street. With the Woolworth Building (Cass Gilbert, 1913) it helped to make setbacks and terraces standard elements in the design of skyscrapers in Manhattan during the following decades. The Singer Tower was the tallest building in the world for 18 months. In 1968 it became the tallest building ever demolished, to make way for the U.S. Steel Building (Skidmore, Owings and Merrill, 1972) and remained so until the destruction of the World Trade Center towers on 11 September 2001.

single-room occupancy hotels. See SROs.

Singleton, Anne. Pseudonym under which Ruth Benedict published poetry.

Sing Tao. Daily Chinese-language newspaper launched in 1965. Aimed at immigrants, businesspeople, and students, it covers Chinese communities worldwide and offers articles on leisure, finance, tourism, medicine, and entertainment. The New York City office publishes five editions covering New York City, Boston, Philadelphia, Washington, D.C., and Chicago. In 2003 it claimed a circulation of 50,000 in New York City and was one of four major Chinese-language newspapers in the United States. About 80 percent of its readers speak Cantonese and 20 percent Mandarin. Often categorized as more sensationalistic than its competitors, *Sing Tao* is owned by a parent company in Hong Kong with offices worldwide.

Jacqueline Lalley

Sisters of Charity of Mount St. Vincent. Roman Catholic women's order formed in New York City in 1846. Its original members belonged to the American Sisters of Charity (formed in 1809 by Elizabeth Ann Seton in Emmitsburg, Maryland) who first worked in New York City in 1817 at the Roman Catholic Orphan Asylum. The first superior was Elizabeth Boyle (1788–1861), and the first motherhouse was at McGowan's Pass in what is now Central Park. The order conducted much of the Catholic Church's charitable work in child care, health care, and education in the city. They earned a reputation as effective nurses during cholera epidemics in 1832 and again in 1849, when they opened their first hospital, St. Vincent's Hospital, in Manhattan. The motherhouse was moved to Mount St. Vincent in Riverdale in 1859. During the Civil War the order volunteered to operate St. Joseph's Military Hospital at McGowan's Pass. In 1868 the members opened St. Mary's Female Hospital in Brooklyn (reorganized to provide general care as the Hospital of the Holy Name in 1909 and transferred to the Daughters of Wisdom in 1955). They also opened several schools and formed the New York Foundling Home (1869) and the College of Mount St. Vincent (1901). On Staten Island the order established several other health services, later combined as the Sisters of Charity Services Corporation. The order continues to operate as a constituent community of the Federation of Sisters of Charity in the Vincentian–Setonian Tradition.

Matthew J. Brennan

Sisters of Mercy. Roman Catholic women's order formed in 1831 in Dublin by Mary Catherine McAuley to serve the poor. It established a branch in Pittsburgh in 1843 before opening another in New York City in 1845 under Mary Agnes O'Connor, who was persuaded to move to the city from England by Bishop John J. Hughes. In 1848 the order took over the former convent of the Sisters of the Sacred Heart on the corner of Houston and Mulberry streets and renamed it St. Catherine's Convent of Mercy. During the following years it focused on the care, training, and placement of immigrant women. In 1855 nuns of St. Catherine's under Mary Vincent Haire established the Sisters of Mercy in the Convent of St. Francis of Assisi in a brick house at Jay and Chapel streets in Brooklyn.

Melissa M. Merritt

69th Regiment. Military unit privately formed in 1848 in New York City, although the A Company traces its roots to the American Revolution. It joined the New York Militia (now the New York National Guard) in 1849. At the outset the regiment consisted largely of Irish Americans, and it became the military escort of the St. Patrick's Day parade in 1851 (a status that it retained in the twenty-first century). During the Civil War the regiment fought in the battles of Bull Run, Antietam, and Appomattox and suffered huge losses; General Robert E. Lee nicknamed it the "Fighting 69th." As part of the 42nd Division of the American Expeditionary Forces in World War I it fought with distinction in the Battle of the Argonne Forest; the regiment's service, especially that of military chaplain Francis P. Duffy, was celebrated in the film *The Fighting 69th* (1940). During World War II the regiment served in the Pacific theater, fighting on Makin, Saipan, and Okinawa. It was one of the first to respond to the terrorist attacks on 11 September 2001, losing several members during rescue operations. After 11 September the regiment guarded the U.S. Military Academy at West Point as well as the city's bridges and tunnels before it was sent to Iraq in 2004, where it suffered further casualties. In 2008 the regiment was deployed to Afghanistan. Since 1904 the 69th has been based at the armory at 68 Lexington Avenue.

Eleanor Hannah, Kate Lauber

Skidmore, Owings and Merrill. Firm of architects, begun in 1935 as the partnership of Louis Skidmore (1897–1962) and Nathaniel Owings (1903–84), later joined by John Ogden Merrill (1896–1975). The firm prospered with commissions from corporations and government, adding four partners in 1949, including Gordon Bunshaft as chief designer. Lever House (completed 1952), a slab-shaped office tower on slender supports at Park Avenue and 52nd Street, introduced European modernism to the United States as the first glass-faced commercial building in the city. Its prismatic shape, contrasting with setback skyscrapers, and open space at its base helped to promote new zoning regulations in 1961. Bunshaft was also responsible for Manhattan House (1950), the Manufacturers' Trust Company bank branch at 43rd Street and Fifth Avenue (1954), Chase Manhattan Plaza (1961), the Library and Museum at Lincoln Center (1965), and 9 West 57th Street (1984), among other buildings. Later, other partners including David Childs, Raul de Armas, Michael McCarthy, Marilyn Taylor, and Roger Duffy designed institutional, civic, and conspicuous office buildings such as Liberty Plaza (1974); Olympic Tower (1976); Park Avenue Plaza (1981); the Citicorp Building, Queens (1990); Worldwide Plaza (1990); the Time Warner Center (2004); and 7 World Trade Center (2006). Current work includes the Penn Station Restoration Project at the Farley Post Office, condominiums in Manhattan House, and the World Trade Center site. The firm is also well known for its hospitals and several structures at John F. Kennedy Airport.

Carol Krinsky

Skinner, Otis (*b* Cambridge, Mass., 28 June 1858; *d* New York City, 4 Jan 1942). Actor. He left school at age 16 to become an insurance clerk and resolved on a stage career after seeing *The Hunchback of Notre Dame* at the Lyceum Theatre. Assisted by a referral from his father's friend P. T. Barnum, Skinner was hired by a Philadelphia theater in 1877. He made his first New York appearance in a traveling production

of *Coriolanus* at the Grand Opera House in 1879. Later that year he moved to New York City and appeared in a Kiralfy brothers production at Niblo's Garden. This was followed by a 10-week engagement with Edwin Booth's company, the first in a succession of prominent companies (including those of Augustin Daly and Helena Modjeska) to engage Skinner's services over the next 15 years. During this period Skinner was frequently on tour and played various kinds of roles, both leads and character parts; playwright George Middleton later described his style as "flamboyant and scene-filling, like rich claret running over everything." By 1894 he was a star in his own right and launched his own touring company. His greatest success came in 1911 as the beggar Hajj in *Kismet,* a romantic drama that ran for one year at the Knickerbocker Theater in New York City; he also excelled in Shakespearean roles. His daughter, Cornelia Otis Skinner, became an author and actress.

Susan Kriete

Skyscraper Museum. Private, nonprofit educational corporation located in Manhattan's Battery Park City at 39 Battery Place. It was founded in 1996 to celebrate New York City's architectural heritage and to examine the individuals and circumstances that have shaped the city's skyline. The museum's inaugural show was titled *Downtown New York* and ran from April through December of 1997 at one of the museum's previous Manhattan locations, 44 Wall Street. The museum was also located briefly at 110 Maiden Lane in Manhattan but had to move because of its proximity to the site of the terrorist attacks of 11 September 2001 at the World Trade Center.

Marlena Slowik

skyscrapers. New York City is inextricably associated with skyscrapers.

1. 1870–1916

The demand for tall office buildings arose during the 1860s as the commercial district along Broadway between the Battery and City Hall became more congested, and as large businesses, among them insurance and communications firms, sought more impressive and larger corporate headquarters.

Skyscrapers were made possible by technological advances, especially the passenger elevator, used successfully in the late 1850s. As the first office building to include elevators in its initial design, the Equitable Building (1868–70, Gilman and Kendall with George B. Post; demolished), eight stories tall, opened the age of the skyscraper. By 1875 the city had several 10-story buildings, notably the Western Union Building (1872–75, Post; demolished) at Broadway and Dey Street and the Tribune Building (1873–75, Richard Morris Hunt; demolished) at Nassau and Spruce streets, both of which had a mansard roof and a tower. The 1880s saw the construction of such massive commercial blocks as Temple Court (1881–83, Silliman and Farnsworth; enlarged 1890) at Beekman and Nassau streets, which has twin towers. The Produce Exchange (1881–84, Post; demolished) overlooking Bowling Green, innovative in its "modified Renaissance" design, incorporated iron-framed inner court walls that were a forerunner of skeleton construction.

A cluster of skyscrapers had formed next to City Hall Park with the completion of the ebulliently ornamented Potter Building (1883–86, N. G. Starkweather) on Park Row and the mansarded, neo-Romanesque New York Times Building (1888–89, Post; altered). Using as its structural base the iron-framed floors of the newspaper's old five-story building (1857–58, T. R. Jackson), the new Times Building at the intersection of Park Row, Spruce, and Nassau streets combined load-bearing walls with cage framing. The narrow, 11-story Tower Building (1888–89, Bradford L. Gilbert; demolished) at 50 Broadway introduced full skeleton, or skyscraper, construction to the city: the metal frame carried both walls and floors, allowing the walls to be reduced in thickness and the site to be used more efficiently. The Pulitzer, or World, Building at Park Row and Frankfort Street (1889–90, Post; demolished), known for its gilded dome, was less innovative structurally, but with a reported height of 309 feet (94 meters) it was briefly the city's tallest building.

The word *skyscraper* came into common usage during the 1890s when skeleton construction was widely adopted, building methods were refined, and competition intensified to build ever higher buildings. The steel-skeleton–framed Manhattan Life Building (1893–95, Kimball and Thompson; demolished) at 66 Broadway was the city's first skyscraper erected on pneumatic caisson foundations. Others soon followed, among them the American Surety Building (1894–96, Bruce Price; enlarged 1921) at 100 Broadway, an elegant, columnlike tower of 21 stories. R. H. Robertson, who designed the 23-story American Tract Society Building (1894–95) at Nassau and Spruce streets with a distinctive arcaded top, set a new height record with his formidable 30-story Park Row Building (1896–99). Neoclassical designs with three-part facades also became fashionable and were used in such distinctive buildings as the Bowling Green Offices (1895–98, W. and G. Audsley; altered), decorated with crisp Grecian motifs, and the slablike Empire Building (1897–98, Kimball and Thompson) south of Trinity Church at Broadway and Rector Street. Standing 13 stories tall, the Bayard Building (1897–99) at 65–69 Bleecker Street was designed by Louis Sullivan with slender, structurally revealing piers and lush, fluid ornamentation (it was Sullivan's only work in New York City). The Broadway Chambers Building (1899–1900), a colorful brick- and terra-cotta–clad tower across from City Hall Park, was the first of several stunning skyscrapers in New York City designed by Cass Gilbert.

During the first decade of the twentieth century skyscrapers were built in areas beyond lower Broadway. At 21 stories the Flatiron Building (1901–3, D. H. Burnham and

Skyscrapers in midtown along 42nd Street, ca *1940*

Company), just south of Madison Square, was the tallest building north of the financial district. Designed to conform to its triangular site, it was likened to the bow of a "monster ocean steamer" by the photographer Alfred Stieglitz. The neo-Gothic Trinity and U.S. Realty buildings (1904–7, 1906–7, Francis Kimball) were erected north of Trinity Church Yard on Broadway. As the Broadway subway neared completion (opened 1904), the Times Tower (1903–5, Eidlitz and McKenzie; altered 1966) was built on a midtown site that soon became known as Times Square. Elegant skyscrapers were also erected in lower Manhattan: the neo-Gothic West Street Building (1906–7, Cass Gilbert), which set a new standard of opulence, as well as the neoclassical Whitehall Building at Battery Place and West Street (1902–3, Henry Hardenbergh; 1909–11, Clinton and Russell) and the flamboyant City Investing Company Building (1906–9, Kimball; demolished) at Broadway and Cortlandt Street. As the narrow streets off Broadway became more densely built up, the loss of light and air emerged as an increasingly serious problem. A solution was offered by Ernest Flagg, who determined that adequate light and air would be let in if a skyscraper tower, no matter how high, occupied only 25 percent of its site. He demonstrated the effectiveness of this principle in his needlelike Singer Tower (1906–8; demolished), which at 47 stories was the tallest building in the city. But not for long: the Metropolitan Life Tower (1907–9, Napoleon Lebrun and Sons) on Madison Square, modeled after the Campanile of San Marco in Venice, was three stories higher.

The last unregulated office buildings were completed about the time of World War I, among them the new Equitable Building (1913–15, Ernest Graham and Associates), which rose 38 stories and was said to cast a noonday shadow four blocks long; the colossal Municipal Building (1909–14, W. M. Kendall of McKim, Mead and White), at Chambers and Centre streets; and the romantic neo-Gothic Woolworth Building (1910–13, Cass Gilbert), which had a mounted tower and with a height equal to 60 stories remained the world's tallest commercial building until 1930. The design of skyscrapers was transformed in 1916 when the city passed a zoning law restricting the height and bulk of buildings.

2. 1916–1995

A formula called the "zoning envelope" required that upper stories be stepped back above a prescribed level. A tower of unlimited height was allowed over only 25 percent of the site. These regulations produced the "setback" or "wedding cake" profiles (some with a slender tower) that dominated design until the next major zoning change in 1961. During the 1920s architects developed an aesthetic of simple, sculptural mass expressed in pyramidal forms clad in brick or stone; early examples of the setback style were the Shelton Hotel (1924, Arthur Loomis Harmon) and the New York Telephone Building at 140 West Street (1923–25, Ralph Walker). Fueled by national prosperity and easy financing, the volume of construction increased in the second half of the 1920s. This increase coincided with the peak of art deco design to produce a spate of modernistic skyscrapers. Most activity took place in midtown Manhattan. Within a few blocks of Grand Central Terminal rose the Chanin, Chrysler, Lincoln, Graybar, Fred F. French, and Daily News buildings, while projects such as Rockefeller Center and the Empire State Building opened up new areas distant from transportation centers. Speculation drove up land prices and led to the construction of taller towers. Downtown in the financial district several structures of 50 to 70 stories were shoehorned into narrow sites, among them the Bank of Manhattan Company and the Cities Service buildings. The race to build ever taller buildings resulted in the Chrysler Building (1930; 1046 feet, or 319 meters) and the Empire State Building (1931; 1250 feet, or 381 meters). Between 1920 and 1935 the amount of office space in the city nearly doubled, from 74 million square feet (7 million square meters) to 138 million square feet (13 million square meters); at least two-thirds of this amount was in speculative construction. Skyscrapers also accommodated hotels, apartments, and even hospitals. Most high-rise buildings in the outer boroughs were residential, although a number of office towers were built in Brooklyn.

Construction virtually ceased during the Depression and World War II, and when it resumed, the new aesthetic of the International Style was firmly established. Both external and internal design changes were made possible by advances in curtain-wall technology, air conditioning, and other mechanical and structural systems. The United Nations Secretariat (1947) and the corporate headquarters Lever House (1952, Gordon Bunshaft) and the Seagram Building (1958, Ludwig Mies van der Rohe) on Park Avenue established the prismatic glass box as the modern paradigm. Unlike older buildings that usually filled their lots, these were sited away from the street in plazas. Acclaimed by planners, the "tower-in-the-plaza" arrangement was encouraged by the zoning law of 1961, a sweeping revision that imposed a maximum volume for a building based on a multiple of the area of the lot, known as the floor area ratio (FAR); bonus floors could be added by including public spaces and amenities. Under the new code in the 1960s and 1970s sheer metal and glass shafts such as those on Sixth Avenue at Rockefeller Center proliferated. Skyscrapers of the 1960s were often big and bland; the construction of the Pan Am Building exploited the air rights above Grand Central Terminal to create 2.4 million square feet (222,960 square meters) of floor space.

Chrysler Building, 2009

Redevelopment in lower Manhattan did not begin until the Chase Manhattan Bank built its new headquarters, designed by Bunshaft, in 1960. During the late 1960s large speculative buildings on Water Street boxed in the skyline along the East River. On Broadway the Singer Tower became the tallest building ever demolished, making way for 1 Liberty Plaza (1974). Plans for the World Trade Center, announced in 1964, called for twin towers of 110 stories (as built, the North Tower was 1368 feet [417 meters] and the South Tower was 1362 feet [415 meters] tall). Designed by Minoru Yamasaki

Tallest Buildings in New York City

1. Antenna masts are not included in height; spires and architectural details are included in height.
2. Destroyed in the terrorist attacks of 11 September 2001.
3. Formerly Bear Stearns world headquarters.
4. Includes both towers.

and completed in 1973, the complex added 10 million square feet (929,000 square meters) of office space just before a downturn of the real estate market that persisted until the late 1970s.

Changing tastes and technology dictated new forms and styles in skyscrapers of the 1980s. Reacting against the anonymity of modernist slabs and spurred by the theories of postmodernism, many architects revived historical references and lavish ornamentation. Masonry cladding was used in the headquarters of American Telephone and Telegraph (1978–84, Philip Johnson; now the Sony Building) and the Heron Tower (1987, Kohn Pedersen Fox); others such as the Carnegie Hall Tower (1990, Cesar Pelli) reflected the character of an adjacent landmark or neighborhood. With the demand for "smart buildings" wired for computers and for large floor areas of 30,000 to 40,000 square feet (3000 to 4000 square meters), buildings became bulkier. Sites at the edges of the dense business districts permitted such buildings, among them the four giants of the World Financial Center (1985–88, Pelli) at Battery Park City and the full-block development of Worldwide Plaza (1989, Skidmore, Owings and Merrill; David Childs) west of Eighth Avenue between 49th and 50th streets. Other towers more centrally situated, such as the headquarters of the Morgan Bank on Wall Street (1988, Kevin Roche), were able to achieve the same expanded volume by using the air rights of adjacent low-rise buildings or landmarks. Special zoning incentives made the West Side of midtown Manhattan especially attractive to developers. From 1978 to 1991 more than 59 million square feet (6 million square meters) of commercial space was constructed in Manhattan. In 1990 New York City had 25 of the 100 tallest buildings in the world.

3. Since 1995

A real estate recession during the first half of the 1990s put a stop to most high-rise construction. High vacancy rates in older office buildings, especially in lower Manhattan, led to the

beginning of widespread conversion of "Class B" properties into apartments and condominiums. A few significant office towers and some mixed-use projects, all in midtown, were started in the late 1990s, including a cluster around Times Square and the Time Warner Center at Columbus Circle (2004, SOM).

After the destruction of the World Trade Center on 11 September 2001, many people predicted that the era of tall towers in New York City was over. But the desire to occupy the sky and exploit the value of Manhattan land returned with the post-9/11 economic recovery, with something of a renaissance of high-profile design: most significant were several media company headquarters, including the Time Warner Center, Hearst Tower (2006, Foster and Partners, Norman Foster), the New York Times Tower (2006, Renzo Piano Building Workshop, Renzo Piano and FXFOWLE), and the mixed-use Bloomberg Tower (also called One Beacon Court; 2005, Pelli Clarke Pelli).

The market for luxury apartments also expanded, and for the first time residential towers matched or exceeded the number of stories (if not the height in feet) of office buildings or major hotels. The residential Trump World Tower (2001, Costas Kondylis) pioneered new heights with a 72-story, 861-foot (262-meter) dark-glass prism that was nearly indistinguishable from a corporate office tower, and in the early 2000s, numerous mixed masonry and glass apartment blocks stretched taller than 55 stories. Signature towers by world-famous architects became a marketing strategy for some developers, as exemplified by the curvy, inventive Beekman, designed by Frank Gehry for Forest City Ratner (2010, Gehry Partners), rising 76 stories on a lower Manhattan lot near the foot of the Brooklyn Bridge. Another iconic, but controversial Gehry tower, dubbed "Miss Brooklyn," was designed to culminate the ensemble planned above the Atlantic Yards, a mega-project of Forest City Ratner.

One of the most important innovations in high-rise design in the late 1990s and early 2000s was the green building movement and the embrace of LEED (Leadership in Energy and Environmental Design) standards. America's first "green" skyscraper was 4 Times Square, also known as the Condé Nast Building (1999, FXFOWLE), conceived as a demonstration of "best practices" by the Durst Organization and its architect Fox and Fowle. A few photovoltaic solar panels were the only signal on the facade of a dramatic new type of commercial architecture, for most of the features of high-performance and energy-efficient design were manifest in the mechanical systems. By 2006 a crop of green towers, including the Hearst and Times buildings, 7 WTC, and most notably the Bank of America Tower at One Bryant Park (2009, Cook+Fox) established sustainable design as the sine qua non for quality buildings, as well as for retrofits.

Bank of America Building, 2009

Residential high-rises were slower to adopt LEED standards, but an exemplary experiment was instituted by the Battery Park City Authority, which in 2000 mandated rigorous green guidelines for all new buildings. Completed in 2003 the Solaire was the first LEED-rated high-rise apartment in the United States. By 2009 every remaining site in Battery Park City had a new green building either recently completed or under construction, and the new world headquarters of Goldman Sachs (2009, Pei Cobb Freed) completed the build-out of the master plan of the World Financial Center. Rebuilding of the office towers at the World Trade Center was under way in 2010, but only infrastructure and one building had been started.

slang. From the early nineteenth century life in New York City has inspired the formation of slang words and phrases. The wealthy were known in the 1840s as the *Upper Ten (Thousand)*; many lived on Fifth Avenue and by 1850 were known as *Avenoodles,* which played on the local pronunciation of "avenue" as two syllables. In the 1880s *Astorbilt* (a form combining Astor and Vanderbilt) became a generic surname for the wealthy. The words *ritz* and *ritzy* and the phrase *puttin' on the ritz* were inspired by the high style of the Ritz hotels. During the 1890s the wealthy were often called the *Four Hundred* in newspapers, after the society figure Ward McAllister remarked that Mrs. William Astor limited her guest list to 400 names. Chorus girls, often called *Dumb Doras* from 1890, accompanied *sugar daddys* (1905), who took them to late-night dinners of champagne and lobster at *lobster palaces* in Times Square. From the Cockney use of the verb *to hook,* meaning to solicit for prostitution, the noun *hooker* was formed in the 1840s; the term was later reinforced by the reputation of brothels in Corlear's Hook, where residents were known as "Hookers." About this time the terms *O.K., shyster,* and *smart aleck* came into use in the city. From the 1860s being *sent up the river* meant going to Sing Sing Prison, which stood on the Hudson River at Sing Sing, now known as Ossining. Pesky, loud-mouthed newsboys in the city prompted the phrase *go peddle your papers,* meaning "get lost."

In the 1880s *hokey pokey* came to mean "penny serving of ice cream" rather than simply "trickery"; the ice cream vendor became known as the *hokey-pokey man.* Some newspapers in the city gained a reputation for *yellow journalism,* a term associated with circulation battles between the *New York World* and *New York Journal,* both of which published the comic strip "The Yellow Kid." *Skyscraper* was coined in the 1880s, and its adoption was influenced by the spectacle of tall buildings in New York City. The phrase *to do a Brodie* (or *to take a Brodie*) was inspired by the claim of Steve Brodie, a saloonkeeper from the Bowery, that he had dived from the Brooklyn Bridge in 1886. *Hot dogs,* introduced at Coney Island about 1890, were perhaps so named because according to urban folklore they were made with dog meat. New York City was always a destination for tourists, and gawking tourists became known as *rubbernecks* in the 1890s. At the beginning of the twentieth century the elevated lines, or *els,* were so crowded that the hours when most people traveled to and from work became known as *rush hours;* many riders stood clinging to overhead straps, inspiring the word *straphanger.* About this time the word *breadline* came into use, after Fleischmann's bakery began giving bread and coffee to the poor each night at the side door of its shop on Broadway at 10th Street.

By 1915 country residents of upstate New York were called *appleknockers,* after a putative method of harvesting apples by knocking them down with long sticks; the name of the town of Herkimer, New York, inspired the term *Herkimer Jerkimer,* meaning both a hick and a jerk. Nightlife after World War I focused on the activities of *café society,* a name first used in a gossip column and popularized by *Herald Tribune* columnist Lucius Beebe in the 1930s. As it became fashionable and respectable in the city for society members to live in apartment buildings, those younger members who had apartments were called *cliff dwellers,* and older ones who still lived in their mansions on Murray Hill were known as *cave dwellers.* The 1928 Broadway musical *Whoopee!* helped to make popular the expression *makin' whoopee* for risqué behavior, including that of the *butter-and-egg man,* a big spender in nightclubs, who was so named because he seemed to have become wealthy in the dairy business. The term *G-string* came into use in the 1930s in the city's burlesque theaters and derives from the name of a loincloth used by an American Indian male. Young men and women of little means sunbathed at *tarpaper beach,* the tarred and graveled rooftops of city apartment buildings. *Dumbbell* tenements in the city were named for the shape of their floor plan. *Yuppies,* a term coined in New York City in 1983, came to symbolize the 1980s, just as *hipsters* became identified with early twenty-first century New York City, especially Brooklyn.

slavery. Slavery was introduced in Manhattan by the Dutch, who settled 11 African men there in 1626 and three women in 1628, all of whom had been captured during war. The Dutch West India Company was among the foremost slave traders in the world but provided only a few Africans to New Netherland, where slaves commanded lower prices than in the Caribbean. Most slaves in New York before the 1650s were taken by Dutch or French privateers from Spanish or Portuguese ships. Initially the company, the main employer in the colony, used slaves for projects such as building Fort Amsterdam, laying roads, carrying merchandise, and providing domestic services such as cooking and laundering. During these years slaves were married in church and their children were registered with the company. As the settlement became established and public works slackened, the need for slaves diminished and the 11 men of the first cargo petitioned for their freedom. On 25 February 1644 they and their wives received their conditional release in return for services on demand and lifelong payments due annually in cash or kind. The company surrendered none of its claims to service, shifted living costs to the petitioners, and bound to service their children, born and unborn; it later freed some of the nearly two dozen people affected by this arrangement, and a comparable number were freed privately by 1664 when the English took control of the colony. At this time at least 9 percent of the 8000 settlers were Africans, both slave and free.

The Articles of Capitulation formalizing the surrender of the Dutch to the English in 1664 preserved all the property rights that they recognized, and the ownership of slaves was transferred to the English, who soon institutionalized slavery by endorsing it as a system of property rights in the Laws of 1665, the first legal code in the colony. Slaves were classified as chattel bound to serve involuntary, indefinite, and heritable tenure, and their marriages were no longer recognized as legal. American Indians and Africans were enslaved, but the laws made "slaves" synonymous with "Negroes," and the Iroquois Confederacy, the Hurons, and the Delawares made pacts with the English to return runaways. To help keep peace the colonial governor Edmund Andros prohibited the enslavement of Indians from local tribes in 1679; others continued to be enslaved until the 1740s.

White working men protested the increasing use of slaves in shops, along the docks, and in skilled and unskilled trades, and eventually municipal licensing ordinances banned Africans from driving wagons and selling goods in public markets. The restrictions mostly affected free blacks, since slaves continued to be employed in these ways by their masters. Restrictions on slavery were proposed as early as the 1680s. Many people resented the power of the Royal African Company (chartered in 1672), which had a monopoly in the slave trade: a tax was levied on the importation of slaves, though smuggling made this ineffective. By the beginning of the eighteenth century about 14.2 percent of the New York City population was black. The number of slaves entering the port was 225 between 1701 and 1704, and 185 between 1710 and 1712; all were from Africa, and unlike those who had entered on earlier shipments from the West Indies, they had no experience with slavery. Between 1700 and 1774 the city legally admitted about 6800 slaves, 2800 of whom were from Africa. Slave markets at the foot of Wall Street were named after prominent families involved in slave trading, including the Crommelins, Schuylers, Van Zandts, and Waltons. Other families that made profits legally and illegally in the slave trade were the Beekmans, Crugers, Livingstons, Philips, Van Hornes, and Van Cortlandts.

Slaves did have a few rights: for instance, people who willfully killed or maimed slaves were punished under a law passed in 1686, but the purpose of most laws was to control rather than to protect slaves. A set of laws passed in 1702 prohibited slaves from escaping, taking part in conspiracies or insurrections, trafficking in stolen goods, assembling in groups larger than three, bearing arms, and traveling without permission. In 1705 the state assembly declared baptism ineffective for slaves and from the following year endorsed conversion to Christianity. Local ordinances barred slaves from various activities. Despite such legislation slaves often stole, gambled, drank, evaded curfew, and disturbed the peace; less frequently they committed serious crimes

Free Blacks and Slave Populations of New York, Kings, Queens, Richmond, and Westchester Counties, 1790–1820

Compiled by James Bradley

such as assault, battery, murder (usually of whites), and arson. After a time in which the number of slaves increased dramatically, recently arrived Africans led an uprising on the night of 6 April 1712, in which eight whites were killed and more than 20 others seriously injured. In addition fires were set in the east ward, although only a few outbuildings burned and property damage was light. Twenty-five blacks paid for the incident with their lives. During the same year and again in 1730 more laws were passed to tighten the control of slaves.

The separation of husbands from wives and of parents from their children was a principal cause of hardship. Slave families in New York City seldom shared one household. Mothers and young children lived together, but men were housed separately. Visiting privileges were granted for Sundays, but husbands and wives frequently negotiated weeknight meetings, usually at the woman's quarters. Often men were denied visits and violence resulted; in 1741 Roosevelt Quack was kept from seeing his wife, the governor's cook, and burned the governor's house. The separation of mothers and children at sale, especially beyond visiting distance, was also a source of great distress.

Slaves recognized and respected their own family unions regardless of law, and kinship networks developed early. The proximity of houses to each other also encouraged networks for friendship and recreation. Some slaves organized theft rings such as the Geneva Club of the 1730s; members conspired with whites and caroused with them in notorious taverns where they held private celebrations. Some celebrations were public, but carnivals such as Pinkster and Election Day that were held by rural blacks were restrained in Manhattan, perhaps because officials feared that they could not assure public safety.
